Nowa Huta has reminded the world that there is much unfinished business in Poland—business that will not be finished until freedom has been restored and communism abolished from the homeland of a great and courageous people.

The Festival of Jeanne D'Arc

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. MULTER. Mr. Speaker, on May 8 the people of France and their friends throughout the world celebrate one of the great national French festivals—the commemoration of Jeanne d'Arc.

This young girl—a strange combination of warrior, maiden and saint—is one of the most intriguing figures in history. Her tragic, romantic and heroic life has long been a favorite subject of literature, either as a symbol of an innocent martyrdom, a victim of narrow, self-seeking despotism and treason, or in some cases, simply as a model to inspire and delight the young.

But for the French, Jeanne the maid is something more than just a figure of liteurature. She is the essence of French patriotism, the God-appointed instrument for preserving the unity and integrity of France. That is why they celebrate her memory today with such awe and honor.

The Maid Jeanne appeared on the stage of history at a very critical time for France. Early in the 15th century the English were in control of northern France, including Paris, and were threatening to dominate their entire country. The English monarch also claimed the French crown. In a word, France was in mortal danger of losing its independence.

The French claimant to the crown was Charles, the Dauphin. In 1428 he was hard pressed because the English were threatening the key city of Orleans. If this city fell, an important barrier to an English advance toward the south would be gone. At this juncture the young, uneducated girl Jeanne—just about 17 years old—was brought to harles maintaining that she had been commissioned by God to see Charles crowned and to save France. In her father's village, Domremy, Jeanne had for a long time heard voices and seen visions of the Archangel Michael, St. Catherine and St. Margaret. From them she had received her mission.

Charles was so impressed that he placed her arrayed in white armor at the head of a force and she bravely led the march which defeated the English at Orleans. This victory was followed by others and soon the beginning of the end appeared for the English invaders. To the French she became a saint sent to deliver them from their foes,

Unfortunately, she was captured by the enemy and most of us know from the many literary versions of it how she was forced to undergo a long trial as a witch and eventually was burned at the stake. But in the flames that consumed her, she became immortal, forever enshrined in the hearts of her countrymen, and for all men an everlasting symbol of courage, innocence, patriotism, and the ascendance of nobleness of character over the forces of selfishness, revenge and pride.

We join with our French friends in paying homage to this heroine of all mankind.

House Concurrent Resolution 633

SPEECH

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. DONOHUE. Mr. Speaker, as a cosponsor of this resolution, designed to influence the restoration of the fundamental freedoms and God-given rights of the subjugated peoples now existing in Communist captive nations, I most earnestly hope this House will promptly and unanimously approve it.

As we all know, in numerous and repetitive documents and agreements, the great powers of the world, including Soviet Russia, have pledged and promised the persecuted peoples of these nations, the return of their national freedom and personal liberties. The United States has consistently attempted to have these promises carried out but Russia still denies these countries the right of free elections and independent sovereignty.

To my mind the adoption of this resolution will add substantial strength to the position of the President when he meets with the Soviet leaders at the approaching summit conference. The Communist rulers, by our action, will be emphatically reminded that it is the sense of this Congress that no firm and lasting agreements for peace can be made while the world remains practically half free and half slave. By our action the rest of the free world can be concretely convinced this Nation will not abandon her traditional principles of free government for all peoples and the captive nations themselves will be further inspired to remain adamant in their determination to reject any Communist entreaties for cooperative existence under the Soviet system.

The fact and the truth is that the Russian Kremlin is solely responsible for the inhuman slavery being imposed upon the brave peoples of Poland, Czechoslovakia, Lithuania, Estonia, Latvia, Bulgaria.

Hungary, Rumania, and all the other captive countries. It is also unfortunately true that we have suffered many disastrous propaganda defeats at the hands of the Russians.

Not the least of the purposes of this resolution is an attempt to meet the Russians in their own most effective field. Unlike their multitudinous and skillful distortions for propaganda purposes, we are telling the truth. If the Kremlin leaders want to prove their sincerity in seeking peace in the world then let them simply declare freedom for the captive nations. That is the first and fundamental step that must be taken before there can be any reasonable hope for the achievement of a peaceful world.

Let us then promptly approve this resolution to encourage the Soviet rulers to take this first, just action and then proceed, at the summit, to the adoption of agreements for all of us to live, in good will and good faith, in a world at peace.

A Salute to Radio

EXTENSION OF REMARKS

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. McGOVERN. Mr. Speaker, the American people enjoy the finest radio services of any nation in the world. We are indebted to the radio industry for high performance standards.

Since the month of May has been designated National Radio Month, I should like to salute the radio stations in South Dakota and across the country which play such an integral part in our daily community life.

It is true that new forms of communication have taken some of the spotlight away from radio, but radio will continue to be an essential part of the educational, commercial, and entertainment life of the American people.

I include the following interesting facts about radio in the United States:

RADIO FACT SHEET

National Radio Month this year will be symbolized by the theme, "Radio: The Heartbeat of Main Street." Radio's vital role in the lifestream of the country will be brought to the attention of the public through a nationwide program reaching into every community.

The unstinting and generous assistance that radio contributes to every civic situation will be dramatized by local cooperative projects between radio stations and community organizations.

Radio is always in the forefront—as a lifeline during emergencies with advance warnings, first aid information, pleas for help—as a crusader for civic betterment—as an education and information medium for citizen and student—as a source of facts on our democratic processes and institutions.

Today there are more than 155 million radios in use in the United States. Ninety-

seven out of every hundred homes in the Nation have radios.

Americans are seldom more than an arm's length from a radio set; no matter where they are—at home, in a car, at the beach. About 39 million cars are equipped with radies. Portable radios are made to fit the pocket and purse.

Today there are more than 4,000 radio stations on the air in the United States, an increase of 228 since last year. Their programs of information and entertainment reach the remotest areas of the country and the humblest of homes.

One survey of 5,000 women representing a cross-section of U.S. households showed that they listened to radio 4 hours and 36 minutes a day.

FM (frequency modulation) is particularly effective for reaching a select audience. Most family income of FM listeners ranges upward of \$7,500, many over \$15,000, a research study reveals.

Radio listening knows no bounds of age, sex, geographical location, or season. More than half of the country's professional men tune in 5 or more days each week. More than 9 out of every 10 single workingwomen tune in to radio each week. Among men and women between the ages of 50 and 65, about 9 out of 10 listen every week, nearly half of them tune in every day.

A Protest Against Airlifting First-Class Mail

EXTENSION OF REMARKS

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. CUNNINGHAM. Mr. Speaker, at the close of my remarks, I am including the text of a resolution which will be submitted by the Glendale Post Office clerks to the California Federation of Post Office Clerks convention later this month. The resolution points out that the Post Office Department has incurred additional expense through use of the airlift for 4-cent letter mail and if expanded further, will have a detrimental effect on the use of airmail service at its current rate, 7 cents for letters: In addition, the space-available concept for the airlift of first-class mail has disrupted the reliability of service, since first-class mail can sit for 12 hours at an airfield terminal, awaiting space to be available on an outgoing flight.

The resolution follows:

PROTEST ON POST OFFICE POLICY OF USING AIRLIPTS BY LOCAL 841, GLENDALE, CALIF.

Whereas the Department in its efforts to speed up the mail has incurred additional expense in the movement of the mail by the

unwarranted use of the airlift system; Whereas the public who desire such service are quite willing to pay the airmail rate for such service;

Whereas the use of airlift by other classes of mail tends to lessen the distinction and retard the proper incentive for selling airmail service at its proper rate;

Whereas the system of "available space" mail cargoes has disrupted the reliability of service; be it

Resolved, That the California Federation of Post Office Clerks in convention assembled at San Jose, Calif., on May 28, 29, and 30, 1960, go on record favoring a limitation in the use of airlift to emergencies such as disruptions in service caused by acts of God.

The Puswash Conference of International Scientists on Biological and Chemical Warfare

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. PORTER. Mr. Speaker, along with atomic warfare we have been hearing recently about biological and chemical warfare. At the Pugwash Conference of International Scientists on Biological and Chemical Warfare last year a very significant statement on these subjects was prepared by scientists from all over the world.

The purpose of the conference was to assess the potentialities of chemical and biological agents as weapons, and to explore possible means for preventing their production or use in war.

It is plain that the progress made in the production of biological and chemical weapons has been far greater than most people realize or care to consider.

The scientists conclude that the delivery of these chemical and biological agents of warfare cannot be prevented because it would require a ban on all forms of transport, civil as well as military.

Peace will be a lot closer when more people, especially leaders, recognize that we cannot attain foolproof inspection nor total disarmament. We can take many measures to put atomic, biological and chemical agents of warfare out of the reach of madmen who would seek to use them. At the same time we must recognize that our best attempts will probably fail. This means that we must create a world situation where such accidental or miscalculated use will not trigger the allout war.

The Pugwash conferees recognize that trust between nations cannot be established by proclamation, but only by experience, particularly by experience in cooperative work toward common aims. Their report is worth the attention of every Member of this Congress. Its authority can best be proved by a glance at the list of participants which I am including following these remarks and prior to the statement of the conference: Participants in Pugwash Conference of In-

TERNATIONAL SCIENTISTS ON BIOLOGICAL AND CHEMICAL WARFARE, PUGWASH, NOVA SCOTIA, CANADA, AUGUST 24-30, 1959

Sponsor: Mr. Cyrus Eaton, chairman of the board, Chesapeake & Ohio Railway. Cleveland, Ohio, United States of America.

Dr. Brock Chisholm, former Director General, United Nations World Health Organization

Prof. Claude E. Dolman, head of Department of Bacteriology and Immunology, Uni-versity of British Columbia.

Prof. Donald Kerr, Department of Geography, University of Toronto.
Sir Robert Watson-Watt, "father of radar."

DENMARK

Dr. Preben von Magnus, State Serum Institute.

FRANCE

Dr. Andre Lwoff, head of the Department of Microbial Physiology, Institut Pasteur.

Dr. Pierre Thibault, chef de service, Insti-

tut Pasteur.

CREAT BRITAIN

Mr. F. C. Bawden, F.R.S., director, Rothamsted Experimental Station.

Dr. Patricia J. Lindop, Physiology Department, Medical College of St. Bartholomew's Hospital.

Prof. Gordon Manley, head of Department of Geography, Bedford College, University of London.

Prof. Joseph Rotblat, Physics Department, Medical College of St. Bartholomew's Hospital.

Prof. M. G. P. Stoker, Department of Virology, University of Glasgow.

INDIA

Dr. M. L. Ahuja, medical adviser to the Government of India,

SWEDEN

Prof. Sven Gard, director, Department of Virus Research, Karolinska Institute.

UNITED STATES

Prof. H. Bentley Glass, Department of Blology, Johns Hopkins University.

Dr. Charles C. Higgins, president, American College of Surgeons.

Dr. Martin Kaplan, University of Pennsylvania.

Prof. Chauncey D. Leake, dean, College of

Medicine, Ohio State University. Prof. Hugo Muench, professor of biosta-

tistics, Harvard School of Public Health. Prof. Eugene Rabinowitch, Department of

Botany, University of Illinois. Prof. Alexander Rich, professor of bio-Physics, Massachusetts Institute of Tech-

nology. Prof. Theodor Rosebury, professor of bac-teriology, Washington University.

U.S.S.R.

Academician Mikhail M. Dubinin, U.S.S.R.

Academician Mikhail M. Bushing, Institute of Physical Chemistry. Prof. Alexandre A. Imshenetsky, director of Institute of Microbiology, Academy of Science.

Mr. Vladimir P. Pavlichenko, assistant general scientific secretary, Academy of Sciences.

Prof. A. A. Smorodintsev, Department of Virology, Institute of Experimental Medicine.

STATEMENT OF PUGWASH INTERNATIONAL CON-PERENCE OF SCIENTISTS ON BIOLOGICAL AND CHEMICAL WARFARE

The fifth in the series of Pugwash conferences of scientists, aimed at assessing the dangers to humanity arising from developments of modern science and technology, has met in Pugwash, Nova Scotla, from August 24 to 29, as guests of Mr. Cyrus Eaton.

The purpose of the conference was to sess the potentialities of chemical and biological agents as weapons, and to explore possible means for preventing their production or use in war.

The subject of chemical and biological warfare has been shrouded in official secrecy. For years large projects have existed in several countries with the stated purpose of developing defense means against such weapons. We have no direct information about the results of these projects, but inevitably they increase the efficiency and destructive-ness of various types of biological and chemical weapons, and result in the development of new techniques. Judging from the number of technical workers involved in such projects and the money expended, much knowledge related to the production and delivery of micro-organisms for war purposes has probably been gained. Moreover, unsupported statements appear which suggest that such weapons have enormous lethal or incapacitating effects against man, can destroy plants and animals, and have advantages under certain conditions of war. Recently a concerted effort appears to have been made to suggest that these weapons are more humane than other means of war-

We have discussed the general nature of such weapons as well as the properties of the individual agents and their methods of delivery, and have compared them with other weapons. Our discussions suggest that the difficulties of establishing a stable and lasting peace are aggravated by the fact that nations, whether or not they possess nuclear weapons, might produce biological and chemical weapons; international tension would consequently be increased.

POTENTIALITIES OF BIOLOGICAL AND CHEMICAL WEAPONS

Biological weapons-microbes, viruses and their toxic products-can be delivered and dispersed in such a way that fatal or in-capacitating disease might be produced over They can be produced cheaply large areas. They can be produced cheaply on a significant scale, even in a country whose technological development is not highly advanced. Such weapons could be used either alone or together with others. The attack could be local or massive or could consist of individual acts of sabotage. The agent could be selected to cause a great many primary casualties, or to initiate epi-

Infective agents or toxins used as biological weapons would presumably have the following characteristics: (a) Lethal or incapacitating when applied in small amounts; (b) remain potent when stored or dispersed; (c) the diseases they produce should not be preventable by simple sanitary precautions, or by customary practices of immunization; (d) neither the agents themselves nor the diseases they produce should be easily identifiable; (e) the diseases they produce should not be curable by customary drugs or anti-biotics. Many well-known biological agents possess several or all of the foregoing attributes. The simultaneous use of two or more pathogenic organisms might assist the spread of infection and confuse diagnosis.

Highly virulent strains of some pathogenic agents can easily be selected as can strains virulent bacteria resistant to all antibiotics, drugs, and to some disinfectants. Recent advances in microbal genetics make it possible to produce variants, some of which may be even more suitable for biological warfare than naturally occurring strains.

Quantitative information on the infectivity and toxicity for man of biological agents that might be used as weapons is too meager for their effects to be compared at all accurately with those of nuclear weapons. However, a surprise attack on a city might in time cause numbers of casualties approaching those caused by a small atomic bomb. An attack with an infective agent, originally meant to be localized, might lead to an epidemic because of abnormal routes of delivery, the large number of primary casualties, or the disorganization of public

The meteorological and other conditions required for biological or chemical attacks on man are so exacting that the military effects will be far from certain. The necessary conditions for a successful attack might prevail only on some days and at limited times of the day, and would be subject to the errors of meteorological forecast-The discharged material, instead of moving into and staying in the intended area, might recoil on the aggressor. Biological weapons would presumably be stabilized to withstand exposure to the atmosphere and so might remain active for long periods and ultimately fall anywhere.

Attacks on economically useful animals are subject to many of the same limitations as attacks on man. The most likely use of biological warfare on animals would be to disrupt the economy, which could be done by introducing various infections, spread very rapidly and some of which are transmissible to man.

There are also agents that could be used to destroy crops, but their effects are unlikely to be important compared with attacks on human beings and animals. Chemicals such as plant hormones would produce the quickest and perhaps the most serious results, but to be effective would have to be applied over great areas. Some infectious diseases of plants could also be damaging; their introduction, however, could adversely affect the economy of a region for a long time, but most spread too slowly to influence the outcome of a war.

Chemical weapons (poison gas or other oisonous substances) were used in the First World War and several subsequent occasions. In recent years new poisonous sub-stances have been produced which are many times as active as the earlier agents. Means for their bulk production have also been improved as have procedures for their dissemination over areas very much larger than those covered during chemical attacks in World War I. The production of chemical warfare agents could easily be disguised as peacetime chemical industry, or such industry could be quickly converted to produce

The so-called nerve gases, which are chemically similar to certain insecticides, are extremely potent and cheap, and cannot easily be countered with effective defensive measures. Masks and appropriate clothing can partially protect against them, but it is difficult to apply such protection to large populations; and it is unlikely that nerve gas casualties could be treated with antidotes soon enough after an attack to prevent serious consequences. New types of hallucinating agents or of poisons that give rise to transient mental disorganization, without recognizable permanent injury, have been advocated as means of "humanizing" war. Although they do not kill directly, their use could have serious consequences, because individuals or groups of people exposed to them behave unpredictably and often ir-responsibly. The extremely high level of toxicity of new types of poisonous materials, as well as the means available for their delivery, permit their effects to be compared with those of certain types of atomic weap-

Summarizing the previous paragraphs, biological and chemical agents clearly represent considerable additions to modern arsenals. Yet, we realize that nuclear weapons, particularly modern hydrogen bombs, have a destructive power several orders of magnitude greater than chemical or biological weapons. As means of immediate and certain destruction, these weapons cannot compare with hydrogen bombs. The dependence of biological weapons on uncontrollable factors, such as meteorological conditions, and the difficulty of confining the effects to the attacked territory, make them especially unpredictable in scope and effect.

Worldwide apprehension about biological and chemical weapons can be allayed only by measures tending to assure that they will not be produced or used. But, however difficult the international control of atomic weapons may be, the international control of biological and chemical weapons by any system of inspection seems incomparably more difficult.

The first reason is that the specific weapons, or combinations of weapons, likely to be used in a particular instance cannot be foreseen.

The second is that chemical or biological weapons can be selected and prepared in ordinary chemical or microbiological laboratories. The fact that no elaborate or large-scale facilities are needed makes it difficult to identify possible places of preparation for biological or chemical warfare. Even elaborate installations would resemble those normally used in vaccine or antibiotic production. It follows that small and large nations, whether industrially undeveloped or highly industrialized, might secretly prepare to use such weapons; and with each added nation possessing such capabilities, the danger of war would mount.

A third reason is that means of dispersal of chemical and biological agents of warfare are diverse, including planes, submarines, and missiles, as well as saboteurs. Their delivery therefore cannot be prevented because it would require a ban on all forms of trans-

port, civil as well as military.

If control by inspection is so extremely difficult, what alternative ways are there to decrease the danger that chemical and biological weapons will be used? It seems clear that the international renunciation of the use of such weapons, as in the 1925 Geneva protocol, cannot allay apprehension unless all nations, small as well as large, ratify such an agreement without reservation. This is the first necessary step.

the first necessary step.
Secrecy is clearly essential to preparations for biological and chemical warfare. On the one hand, it enables any nation planning aggression to depend upon the element of surprise, and upon the opponent's lack of effective countermeasures taken in advance. On the other hand, the unknown is, of itself, a potent cause of human anxiety, and is even more so when associated with weapons of any kind. Any actual danger there may be will certainly be exaggerated wherever information about any aspect of the situation is denied. Secrecy on the part of pos-sible enemies is even more productive of anxiety, suspicion, and hostility, and may precipitate hostile reactions. Free and frank revelation of all scientific and technical developments is essential to a degree of mutual trust necessary to resolve the acute tensions that now plague the world.

The most hopeful approach to international regulation therefore seems to comprise (a) a general agreement to prohibit the use of such weapons, and (b) the renunciation of official secrecy and security controls over microbiological, toxicologial, pharmaceutical, and chemical-biological research.

In considering how to implement the second of the foregoing proposals, we note the already excellent effects of the report of the U.N. Scientific Committee on the Biological Effects of Radiation. A comparable scientific committee or a permanent U.N. scientific commission on biological and chemical modes of warfare could help to dispel apprehension. A subsidiary function of either group might be to investigate impartially the claims by plaintiff nations that others had openly or

surreptitiously used methods of biological or chemical warfare against them.

The very existence of such a commission might in time arouse the conscience of the individual scientists of all nations, the only ultimately effective safeguard against violations.

In agreement with the Third Pugwash Conference in Vienna, we repeat that, in the end, only the absolute prevention of war will preserve human life and civilization in the face of chemical and biological as well as nuclear weapons. No ban of a single type of weapon, no agreement that leaves the general threat of war in existence, can protect mankind sufficiently. We therefore must look forward to a day when the preservation of peace will transcend the ambitions of individual nations.

Trust between nations cannot be established by proclamation, but only by experience, particularly by experience in coopera-tive work toward common aims. There is already an extensive interchange of scien-tific information and people in the sciences basic to the problems discussed in this statement. We must build on this. The commission proposed to collect and evaluate information bearing on chemical and microbiological warfare should serve not only to allay the fears of mankind that new and more horrible weapons of such types will be invented, but further to dispel the miasma of secrecy that fosters international suspicion and tension, and in its place to extend the benevolent application of micro-biological and chemical knowledge for the benefit of all men.

Johnson Voted "Best Qualified" Candidate in Roll Call Poll

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. ANFUSO. Mr. Speaker, this week's issue of Roll Call, the newspaper of Capitol Hill, carries the results of the Presidential Preferential Poll which it has conducted among Senators, Representatives and congressional aides. Those who best know the candidates and work with them and observe them daily believe that Senate Majority Leader Lyndon B. Johnson is the best qualified candidate for President on Democratic Party ticket.

I was the one who originally suggested the poll in a front-page article in the March 30 issue of Roll Call, under the heading "Congress Seen as Best Judge of Candidates' Qualifications." In it, I called attention to a survey made by Life magazine on the qualifications for the Presidency and the five ideal qualities most desired by the American peoples. To these five qualities (listed below), I added a few others which I consider highly important in determining a person's fitness for the highest office in the land, such as, leadership capability, mature judgment, assumption of duties. fulfillment of responsibilities, et cetera. In addition, I emphasized that he must be able to forge unity of the Nation and he must believe in progress and continued growth in every phase of our national life, "for to believe otherwise would mean stagnation, loss of our moral, political and economic positions in the world, and our retrogression to a second-rate power."

It was my feeling that, since nearly all the major contenders are members of the Congress, those who serve with them in the national legislature and those who work on Capitol Hill would seem best to know the qualifications of these men. How do these people feel about the current contenders? Whom do they regard as the best qualified candidate?

The results of this poll, as published in this week's issue of Roll Call, show that Senator Lyndon B. Johnson received 339 votes out of a total of 770 ballots cast in the poll. This is a shade above 44 percent of the total. Vice President Nixon ranked second with 150 votes, or 20 percent of the total.

Other major contenders ranked as follows, in the order named: Senator Stuart Symington, Senator John F. Kennedy, Senator Hubert H. Humphrey, and Adlai Stevenson.

Mr. Speaker, I consider this poll highly significant because to a certain extent it represents the voice of Congress. I suggest that all delegates to the Democratic National Convention in July, all National, State, and local leaders in Democratic ranks, and the American people in particular, study the results of this poll in an objective manner and with an open mind.

At this point I wish to express my appreciation to Mr. Sidney Yudain, the editor and publisher of Roll Call, for the very fair and just way in which he conducted the poll through his newspaper. He has rendered a fine service to Congress and the Nation and deserves to be commended for it.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the article from the May 4 issue of Roll Call giving the results of the poll, as well as the tabulation of the vote, the five major qualifications for the Presidency, and a brief statement which I had prepared on the results:

[From Roll Call, May 4, 1960]

JOHNSON AND NIXON WIN POLL—TEXAN GETS
44 PERCENT OF VOTE—20 PERCENT FOR NIXON

Senate Democratic Leader Lyndon Baines
Johnson captured 44 percent of the total
vote to win Roll Call's presidential preference
poll of the Congress.

Tabulations made this week at the close of a 4-week election contest among Senators. Representatives, and congressional aides gave the Texas Senator 339 votes of the 770 ballots submitted.

Vice President Richard M. Nixon garnered 150 votes for a total of 20 percent of the tabulation.

The vote was a nonpolitical basis, but apparently followed party lines. Republican candidates racked up 21 percent of the vote, with Democrats carrying 79 percent.

The Congress is divided 65 percent Democratic, 35 percent Republican.

Second-place runner on the Democratic side was Missouri Senator Stuart Symington with 84 votes, a total percentage of 11. Senator John F. Kennedy, of Massachusetts, was close behind with 10 percent of the vote and a total of 63 ballots.

Senator Hubert Humphrey, of Minnesota, polled 8 percent of the total vote with 63. Adlai Stevenson received 42 votes, 5 percent

of the total. Representative CHESTER BOWLES, of Connecticut, was tendered four votes.

Two surprises of the poll were the 10-vote pull of Representative CHARLES A. HALLECK, of Indiana, and the fact that only one vote was cast for New York Governor, Nelson

Senator HERMAN TALMADGE, of Georgia, and Representative RANDALL HARMON, of Indiana, each received one vote.

Breakdown of the vote was Senators, 47; Representatives, 138; congressional aids, 585.

Although no signatures were required on the ballot which appeared in Roll Call, many were signed, several bore enthusiastic slogans.

The Roll Call poll was the first of its kind

to embrace the entire Congress.

The poll was suggested by Representative VICTOR ANYUSO in a front-page article in the March 30 issue of this newspaper. Anguso pointed out that Life magazine had taken a nationwide poll to determine the ideal qualities the American public desired in a President. After listing the qualities, Anguso suggested that the men and women of the U.S. Congress should be best fitted to judge the qualities of the presidential candidates since they have been working with most of them for many years. All of the ma-jor five contenders are in the U.S. Senate.

Because they were voting on their co-workers and colleagues the congressional Voice expressed in the Roll Call poll is considered significant. While Congressmen and aids are not necessarily delegates to the national convention, their political power and influence is considered.

IDEAL PRESIDENT

Roll Call's poll was based on the following qualities which Life magazine determined the American voter most desired in a President.

1. He must be a man of conviction who is Willing to fight for his principles, but at the same time he must be able by conciliation and compromise to avoid fights.

2. He must be a man who is above partisan considerations.

3. He must be a man with a common touch.

4. He must be a vigorous and decisive man Who can make up his mind, one who can get things done, and who will not be pushed around by other people, especially by the Russians.

5. He must be a man with wide experience in foreign affairs.

STATEMENT BY REPRESENTATIVE VICTOR L. ANFUSO

On the basis of these returns, it seems inevitable that a ticket headed by Senator LYNDON B. JOHNSON will be a sure winner. Those who best know the candidates of both parties-those who work for and with them every day-they have spoken very eloquently and clearly of their choice for President.

However, as a northern liberal, I still have some reservations in this matter. True, Senator Johnson kept his promise to the American people regarding civil rights. True, he did a magnificent job in guaranteeing voting rights to all of our citizens irrespective of race, creed, or color.

It is now necessary for him to support legislation that our elder citizens can live in dignity. He must utilize all his energy and influence to obtain passage of a law that would provide adequate hospitalization and medical care for our elderly and retired citizens. They deserve this recognition after a lifetime of work.

Because of the increased cost of living, which still continues its upward trend, today's wages do not have sufficient purchasing power for the average family. Consequently a minimum-wage law, providing at least \$1.25 per hour and wider coverage, should be established by Congress.

Having led the fight for these three basic measures which would benefit the vast majority of our people, viz-(1) Voting rights for all citizens; (2) medical and hospital care for the elderly; and (3) increased minimum wages-Senator Johnson should then be given serious consideration for the nomination by all segments of our people.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law. but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for fere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address Delivered by Hon. Hubert H. Humphrey, of Minnesota, at West Virginia University

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, May 6, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record excerpts from an address delivered by me at West Virginia University on Thursday, May 5, 1960.

There being no objection, the excerpts from the address were ordered to be printed in the Record, as follows:

AN OPPORTUNITY FOR PROGRESS—WEST VIR-GINIA UNIVERSITY, THURSDAY, MAY 5, 1960

Sometimes when I travel from region to region in this country of ours, I think of the hungry little boy who saw a tree full of ripe apples on the other side of the hill.

"Ain't no reason to go over there," the little boy said sadly. "I ain't got no wagon to bring any apples home to the family."

That is the story in too many regions of America today. We do not have enough wagons to haul the abundant resources of one area to meet the desperate needs of another area.

Some regions have more water than they need, while others lie wasted and unproductive in the sun.

Some regions have more food than they need, while others are strained to feed the people.

Some regions have more jobs than men, while other areas represent pockets of unemployment and inactivity.

There are many men who say that this is just a natural state of affairs. They say it is all very sad and unfortunate, but that nothing can be done about it.

Well, I disagree.

I say that an unbalanced water supply, or an unbalanced distribution of food or an unbalanced employment force, should not be ignored. I say that it is the responsibility of Government to balance the Nation, to see that the resources of one area are utilized fully to meet the needs of another area.

Now don't misunderstand. I am not talking about Government handouts or total Government control of the whole fabric and pattern of society. I am talking about Government with enough commonsense and heart to work for the healthy growth of every area, to help each area build its own security and prosperity.

Let me use an example all of you will understand—the unbalanced supply and demand of electric power, the vast supply of coal in West Virginia and the growing demand for electric power throughout the East.

I have seen solid proof of that demand, my friends. America's population is growing by leaps and bounds. Its cities are spreading over wider areas. New homes are springing up like wild grass and new business and industry are boosting their output to service the growing population. And 55 percent of all Americans live within 500 miles of West Virginia. This growing region needs power—and lots of it—to meet the demands of more people, more homes, more business.

West Virginia is in the center of this circle of growth. And West Virginia has the source for power—coal. The State produced 30 percent of the Nation's supply, but still has an estimated eight times the amount of coal it has already produced under the ground. West Virginia's coal can produce power—and lots of it—to meet the needs of the growing East.

The implication is obvious. West Virginia should be the heart of the East—sending out the life blood of any nation's growth, power. But instead, West Virginia and its vast resources are treated like an unnecessary appendage, getting smaller and smaller as the rest of the Nation's body grows and prospers.

You know the results. Coal output is down. Miners are unemployed. The whole State—and all its people—have suffered because the coal industry is the most important in West Virginia.

Despite the tragic effects of the industry's decline, West Virginians have not given up. You are a hardy, determined people, and you are not quitters. Like the little boy eyeing the apple tree on the other side of the hill, you are not going to move off to satisfy your own individual needs. You are going to stay put, and face the responsibility for taking care of your families, your homes, and your State.

And like the little boy who needed a wagon to carry the apples, West Virginia needs a new method for sending the power of its coal to the growing areas which need it.

The cost of hauling your coal to centers of consumption is just too high. The freight charge for transporting coal by traditional methods amounts to almost three-fourths of the average value of coal at the mine. Such costs represent a major competitive disadvantage for coal compared to other energy sources.

There is a new method to reduce such costs and increase the demand and production of coal. This is the establishment of power stations at the mines able to send electricity by line to the major consuming centers.

Traditionally, the cost of transmitting electricity over high voltage powerlines more than 200 miles has been greater than the cost of transporting the coal itself.

But today growing demand has established the need for huge "blocks" of power at specific centers of consumption. Sweden has demonstrated that it is economically feasible to transmit more than 500,000 volts more than 500 miles. And, yes, the Soviet Union has done the same thing.

It is obvious that "mine-mouth electric power stations" represent an exciting new possibility for the growth of the coal industry and the revitalization of West Virginia's economy.

The State is ideally located for such power stations. In time electrical power from your coal could hum steadily through the high lines stretching to America's great industrial and urban centers. The coal beneath your hills could then become the source of new wealth and economic security for West Virginians.

Just listen to one prediction, reported recently by the Federal Power Commission.

FPC experts estimate that 10 strategically placed mine-mouth generating plants could supply the entire area east of the Mississippi with sufficient electrical power. Those 10 plants could do the job done by 1,623 plants now scattered in various regions.

But much must be done. It is the job of the Federal Government to take the lead in encouraging construction of mine-mouth generating plants. We must embark on a bold new program to stimulate the use of West Virginia coal. We must immediately establish a mood of cooperation between Federal and State Governments and private industry to accomplish that purpose.

Right now we have the chance to make a big start in this direction. Congress is considering legislation calling for a study of the electrical power supply situation in the United States. The study would pave the way for additional legislation to assure development of bulk power supply.

The establishment of mine-mouth power stations would not be a boost just for indus-

try in other States.

West Virginia's great potential contributions would be vividly dramatized to the whole Nation. Others would come to understand—as I do—the wealth of this State.

Development of new, low-cost energy resources can be the single greatest attraction to new industry to move into West Virginia itself.

Paper and chemical industries which consume huge quantities of electrical energy and use coal, water and forest products could not resist the West Virginia location.

And—above all—others would come to appreciate the skills and reliability of West Virginia's labor force.

It is time for the Government to take action to balance the Nation. It is time for giant steps to balance the needs for power with the supply of coal here. It is time for transforming the potential wealth of West Virginia into real prosperity for her citizens.

Paper Presented by Dr. Sverre Petterssen Before the Panel on Science and Technology of the Committee on Science and Astronautics

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. McCORMACK. Mr. Speaker, the Committee on Science and Astronautics had the great honor recently of playing host to a group of eminent scientists and engineers who make up the committee's panel on science and technology.

During the first meeting of this group, held on March 25, 1960, an important paper was presented by Dr. Sverre Petterssen, professor of meteorology at the University of Chicago.

Under unanimous consent, I insert in the RECORD Dr. Petterssen's paper: PAPER BY DR. SVERRE PETTERSSEN

Dr. Petterssen. Mr. Chairman, members of the House Committee on Science and Astronautics, ladies and gentlemen, our chairman remarked earlier that the scientists were so modest that they didn't offer papers. I can assure you that it was out of modesty that I offered to present a paper. I thought that I might not get the \$50 unless I worked hard for it. [Laughter.] My topic is: "Expected Developments in

My topic is: "Expected Developments in Meteorology During the Coming 10-Year Period."

1. INTRODUCTION

I have read the report entitled "Preliminary Plans for a National Institute for Atmospheric Research," prepared by the University Committee on Atmospheric Research (February 1959) and presented to the National Science Foundation, and I concur in the general philosophies and findings of this document.

I have read also the detailed statement on "Satellite Meteorology," by Dr. F. W. Reichelderfer, Chief of the U.S. Weather Bureau, contained in "The Next 10 Years in Space," published by the Select Committee on Astronautics and Space Exploration, 86th Congress, 1st session, House Document No. 115, pp. 135-144, and I concur with Dr. Reichelderfer's analyses and conclusions.

The purpose of this paper is to supplement the above-mentioned documents, particularly in areas where progress may depend upon proper coordination between space research and conventional meteorological research.

2. SCOPE

Without oversimplifying the essence of the problem, it may be said that our atmosphere communicates with the Sun in two ways: First, there is the direct communication through short-wave and corpuscular radiation via the uppermost part of the atmosphere. Second, there is the conversion of solar radiation into sensible heat and the resulting exchanges of heat and water vapor at the Earth-atmosphere interface. Both of these complexes of processes are important, for to some extent they influence the whole gaseous envelope of the Earth. To secure maximum progress in atmospheric science and technology we must provide observations and carry out research on processes ranging in space from a short distance down in the ground and the oceans all the way out to the tenuous border toward interplanetary space.

In many important problems, we are concerned with the establishment of energy budgets. While satellite observations suffice for establishing the budget for the entire system Earth-atmosphere, observations at the lower interface are needed to determine the amount of heat available to the atmosphere alone. Such observations are essential also for research on the circulation of water vapor and in many other connections.

3. COMMENTS ON OBSERVATIONS

It goes without saying that certain parts of the globe, such as the polar regions, the large deserts, et cetera, are sparsely covered with international networks of observing stations. Less known and even more detrimental to progress in mateorology is the fact that observations to describe the processes at the interface between the Earth and the atmosphere are almost universally absent. As a result, our knowledge of the heat and cold sources associated with the Earth's surface is exceedingly meager, and so is our knowledge of the supply of water vapor to the atmosphere. Though, through indirect methods, we are able to account for long-term balances and mean values, we are quite unable to cope with individual cases. This lack of observations of the processes surrounding the lower interface is a severe obstacle in the way of progress in the science of meteorology and its application to practical problems. It should be noted that this deficiency in our observing system can be eliminated without waiting for new technological developments. Furthermore, observations of the type here mentioned would be of great interest also to oceanography, hydrology, agriculture, water and soil conservation, pollution control, et cetera.

During the last two decades or so we have had international networks of sounding stations where balloons are released twice a day to measure the pressure, temperature, mois ture, and the winds aloft. Under ideal conditions such balloons will reach altitudes of about 100,000 feet, but normally the height is considerably smaller. In recent years customary rockets have provided useful data above about 200,000 to 300,000 feet. We find. therefore, that there is a wide gap, roughly from 70,000 to 250,000 feet which needs to be covered with direct measurements. Here, too, no essentially new technology need be developed to eliminate the deficiency: there are good reasons for believing that relatively inexpensive rockets can be developed and equipped with instruments suitable for the type of observations here needed. In populated regions rocket fragments may create a problem, but it should be possible to develop suitable materials. Observation on winds in the layer here under discussion may be obtained also from radio-telescope observations of meteor trails.

4. COMMENTS ON PREDICTION AND CONTROL

In the normal course of production of new scientific knowledge, one has first to observe, then to describe and lastly to explain. After a phenomenon has been explained, or understood, one may consider to what extent it is predictable and/or controllable. All ex-perience indicates that the large-scale phenomena in the lower atmosphere are predictable to some extent, but the degree of predictability has not been determined. the present time, little is known about the predictability of the small-scale phenomena in the lower atmosphere and nothing is known about the predictability of the phenomena above about 60,000 feet. Also, very little is known about the controllability of any atmospheric phenomenon, except that certain cloud types may be modified locally.

As meteorology develops as an environmental science, the questions of prediction and control will become more urgent, and real mastery of our environment will depend upon progress in these fields.

5. COMMENTS ON MANPOWER

With the rapid development of science, technology, and industry after the Second World War, the acquisition of highly trained personnel has become a major problem. The situation appears to be most urgent in the earth sciences, and within these meteorology occupies a rather unique position.

At the present time less than I percent of the meteorological profession is engaged in teaching, with the result that production of new personnel is far behind the demand for production of new knowledge. With the vigorous programs for stimulation and support of research and education developed by the National Science Foundation we may hope that the influx of young talent to meteorology will increase. However, the impact of these programs on progress in meteorology will be felt only gradually, and the Congress should realize that the atmospheric sciences need special consideration over a prolonged period.

To stimulate and maintain the influx of talent to meteorology we must provide more research opportunities and better scientific careers. In addition to preaching these laudable principles we need establish real beacons to attract young students. The National Institute for Atmospheric Research will be a major beacon when it becomes a

physical reality. Other beacons must be established by our universities. In the meantime, I will assume that, to some considerable extent, the manpower situation will be solved during the 10-year period under review.

6. PROGRESS DEPENDING ESSENTIALLY UPON SATELLITE OBSERVATIONS

It is difficult to speak on this subject without duplicating what has already been stated in the aforementioned paper by Dr. Reichelderfer. Since I shall try as far as possible to avoid duplication, reference must be made with his paper.

I shall assume that by 1970 a variety of satellites, not only of the Earth but also of the Moon, the Sun, and the near planets (e.g., Mars and Venus) will have been in operation for at least one-half sunspot cycle. I shall assume also that "soft" landings on Mars and Venus have been made succesfully. Looking then for results which may be of practical value, the following suggest themselves:

(a) The most important meteorological result to be obtained from a solar satellite would be the chance to observe the time worlation of the solar electromagnetic and corpuscular radiation over a period covering at least one-half solar cycle, say 5 years or more. It is known that the visible radiation undergoes only small variations but the short-wave radiation varies greatly, as does the corpuscular radiation. A quantitative study of the total solar energy input into the Earth's atmosphere and its time variation will yield essential knowledge of the ultimate cause of the atmospheric changes in the upper atmosphere.

(b) The Earth satellites will provide us with the other piece of essential information—namely, the output of the Earth's atmosphere both radiative and particulate (neutrons) and its time variation. The observational difficulties may be great, but I feel they will be overcome within a few years. We will, I hope, be able to explore not only the whole spectrum of the Earth's radiation back to space and the time variation of each portion of the spectrum, but also be able to detect the uppermost atmospheric level from which each part of the spectrum originates.

(c) The combined information from (a) and (b) above will not only give us the desired knowledge of the mean energy budget of the Earth as a whole (a subject upon which we already have some information) but will enable us to attack the more difficult problem of the Earth's reaction to solar activity, answering such questions as: "What layers react most? By how much?" "How far down in the atmosphere are appreciable effects produced?" "Is there a timelag between the operation of cause and effect?" "Do the effects integrate, so that the atmospheric output as a whole varies slowly with Answers to these questions would the Sun?" set up a framework for the study of the more complicated interrelations of the radiations within the troposphere.

(d) The role of the Van Allen belts in trapping high energy particles and the discharge of the particles into the auroral zone of the atmosphere when solar activity is high will be elucidated further. The physicists will certainly do this, but long-term measurements are needed before we can say what effect, if any, these discharges have on the atmospheric circulation above (say) 100,000 feet. So far, only effects on atmospheric density and electrification have been studied. The extremely strong winds already observed in the auroral zone during the polar night, for example, undergo abrupt changes in direction and speed that have been supposed by some to be "triggered" by solar activity. It is conceivable that aircraft may soon be operating in the lower parts of this system. Forecasting of the changes at

these levels is going to a meteorological problem in the not too distant future, and

it will certainly be a difficult one.

(e) Planetary satellites and "soft" landings on other planets will open up fascinating fields in meteorology. The composi-tion of other planetary atmospheres is known to differ from ours. One neighbor, Mars, has roughly the same angular velocity as ours; Jupiter exceeds our greatly; Venus rotates very slowly. The energy input of the Sun varies with the square of the distance. In our solar system, nature has set up a variety of meteorological experiments. It has been said that the meteorologist at present is in the position of a biologist who has to study only one species of animal, though he knows that many others exist. A truly general dynamic meteorology ought to be able to predict the general circulation of any planet. To do so may not be our privilege, but we must prepare the path and do our share of the work.

It is possible to foresee the early establishment of robot observing stations on Mars and Venus. At first these stations will measure for us only surface pressure, temperature, wind, etc., but even this information Would lay down the foundation for a description of the broad aspects of the circulation. In the Earth's atmosphere the water vapor and latent heats play an important part. Mars' atmosphere is notably dry, and it would be very instructive to know, in comparison, how a dry atmosphere behaves.

For other aspects of satellite meteorology reference is made to Dr. Reichelderfer's paper.

7. PROGRESS DEPENDING ESSENTIALLY UPON APPLICATION OF FLUID MECHANICS TO ATMOS-

In this field new vistas have been opened up by two recent developments. First, the development of electronic computers has made it possible to solve equations which describe, at least in broad outline, the evolution of the large-scale motion systems of the atmosphere. Second, through the development of new experimental techniques, it has become possible to reproduce experimentally, in rotating tanks, the essential features of a variety of atmospheric motions. Both these approaches are highly promising and, as more satisfactory observations become available, one may confidently expect to achieve a basic understanding of atmospheric motions and a greater capability to predict changes. In particular, the following developments are expected within the coming 10-year period.

- (a) The development of successful operational models i describing the general circulation of the atmosphere. This will lead to a better understanding of the causes underlying the mobile weather and motion systems and increased ability to predict the behavior of such systems. Considerable improvement in the accuracy of short-range forecasts and some extension of the forecast period may be expected through such researches.
- (b) Our ability to understand and predict the behavior of hurricanes has been very limited, mainly because of lack of observations from the pertinent ocean areas. Observations from Earth satellites, combined with balloon and radar soundings, will greatly enrich the observational data. Furthermore, recent research indicates that it will be pos-sible to construct realistic hurricane models which will lend themselves to numerical treatment by electronic computers. The problem of predicting hurricane storm surges (a related oceanographical problem) lends itself to the same kind of treatment. Progress in these fields will depend greatly

upon the acquisition of pertinent observations.

(c) Much of the weather in the United States develops around mesoscale systems. Examples are squall lines, thunderstorms, hailstorms, tornadoes, etc. As suitable observations become available, it appears possible to construct models which will lend themselves to treatment by electronic computers. Considerable improvement in our ability to predict the behavior (and perhaps also the initial development) of such systems is expected.

(d) Referring back to section 6 it may be noted that the extent to which the circulations of the upper and lower layers of the atmosphere are coupled has remained an unsolved problem. Such coupling has often been postulated but never satisfactorily explained. It is expected that models will be constructed and numerical experiments carried out to determine the extent to which such coupled motions are important.

(e) Many of the mathematical models which can be constructed for tests with electronic computers can be simulated in physical experiments with rotating liquids. It is expected that progress will be greatly accelerated by proper coordination between physical and numerical experiments on the one side and actual observations and analyses of atmospheric states on the other.

8. PROGRESS DEPENDING ESSENTIALLY UPON OB-SERVATIONS WITHIN THE ATMOSPHERE

While satellite observations will provide the items that enter into our global energy budgets, and the present balloon soundings will continue to provide basic data for skeletal analyses, more refined observations throughout the atmosphere are required if we are to explain and predict the behavior of individual motion and weather systems.

The requirements in this area are well described in the aforementioned report of the University Committee on Atmospheric Research, and it suffices here to summarize as follows:

(1) Observations from extensive networks of the exchange of heat and water vapor between the Earth and the atmosphere.

(2) Sounding systems which will provide observations from the layer between about 70,000 and 250,000 feet (see sec. 3).

(3) A network of electronic probing devices to record the physical structure of atmospheric systems and their changes.

(4) A relatively small number of highly instrumented aircraft for observations on the chemical and microphysical process associated with condensation, precipitation, electrification, etc.

Observation of the type described under (3) and (4) above are gradually becoming available, notably in the United States, U.S.S.R., and United Kingdom. As soon as observation in the categories (1) and (2) also become available from sufficiently larger areas, we shall be in a position to really describe the atmospheric processes and understand their behavior.

Though standard observation from the polar regions, large deserts, and certain ocean areas will remain sparse for some considerable time, satellite observations of cloud systems, and supplemental observations from reconnaissance systems will provide data to bridge the gaps. We shall then be in a position to cope with the global aspects of the atmosphere as well as with the behavior of a variety of superimposed weather systems on different scales.

Though all this may not be achieved within the coming 10-year period, we must strive toward this end. On the way we shall find that the questions of the predictability and the controllability of atmospheric process have become considerably clarified; we would expect considerable improvement in the accuracy of general weather forecasts; greatly improved accuracy in disaster warnings (hur-

ricanes, tornadoes, etc.); some extension of the time period for which useful forecasts can be provided; and new capabilities in the forecasting of the conditions of the uppermost atmosphere. Finally, I am certain we shall see that meteorology has developed en-gineering capabilities with extensive applications in agriculture, soil and water conservation, pollution prevention and control, and in a great variety of services to the general public, government, business, and in-

9. WEATHER MODIFICATION AND CONTROL

Though progress in the field of weather modification and control is inseparable from progress in meteorology in general, a word or two may be said here on this isolated subject since public interest in it is very strong. Without being unduly optimistic we may say that if the Government agencies concerned continue to maintain a program of carefully designed experiments which lend themselves to thorough statistical and/or physical evaluation, we shall be able, within 5 to 10 years, to determine the extent to which present techniques are capable of augmenting precipitation, modifying or controlling hall, lightning, etc. By about 1970 the Government should be in a position to formulate a nationwide policy in the general area of weather modification and control insofar as customary cloud and weather systems are concerned.

On general principles it is possible to believe that the behavior of hurricanes could be influenced by cloud physics operations, but little research has been carried out to

ascertain the possibilities.

There is nothing in our present knowledge to indicate that the general circulation of the atmosphere, the distribution of climates, and similar large-scale features can be influenced

by man.

Regardless of the extent to which weather may prove controllable, research on the physics, chemistry, and dynamics of clouds is essential for our understanding of a wide spectrum of atmospheric processes. Progress in this general area has been hampered, at times, by overoptimistic applications and crash projects to determine practical results. The efforts should now be concentrated on thorough scientific investigations which will yield basic knowledge of the processes themselves, and thus clarify the inherent predictability and controllability.

10. FURTHER REMARKS

In concluding I would like to point out some features which are typical of the present state of affairs in meteorology. Firstly, since the end of the last World War meteorology has been a neglected scientific field, the results that a severe manpower problem has developed in atmospheric research. Secondly, meteorology is an integra-tion of many sciences, so that interdisciplinary activities are essential for progress on a broad front. Finally, many of the most important problems in meteorology are of global nature and can be solved only by piecing together information and results of research in many lands. Though the weather systems do not respect frontiers, language barriers have severely hindered free flow of knowledge.

It is my firm belief that very substantial progress in the science and in the service of meteorology can be achieved over the coming

10-year period-

(a) By creating stable research programs, facilities and opportunities which will attract new talent to meteorology and related fields in the earth and space sciences;

(b) By maintaining an extensive program of interdisciplinary activities to stimulate exchange of ideas and coordination of efforts;

(c) By maintaining a greatly expanded program for speedy translation, abstracting, etc., of pertinent publications in foreign languages.

¹ Here, the term "model" refers to a mathematical formulation of the laws of motion applicable to a specified type of atmospheric Bystam.

11. ACKNOWLEDGMENTS

My grateful thanks are due to the colleagues mentioned below for their comments on the progress that may be expected in meteorology over the coming 10-year period: Prof. R. H. Byers, the University of Chicago; Prof. H. G. Houghton, Massachusetts Institute of Technology; Prof. C. E. Palmer, the University of California at Los Angeles; Prof. G. W. Platzman, the University of Chicago; Prof. H. Riehl, the University of Chicago.

Address of Most Worshipful Max Seligman, Grand Master of Free Masons of Grand Lodge of the State of Israel

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. HUMPHREY. Mr. President, earlier this year it was my pleasure to visit with Most Worshipful Max Seligman, grand master of Free Masons of the Grand Lodge of the State of Israel.

At that time I discussed with him the splendid humanitarian work of the Masons in Israel. I was so impressed with the work the Masons are doing in Israel that I asked Mr. Seligman to furnish me with some of the details of that work.

I am happy to say, Mr. President, that I now have a copy of the paper delivered by Mr. Seligman before the Masonic Service Association here in Washington on February 25, 1960.

I feel this summary of the work of the Masonic Order in Israel is particularly appropriate, as preparations are being made for the second annual Masonic pilgrimage to Israel and Europe on June 4 through June 29 of this year.

The honorary chairman of the pilgrimage is former President Harry S. Truman.

I should like to say a few words about Mr. Seligman himself, whose varied background and successful career are typical of the leadership of this splendid dynamic State of Israel. Seldom in history have so many gifted men and women joined together to create a completely new society. In some ways it is reminiscent of our own experience on the eastern seaboard of North America when similarly gifted and energetic men and women formed the Thirteen Colonies and later the United States. Mr. Seligman was originally a Welshman and is a graduate of the Technical College of the University of Wales, Cardiff, as well as of the Government Law School in Jerusalem. He has been a prominent member of the Palestine and Israeli Bar since 1929, is the founder and was chairman for a number of years of the Israel and British Commonwealth Association. He was installed as the grand master of the Masons of the Grand Lodge of the State of Israel on December 22, 1959.

I ask unanimous consent to have printed in the Appendix of the Record,

the address of Mr. Seligman of February 25, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Paper Delivered Before the Masonic Service Association by Most Worshipful Max Seligman, Grand Master of Free Masons of the Grand Lodge of the State of Israel, February 25, 1960, Washington, D.C.

Grand masters and brethren, first permit me to express my gratitude and that of the Grand Lodge of the State of Israel to your executive secretary, Worshipful Brother John Cunningham, for his never falling courtesies and wholehearted friendship. Our American coordinating representative, Brother Monty Winslow has spoken so highly of you, Brother Cunningham, that we feel that we have in you a good and loyal friend. Our thanks also to Brother Conrad Hahn and very par-ticularly to Brother Sam MacIntosh for their interest and helpfulness. I found, upon arrival in Washington, that the first person to greet me was none other than Brother Ray Denslo whom I have heard of for so many years through his heading your foreign relations committee. Freemasonry in Israel-what a veritable wealth of mysticism and significance to our craft is contained in this short phrase. It conjures up many ideas, visions, truths, and evidences of our life, facts and problems that our brethren in Israel face and which are unique to our own jurisdiction. No talk on this subject can be complete, however, without a brief résumé of our grand lodge's history so that you may be more fully aware of how our present day problems have evolved.

As you all know ancient Israel is reputed to be the legendary birthplace of our craft. Our rituals are replete with their references to King Solomon's temple. Modern masonry in Israel goes back to the middle of the 19th century, when the first Freemason's lodge in the then Palestine was formed by French engineers engaged in the building of the Suez Canal. That lodge, the Aurora has seen many forms and now almost 100 years old, retains much of its French origin and works under our present constitution as Barkai Lodge. In 1902 Scottish Freemasonry appeared in Palestine in the ancient Arab citadel town of Acre. As time progressed other constitutions formed lodges in the then open mandated territory. Scottish Freemasons made the greatest impact and left the heaviest continuing impressions on our changing freemasonry scene.

It is of interest to note that, in the latter part of 1948, following the establishment of our present State of Israel and the ending of the British mandate that three lodges operating under the English constitution terminated their Palestine operation and were moved elsewhere.

With the establishment of the State of Israel and under the initiative of a group of energetic Scottish past masters, negotiations were opened for the erection of a sovereign grand lodge of Freemasons in Israel. After no small effort, in which your humble servant played some part, the great day dawned, October 20, 1953, when the present grand lodge of the State of Israel was erected and consecrated under the aegis of the grand lodge of Scotland with the full consent of the grand lodges of England and Ireland. The red letter day in the annals of Israel Freemasonry was marked by the presence of the Earl of Elgin P.G.M .: Grand Secretary R. W. Bro. Buchan; Grand Master Davidson of the grand lodge of Netherlands and large numbers of visitors from Scotland, South Africa, England, the Netherlands, United States of America, and other countries. On the same evening, immediately following the erection ceremonies, and

with the blessing of the Earl of Elgin, all of the lodges, operating in Israel under different constitutions were granted charters by us. We then found ourselves faced with the problems with which every grand lodge must cope plus the added problems en-gendered by the daily vicissitudes of our beloved land of Israel. Today we have 48 lodges operating under the constitution of the grand lodge of the State of Israel. Most of these lodges operate in Hebrew, but there are lodges also operating in French, Rumanian, English, and German. Yes, and there are no less than four Arabic-speaking lodges as well. Of the overall group four are English speaking, one the George Wash-ington Lodge operating under New York rites and preparing Americans who are in Israel under point 4 or as American Embassy staff members. Our proud boast is that we in turn send them back to their native America as master Masons, made in Israel-our favorite export. Our grand lodge seal with its self-contained Star of David (or Mogen David) the cross of Christianity and the crescent of the Moslem world best exemplifies the spirit of true brotherhood and real unity of Masonry in action in Israel which stands at the crossroads of inter-national Freemasonry. We proudly point to the Koran, the Old Testament, and the New Testament which lie on our lodge altars and on which our candidates take their obligations on the respective good book which they individually hold dearest to themselves. So you see that we, every day in Israel live our Masonic lives ever mindful of the basic principles of Freemasonry.

I have mentioned four lodges which are comprised predominantly of Arab brethren. They take an enthusiastic interest in their lodges. You may ask what problems we have that are not akin to yours here. Our grand lodge is faced with several that are indigenous to our land. In Israel our earning power is keyed to the economy of our country. As a yardstick example, a mu-nicipal judge does well to earn 1£500 to 1£600 per month. From this the Govern-ment with various and assorted taxes, including income tax, removes well over 40 percent. From the balance our illustrious member must maintain himself, his family and household, and attempt to provide for his family's growing needs. At this point, for your information, we point out that 1 Israel pound is worth 55 cents Ameri-can. If he is fortunate in having children of high school age there again goes If60 to I£120 per month per child to keep them in school. The Government provides free schooling only through the eighth grade. So you can see where normally elsewhere the grand lodge is supported by its daughter lodges, we grand lodge officers in Israel are faced with the problems of supporting almost 60 percent of our daughter lodges in their charity programs and situations that are not covered by the nominal dues which many of our members have enough difficulty in meeting.

It is significant to know that, in the entire Middle East, Israel forms an oasis where Moslems, Christians, and Jews meet together for Masonic work and pleasure in complete amity. This is really what a speaker yester-day referred to as "applied Masonry." In Israel, up to this past year, we faced the basic problem of our grand lodge (to say nothing of the daughter lodges) having no suitable place to meet. All worked in rented premises often far too small to hold the brethren wishing to enter. However, with the help of the G.A. of the U. we have managed to make some progress in meeting this problem-In Haifa (in the north) our daughter lodges banded together to erect a small but tasteful temple. In Nathanya, likewise. In the south, in historical Ashkelon, our newest and smalest lodge has acquired a suitable plot of land and emulating your American do-it-

yourself craze, are erecting their own temple ultilizing the building skills assembled among the brethren. In Tel Aviv, a city which has just celebrated its 50th anniversary, grand lodge has moved into a new temple by means, to use another American phrase, "Operation Bootstrap," that is, by taxing its own membership a minimum of I£100 per head. I am proud to tell you that every member in Tel Aviv paid his assessment and today we have the first floor of our grand lodge temple completed. Our substantial balance of \$50,000 still due the builders will be paid off, I assure you, within the next 6 months. How, I cannot tell you here, as yet, but it will be the very spirit of brotherhood which has brought our grand lodge to its present milestone of achievement.

In the field of rehabilitation we face a problem which no other grand lodge in the world must meet. Eschewing politics no one can deny that the State of Israel is constantly absorbing new immigrants. A population of half a million has absorbed over a million refugees. Among them are no small number of Freemasons, many of whom have managed to escape from concentration camps and from countries behind the Iron Curtain. They arrive in an impoverished state similar to our new candidates, that is, without any worldly possessions, and to put it mildly, divested of all metallic substance whatsoever.

What is our task in this? In every fashion to help the brother rehabilitate himself and restore his usefulness to himself, his family, and his new found country. To reinstill in him the feeling of being a freeman on free soil. To help him assume his rightful place among his equals, to reaffirm in him the realization that he is among brethren. this end we have established a Masonic oldfolks home in Naharya, an immigrant Ma-sonic fund, an orphanage fund, a student bursary to provide education loans to Masons and their children, a crippled children's fund, a polio victims' fund, a Masonic youth fund, a defective children's fund, a Masonic or-Phans' education fund, and so forth, as well as participation by the daughter lodges on their own community levels in assorted aid

We of the grand lodge of the State of Israel are constantly mindful of the terrific responsibilities which our obligations have imposed upon us in all these respects.

We in turn however are not unmindful of the interest exhibited by our Masonic brethren in other lands, and last year during July we entertained the first annual Masonic pilgrimage to Israel from United States and Canada under the guidance of R. W. Russell P. Kantor 33°. We are at this very moment entertaining 120 Masons from England. Next June 4 we look forward to the second annual Masonic pilgrimage of United States and Canadian Masons under the leadership of your very own Most Worshipful Chester Hodges 33° P.G.M. At this Point, I would most certainly be remiss if I did not extend to all of you a most warm invitation to join this second annual pilgrimage with your loved ones and to visit your brethren in Israel, the land of the Bible. We are proud to tell you that the great mafority of our pilgrimage members will be brought to our shores by Israel's own national airlines, the world famous El Al.

Sincerest thanks to the Masonic Service Association from whom we have learned much this year, and I salute you until we meet again with my country's classic salutation. Shalom, lehitroht.

Some Problems of the Independent Federal Regulatory Commissions

EXTENSION OF REMARKS

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. HARRIS. Mr. Speaker, it was my honor and pleasure to address the annual dinner meeting of the Federal Trial Examiners' Conference on some of the problems of the independent Federal regulatory commissions. In that our committee has been studying these problems for some time and have proposed legislation under consideration, I know of no group which I think more appropriate than this distinguished group for discussion of these problems. Because of its importance and interest manifest in these problems, under unanimous consent I extend my remarks and include it therein:

SOME PROBLEMS OF THE INDEPENDENT FED-ERAL REGULATORY COMMISSIONS

(Remarks of Hon. OREN HARRIS, chairman, House Committee on Interstate and Foreign Commerce, at annual dinner of Federal Trial Examiners' Conference, May 5, 1960)

Mr. President, members of the Federal Trial Examiners' Conference, honored guests, it is a great pleasure for me to appear as your speaker tonight, at the annual dinner of the Federal Trial Examiners' Conference. As you know, my duties as chairman of the House Committee on Interstate and Foreign Commerce and of two of its important subcommittees have brought me intimately into touch with many of the problems that confront you. Of course, our committee work has been concerned with the problems of the regulatory agencies administering statutes under the jurisdiction of the Committee on Interstate and Foreign Commerce. For that reason we have not focused on every problem that might face all of you, particularly those of you who serve as examiners in executive agencies. And yet I think that the matters we have had occasion to consider in connection with the adjudicatory functions of the independent commissions are pretty representative of many matters of professional interest to your whole member-

Tonight I thought I would discuss with you four topics of relevance to the adminis-I am sure most of you will recognize that these topics are roughly the same ones considered in the panel discussion hearings held last June before the Subcommittee on Legislative Oversight of the Interstate and Foreign Commerce Committee. At those highly instructive sessions, the subcommittee had the benefit of the views of several of you. You will remember that there was a good deal of difference of opinion on practically every point raised. In the matter of ex parte contacts, for instance, everybody professed to be against sin, but a number of our distinguished panelists seemed to prefer a little sin to any proposal that would do away with it. It is the belief of the committee, however, that from the give and take of opposing viewpoints set forth in the hearing record will emerge a workable approach to the ex parte and other

As you know, we have tried to do just that in H.R. 4800, the bill I introduced in the first session of this Congress as a result of recommendations contained in the Legislative Oversight Subcommittee's report to the 85th Congress. I also introduced H.R. 6774, a bill proposed by the American Bar Association and also designed to cope with the problem of improper pressures on agency personnel, Now the legislative hearings we held in March and April of this year indicated a few imperfections in those bills. But I believe that the general approach is a sound one and that legislation in this field is essential.

I. REGULATORY COMMISSIONS AND THE ROLE OF HEARING EXAMINERS

First, I want to touch briefly on the role of the independent commission in the regulatory scheme, and to try to cast some p spective on the adjudicatory function of the hearing examiner. It is not my intention to justify the existence of the independent regulatory commission. While the commission as a regulatory instrument has its critics, I feel it has demonstrated that it has a permanent place in our governmental scheme. I think we'll all concede that no human arrangements are without their flaws. In recognition of this, we strive to diagnose them and to apply whatever remedies seem necessary and practicable. I simply do not hold with certain commentators on the administrative process whose proposals seem to me equivalent to burning up the roost to catch a chicken thief.

Many of us are in danger of forgetting that these regulatory commissions were established, not to fulfill some grandiose scheme of visionary planners, but to meet down-to-earth, practical difficulties. time went by, experience amply showed that rail, water, and air transportation, electric power, interstate communications, security exchanges and the like would not adequately serve the public interest if left in the hands of large unregulated corporate owners. It became clear that the responsibility of the managers of these giant organizations to their stockholders must be accompanied by a corresponding responsibility to their customers and, indeed, to the public generally, Accordingly, the Congress, as representative of the public interest, intervened to redress the imbalances and dislocations in our economy brought about by the unfettered sway of these corporations affected with a public interest.

So it was for practical reasons that Congres delegated to regulatory commissions diverse broad discretionary powers limited by the confines of enabling statutes.

Formal adjudication is but one phase of the work of most regulatory commissions. In addition, they are directed to investigate, advise, prosecute, study, legislate, supervise, and enforce. The commission member must wear many hats. We hear it suggested, and the charge has some foundation, that occasionally a commission member forgets to take off his prosecuting or legislative hat when he is supposed to be deciding an adversary dispute.

The job of the commission hearing examiner is to see to it that such disputes are initially heard and decided in the proper judicial manner when the situation calls for judicial procedures. His duties are not concerned with the legislative, supervisory, prosecutory or enforcement functions of his agency. But when opposing parties compete for favors available through his agency or resist enforcement measures the agency seeks to impose, the trial examiner will be called upon to determine the rights of the parties. His determination must be based on substantial evidence taken at a hearing.

He hears and observes the demeanor of the conflicting witnesses and counsel. He has a firsthand opportunity to appraise the credibility of witnesses and to make findings of fact based on his firsthand experience. In these matters his role is precisely analogous to that of a trial judge or master charged with finding the facts of a dispute without a jury. As such, the agency hearing examiner's findings, if contested, should be entitled to considerable weight. It is no secret to you, however, that the weight given to the findings of fact and conclusions of law of hearing examiners varies widely from commission to commission.

Now without in any way trying to glorify trial examiners or pretending to magnify their importance all out of proportion, it is obvious that the examiner is of central and crucial importance to the success and integrity of agency adjudication. Both the agencies and the Congress, as well as your own Federal Trial Examiners' Conference, are constantly trying to devise means of improving the training and quality of hearing examiners and, correspondingly, of enhancing their compensation and prestige and of improving their working conditions. Of these matters I shall have something more to say later.

II. EX PARTE PRESSURES

The second point I want to take up with you is the problem of improper ex parte approaches to commission personnel. In our consideration of this problem, the Committee on Interstate and Foreign Commerce and the Subcommittee on Legislative Oversight have heard a wealth of commentary. Putting aside for the moment the very tough questions of propriety of ex parte contacts in connection with rulemaking proceedings, even adjudication has given us trouble. When, for example, does adjudication begin? Does it begin when either the agency or an outside party files a first pleading invoking agency action? Or does it begin only when a second party comes into the picture, that is, when a contest of some kind becomes inevitable? Is it sufficient to bar ex parte communications at the stage when the separation of functions provision of the Administrative Procedure Act takes effect, or may the damage not be done by that time? sufficient to prohibit ex parte communications with "decisional personnel," or should the ban go farther? How can routine procedural matters and matters leading to tlements, stipulations, and more expeditious procedures be handled without leaving open the door to more sinister approaches? H.R. 4800 prohibits certain approaches concerning the "issues, merits, and disposition" of agency matters. Does this language go far enough? Does it attempt too much? Is it sufficiently clear to afford reasonable guidance to commission personnel and to the public?

What weight should be given the findings, rulings, and recommendations of hearing officers? What restraints should be placed on their powers to control their own proceedings? Do the hidden review procedures in certain commissions afford a means of circumventing the hearing examiner and thus effecting an improper result?

These are only a few of the questions raised in hearings before us during this session of Congress. Even more difficult questions arise concerning the uneasy borderland between adjudicatory and rulemaking proceedings. The latter are conventionally and, for the most part, properly likened to the proceedings of a legislative body. The agency, like the legislative body, is seeking information from all possible reliable sources to assist it in formulating as intelligently and fairly as possible rules to govern future conduct. The procedures associated with the trial of a law-suit, with its limitations on parties in interest, evidence restrictions, and so forth, are as

inappropriate to the quasi-legislative as to the legislative task.

We are becoming increasingly aware that the distinction made in the Administrative Procedure Act between adjudication and rulemaking in some instances breaks down. Recent developments have taught us that adjudication and rulemaking are not watertight compartments. Rather, they are useful guides, readily applicable in the bulk of agency proceedings. But where, as in the celebrated Sangamon Valley case, handed down in May 1959, the outcome of a rule-making proceeding in effect determines the substantive rights of contesting parties, ex parte contacts with Commission personnel should be strictly circumscribed. Too many people have gotten the idea that the sky is the limit if only they can tag the rulemaking label on a given proceeding. Perhaps the hardest task confronting the draftsman of legislation is to devise language to cover this type of borderland situation.

But despite the many vexatious questions raised by an effort to bring a higher level of integrity to Commission proceedings, many of which I suspect merely conceal a desire to prevent any tightening up at all, our committee intends to go forward with its efforts. If H.R. 4800 or H.R. 6774 or some combination of their provisions cannot best do the job, modifications can be made that will strengthen existing law while recognizing certain criticisms as legitimate. Our hearings on this legislation were to some extent marred because of the failure of some critics to address themselves carefully to the actual language of the bills. In fact, I had doubts as to whether some opponents of the legislation had even read all the provisions they opposed.

III, EXCESSIVE DELAYS AND REDTAPE

The third general topic I want to mention tonight is the question of increasing redtape that is threatening to strangle the administrative process. Among the matters of overriding importance that have caused concern. even alarm, are the related problems of unduly protracted hearings and extensive length of hearing records, the high costs of Commission proceedings, and the frequent lengthy delays in bringing agency matters to a conclusion. Apart from the inconvenience and financial loss caused by these factors to litigants, their representatives, and the agencies, they have been cited as an unintended inducement to ex parte activity. Many such contacts begin as a result of frustration and exasperation with interminable agency delays. As one experienced attorney told the Subcommittee on Legislative Oversight in 1958:

"Ethics in the administrative process is linked with efficiency in administrative operations. The climate for fast deals or sly arrangements is good when administrative operations are marked by excessive delays, inadequate procedures, complexity of regulations, poor public information provisions, and so forth.

"On the other hand, efficient operations tend to keep everyone on a straight and narrow path."

One agency for which the Legislative Oversight Subcommittee has figures is the Civil Aeronautics Board. The CAB issues some 175 opinions and orders a month, some 2,100 a year. At least 32 tons of this "green stuff," as the opinions and orders issued on green letter-size paper are called, are issued and distributed annually. In a recently heard route proceeding now awaiting an initial decision by the Examiner, the written testimony and exhibits which should be required

to be served on all parties were estimated by the subcommittee staff to weigh some 15 tons. We hear of proceedings dragging on over several years, and there is at least one instance of a hearing officer's decision that exceeded 650 pages.

. The cumbersomeness of such procedures represents a burden that falls heavily on the hearing officer. People outside the agencies got a graphic idea of what this burden can mean from a photograph in the September 1959 copy of Fortune magazine showing one of your veteran members, the Chief Hearing Examiner of the Federal Power Commission, almost hidden behind a mound of hearing transcripts, briefs, exhibits, etc., for a single case.

These unwieldy proceedings are expensive, both to the regulated industry and to the Commissions concerned. Ultimately, of course, the American people bear the heavy costs. The taxes they pay suport the Commissions, and they indirectly pay the industry bills through inflated rate bases, subsidies, and the like.

A number of causes are suggested for these problems: inadequate agency personnel, clumsy hearing procedures often stemming from inadequate power in the examiner to direct and control the hearing, excessive and secret intra-agency review of examiners' findings, obstructive tactics by parties and their representatives, inefficient and bureaucratic staff work, uncertainty as to limitations on parties in interest, abuse of the principle of the Ashbacker case, and so on. Unquestionably all these factors and many others contribute to the confusion. The blame, if it is fair to ascribe blame for such a complex situation, lies in no one place. I think there are some respects in which the Congress could lend a hand. But the effort must be a cooperative one. Neither the Congress, the agencies, the examiners, the regulated industries, nor the bar alone can do the job.

I have tried to take at least a first step toward dealing with the situation. With the help of the staff of the Subcommittee on Legislative Oversight and representatives of each of the so-called "Big Six" regulatory commissions, we have established an Advisory Council on Administrative Procedure. The Advisory Council is in the process of collecting, sifting and evaluating a mass of detailed factual information respecting agency procedures. Our expectation is that the council will serve as a clearinghouse that will before long be able to advise the Congress as to concrete measures that might be taken, measures based on a careful appraisal of up-to-date, documented information.

Since one of the classical reasons advanced for resort to the administrative process was the need to avoid the unwieldy procedures of courts of law, it is clear that the situation I have described calls for corrective action. Increasingly we hear doubts as to whether the regulatory commissions can "do the job." It is up to all concerned to show that it can if it will.

IV. PROBLEMS OF HEARING EXAMINERS

Finally, I turn to my fourth point, a discussion of some questions of immediate practical concern to all of you—the role of hearing examiners in the administrative process.

Many factors enter into a determination of this role—the extent to which the agencies determine general questions of policy in advance of the decision of a particular case, the breadth of the discretion vested in examiners to control proceedings before them, the weight attached to their reports, the facilities and assistance furnished to them for the performance of their duties, and,

¹ Sangamon Valley Television Corp. v. United States, 358 U.S. 49 (1958) and, on remand, 103 D.C. App. 113, 255 F. 2d 191 (D.C. Clr. 1959)

² Ashbacker Radio Corp. v. FCC, \$26 U.S. 327 (1945).

above all, the caliber of the men chosen for these positions.

There is a widespread, though by no means universal, belief that examiners could function more effectively if the agencies gave them more policy guidance for the handling of specific cases. One of the most experienced practitioners before the ICC, John R. Turney, has said that:

"The failure of administrative agencies, including the ICC, to engage in clear-cut policymaking has resulted in inconsistent unsound decisions and doubtless, in some cases, in unjust or discriminatory treatment of parties in different proceedings."

I'm sure you are all familiar with the provocative memorandum submitted to the President by Mr. Louis J. Hector at the time of his resignation from the CAB. In that memorandum he placed much of the blame for the delay in the disposition of important cases on the fact that the board assigns them for hearing without any policy direction whatever.

I know you don't all agree with Mr. Hector's view, but I believe it is a point which deserves serious study by the agencies themselves and by Congress.

Another important aspect of the hearing examiner's function is the extent of his power to control the proceedings in cases heard by him. Lack of adequate authority for this purpose is assigned as one of the causes of delay and the inordinate length of hearing records. One experienced examiner in an agency which has given its examiners relatively little discretion made the off-the-record observation that he would probably let a Sears, Roebuck catalog go into the record if any one offered it.

The extent of the examiner's effective control depends not only on the text of the agency's rules. In practice, it also depends to a large degree on the weight accorded to his conclusions in the final disposition of the case. When the final decisions are drafted by anonymous reviewers who are free to disregard the hearing examiner's findings, the examiner is likely to have difficulty in obtaining cooperation of the parties in his efforts to define the issues and expedite the proceedings. This was recognized by the Attorney General's Committee on Administrative Procedures in 1941. That committee noted in its report that as the conduct of the hearing becomes divorced from responsibility for decision two undesirable consequences ensue. The hearing itself degenerates, and the decision becomes anonymous.

Testimony before our subcommittee has shown that the practice deplored by the Attorney General's committee persists in some form in many agencies today. In some the hearing examiner's report passes through the hands of a succession of reviewers, each of whom is free to disregard entirely the report prepared by the examiner and to substitute his own conclusions based on a reading of the cold record. Moreover, the Subcommittee on Legislative Oversight has heard testimony that in at least one agency proceedings before the examiner have been regarded as a costly waste of time, because the final decision is believed to be reached by members of the agency in response to representations made either on or off the record after the hearing examiner has made his report.

While I am not sure that I see eye to eye with all of you as to the extent to which administrative proceedings should be judicialized, I most emphatically agree that every proceeding should be what it purports to be. Any proceeding which by statute or regulation is required to be decided in a record should, in fact, be decided on the record made in open hearings or on written pleadings, evidence and argument available to all interested persons.

I also agree with the conclusion of the Attorney General's committee that the status

of the hearing examiner "is the heart of formal administrative adjudication. It cannot succeed without competent and wellpaid men exercising functions of responsibility and interest. This is necessary to protect both the public interest and the private interests which are concerned in the pro-

There was recently introduced in the House of Representatives a bill, H.R. 11669, which is designed to attract and retain the ablest men as hearing examiners. Although it was referred to another committee, the Committee on Interstate and Foreign Commerce is interested in it because of the central role played by examiners in administration of statutes within our jurisdiction. In addition to the higher salary scale provided for examiners generally, this bill has two other features which are significant to the administrative process. One is the fact that the statute itself prescribes the grade for examiners in each agency. Secondly, places all examiners in any agency in the same grade. Both these changes take away discretion now exercised by the Civil Service Commission with respect to the assignment of examiners in various agencies to specific salary grades. I recognize that there are a number of arguments for and against the vesting of this discretion in the CSC. Two of the arguments in favor of withdrawing CSC discretion appeal to me as meriting particular study. One is that in determining whether to reclassify the position of an examiner in a given agency the CSC is alleged to give undue weight to the volume of the record made in proceedings handled by an examiner. Such a practice, if in truth it is followed, tends to defeat the objective of simplifying proceedings and shortening records. An examiner who hopes for a reclassification of his position or for promotion to a higher grade already allocated to the agency is said to face the dilemma of being penalized if he courageously exercises his authority to confine the testimony to the relevant and important issues, reducing its volume and sharpening the issues, or of being rewarded if he allows the parties to prolong the proceedings and encumber the record with a mass of irrelevant material.

A second point urged in favor of the proposed change is that where examiners in any agency are assigned to two or more grades, the CSC is believed to give great weight to the recommendations of the agency for the promotion of examiners. The result, it is said, is that in certain agencies examiners in lower grades are susceptible to pressure because of the fear that their opportunity for promotion will be jeopardized if they propose decisions contrary to the desires of senior staff members or of individual members of the agency. I refer to these matters not to pass judgment on their merits, but simply to indicate that they deserve serious attention in the consideration of H.R. 11669.

With respect to the proposal to assign examiners in the major regulatory agencies to a higher grade under the Classification Act of 1949. I was interested to discover that in 1941 the Attorney General's Committee on Administrative Procedure recommended that for major agencies, salaries for hearing com-missioners should be \$7,500 and for chief hearing commissioners, \$8,500. Translated into the deflated dollars of 1960, these figures would, I believe, exceed the highest salary now paid to examiners in these agencies.

To make the best use of their examiners' time and skill, agencies must furnish them adequate working quarters, facilities, and assistance. Unhappily some agencies have not found it possible to do this. In such cases a modest investment in additional space equipment and clerical and technical assistance would probably pay large dividends in sounder decisions and speedier disposition of cases.

The Government, and the people, are for-tunate in having men and women of your stature and dedication to duty who are willing to accept, even under adverse conditions, the responsibilities of adjudicating the almost unbelievably complex cases arising under statutes regulating various forms of business enterprise. The Subcommittee on Legislative Oversight has benefited greatly by the insight into the administrative process presented by members of your conference who have participated in its panel discussions. I bespeak your continued interest and cooperation in our efforts to hammer out legislation to improve this process and to put an end to the abuses which our hearings have revealed.

Graham A. Barden and Carl T. Durham

EXTENSION OF REMARKS OF

HON. SAM J. ERVIN. JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. ERVIN. Mr. President, on May 6, 1960, the North Carolina Society of Washington honored two of North Carolina's ablest and most beloved sons, GRAHAM A. BARDEN and CARL T. DURHAM. who are voluntarily relinquishing their seats in the House of Representatives after years of consecrated courageous and intelligent service to their districts, State, and country. On that occasion the society's charming president, Mrs. Fred W. Morrison, paid eloquent and happy and merited tribute to those distinguished North Carolinians.

I ask unanimous consent that this tribute be printed in the Appendix of

There being no objection, the tribute was ordered to be printed in the REC-ORD, as follows:

It is unusual for the North Carolina Society to pay tribute to two men at the same time. It is logical and appropriate that our guests, Representative GRAHAM A. BARDEN and Representative Carl T. Durham, should be honored together tonight. Both of these North Carolinians got their education at the University of North Carolina, got it through considerable sacrifice. Both served in the Navy in World War I. Both became professional men—one a lawyer, the other a pharmacist. Congressman Barden was elected to Congress in 1934, Congressman DURHAM in 1938. They have served together for over 22 years. They are two friendly, but exceedingly individual persons, each going his own way, subscribing to his own convictions, maintaining, however, at all times, a cordial relationship based on mutual respect.

My husband, who has known both since they were university students (and who thinks he knows them much better than I do—a very manly mistake) has at times said things like this to me about Mr. DURHAM and Mr. Barden. He says each is a gentle-man, and each is a positive character—firm, vigorous in standing up for his thinking and for his position and policy. Their ways of standing up, he says, are usually quite dif-ferent. Mr. Durham is quiet, genteel, sweet in maintaining his position. Mr. Barden possesses these same virtues. But he never means to show them openly until after he

has had a big fight first.

It would be impossible to list formally their achievements. Let me merely say

that Congressmen Barden and Durham are men of great ability who are keenly aware of the uncertain world about them, of the threat of new and dangerous social and economic movements, and of the ominous implications of the discoveries of science. Both men have gained national stature in Congress.

Representative Carl T. Durham, for over a decade, has had to deal with the problems of mass destruction through nuclear weapons as a member and chairman of the Joint Committee on Atomic Energy since it was established in 1946.

Representative Graham A. Barden is now the 20th ranking Member in the entire House membership. He has served as chairman of the powerful Committee on Education and Labor since the Reorganization Act was passed consolidating the Committees on Labor and Education. His leadership in legislation to help the physically handicapped, in vocational education programs, the passage of the Taft-Hartley law, Federal aid to education and the recent laws designed to control corruption in labor unions is well known.

Both of these men are affable, genial and easy to know. They have gone through life possessed with an enormous amount of what I shall call political charm, with which they were able to convert acquaintances into friends. But this genial, affable manner was sometimes deceptive. Occasionally there were people who assumed that this friendly exterior was a sign of softness. Nothing could have been further from the truth. Actually both of these men have in their makeup an element of steel when an effort is made to attack their deeply held convictions.

And so tonight we salute Graham Barden and Carl Durham, who in their separate ways symbolize much of the good in North Carolina. They are men easily recognized in any crowd: Mr. Durham with his silver hair, courtly manner, bowing graciously as he passes from individual to individual, bestowing on all the friendly benediction of a family doctor; Mr. Barden with his dynamic personality, laughing and joking with his friends and displaying that manner which made him equally at home on the streets of New Bern or in the sophisticated circles of Washington.

There is a salutation that has come down to us from the days of ancient Rome which is a combination of joy and sorrow. The words are "Hail and Fareweil." Tonight the members of the North Carolina Society would like to reverse this ancient phrase and acclaim our friends Barden and Durham by saying "Fareweil and Hail." For we are determined not to have them leave us with a word of parting, but to cherish always as a living thing their gallant service for the Nation and the "Old North State." The words of Paul to his young colleague, Timothy, are so appropriate: "I have fought a good fight, I have finished my course, I have kept the faith."

We of the North Carolina Society wish you Agnes and Graham and you Carl a happy and much earned vacation and rest. We will miss you. We wish you to continue to hold on to your abiding interests and friends, to stay young and grow new ones, to play, to work—not too much, to live life—to know the best is yet to be.

The board of governors, by acclamation, confer upon you Mr. Barden and you Mr. Dubham, honorary membership in the North Carolina Society. And from the members of the North Carolina Society I present a small gift to each of you as a token of our love and friendship.

Twelfth Anniversary of Israeli Independence

SPEECH

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. ROOSEVELT. Mr. Speaker, 100 years ago, in the city of Budapest in Hungary, Theodore Herzl was born. Twelve years ago, in the city of Tel-Aviv in Palestine, the State of Israel was reborn. It was Herzl's birth which made possible the rebirth of Israel.

In 1894 Theodore Herzl was the Paris correspondent for Die Neue Freie Presse. the leading Vienna paper of the time. As such he covered the Dreyfus affair and was deeply affected by the cries of "Death to the Jews" of the Paris mobs. He came to the conclusion that the only solution to the Jewish problem, the only way to safeguard the future of European Jewry, was the establishment of a Jewish state. In 1896 he published a pamphlet called "The Jewish State," in which he set forth his ideas, and, 1 year later, he began putting them into effect by forming the Zionist Organization. For the next 7 years Herzl devoted himself to obtaining the approval of the great powers for the establishment of a Jewish national home in Palestine, but he was unsuccessful, and when he died in 1904. at the age of 44, his dream remained unfulfilled.

Herzl did not invent the idea of a Jewish state. The idea, in fact, was almost as old as the Jewish people. What Herzl did accomplish was to convert the Jews into a political force. In the words of David Ben-Gurion, Israel's Prime Minister:

Herzl created "Jewish statesmanship," and forged the tools and implements the people needed in its fight for liberation and revival: a world platform, the framework of national organization, political representation, the instruments of state finance.

Herzl gave his followers a political purpose and the means to fulfill it. Like another great Jewish leader, Moses, he did not live to reach the Promised Land. However, 2 years after the State of Israel was proclaimed his remains were brought to that country and buried on one of the hills of Jerusalem where the people of Israel paid homage to the founder of modern zionism and the father of the State of Israel.

Theodore Herzl had a favorite saying: "If you will it, it is no dream." The Zionists adopted this slogan as their own. Despite the opposition of many groups they colonized Palestine. In a country which was mainly desert and swamp they reclaimed the land and made it productive. Notwithstanding the slaughter of millions of Jews by the Nazis they readled themselves for independence. Finally, on May 14, 1948, they proclaimed the State of Israel.

The struggle, however, was not over. Immediately after the state was proclaimed it was attacked by five Arab nations. Although Israel defeated the attackers and signed armistice agreements with them the Arabs refused to allow the new state to live in peace. Egypt encouraged "fedayeen," or guerrilla, attacks on Israeli villages. Israeli ships are barred from the Suez Canal. An economic boycott by all the Arab states has been in progress for many years.

Nevertheless, the Israelis have remained true to their slogan. In the brief dozen years of the state's existence it has accepted and absorbed nearly 1 million refugees from Europe, the satellite nations of communism, and from north Africa, and the Middle East. It has increased its industrial production from almost zero to over \$950 million. The cultivated area of the country has been more than doubled, and the area under irrigation increased fivefold. The desert has been made to bloom, cities built where originally mud huts stood. Schools have sprung up to meet the needs of the population.

Israel is attempting also to pay back the United States and the free world for their financial aid and support by giving aid in turn to the newly emerging states of Africa and Asia. Trade agreements between Ghana, Nigeria, Guinea and Burma and Israel are proving beneficial to all parties. Israeli technicians and trade specialists are of invaluable assistance to the Africans. Israel is thus acting as a bridge between East and West and drawing Africa closer to the free world.

On this 12th anniversary of Israeli independence I salute the magnificent accomplishments of the Israeli people. And with them I pay homage to the memory of Theodore Herzl who dreamed a dream which has become reality.

A Cold Wind Blows From North Korea

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, May 6, 1960

Mr. WILEY. Mr. President, we recall that, in the Korean conflict, the sons of America, along with the sons of other allied nations, paid a great price to withstand the spread of communism, and keep alive the flames of liberty.

Although the shooting has ceased for almost 6 years, the border area between North and South Korea is still an area of serious tension.

Today a great many Americans may have forgotten that we still have 40,000 sons of America in Korea—separated by a single strand of barbed wire from a North Korea bristling more and more with armaments—many imported in violation of terms of the truce.

As all republics striving to establish a free government, the people of South Korea are now having internal problems.

A big question, however, looms: Will North Korea-possibly prodded by Red China-take advantage of the present instability—temporary, I sincerely hope in South Korea to attack South Korea?

Too, we must ask ourselves, are we prepared to meet such a crisis there?

In 1951, the sons of America were rushed out-ill prepared and poorly equipped—to preserve freedom to the Korean frontier. We must not let this happen again.

Consequently, we must ask ourselves: Are we ready and able to assure our troops the adequate equipment and support to defend themselves and accomplish their military mission?

We cannot allow our soldiers in the Korean front lines to be "sitting ducks" if the North Koreans or the Red Chinese, in violation of truce agreements, should

again decide to attack.

Also, the free world, I believe, should restate its firm desire to resist and repel any such aggression. In addition, the U.N., I believe, could again well take a new look at the conditions along the North-South Korean border to provide all possible safeguards against ruses, or excuses, under which North Korea might use the difficulties in South Korea as an opportunity for attack.

Recently, the Milwaukee Journal published a thought-provoking article by Lindsay Hoben, entitled "A Cold Wind Blows From North Korea." In addition, Look magazine recently published an article by J. Robert Moskin, entitled "An Army Poised for Disaster." Reflecting upon serious conditions in an area in Which we have already paid a great price-and in which the free world still has a real stake—I ask unanimous consent to have these articles put at this Point in the RECORD.

There being no objection, the articles Were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Tribune]

A COLD WIND BLOWS FROM NORTH KOREA-EVEN AS FREEDOM RIOTERS WERE BREAKING THE RHEE GRIP IN SEOUL, THE POSSIBILITY OF NEW ATTACK FROM COMMUNIST NORTH CHILLED VISITOR TO BORDER SHED WHERE HOSTILE WORLDS MEET

(By Lindsay Hoben, of the Journal Staff)

PANMUNJOM, KOREA.-Here two worlds meet. They do not mix. Coldy they eye each other-day after day, week after week, month after month, year after year.

The wind rattles the plywood building as You enter the door from the Republic of Rorea. There are a few dozen seats and an oilstove at each end of the building. In the middle is a table with a green felt cover. Five chairs are along each side of the table.

The middle of the table is the border that now divides Communist North Korea and the southern Republic of Korea. About once a month five representatives from the United Nations and five from North Korea, including a representative from Red China, sit face to face across this table. As you look north there is a U.N. flag at the right, a North Korea fing at the left.

For 117 meetings they have sat, sometimes as long as 7 hours at a time. Nothing is accomplished. Nothing is expected to be accomplished. The five from the north come to make charges, sometimes fantastic, to furnish fuel for the Communist propaganda mill to disseminate through the Red world.

Patiently the U.N. members listen and rebut, knowing that nothing will come of this, or of any other meeting of this military armistice commission (MAC). For there is only an armistice between the armies that still face each other all along the breadth of Korea. Both are on the alert 24 hours a

day, ready for instant combat.

The senior member of the United Nations command, a lanky U.S. Air Force of-ficer, tells you of the endless negotiations. At every one of the 117 meetings the North Koreans start by denying the right of the U.N. to be in any part of Korea and by demanding the U.N.'s withdrawal. At every meeting the U.N. refuses the demand and, in turn, demands free elections for all of divided Korea.

All of these endless conversations are taped. Hopeless as it sounds, the U.N. representatives consider the meetings worth while. "After all, they serve as a place of contact. We look at each other eyeball to eyeball—and there is no shooting."

EIGHT-HUNDRED-YARD NEUTRAL CIRCLE

The wind flaps the door at the North Korean entrance to the building.

In the 800-yard-in-diameter circle in which this building stands in the demilitarized zone, both sides may move freely. So you step to the North Korean side of the

You walk out the North Korean door. few feet away stand two stolid North Korean guards on an observation tower. They watch you impassively—no smiles, no scowls, absolutely no expression at all, just a cold war stare.

Here, surely, is one of the strangest borders between the Red and the free worlds. Here stand long, green sheet metal and plywood buildings housing United Nations personnel. Mixed in between them are North Korean masonry and stucco buildings. Some are only a few feet apart. Thus men of the free world and of the Communist worldfrom both sides in this Korean war (for, remember, there is no peace, but only an armistice-live side by side and pass each other every day.

There is no regulation to keep them from

fraternizing. But they never speak to each other. Each side may bring guests (ours is a group of free-world members of the International Press Institute) into this strange 800-yard area. Each side notifies the other in advance of plans to bring in visitors.

LOOK DOWN ON FIRST COMMUNES

You walk along to a height of land where you look down on the first communes of North Korea. Peasants are preparing their rice fields. Before you is the "bridge of no return" across which persons from north and south chose to go depending on their decision on which part of Korea they wished to live in after the shooting on this front ceased toward the end of 1951.

The hills of North Korea stand sharply against the bright blue sky. The sun beats down on the pine and scrubby oak. trenches in the sandy soil are filling in as the sides crumble. Spring is almost here. A few flowers, perhaps azaleas, bloom in the brush. The brown grasses wave in the wind. Small, green patches show in the marshes. Huge, awkward magple nests, 2 or 3 feet across, abound in the willows along the road to the south. Some buds are swelling.

The life of a coming season, yes, but there is no normal human life in this demilitarized zone. Patrols follow the paths only. Deadly mines still lie buried everywhere else. Game abounds for there is no one to hunt it. Only two little villages remain in this zone of death. One is reached, perhaps once a week, by patrols taking in supplies from

the south; one from the north. These vil-lagers refused to leave when war raged around them. They refuse to leave now.

CATSUP BOTTLE CALLED "GRENADE"

But it is a sealed frontier. No one passes across it.

You drive a few thousand yards south on a dusty road just south of the edge of the demilitarized zone. Here is an officer's club in a ritzy quonset hut, * * * fireplace,
* * * mounted Korean ring necked pheasants over the mantle, * * * a hi-fi, * * * piano, * * * the most northerly bar in

the Republic of Korea.

An officer is talking: "Their eagerness to An olicer is talking: "Their eagerness to pick quarrels is beyond belief. One of our trucks drove past one of their guard bar-racks near the MAC building. A plastic cat-sup bottle fell off. Out rushed the north Korean guards. They erected a stone wall around the catsup bottle, to preserve it as evidence, then charged that a U.N. truck had dropped a grenade in front of a north Korean building and demanded a special meeting of the armistice commission. That's the way it goes."

After lunch you go up to a command post high on a hill. You watch a demonstration of manning front positions. An Indian editor from Calcutta is asked to push a button. Sirens screech. Men, like ants, rush from buildings in the valleys; tanks and trucks start up the dusty roads. Jeeps are everywhere. In 19 minutes-a new record-every combat post is fully manned. The com-mander from our hill orders post after post to send up flares to mark position. Green, yellow, red.

A few minutes later smoke billows in grow ing clouds. The flares have fired the dried grass and brush. "Detach as many men as necessary to fight fires on point so and so."

Down the broad valley in front of us have come the invaders of South Korea from the time of Genghis Khan to June 25, 1950, when the North Koreans crossed the 38th parallel.
In the distance, from their hidden look-

outs, Communist North Koreans are watching us now. What are they thinking? Will they attack again, especially if the Republic of Korea is torn open by strife?

The demonstrations are beginning in Seoul. The pressure is mounting against Synghman Rhee. [This was written before he was deposed.] Koreans slipped up to us this morning in Seoul and gave us handbills to read, telling us of Rhee's tyranny and the stolen elections, of their determination to demonstrate in spite of police orders.

"MY OLD MOTHER CAN ONLY WEEP"

The wind has now risen almost to a gale. Our giant U.S. Army helicopters are grounded. We start back to Seoul by bus, over wretched roads, past pitifully poor vil-lages, men and women slaving in the fields. A railroad ends in nowhere. It once brought fine trains down from Manchuria. It was 31 years ago that we came this way as a young correspondent for the Journal.

It was one Korea then, but the people

hated being ruled by Japan.
A Korean surgeon tells us: "My old mother can only weep whenever I go to see her. I fought with the ROK forces. One brother went north and joined the Communists; we do not know whether he is alive. Another brother joined the Japanese Army."

Yes, it is two Koreas now and no one can

see a solution.

But a cold wind blows from North Korea.

[From Look magazine] AN ARMY POISED FOR DISASTER (By J. Robert Moskin)

It is cold in the Korean hills now. And tense. Up front, the infantry patrols in bulky parkas and boots hug old tank trails to avoid the minefields. Rifles and radios weigh heavily on their backs. The wind

from Siberia burns their faces. Sentries shout "Halt!" in English and Korean and, if unanswered, shoot to kill.

Almost 6 years after the Korean war armistice, there is still no peace. A single strand of barbed wire separates North and South Korea; beyond it waits an alert, bitter enemy. Americans back home, listening to the debates over missiles, space shots, and taxes, have forgotten that we still have more than 40,000 soldiers in Korea.

These soldiers, most of them youngsters in their teens and twenties, are helping guard a nervous frontier of the free world. Their military mission is to block the key invasion routes to Seoul. If the Communists attack, they are supposed to help the Republic of Korea's army defend South Korea, held at such a bloody price 10 years ago, and to throw back the invaders if they can.

The shocking fact about our Army in Korea is that it faces disaster. Gen. Carter B. Magruder, commander of United Nations forces and the American 8th Army in Korea, admits, "If there was fighting that used up equipment rapidly, we could not support sustained operations." The thousands of American soldiers there are in danger of being wiped out if war should begin again.

Our Army in Korea is armed chiefly with World War II-style weapons. General Magruder says, "The Army has many items of proved hardware that it has not been to afford to buy in adequate quantities to equip the whole U.S. Army—including the people out here." The 8th Army has no M-14 rifles—the equal of modern Russian rifles—no M-60 machineguns, no M-48 tanks, no M-59 personnel carriers, no surface-to-air missiles for air defense.

"We could do a better job with less casualtles if we had new weapons," says Gen. Isaac D. White, commanding all U.S. Army units in the Pacific. "Our equipment is in good operating condition, but it is old and isn't as modern as we'd like to have. We've been passed by the Russians in the modern quality of equipment they have given their troops since World War II."

Down to rockbottom: Much of our oldstyle equipment in Korea is in short supply. "We are right down to rockbottom in logistic support," says Gen. George H. Decker, U.S. Army Vice Chief of Staff. Vehicles the Army needs for modern mobility—2½-ton trucks, for example—are rebuilt as many as six times to keep them running.

General Magruder adds, "We need funds for operation and maintenance to have the reserve we are authorized to have to support combat operations. We do not have that reserve now."

A major at the supply depot near Seoul sums up the resupply problem thus: "We are at the end of the longest supply line in the world. There is nothing behind us."

If ordered to fight with nuclear weapons, the 8th Army would be no better off. It would have to depend on a few primitive types like the obsolescent Honest John rocket, the 8-inch howitzer, and the dinosaurian 230-mm gun. The Army has developed better nuclear weapons, but they are not available in Korea. And even the newer types would not insure us battlefield superiority. An officer in charge of Army special weapons development warns, "We would be utterly naive to think Russia didn't have missiles as good as ours."

Equipment is only one of the critical problems that endangers our frontline army in Korea. Another is manpower. Even at peak moments, our two divisions there have only two-thirds of the Americans they are supposed to have. They are filled out with native Korean troops. Veteran officers know of no precedent for using members of a foreign army to man American units. For the most part, these Korean soldiers, called Katusas, are unskilled conscripts who speak no English. Because they are useless in technical or skilled jobs, they are used as infantrymen. In some of our rifle squads, more than helf the soldiers are Koreans. Says one U.S. general, "50 percent of our fighting soldiers are missing."

The tour of duty for American soldiers in Korea is now 13 months. This means that a sizable portion of the 8th Army leaves every month. After 13 months, everyone has been rotated—from battle group commanders to infantry privates. The Katusas, who serve in our units from 18 to 24 months, provide the continuity.

Our troops in Korea are supposed to be able to fight until more men and equipment could be rushed in to support them. The trouble is that no one in the U.S. Army knows how long they would have to hang on. Officers in charge of the Army's war plans have been unable to win commitments from the Air Force, which is responsible for air-lifting troops. Army planners don't know the numbers or types of planes that would be ready to meet specific emergencies. "We have no planning figures available to us," protests one war-plans colonel. The defense of Korea, he says, has to be planned in a vacuum.

Reasons for the Army's predicament: Why does the U.S. Army lack the weapons and manpower it needs if lives are not to be wasted and a war in Korea lost almost before it begins?

National policy put ceilings on the \$41 billion defense budget and on the Army's 23-percent share of it. Stretched over the jobs the Army has to do around the world, this money is regarded by the men responsible as inadequate to put more men and materiel into Korea.

According to national policy, the threat of massive nuclear retaliation will prevent the Communists from starting another war. Army officers point out that this deterrent did not prevent Red aggression in Korea, Indochina, Laos, or India. And the recent Rockeller Report on foreign policy and defense asserts that the frightfulness of nuclear weapons makes the retaliatory threat less creditable against local aggression. An enemy like the Chinese Reds might gamble that we would not throw the first hydrogen bomb.

The Army itself is torn between preparing for a ground war and obtaining a role in the missile and space revolution. It is also eager to "go for broke" to develop an antimissile missile for the defense of the continental United States. The Army's leaders argue that they cannot separate ground and space. Even a future nonnuclear war, they say, may require reconnaissance from space or communication via space satellites. Fifty percent of the Army's research and development money, for example, goes into speeding up missile and space work. New rifles and tanks have to move more slowly. But General Decker says, "We have to be ready to fight either way."

An investigation of what could be done to make our troops in Korea ready to fight points to these conclusions:

- 1. Our national policy must include adequate preparation for ground warfare to hold the borders of the free world and to protect the safety of American troops overseas. Last spring, Gen. Maxwell Taylor, then Army Chief of Staff, bluntly told Congress, "We do not have the necessary forces to cope with the threat of limited war."
- 2. Modernization of the Army must be speeded up. The Russians have completely reequipped their army since the end of World War II and are already in a second round of modernization. As in missiles and satellites, we have been passed by the Russians in the quality of the soldier's arms and equipment. President Eisenhower, in his state of the Union address in January, said

Army modernization is going forward "at a rate which will steadily add to our strength." But it will be years, for example, brfore our soldiers in Korea have the M-14 rifle. They still use a World War II rifle and a 1918 machinegun. This weapons gap is not being closed. General Decker warns, "At the present rate, we are going to lag behind."

3. Money must be spent to maintain our current World War II-type equipment. General Magrudor estimates that it would cost \$5 million to give our troops in Kores enough spare parts for combat—a relatively small sum in an age when a bomber costs

\$6.7 million.

4. The 8th Army—nose to nose with an armed enemy—must be relieved of depending on foreign conscripts to fill out its ranks. Until recently, Army brass refused to criticize the Katusas arrangement. But now General Magruder, while praising the Korean soldier as a fighter, admits, "A unit that is partially Korean and partially American is not as satisfactory as one that is all American." He estimates he would need 6,000 more men to fill his ranks properly with Americans. Whether they can be obtained by freeing back-line troops for compat duty or by raising the Army's ceiling of 870,000 men needs to be determined.

5. Plans for airlifting troops must be made in advance. The Air Force is reluctant to do this because it would cut into its missile and Strategic Air Command bomber funds. But until the airlift problem is faced up to, all military planning for a ground war is meaningless. The Army's leaders do not want planes sitting idle awaiting an emergency, but they do plead that new long-range, fast troop carriers be developed and built, that aviation fuel and parts be stockpiled at strategic points and that crews and aircraft be earmarked so they can move out at a moment's notice. Even with such planning, it would require weeks to move a division into Korea.

- 6. Our soldiers in Korea must be provided with adequate air defense. "There is a very great need here for surface-to-air missiles," says General White. Nike-Hercules missile batteries have already been sent to Formosa and Okinawa, but they are not now being used to protect our own soldiers in Korea. Only within the past few weeks has the Army admitted the need there. Some will be sent in the future.
- 7. The Army's generals must be encouraged to fight for their ground-war needs. Representative Daniel J. Flood, Democrat, of Pennsylvania, told the generals at the defense-budget hearings last spring: "The Army does not fight for itself any more. You quit in the last several years." The generals are afraid to speak out and tell the public what they need. Recently, they were warned again that if they opposed the official Washington reliance on a nuclear deterrent too vigorously, they would be "fired." An Army running scared before the fighting begins will cost American lives if war does come.

Ocean Research Studies

EXTENSION OF REMARKS

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. OLIVER. Mr. Speaker, today the competition between America and

Soviet Russia is rapidly accelerating in the area of oceanographic research. Which leadership will win in these attempts to reveal the secrets of our ocean depths, and, thusly, gain the advantage Which these incredible resources will givas

In this struggle, our country's oceanographers constitute a vital force in America's first line of defense. Scientists, engaged in the field of oceanic research, are required to devote many hours to tedious routine duties; time Which they could be spending more fruitfully in the evaluation of data and basic research.

Capt. Henry G. Munson, hydrographer of the Navy, has suggested the development of a new educational program designed to train technicians in the field of marine science to relieve oceanographic talented experts from some of these more routine requirements. supplement this proposal, the Navy Department is donating a vessel for the use of the Maine Vocational Technical Institute of South Portland, Maine, as a floating classroom for the training of such technicians. Earl Hutchinson, principal of the institute, is making plans for the initiation of a course designed to accomplish this objective.

This project can and will be an important step forward in accelerating our program of oceanographic research to its fullest potential. It has been most satisfying for me to cooperate in the

initiation of this project .

In more detailed explanation of this program, the newspaper story which ap-Deared in the Portland Press Herald of May 4 is inserted herewith, as well as an editorial published in the same paper on May 5:

[From the Portland Press Herald, May 4, 1960]

MVTI TO GET MINESWEEPER FOR OCEAN RESEARCH STUDIES

(By May Craig)

Washington.—The mothballed mine-Sweeper Seagull is expected to be transferred to the Maine Vocational Training Institute in South Portland in about 3 weeks, U.S. Representative James C. OLIVER said Tuesday

The minesweeper will be used by MVTI as a floating classroom for marine research,

ship handling, and fisheries.

OLIVER said he expects the deal to be consummated perhaps with payment of \$1 to the Navy. He believes the transportation, made without time-consuming legislation, made without time-consuming legislation. He believes the transfer can be

The MVTI will agree to return the ship to the Navy in the event of national emergency, and meantime must maintain it in

condition satisfactory to the Navy.
Principal Earl Hutchinson of MVTI and Oliver confered Tuesday with Capt. Henry G. Munson, hydrographer of the Navy, who is so excited about the prospects that he wants to go down to Philadelphia and help sail the Seagull to South Portland when it is overhauled sufficiently for the voyage.

The Navy is in process of transferring the vessel to the State for use of MVTI, free of charge, except that the school will pay

charges incident to delivery.

Hutchinson and the MVTI instructor in charge, Arthur Jordan, and five or six students will go to the Philadelphia Naval Yard to get the vessel probably in June.

Wednesday Hutchinson, Oliver's Portland assistant Kenneth Curtis, and Lt. Cmdr.

F. S. Vecchione, U.S. Navy, will go to the Philadelphia yard to inspect the Seagull, the wooden-hull minesweeper of the Albatross class, 136-foot length, 241/2 feet width, maximum draft 6 feet, powered by two diesel engines, was manned by wartime complement of 50 officers and men.

MVTI has 150 boarding students, and 150 commuting students, more will be attracted by the expansion contemplated by Hutchinson and Representative OLIVER who is a member of the Oceanography Subcommittee of the House Committee on Merchant Marine and Fisheries.

At a press conference Tuesday in the office of Capt. Paul Bower, official adviser to the Oceanography Subcommittee, he and OLIVER and Hutchinson expatiated on the bright future of the institute. Munson described the marine science program as a revolutionary new concept in the field of oceanography.

There is urgent need for oceanographic technicians, they all said. With increasing stress on submarine warfare today, the se-crets of the oceans depths, currents, temperature, deeps and caves are vital to our defense. Disposition of radioactive wastes are an increasing problem, with question whether present disposal in the ocean in concrete barrels is safe.

Hutchinson said we face increasingly efficient Russian fishing vessels, equipment and technique, and the simplicity of oldtime fishing is gone. Fishermen need training in electronic gear and methods not dreamed of by their fathers,

Hutchinson cited the professionalism of fishing today, the larger vessels which the Soviet now has in the Grand Banks, as well

as the Baltic countries.

There is nothing on the east coast like what Hutchinson and OLIVER are contemplating, they said. The Navy is interested because of the defense angle involved and the atomic scientists also. Captain Bower said "we must look at the sea as an environment" for fish, and need to study temperatures and currents in relation to fish.

Hutchinson said that Canada is advertising for 300 to 400 technicians in marine science. The demand far exceeds the supply, and demand will increase, they said. The U.S. Weather Bureau says there are wide gaps in our knowledge of what the sea can teach us and much research is necessary.

[From the Portland Press-Herald, May 5, 19601

OCEANOGRAPHIC STUDIES AT MVII BY NO MEANS A VISIONARY NOTION

With excellent reason the Navy is pushing for an expanded national program in oceanography. It sometimes calls the ocean depths "inner space." The phrase is apt in more ways than one for not only is what lies beneath the surface of the seas more mysterious in many ways than what lies in the heavens but our knowledge is equally fragmentary. Considering that the oceans cover about 70 percent of the earth's surface it is clear that neglect of oceanography is neglect of a good deal that could be useful

in either war or peace.

At first glance the launching of the Maine Vocational Technical Institute into active study of oceanography and the training of people skilled in its techniques seems a long reach on the part of the South Portland school. Long it may be but it makes a large amount of sense for in its small way it puts the youth of the maritime state of Maine in close to the beginning of an endeavor that is bound to broaden. Moreover the usefulnes of oceanographic techniques to Maine's fishing industry is self-evident.

The Navy is interested enough to turn over a surplus World War II minesweeper to MVTI for oceanographic studies. And anyone familiar with MVTI knows that enthusiasm for and application to the new prospect will not be lacking. Our compliments go to the school for this promising venture and to Congressman James C. OLIVER who, as a member of the Oceanographic Subcommittee of the House Committee on Merchant Marine and Fisheries, has taken a leading interest in this important but as yet generally unrecognized subject.

U.S. Satellites Surpass Reds' in Effectiveness of Instruments

EXTENSION OF REMARKS OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "U.S. Satellites Surpass Reds' in Effectiveness of Instruments," published in the Lexington (Ky.) Leader of April 18, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. SATELLITES SURPASS REDS' IN EFFECTIVE-NESS OF INSTRUMENTS

On the basis of results so far, it is safe to say that the United States has taken the lead from Russia in adventures into space.

In only one respect, apparently, does the Soviet have the advantage, and that is in launching power. Using rockets of tre-mendous thrust, it has put into orbit satellites much larger than any the United States has sent up.

However, the American satellites are far more sophisticated, as the scientists say, than the Russian. Their instruments are more refined and have greater capacity for observing conditions in space and relaying information back to earth.

At the time the Russians launched their first sputnik and many people of the United States went into hysterics of terror, the Leader pointed out that America had not engaged in any race with Russia to see which country would be first up with a satellite. While the Kremlin was striving for propaganda advantage by being first, the United States was seeking scientific knowledge. It wanted to send up instruments that would have a practical advantage, and in this it has vastly exceeded Russia.

In a little over a month, American scientists have launched four valuable satellites, Pioneer V, with its very long-range, longlasting radio; Tiros I, the weather-observation television device, and Transit I-B, which is designed to give navigational fixes for surface ships. Its data will be available to all nations wanting it. It also sent up Discoverer XI, with a capsule that was intended to release at an elevation of 200 miles but remained in orbit instead of descending.

By contrast, Russia has not launched an earth satellite in almost 2 years, but has to and concentrated on tossing spheres around the moon and into solar orbit. Yet in this field, the United States also has made great strides, and has exceeded Russia in perfection of instruments the satellites contain.

Kentucky's John Sherman Cooper, speaking in the Senate last Thursday, asserted that Senators seem more prone to make speeches about Russian space achievements than about America's. He called attention to the success of the three satellite launchings in a 5-week period, and pointed out that they represented three firsts in three different fields of peaceful use of space.

"Had the launching of Pioneer V. Tiros, and Transit been Russian accomplishments, we would have heard many speeches about it on the floor of the Senate, expressing great concern about the state of our scientific progress and the delinquencies of our space program, and calls for imagination and urgent steps by the administration," Senator Cooper declared. "As it is, these exciting demonstrations of scientific progress and technical capability by U.S. satellites have aroused little comment in the Senate."

Prizewinning Letter in Christian Endeavor's Citizenship Contest

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. JUDD. Mr. Speaker, if we are to win today's struggle with atheistic communism, we must have more citizens with deep Christian convictions, who will take an active part in government at all levels, seeking to apply Christian principles in the political processes by which the kind and quality of government we have is determined.

Under leave to extend my remarks I am happy to include the first-place letter written by a young man from my district in division B—youth out of high school—in Christian Endeavor's citizenship contest for 1960 sponsored by the International Society of Christian Endeavor:

"LETTERS"-DIVISION B

(By David M. Olson, of Mineapolis, Minn., a sophomore at Wheaton College)

Beginnings are important. There can be no Christian citizenship—even limited—without first of all an awareness of citizenship. Christian citizenship means projecting our thoughts beyond ourselves. The natural direction of the human eye is inward—inward, to our own lives and interests and needs. We have to wake up and look outward and just see citizenship first. Instead of staying within our Christian groups and enjoying them, we need to feel a deep responsibility to our neighborhood, our community, and on out to the whole world.

I have three points in expressing myself here on Christian citizenship. I have mentioned the first: an awareness of citizenship itself and the need. Nehemiah saw the need. prayed, went back to Jerusalem, and with a sword in one hand and a shovel in the other, so to speak, rebuilt the wall.

I mentioned that he prayed. My second point is that prayer is an absolute must in being a good citizen for Christ. We do not have just a pattern alone in Christ—although He was a good citizen (rendering unto Caesar the things that were Caesar's). But He is also the source of everything we need for Christian citizenship. One of the most inclusive and encouraging verses of Scripture is Colossians 2: 10—"ye are complete in Him." So I know that the qualifications for Christian citizenship—which must be supernaturally supplied—are in that completeness. But only prayer can connect us with the source of the supply. And I am including in prayer the soaking in each day of His Word. Only a scripturally well-in-

formed person could cope with all that I feel must be involved in Christian citizenship.

Thirdly, I believe that the place to begin Christian citizenship is not far away—that it begins in small demonstrations and then moves naturally into bigger responsibilities. Sanding the icy walk for the old couple living next door is the type of beginning which will eventually lead—through God—to a larger, and then still larger responsibility in community citizenship. There are dozens of little ways of starting out at the beginning in Christian citizenship: courtesy when driving a car, when in a supermarket, when swimming at a public bathing beach, when getting in or out of an elevator, when telephoning. There is also the sharing in community funds of one kind or another. There is the matter of speaking out quietly at the right time—on such matters as liquor, dishonesty, subversive activities, etc. When I say "speaking out quietly," I do not mean without unshakeable convictions. But a caustic, prejudiced, uncontrolled Christian will lack effectiveness.

Here at Wheaton some of us like a little book by Amy Carmichael called "If." The thought presented in the book is that if you have the love of Calvary it will show up in your living with others. Christian citizenship—unlimited—really goes right back to Calvary.

DAVID M. OLSON.

Teacher Shortage

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. HUMPHREY. Mr. President, the Senate approved a Federal aid for education bill, S. 8, which includes authority for Federal aid for teachers' salaries as well as for needed classroom construction. I supported this measure and I spoke up during the debate on the need for Federal aid to our States and local communities to help them pay decent salaries to schoolteachers.

In the New York Herald Tribune of April 27 there is a report on our nationwide shortage of teachers. This report underlines the urgent need for further action by Congress and the President on the school aid bill passed by the Senate.

As the Rockefeller Report on Education puts it:

The root problems of the teaching profession remain financial. More perhaps than any other profession, teaching needs dedicated men and women to whom pay is not an overriding consideration; but, until we pay teachers at least as well as the middle echelon of executives, we cannot expect the profession to attract its full share of the available range of talents. Salaries must be raised immediately and substantially.

I ask unanimous consent that the article from the New York Herald Tribune be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION—TEACHER SHORTAGE IS STILL MAJOR PROBLEM

(By Terry Ferrer)

Need for adequately prepared elementary teachers is imperative now, and will become

even greater in the next 5 years as the Nation's elementary schools feel the full impact of the 4 million bables born each year since 1954.

This is one of the major conclusions of the 13th annual survey of the "Teacher Supply and Demand in Public Schools," prepared by the research division of the National Education Association and released yesterday in Washington. While the class of 1960 will produce 129,295 new teachers prepared to teach next fall, the survey said, only 95,000 of this number will actually go into the schools. This will leave a gross shortage of 135,000 teachers next fall—the same shortage as this year.

Among the prospective teachers, 80,465 have prepared to teach in high school, an increase of more than 12 percent over last year. But prospective elementary teachers number only 48,830, an increase of just over 2 percent.

Since there are eight elementary school jobs open for every five in the high schools, the survey said, "the division of the total supply between the two grade levels is out of balance." The imperative need for properly prepared elementary teachers "far overshadows the acute shortage of competent teachers in any of the high school teaching fields." In preparation, a quarter of all elementary teachers are not college graduates, while a third of high school teachers now hold master's degrees.

BREAKDOWN OF SHORTAGE

Dr. Ray C. Maul, director of the NEA survey, said in the report that the total shortsge of 135,000 is based on ideal conditions, with no overcrowded schedules and no teachers with emergency licenses. Ideally, he said, 230,000 new teachers will be needed next fall to replace the 110,000 leaving, the 40,000 unprepared, the 30,000 necessary because of increased enrollment, the 30,000 to relieve overcrowding, and 20,000 for services not now provided. Subtracting the 95,000 who will actually enter teaching, the shortage will be 135,000, he said.

The greatest gains will be made in the more crucial areas of mathematics, science, and foreign languages, the survey showed. There will be 5,650 new mathematics teachers—a gain of almost 32 percent over last year; 7,797 science teachers, up more than 26 percent, and 2,200 foreign language teachers, up 21 percent.

New York, according to the report, will produce more candidates for high school teaching jobs than any other of the 50 States. New York has prepared 5,711, an increase of almost 31 percent over 1959. Pennsylvania is second (5,195), and Texas third (4,750).

New York is second in preparing elementary teaching candidates, with a total of 4,776. California is first (5,514), and Michigan third (2,932).

More than 12,000 colleges and universities were surveyed for the report, which is available for \$1 at NEA offices at 1201 16th Street NW., Washington,

Panama Canal: Daughters of 1812 Resolution, 1960

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. FLOOD. Mr. Speaker, it was my privilege on April 25, 1960, to address the national defense meeting of the National Society, U.S. Daughters of 1812 on the subject, "Hemispheric Security—Con-

gress Must Reaffirm Our Historic Policies," which address was quoted in a statement to the House on April 28, 1960, by Representative Francis E. WALTER, of Pennsylvania. Subsequently, this splendid organization passed a resolution on the Panama Canal which I

NATIONAL SOCIETY U.S. DAUGHTERS OF 1812, RESOLUTIONE, 1960, 68TH ASSOCIATE COUN-

PANAMA CANAL Resolution No. 5

Whereas current demands to either "internationalize" the Panama Canal or permit Sovereignty of Panama over the Canal Zone Would not only threaten the political stability of that region but also threaten America's entire defense system; and

Whereas the Panama Canal has been constructed, maintained and operated by the U.S. Government under an absolute grant, in perpetuity, by terms of the 1903 treaty with Panama: Be it

Resolved, That the National Society U.S. Daughters of 1812 urge the Congress of the United States to reaffirm, by Joint Resolution the constitutional sovereignty of the United States over the Panama Canal Zone and further declare that the policy of the United States shall not permit Panamanian flags as "symbols" of a false sovereignty, nor surrender, compromise or in any way weaken the absolute and vital jurisdictional control, management and protection of the zone by the United States of America.

Voluntary Confessions and the Mallory Case

EXTENSION OF REMARKS

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. ERVIN. Mr. President, on May 4, 1960, the Twin City Sentinel, of Winston-Salem, N.C., contained a sound edi-torial entitled "Federal Courts Have Good Reason To Admit Voluntary Confessions." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial Was ordered to be printed in the RECORD,

as follows:

FEDERAL COURTS HAVE GOOD REASON TO ADMIT VOLUNTARY CONFESSIONS

Senator Sam Ervin has introduced a bill designed to mitigate or modify the effect two recent U.S. Supreme Court decisions. His measure would make voluntary confessions admissible in criminal proceedings and prosecutions in the courts of the United States and the District of Columbia.

That such legislation is regarded as necessary by some of our Congressmen may come as a surprise to many people. Over a long Period of time the voluntary confession of the accused has been widely recognized as the best evidence of guilt. But in the Mallory case the Supreme Court handed down a decision about 2 years ago which seemed to cast doubt upon any confession obtained by Federal law enforcement officers from an arrested person prior to a court hearing. This was the action involving an alleged rapist who confessed that he made a brutal attack upon a Washington, D.C., housewife. The confession was largely the basis for Mallory's conviction in the District of Columbia trial court.

After hearing the case on appeal the appellate court held that the confession should have been excluded from evidence. Its ground for this ruling was that the District police had held Mallory for 71/2 hours before bringing him before a judge for a preliminary hearing. The 71/2-hour period was too long, the Court held, and constituted an "illegal delay" between the defendant's arrest and his appearance before a judge. As the result of this High Court ruling Mallory went free, but only recently he was again arrested in Philadelphia and charged with the rape of another woman.

In the Mallory case and in a somewhat similar one involving a defendant named McNabb, the Supreme Court was concerned with safeguarding a defendant's right to protection against coercive third-degree treatment at the hands of police officers and his right to the advice of counsel before a hearing. But many critics have interpreted the appellate court rulings to mean that any statement made by a Federal prisoner after his arrest and before his arraignment are invalidated as evidence against him. Under this interpretation effective Federal law enforcement would suffer a grave blow. And the Mallory decision quite evidently turned a dangerous rapist loose on society.

Senator Eavin's bill would make any voluntary confession valid, apparently without regard to the time elapsing between arrest and arraignment. But in any event, long and seemingly unnecessary delay in bringing the prisoner before a committing magistrate would naturally create suspicion of coercion.

A number of lower appellate court rulings have tended to strip the Mallory-McNabb decisions of their broader interpretation. One such ruling holds that "unnecessary delay" does not mean mere passage of time, but a period in which what could and should be done to give the prisoner a hearing is not done. Another appellate court ruling holds that "reasonable questioning" by the police is permissible until police have had an op-portunity to reach "any accessible magistrate." If these rulings should be upheld by the Supreme Court, the need for the legislation proposed by Senator Eavin might be substantially lessened. But for the safety of society it is probably wiser not to gamble on how the various appellate courts are going to rule in confession cases involving dangerous criminals. A clear, plain statute which validates all voluntary confessions but places due emphasis upon the necessity to prove they are voluntary probably offers the best way to clear up the confusion created by the Mallory decision and abate its dangerous potentiallties.

Border Incidents Started in 1950

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times, Friday, May 6. 1960:

BORDER INCIDENTS STARTED IN 1950-NAVY PATROL BOMBER LOST OVER BALTIC WITH 10 ABOARD-OTHERS ARE LISTED

WASHINGTON, May 5 .- Following is an unofficial chronology of incidents involving Soviet and U.S. aircraft in the vicinity of the Soviet borders:

April 8, 1950: Navy patrol bomber dis-appeared over Baltic with crew of 10. The United States said Soviet planes shot it down.

November 6, 1951: Navy patrol bomber on weather reconnaissance flight disappeared over international waters off Siberia after Soviet planes fired on it. Crew of 10 missing.

June 13, 1952: Superfortress on reconaissance mission disappeared over Sea of Japan after takeoff from Yokota Air Base, Japan. No trace of aircraft or 13-man crew found. State Department protested to Soviet Union July 16, 1956.

October 7, 1952: Superfortress on routine reconnaissance flight over Hokkaido, Japan, disappeared after radar observation indicated interception at 15,000 feet still over Japanese territory. Communist report later said B-29 had been intercepted after firing on Soviet planes, but no further details.

March 15, 1953: Four-engine reconnaissance plane attacked by Mig 25 miles off Soviet territory and more than 100 miles northeast of Petropavlosk, Kamchatka. of two Mig's fired on U.S. plane, which returned fire. No damage to either plane. U.S. plane returned to Elmendorf Airbase, Alaska.

July 29, 1953: B-50 bomber shot down by Migs over Sea of Japan. One man recovered,

16 lost.

January 27, 1953: Jet reconnaissance plane escorted by 16 Sabrejets on mission over Yellow Sea attacked by eight Migs. One Mig reported shot down. No U.S. casualties.

September 4, 1954: Navy patrol bomber based in Atsugi, Japan, shot down by two Soviet jets over high seas, 40 miles off Siberian coast. One dead, 9 survivors.

November 7, 1954: B-29 photo reconnaissance plane shot down over northern Hok-kaido, Japan. Crew of 11 bailed out, but one was dead when rescuers reached crash site. May 10, 1955: Eight F-86 fighter planes on

patrol mission over international waters off North Korean coast attacked by 12 to 15 Migs. No U.S. casualties. Two Migs shot down and third seen diving down, trailing smoke.

June 22, 1955; Navy patrol bomber attacked by Soviet aircraft near St. Lawrence Island in Bering Sea. Crashlanded on island, no loss

of life.

June 27, 1958: Unarmed Air Force transport plane, diverted off course by bad weather on flight from Turkey to Iran, shot down in Soviet Armenia by two Migs. Nine crew members reported they had been intercepted and set afire at 15,000 feet. All were returned by Soviets.

September 2, 1958: Turboprop transport plane shot down in Soviet Armenia after going off course on flight in Turkey. Soviet returned bodies of six crew members, disclaiming knowledge of others. United States said there had been 17 in crew. United States also released tape recording purporting to disclose conversations between pilots as they had prepared to attack. Soviet

November 17, 1958: Migs fired on two converted bombers, one over Baltic and one over Sea of Japan. No damage, no casualties.

June 16, 1959: Navy patrol plane attacked by Soviet-type Mig over Sea of Japan, 85 miles east of Wonsan, North Korea. Tail gunner seriously wounded. Plane returned to Niho Air Force Base, Japan.

A Business Statesman

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, May 6, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an editorial from the New York Times of April 5, 1960, and a news item from the New York Herald Tribune of April 8, 1960, be printed in the Appendix of the RECORD:

I want to join in paying tribute to the leadership and statesmanship of Mr. Carrol Shanks, president of the Prudential Insurance Co. of America, of Newark, N.J., which made the historic precedent-making loan to the Republic of Mexico which is the subject matter of the newspaper items. Mr. Shanks is not only one of America's leading business figures but has also made his mark in the legal community as a distinguished lawyer and in the academic community as a professor of law at Yale Law School and as a coauthor of an outstanding work with the Honorable William O. Douglas. He brings to the American business community a breadth of vision and an experienced background which bodes well for America.

American business has a tremendously important role to play as an extension of our national self-interest broad. The Prudential loan is a demonstration that private enterprise can be an affirmative instrument of American foreign policy. The introduction of large sums of private capital abroad helps our friends in other nations at the same time as it helps the objectives of our Government. The American business community faces a challenge and I have every confidence that it can and will demonstrate its capacity to be ambassadors of good will to other peoples of the world.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 5, 1960] CONSTRUCTIVE COOPERATION

Anyone looking for a recent example of constructive international cooperation between nations will do well to look at the announcement of a \$100 million loan extended by the Prudential Insurance Co. to a financial agency of the Mexican Government. The event deserves attention on several counts. It is the largest private long-term loan to Mexico in more than half a century. It represents cooperation between the Mexican Government and a private lender in a way that makes a mockery of the demagogic claims by some Latin American sources that private American interests are only concerned with seeking to exploit that area. And the Mexican Government has been given a free hand to use the borrowed funds in developing Mexico's economy in such ways as may seem most appropriate.

The reason why this loan was possible is that a climate of confidence has now been created in the relations between Mexico and the United States. In the mixed economy of our neighbor to the south, the efforts of the Mexican Government, of Mexican entrepreneurs and workers, and of foreign capital and skills have for many years been joined together to produce sound economic growth which has benefited all involved. Superficially, it is much less glamorous to do the hard and detailed work that is required to build new sources of wealth for a country than it is to make flery speeches and coin violent slogans. But a people's welfare is not improved by speeches alone, nor by frightening away foreign sources of private capital which, as this Mexican experience again shows, can be useful in helping a nation build a better future.

[From the New York Herald Tribune, Apr. 8, 1960]

WALL STREET, U.S.A. (By Donald L. Rogers)

PRUDENTIAL PIONEERS IN LATIN AID

Without fanfare, indeed almost unnoticed, a private American financial institution entered a pact with the Mexican Government last month in what may be the most significant development in United States-Latin American relationships in a half century. It may also presage a wholesome new attitude on the part of U.S. corporations toward Latin investments. In the midst of the unrest in this hemisphere, this financial deal should be encouraging to the citizens of both North and South America.

The largest private long-term loan to Mexico since before the revolution of 1910 was consummated between Prudential Insurance Co. of America and Nacional Financiera, a financing agency of the Mexican Government. It consisted of an advance of \$100 million made by Prudential and will run for 15 years bearing 6%-percent interest. It will be subject to retirement during the last 10 years of the term.

Most significant: Prudential—which does not toss its money around lightly—did not specify any special purpose for which the money was to be spent. It required no special earmarking.

Nacional Financiera, however, said the money would be used to develop Mexico's basic industries and to expand public improvement projects in progress.

Wall Streeters who watch the progress of inter-American financial relations believe this may be a door opener to a new upsurge in commercial exchange between the United States and Latin countries.

See chain reaction

Quite likely, say the observers, Prudential's move will stimulate other foreign private lending interests to put capital to work in Mexico. Beyond question, Mexico has one of the most stable governments in the hemisphere, resulting in one of the most predictable economies.

Clearly this is the case of a major U.S. corporation practicing, with hard cash, what the President and Messrs. Nixon, Herter, Dillon, and others have been preaching.

This genuine breakthrough by Prudential, the biggest event of its kind in the field of U.S. private-enterprise assistance to the development of a Latin American economy, may pave the way for other corporate loans to such other stable countries as Colombia, Peru, Chile, and Argentina. All of these nations are striving hard and sincerely to put their economic and political houses in order so that they might be attractive to American investors.

Housing program

The Mexican National Housing Institute is considering a number of offers, it says, from private sources in the United States to help finance Mexico's ambitious low-cost housing program. There are also some offers from Europe as well as from Mexican financial interests. Involved is a 15-year loan.

First phase of Mexico's housing program calls for spending \$10 million this year for the purchase of land and the construction of 1,000 apartment units in Mexico City and 2,500 houses in 7 cities.

We cite this case of the Mexican housing plans as typical of the burgeoning programs throughout Latin America, programs which should normally be attractive to the in-

Prudential, one of the largest insurance companies in the United States, is not noted for disclosing the reasoning that results in its lending policies. However, its success is

well known and it's safe to describe the giant firm as a beliwether in almost any new investment field it ventures into.

If it doesn't inspire other institutionaltype lenders to look south of the border, we will be much surprised.

This, of course, is the practical side of inter-American relationships. We may proclaim friendship quite effectively, but we definitely cement it when we share economic responsibilities with our neighbors.

Paper by Mr. Martin Goland of the Science and Astronautics Committee's Panel on Research and Technology

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, it was the privilege of the Committee on Science and Astronautics to meet recently with some of the Nation's most eminent scientists and engineers who make up the committee's Panel on Science and Technology.

During the first meeting of this illustrious group, held on March 25, 1960, an important paper was presented by Mr. Martin Goland, president of the Southwest Research Institute, San Antonio,

Under unanimous consent, I insert in the Record Mr. Goland's paper:

PAPER BY MARTIN GOLAND

Mr. Chairman, members of the committee and fellow members of this Panel on Science and Technology. Being the first one to talk before you, perhaps I should start with my favorite definition of science and scientific approach, and so forth, since we shall be discussing things in that particular area.

cussing things in that particular area.

I have a very cynical friend of mine who has this as his favorite definition of the scientific method: He said, "You know, you take a chemist and you sit him down one evening and you take 3 ounces of good bourbon whisky and a half glass of water and he drinks them and he becomes drunk. Then the next night, why, you take 3 ounces of gin, a half glass of water, mix them and he drinks it down, and he becomes drunk again. The third night you do the same thing with a good brandy, with the same result. The fourth night he sits down to write his scientific report. All observations having been concluded and the only common ingredient being water, it is obvious that water makes one drunk." [Laughter.]

Now, I suppose that our scientific studies here will have a little better result than that, although possibly not as pleasant.

of all of the scientific and engineering skills connected with those serving on this panel, my own field, applied mechanics, is perhaps the least familiar to you, and with your leave I will take 30 seconds to tell you about it. With tongue in cheek, I think we might say that those who engage in applied mechanics, that particular scientific area, are misguided engineers, because they are much too theoretical to be really practical; they are displaced physicists, because although they do use physics as rather advanced tools, they are obviously too interested in hardware and black boxes; and they are corrupted

mathematicians, because although in applied mechanics we use a lot of advanced mathematics, but you know how the mathematicians view those who use their noble art only for exploitation in the practical areas.

But in a little more serious vein and just to orient my area, let us say that applied mechanics is synonymous with engineering science whenever we deal with solids, fluids, and heat. This covers much of the scientific matter which underlies mechanical engineering, civil engineering, marine engineering, aeronautical enginering, to give but a few of the areas.

As I understand it, these introductory presentations are intended to call attention to some of the significant developments which may come into prominence during the next decade, as well as to comment on the character of the research being accomplished to bring these advances into being.

In a short talk of this kind, of course, there can be no attempt at systematic coverage, and I shall restrict by remarks to two technical topics which bear on certain themes I would like to develop. Both of these topics are of industrial-research concern, and they both have vital national and international importance.

ENERGY CONVERSION

As my first area I should like to talk to you for a few minutes about energy conversion. The traditional problem of the engineer has been to convert energy from latent or otherwise unusable sources into useful forms. The steam engine, for example, the foundation of the industrial revolution, accomplishes this by transforming the heat from fuel into useful work through the use of steam as the intermediate work-

All heat engines which include such devices as the reciprocating engine, the gas turbine, the nuclear fuel conventional powerplant, and many others, suffer from the limitation that, in principle, all of the heat energy supplied the machine cannot be converted into useful work. In other words, even under the most ideal and theoretical conditions no heat engine is capable of 100-percent efficiency. In practical equipments of the kind I have mentioned, the efficiency of heat engines is generally 35 percent or less.

It is interesting to note that there is a class system among energies, incidentally, depending upon how theoretically usable they are. Electricity, for example, is a very attractive form of energy because it is potentially 100 percent usable; whatever is there, you can use. However, in electrical generation you very often must use a heat engine as an intermediate step in the generation process, and this, of course, immediately pulls the efficiency of the overall system down to the heat engine level, which as I said was 35 percent or substantially less.

this area of electrical generation is one which will undoubtedly see very important advances during the next decade and, even in this space age, when we give so much attention to the dramatic, it is easy to appreciate the far-reaching significance of finding better ways to produce electricity in an energy-hungry world.

Some of the ideas now on the horizon relate to improved methods for the conversion of heat to electricity. Direct conversion Without intermediate steps may one day lead to the elimination of the huge and costly turbines and generators we now associate with central electrical-generating stations.

It is often said that the better our understanding, the simpler is the solution. One idea for direct conversion, now being researched in at least one university and no doubt in a host of industrial laboratories, appears to support this maxim. The idea is simply this: A "hot" junction is placed near a "cold" junction, both in a vacuum.

If the function materials and their temperatures are properly chosen, electrons are "boiled" from the hot emitter and collected by the cold acceptor. The flow of electrons comprises useful electrical energy. Results to date show this approach has considerable promise for operations at efficiencies which may approach the theoretical Carnot (heat engine) values.

There is, however, an even more exciting concept for electrical generation which is now rapidly coming into developmental prominence. It is fascinating, I think, to learn that some 150 years ago, 1809, I believe it was, Sir Humphry Davy constructed the first laboratory model of a fuel cell which in principle is capable of perfect, 100 percent conversion of latent chemical energy into useful electrical energy.

The significance of Davy's laboratory creation 150 years ago, if successfully carried into practice, can be appreciated by noting that if the efficiency of the conversion process is doubled, instead of the 35 percent we must accept now, supopse we go up to 70 percent, 1 pound of fuel can be used as effectively as we now use 2 pounds. This is tantamount to doubling the effective life of our coal, our petroleum, our natural gas

Although the fuel cell is a very complex technological device, as so often happens, its form is elusively simple. In essence, it is nothing more than a direct current electrochemical battery which never runs down because the electrode materials which are normally consumed in batteries are continuously replenished.

For example, in one promising version of the fuel cell a fuel gas stream is fed into one porous electrode of this battery and an oxidizer gas stream is fed into a second porous electrode, and we essentially have a battery which continuously replenishes itself and runs indefinitely. It runs indefi-nitely, of course, providing it is designed properly, and the technical difficulties of the fuel cell relate to very sophisticated electrochemical problems, such as poisoning reactions which take place at the electrodes and which gradually cause the cell to lose efficiency and eventually cease operation completely.

It was lack of advanced dielectrochemical knowledge which, of course, caused Sir Humphry Davy and his associates to discard the device in 1810, although the transactions show an extremely active discussion and the firm conclusion that the fuel cell was probably the way to accomplish electrical generation, all around that time.

Incidentally, successful fuel cell designs will have a great many applications beside the one I have mentioned of central power generation. For example, small units can service homes, commercial buildings, industrial plants, supplying cheap and reliable electric power and eliminating the costly electrical transmission systems which now link the central power station and the user.

The military uses for fuel cells range from power supplies for spacecraft to quiet and efficient powerplants for submarines. Signal Corps of the Army, incidentally, is already using one such small device, a fuel

cell, for a field application.

Even automotive design may and very possibly will be transformed by the fuel cell. because an extremely attractive system consists of a fuel cell generating electricity and serving electric motors which are very compact and powerful at each of the wheels, or at least at two of the wheels of the vehicle. I could go on and on with other uses.

Now, I would like to say a few words about the research and development situation in the fuel cell area. A recent estimate of the level of support for fuel cell work in the United States is on the order of \$1.5 million per year. This will probably double by 1961, because of increasing interest in

this. Much of the research in this particular area, however, is being conducted in the research laboratories of individual private companies, and while this is most certainly a tribute to the free enterprise system, which enables our corporations to balance private gain against technological speculation, the net result is a lessening of the free information exchange which enures to the most rapid national progress.

In an area of research as important as this, there are many who contend that private efforts should be supported by a coordinated central research activity working in the broad public interest and with the responsibility of contributing fundamental knowledge of the electrochemical processes in this case which are characteristic of fuel cell reactions. Thus far, neither the universities nor any other type of research organization, working in the broad public interest, have filled this particular gap.

I will talk a little more about this same thing later, but I would like to point out that the problems of staffing for fuel cell research raise an interesting educational problem which I think would be of interest to you. A common complaint of the universities' staffs today is that students in basic science are preponderantly interested in specializing in the more spectacular fields typified by nuclear physics and astronautics. As a matter of fact, graduate students inter-ested in concentrating on areas with less public-relations appeal are few and far between. Our limited resources of scientists and training are thus being even further handicapped by an unbalanced output which is improperly adjusted to our overall national

MARGINAL PRODUCTION OF PETROLEUM FIELDS

I could continue to talk about energy conversion, but I would like to now take just a few minutes to talk about one other field which is the marginal production of our petroleum resources.

Approximately 2 years ago, I was privi-leged to hear Dr. Furnas deliver a splendid and thought-provoking paper on the growing importance we must attach to producing marginal natural resources, and I hope that he will choose this as a topic for his presentation before you in the future.

In the Southwest, for example, my own part of the country, we have tremendous reserves of iron, aluminum, and manganese, which will become useful as better marginal

recovery techniques are perfected.

In the area of engineering science, however, I would like to discuss with you one specific problem of marginal or secondary recovery which is going to play an increasing and possibly even a controlling role in our petroleum industry and where ful solutions will depend on our skill in engineering and science. I think you are probably all familiar with the primary production process of an oilfield. In a loose and porous formation, naturally occurring pressures may be available to drive the crude petroleum up the drill hole. As the natural pressure gradually reduces, artificial pumping from the surface is employed.

The primary production phase comes to an end when, depending on the nature of the formation and the crude product contained within the formation such extraction techniques are no longer economic. I think you may be surprised or perhaps you know better than I that, on the average, primary production skims only the top third off the available petroleum resource, leaving two-

thirds still in the ground.

For example, I have some figures I picked up here just before leaving San Antonio. Thus far, the U.S. oil box score is as follows: We have discovered to date-this was perhaps the beginning of the year-270 lion barrels of reserves. We have produced through-these figures are for 1957-57.6 billion barrels. We have an economically

recoverable reserve of 30 billion barrels. But here is the astonishing figure. Unrecoverable by present methods, 182 billion barrels.

Now for many years our petroleum indus-try was able to depend on essentially primary production for its next barrel of But a number of factors are now combining to change the industry point of view. Old fields in increasing numbers are playing out for primary production. The invest-ment in the field must be protected. In addition, the location of new reserves, generally requiring drilling to ever deeper levels, is accompanied by rapidly rising costs. These factors are adding value to the secondary oil resources which are part of our total known reserve, and in the years ahead it is this secondary production which will play an increasingly important role in our very important petroleum industry.

Now I am not going to go into many of the current techniques under study for secondary production. These include water-flooding, natural gas repressurization, and miscible phase displacement. Those names may or may not be familiar to you. But I will merely say that each of them is a very excellent technique in certain cases, but that they all leave 30 to 40 percent of the

total reserve still in the ground.

Now these remarks lead to my topic, namely, secondary production by fire flooding. Now in the fire flooding technique, air is injected at one point of the field and a fire is started underground. Production is accomplished through a second drill hole which is close enough to the first so that the formation pressure is increased and both the formation and the crude contained in its pores are heated. The higher temperature reduces the viscosity of the crude and the generated pressure drives the crude toward the producing hole.

Fire flooding has the important advantage of essentially completely producing the reserve, save, of course, for the crude which is consumed by combustion during the underground burning, and this may be substantial if the fire flooding technique is not

properly accomplished.

Perhaps of great importance, however, is the recognition that fire flooding may permit the exploitation of otherwise unproducible reserves consisting of heavy viscous crudes and relatively nonporous formations. Vast, tremendous national reserves of this type are awaiting the magic key of technology to unlock their treasures.

Now for fire flooding to be successful, as general tool, a vast amount of basic scientific knowledge and background is essential.

The physical chemistry of combustion must be thoroughly understood, flow of viscous fluids through porous media, what happens when you try to force a thick fluid through a spongelike formation, multiple through a spongelike formation, multiple phase conditions at the burning interface. These are only a few of the technical fields which are involved. The engineering problem of designing suitable compressor equipment to supply the air required, to say the least, is formidable.

We have here another problem of crucial national importance where private industry is playing the leading research and development role, in this case virtually exclusively with its own funds. As might be expected, much of the work in process is held as closely guarded proprietary information. Being in many things a dual personality—I had originally in these notes "being in many things a schizophrenic personality," and my secretary objected to that—I am tempted to wish that a freer expenses of information. wish that a freer exchange of information were possible between organizations, leading most certainly to faster overall progress, while at the same time I would abhor any interference with free enterprise, the philosophy of free enterprise, private risk for private gain.

There is perhaps a partial answer in a better planned national program of research, leaving the developmental advantages to be accrued on a proprietary basis within each company. It is interesting to note that in England, for example, they approach this problem by establishing industry associations in which private funds are matched by Government funds. Medical research in this country, of course, is conducted in a

somewhat similar fashion.

I wish to make it clear that to my mind any direct Government support of activities in the industrial research area would have very severe disadvantages. And we might also note that the Congress has already established very substantial tax advantages for those contributing to basic research. Perhaps, then, while the situation is not as good as we would like, perhaps it is working as well as we could hope for in an imperfect world.

GENERAL REMARKS

I would like to conclude this with just a few general remarks. I must confess that my choice of topics was with some malice aforethought. I have discussed two subjects which are of vital national concern, yet which lack the spectacular appeal of

both the atom and space.

Secondily, I chose both these topics be-cause the major burden of support rests with private industry. The theme of my remarks is the hope that the members of this committee will keep fresh in their minds the importance of national planning on the broadest of technological fronts. It is of unquestioned importance for us to arrange our relations with the atom and with space, but the same sense of urgency must be devoted to encouraging research and development in commercial fuel cells, secondary petroleum production, and the almost limit less array of other scientific areas which will determine our national health.

Our present resources for the struggle with the Communist ideology are in the opinion of many far too meager. In the defense and allied areas a start toward a solution lies in the injection of public funds, but far more difficult and elusive problems arise when considering the encouragement of technical problems which are largely of civilian and

commercal concern.

Up to now, the enormous strength of our system has kept us far ahead of any competitors, but with the impressive Communist progress in the defense area, and with their attention now being extended to the commercial spheres, the time may well be at hand for a reappraisel of the leadtime we now have, of the leadtime our technological prowess has given us, and the reappraisal to determine whether our research and development environment will result in a widening or a narrowing of our advantageous

Our planning for the future must, of course, be based on the experience of the past. Along these lines, I think it might be interesting for your committee to explore the following, to me, very curious paradox: During the Second World War it was the civilian National Defense Research Council which gave to the military the imaginative technological leadership which helped us to lick them. With the hostilities ended, however, peace upon us, it was bold and courageous planning by the military which kept our support of basic research at as high and vigorous a level as circumstances permitted. What clues does this rather paradoxical history What. hold for us in illuminating our national planning for science and technology?

And finally, I think it is equally interest-ing to analyze the changing role of the individual university professor in the research drama. At one time he was virtually the only player on the stage. Today, however, with the growing complexity of science and

the increasing need for a closely knit interdisciplinary team approach, the effectiveness of the individual researcher is reduced. In what ways, then, must the classical university pattern for fundamental advancement of knowledge be augmented in order to contribute to the strongest national effort? Should, for example, a suitably modified concept of the National Institutes of Health be extended to other scientific areas as well?

These difficult questions are among those your committee must try to answer. If I have not rushed forward with any suggestions for answers this is because I have copied my philosophy on such matters from a statement by Harold Laski: "The expert must always be on tap, never on top." I am sure that I, and the other members of this panel, are on tap for whatever further discussion you believe will be helpful.

Thank you very much.

The Responsibility of Leadership in a Democratic Society

EXTENSION OF REMARKS OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Wednesday, May 4, 1960

Mr. SYMINGTON. Mr. President, St. Louis, Mo., with its many modern facilities and its deserved reputation for hospitality, is frequently the site of important conventions.

An outstanding organization of national scope and influence—the National Jewish Welfare Board-held its biennial convention in St. Louis, March 30 through April 3. One thousand delegates were in attendance.

One speech delivered at that convention has come to my attention, by Mr. Hugh R. Jackson, president of the Better Business Bureau of New York and former president of the National Social Welfare Assembly.

Without expressing agreement or disagreement with the various thoughts therein, I suggest that it merits objective evaluation

For such purpose, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF LEADERSHIP IN A DEMO-CRATIC SOCIETY

(Address by Hugh R. Jackson, at the Biennial Convention of the National Jewish Welfare Board, St. Louis, Mo., April 3,

I am sure that these past 4 days of workshops, discussions, and meetings, centered as they have been about the content and procedures of how to carry forward, to increase and to further build the vital job which you do in your community centers, your YM and YWHA's, and your services to the Armed Forces-have been extremely challenging and fruitful to all of you. And now the time has come for you to return to your home communities across the Nation and to further implement the ideas and the programs which you have discussed and revised in this biennial convention.

I feel greatly honored and not a little awed by the invitation of your program com-

mittee to make some closing remarks to you before this convention adjourns. I must also tell you that I am always a little puzzled and frightened when program committees come up with such cosmic topics as the one handed me for today which, to give it its full title was "The Function and Responsibility of Leadership in a Democratic Society.

How should one go about the task of addressing themselves to such a formidable topic? I suppose there are at least a dozen approaches and points of departure that could be taken-and I am sure that there are at least 50 cliches and an equal number of platitudes that could be strung together such a high-sounding and farflung

We could certainly talk about the need for, and the responsibility of leadership, in connection with the global problems security, of progress—yes, and of survival—which confront us all in our generation. We could talk about the function and responsibility of leadership in our national political community-certainly during the

Presidential election year.

But the sort of leadership that I want to talk about today is not the leadership of the isolated few who emerge from time to time in every field of thought and action-whether it be in politics, in science, the humanities, or religion-and who of course exercise a profund influence on the lives of all of us and our society. What I want to talk about is a kind of leadership which is peculiar to our democratic institutions and particularly to our American democratic society. It is the leadership which emerges in our day-today living in our communities and which affects our attitudes, our behavior, our goals, and our way of life much more profoundly than does the leadership which we see on the national scene. I am talking about the type of leadership which generates and leads our voluntary associations and activitiesour social welfare and community groups such as the local units of the JWB, our civic organizations, our PTA's, our service clubs, and all the rest-as well as the leadership which emerges from our business relationships and from our religious needs and associations. It is here in this pattern of our daily life that-for better or for worse-the leadership arises which most profoundly affects our patterns of thought and behavior and which therefore conditions and establishes our basic strength or weaknessnot only in the conduct of our personal lives-but in the creation of the national sinews and character which make us what We are, establish our posture and image before the world, and make us capable or incapable of meeting the challenges of the world in which we must live and survive.

What are the great issues and the great problems which challenge our need for leadership today? I suggest to you that they are not the political issues of our time, or the specifics of our contest against communism in the race for the winning of the uncommitted peoples of the world. I believe that the greatest issues involve the more fundamental questions of our own individual patterns of thought and behavior, upon which all else depends, and I believe that it is by looking at ourselves and assessing the needs and opportunities for leadership in our communities and in our daily lives that we can best deal with the weaknesses, and develop the strengths, that will help us, as a nation, to achieve our destiny.

There is one such problem which affects you and me and all of us which I particularly want to place before you today. I believe that it is not only important but is the key to many of the more apparent external issues which concern us all in this generation. It is the question of the basic stamina and the moral and ethical fiber of our society today and what, if anything, responsible leadership can do about it.

I am not an alarmist nor a pessimist. But I do not believe that one can observe the present scene of our society without being gravely concerned with the growth of materialism and the worship of material success which has increasingly dominated the attitude of Americans in the postwar period. As someone has said, perhaps we in this country have had it too good for too long.

It is beyond question that the great increase in our physical well-being, and the vast growth and more even distribution of our prosperity and our national wealth among all the people, has produced great and valuable benefits during these past 15 years. It has certainly served to reduce the poverty and the basic wants which were so glaring in the prewar period. But it has unfortunately produced-or at least been accompanied by-an increasing attitude of mind that not only makes us soft and flabby, but which eats away at our moral and ethical concepts and justifies a code of individual and group behavior which is predicated on the concept that almost any means justify the ends provided we or our friends don't get hurt in the process.

We seeem to be in what Allen Drury in "Advise and Consent" called the "age of the shoddy." "This was the time," he wrote. when the job on the car was always half finished, the suit came back from the cleaners half dirty, the bright new gadget broke down a week after you got it home. The great age of the shoddy came upon America after the war and 'everybody wants his' became the guiding principle of far too many."

This is the time when scandals in our national life-while perhaps no greater in number than at earlier times in our historyseem to me to be of far greater significance for the reason that they are accepted and tolerated by the majority of us without

protest or basic concern.

Let me illustrate my point by a few examples. We have witnessed the perpetration of frauds on the American public in the field of entertainment during the past year with no real burning indignation or opposition on the part of most Americans. According to the New York district attorney about a hundred people lied under oath about their knowledge or participation in dishonest TV quiz shows, but when the principals were exposed and caught, they could say that they were sorry and be the object of sympathy rather than the opprobrium of the American public. There was considerable editorial comment at the height of the quiz scandal publicity to the effect that these deceptions and frauds were not isolated phenomena but a reflection and a symptom of the moral standards that characterize our time-and I fear that it is so, for only 2 weeks ago Look magazine reported that the result of interviews with hundreds of Americans across the Nation revealed that nearly 3 out of 4 persons thought that most people would have done what Charles Van Doren did.

In the field of public trust and public esponsibility we have the example of the President's closest adviser using his office to facilitate the fortunes of his friend. And yet, to quote Look's survey again, even the presumably strait-laced and rock-ribbed Vermonters hesitated to criticize his actions and would only say that he was "unwise" or "confused."

We have seen the evidence in my own community in recent weeks of a prominent elected official being indicted for accepting favors from a man who was doing business with the city and conspiring to lie about it to law enforcement officials, and who, after his indictment is thrown out, at least temporarily, on a technical basis, resumes his office as though vindicated and without any real or convincing moral protest from the

majority of the public. We have witnessed during the past month the example of the head of one of the major regulatory agencies the Federal Government who-at the height of publicity over scandals and favoritism-saw nothing wrong in being transported and entertained in Florida for a week by one of the people he was supposed to regulate.

If we turn to the field of business I fear we will find evidence of the same tendencies. Our papers have been full of 1959's most significant contribution to our vocabulary-"payola." But "payola" is coming to stand for a good deal more than the undertable payment to disk jockeys to plug favored records. It stands for the "sharp deal" and the 'fast buck''-the shabby promotion that just skirts the law or the advertising doubletalk that, while it may be literally true in what it says, creates a misleading impression. As one observer put it, "the desire for luxuries plus high taxes and inflation makes it hard for people to keep up. They have to stretch. So they are tempted to do more for a buckand do it in a less honest way."

If we look at education, we can find fur-ther evidence of the striving for ends regardless of means. A variety of studies have reported that cheating in schools is not only greatly increased but is considered acceptable moral behavior by many of our students. "You have to make the grade to get into college and to get a job, so who gets hurt?" seems to be the view of many. Again to refer to my own town of New Yorkwhich I believe is no better and no worse than the rest of the country-we now have a full-fledged grand jury investigation going on of the organized business, apparently well patronized, which is prepared to write anything from a term paper to a doctoral dissertation for our deserving scholars for a fee.

These are, regrettably, not isolated examples. They are, I fear, the public manifestation of the inward sentiment of an increasing number of Americans who-in this era of materialism—find nothing really wrong about padding the expense account, cheating on taxes, or making exorbitant and exaggerated claims on their insurance.

If we can believe some of our more careful students of this current scene, we seem to be moving from a personal code of ethics and an absolute sense of right and wrong to a sort of group morality under which people no longer refrain from doing things because they personally think they are wrong, but only because they would not be acceptable to our neighbors and friends if we were found out. Moral indignation seems to be out of fashion and one opinion survey. at least, came up with the startling conclu-sion that less than 10 percent of the people interviewed felt that honesty was a prime

requisite for success. What is the result of this moral lassitude which seems to pervade the thinking of so many of our people and this striving for personal gain, status, and personal aggrandize-ment with which it is so closely associated? I sumit to you that this trend of thought is at the very heart and core of many of the fundamental problems which beset our democracy and our position and strength as a nation. It is fundamental to our unwillingness as a nation to face up to the problems of national spending for decent housing and education for our people; to our unwillingness to take the cold, hard steps to curb inflation; and to our vacillation and ambivalence in determining to promote our way of life, at whatever sacrifice, and cost. * * * In this latter connection let me quote you a recent statement of our former Ambassador to Soviet Russia, George Kennan, who said "with no highly developed sense of national purpose, with the over-whelming accent of life on personal com-fort, and amusement, with a dearth of public services, and a surfeit of privately sold

gadgetry, with an educational system where quality has been extensively sacrificed to quantity, and with insufficient social discipline even to keep its major industries functioning without grievous interruptions. If you ask me whether such a country has, over the long run, good chances of competing with a purposeful, serious, and disciplined society such as that of the Soviet Union, I must say the answer is 'No.'

This then is one of the great challenges to leadership which I believe confronts us in our democratic society today. It is the challenge of preserving our sense of moral values, the challenge to the capacity to all of us to recognize the fact that our pattern of behavior must be governed by something other than the determination of what will give us the greatest short-term material gain, the challenge to change a shifting national attitude which is veering in the direction of emphasis on the easy personal path of profit at the expense of our strength and responsibilities as a community and a nation.

And how is this challenge to be met? It will surely not be met by the passage of laws or the exhortations of our national leaders. It will be met by a recognition and awareness of the problem by people like yourselves who are leaders of community thought and action in the cities and towns from coast to coast and from North to South. It will be met-if we grasp the larger significance of the issues with which we are dealingthrough the activities and programs of organizations such as those you represent and in your community. In your community center programs, focused as they are on the concept of the family unit and family responsibility, and in the incomparable opportunity for character building services which is yours in your youth programs, you have the opportunity and the obligation, by example, and by precept, to not only meet the recreational and cultural needs of your people but to give aim and purpose and direction to the development of the attitudes and a code of behavior which recognizes our fundamental responsibilities to God, to mankind, and to ourselves and to perpetuate and strengthen the essential elements upon which our Judeo-Christian civilization and our essential democratic concepts depend. The responsibility for leadership in a democratic society rests in your hands and the hands of others like you across the breadth of this country who accept the role of assuming direction and responsibility for our community institutions and associations. a recognition of the real horizon and to full dedication through your own deeds and leadership in dealing with the fundamental issues as well as the specifics of your programs, I wish you Godspeed.

Against the Item Veto

EXTENSION OF REMARKS OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. TABER. Mr. Speaker, for nearly a century there has been agitation from time to time to give the Executive the power to veto individual items in appropriation bills. The item veto is a very bad proposition.

The gentleman from Missouri IMr. CANNON], chairman of the Committee on Appropriations, an outstanding authority on parliamentary law and procedure, and who has been a Member of the House since 1923, has written an excellent article against the proposition. It appeared in the April 21 issue of the Harvard Law Record.

Under leave to extend, I include the article for the information of Members and others interested in the matter.

The article follows:

AGAINST THE ITEM VETO (By Hon. CLARENCE CANNON)

(The Honorable Clarence Cannon from the Ninth District in Missouri has served in the U.S. House of Representatives since 1923. For many years he was parliamentarian for the House and for the Democratic National Convention. He has authored many books and articles on procedure, including procedure in the House of Representatives and the National Convention Parliamentary Manual. He is presently the chairman of the House Appropriations Committee.)

(This article presents the arguments against any proposal to give the President an item veto, thus answering the proposals of Senator KENNETH B. KEATING, which appeared in the Recorn on February 11, 1960.)

The proposition to clothe the of the United States with power to exercise an item veto on appropriation bills was first introduced in the Congress in 1876. It has since been advocated and agitated many times. A number of Presidents have urged it. It is found among suggestions advanced by the major periodic movements of reform of the Federal fiscal or legislative machinery. But its failure of adoption after 85 years of repeated consideration is perhaps the best indication of its lack of merit.

The item veto proposition is advanced in the name of economy and for the purpose of disencumbering appropriation bills of socalled legislative riders. It is sometimes asserted by the Executive, whose power would be greatly strengthened, and others in sympathy with the idea, that the item veto would permit the Executive to prevent, or nullify, or at least discourage, actions characterized as "evils" of the legislative process in inserting appropriations or legislative riders not to his liking either as to amount or purpose, or both. Thus, the item veto would vastly increase the Executive power while weakening the legislative control of the purse.

The Congress ought to concentrate on effective measures to strengthen its exercise of control of the national purse, not weaken it. In recent years, various devices—some sponsored by the executive branch—to get money out of the Federal Treasury through the side doors and the back doors, rather than the front door, have gained in popularity. Through these sundry methods of diffused action in response to the financial needs of the Government, the Congress has made such inroads on its traditional annual appropriations process that it has in practice deprived itself of a significant measure of effective control of the purse.

SUBSTANTIAL SEGMENT

A substantial segment of new authority to obligate the Government is insulated from effective annual determination in the appropriation bills by reason of such items as permanent appropriations, permanent contract authorizations, authorizations to expend from public debt receipts contained in legislative rather than appropriation bills, and specific formulas in various grant-inaid and other programs in basic legislation beyond practicable reach of the annual appropriations process. Substantial amounts of authority to obligate, and even to actually spend, are granted in other than the regular appropriation bills. Basis for effective annual determination of expenditure levels is undermined. The Congress cannot

continue to place large segments of the budget beyond reach of annual determination without further seriously impairing the practical limits of exercise of effective control of the purse through the traditional means of the appropriation bills.

The alleged evils for which the item veto is advanced as a cure are exaggerated. It is axiomatic that virtually every piece of legislation adopted in every Congress repre sents a compromise, whether an appropria-tion bill or a legislative bill. It would be a rare occasion, indeed, when Members of the House and the Senate did not disagree with one or more items in a bill sent to the President. Yet they often vote for passage of the bill because of concurrence with the major purposes or features or the great majority of items encompassed.

Proponents of item veto plead that without it the Executive must "accept the wasteful and extravagant items along with the useful and necessary ones." Wasteful and extravagant—in whose opinion? Useful and necessary-in whose opinion? In the opinion of one person-the President? [Possibly on occasions with advice of the special interest department with a gimlet-hole view of Government finances and the necessities of the occasion?] Or in the opinion of a majority of the directly elected representatives of the people?

Let us concede that there are wasteful and extravagant propositions in virtually every appropriation bill-in somebody's opinion. And the same is certainly true of the Executive budget from the President-in somebody's opinion. There has never been a budget that could not be reduced, and generally the Congress does reduce itregardless of the party in control.

Under our constitutional separation of powers, it is the function of the executive to propose and the function of the legislative to dispose. And this power to dispose is final and absolute. Of all the legislative prerogatives, the power to appropriate is the most vital. Not a wheel of Government can turn without motivation of an appropriation. Basic authorizing statutes for the most part are broad in scope and grant to the executive rather wide latitude. The one continuing and recurring procedure for congressional control over governmental activities within such statutes is the annual appropriations review and legislative provision of funds.

MONEY BILLS

The annual money bills implement programs and activities previously authorized by law-programs which have in the legislative authorizing stage already run the gauntlet, including the opportunity for Executive veto. The subsequent act of appropriation thus represents the stage of final and, necessarily, conclusive action by the elected representatives of the people, each of whom must accept his own responsibility for his participation before his own constituency. Responsibility for appropriation of the people's tax funds would be unwisely diffused if impinged upon by an item veto.

The present budget system, enacted in 1921, greatly increased the Executive power in Government finance matters. The executive budget concept was established. budget is the President's budget. He has the sole power to include, or exclude, whatever items or amounts or restrictive provisions which in his judgment are necessary. the judgment of someone else; exclusively his own judgment. Under the law he is directed to include that which he deems necessary. But the item veto on appropriation bills would be tantamount to permitting the President to tell the Congress what to include in appropriation bills. It would, in effect, transfer from the legislative to the executive branch of the Government the control of the purse.

Incidentally, force of logic compels the suggestion that the item veto would be as appropriate in application to legislative authorization bills as to appropriation bills. And as far as is known, the President for the first time advocated this application in his budget message of January 1959. The genesis of the appropriating process is in the initial authorization statutes. The Executive is not infrequently-sometimes vigorouslyopposed to a specific item, provision, or re-striction in basic authorizing legislation submitted for Presidential approval. The fundamental purpose of Executive veto is now fulfilled under the constitutional pro-Vision according the President oportunity to take exception to a proposition of legislation in the first instance. That same recourse is available to him on appropriation bills and he has used it at his discretion.

WITHOUT SUBSTANCE

Proponents of the item veto seek to justify it on the grounds that, without it, the President is reluctant to veto a bill providing for many necessary functions in order to register his objections to individual items or provisions. The argument is without substance, as the Congress has never, and cer-tainly would never, adjourn without providing appropriations for the necessary functions of Government.

Furthermore, a vetoed bill assumes high privilege in the House and is almost always disposed of at once—in any event, expeditiously. More important, perhaps, is the record of disposition, for in the majority of instances of appropriation vetoes, Congress has yielded to the President and passed leg-Islation omitting the offensive matter. There is no evidence that the public interest suffered by reason of delaying final settle-ment long enough to dispose of a vetoed appropriation bill.

The item veto would also encourage executive capriciousness. We have seen this happen more than once through unwarranted use of the provisions of the antideficiency statute permitting the Executive, under certain defined conditions, to withhold expenditure of appropriations. An appropriation is not a mandate to spend every dollar provided, but neither was the im-Dounding clause of the antideficiency intended to provide the Executive with a statute to thwart the clear will of the Congress. To provide item veto power would be to give the Executive a club which could be held over individuals and Members and even whole delegations, to coerce their cooperation on wholly unrelated legislative propositions in which the Executive was especially interested.

MORE CHECKS

Legislative enactment of the appropriation bills is surrounded by far more checks and balances than is the preparation of the executive budget. As noted, the executive budget is whatever the President determines it shall be. It is prepared behind closed doors. It can include, or exclude, any proposition the President wants to include, or exclude—and in any amount. It is not subject to a parliamentary point of order. It is not materially restrained by any act of Congress or rule of either House.

In contrast, the appropriation bills are subject to several hurdles and must run a number of gauntiets at both ends of the Capital. Items not previously authorized by basic law and provisions of legislation are subject to deletion on objection of a single Member. Only by majority consent, or vote, are propositions of legislation included in appropriation bills, and most of these are administrative and facilitating, or restrictive, in character; and again, many of them will be found to have been recommended by the President in his budget. Furthermore, only by majority action in both Houses

is the President's budget exceeded. But the President, without consulting anyone, can submit budget increases above the previous year's appropriation.

Drawing a suitable definition of an "item" would entail serious complications and dispute as regards its application to specific instances. What is to be embraced by the term "item"? Is it to be a separate para-graph of a bill or only a portion? Where many projects are financed in a single lumpsum appropriation, and thus not separately identified in the bill, is it the lump-sum total or only a portion? Would it apply to restrictive or prohibitive language intended to deny use of the funds for a certain object or to require their use in a specific manner and no other? Implicit in the legislative power of the purse is the right to prescribe the conditions of expenditure and to deny use of the appropriation for a purpose or object even though previously authorized by law. Would "item" veto embrace the power to strike such conditions or restrictions?

There have been instances where the Congress inserted appropriations and provisions not budgeted by the executive and the action proved beyond question to have been in the national interest. There will be others which the item veto could threaten.

Finally, the legislative appropriations process would resemble a one-way street if the item veto were adopted. The executive would have a greater voice, the legislative branch correspondingly less, in the final determina-We need just the opposite.

The constitutional separation of powers is a two-way street-the executive to propose appropriations and related provisions he deems necessary, and the legislative to enact such appropriations and related provisions as it deems in the public interest. The legislative prerogative of the elected representatives of the people must not be diluted. To permit otherwise would impair Member's ability to act in response to the wishes of the people they are elected to serve.

A real grasp of the full dimensions of the one-way character of this proposition can be had from the following statement of the Director of the Budget, as principal spokesman of the executive branch, made to the Committee on the Judiciary of the House of Representatives in May 1957 in support of the item veto proposal:

"I think it ought to be made clear in whatever bill is reported that authority would be granted to veto legislative provisions as well as appropriation items, and that the authority to veto an appropriation item would include authority to reduce an ap-propriation—but only to the extent necessary to permit the disapproval of amounts added by the Congress for unbudgeted programs or projects, or of increases by Congress of amounts included in the budget."

The import of this statement is clear. Implicit in such reasoning is the assumption that the executive is all wise and superior in judgment as to how much should be appropriated from the Treasury and for what purposes.

I am certain the Congress could never seriously entertain such as absurdity as the item veto.

A Farm Leader Speaks Out

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF ORLAHOMA

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. EDMONDSON. Mr. Speaker, there continues to be in this country a great deal of misunderstanding about the American farmer and the economic conditions of the country affecting him.

I believe one of the best talks on this subject I have read was delivered recently by Mr. Lloyd Patton, of Chattanooga, Okla., president of the Oklahoma Association of Electric Cooperatives.

As an appeal for understanding of the farmer and his problems, and as an appeal for cooperation between businessmen and farmers, the Patton speech is outstanding.

The complete text of the speech, which is sure to interest many Americans, follows:

The farmer today is at the crossroads, he faces a crisis and yet his public relations rating with the general public is at the lowest point probably in history. He and his problems are among the least understood in our community and our Nation. It doesn't take much arithmetic to understand that farm dollars are one-third of Tillman County's entire buying income. And that the farmers, all of them, are businessmen with intricate problems in planning, operations, and marketing second to no other business.

The farmer today as you and I know him here has got the fight of his life. He has become a "whipping boy." A "whipping boy" and a "laughing boy" for those who don't know or don't care to understand his problems. You can spread the blame in a dozen places, but you can't erase it from the shoulders of the farmer himself and his hometown friend and the local businessmen, like you, whose closeness to the scene should but hasn't always given him understanding.

You businessmen should understand that parity is no magical slush fund to make a lazy man rich but instead is a formula attempting to obtain for the farmer a take-home pay near par with the price of things he has to buy. You should know too that as the farmer's share of dollars continues to drop his costs climb upward. You should know also that the support program for the Nation's six basic crops is not the only Government subsidy. That in fact there are more than 800 products and items with support or tariff subsidies, and if we are to be concerned with the farmers' support price and marketing quota program we should be concerned too with oil depletion allowance. It's import quotas and productions allowables which keep the barrel price stable. We should be concerned with the quick tax writeoff of millions of dollars to large firms like electric cooperatives who make capital improvements; and millions of Government cash which goes into aircraft manufacturing. The Government guarantee on FHA house loans really put the housing industry in a billion-dollar boom by underwriting its

financing.

Agriculture is important enough for every businessman to pull his head from the prejudice and misrepresented mud and understand that the farmer is not the only business with subsidy assistance and that in the last 50 years for every \$1,000 the Govern-ment spent for subsidies the farmer got only

\$5 or one-half of 1 percent.

The farmer, himself, is largely to blame for his poor public relations and his general rating with the public. The place for him to start to improve his relations is at his home and his own farm and in his own community where his friends and neighbors know him best. He should make a move for unity of purpose, first in his home com-munity, then through other regions and across the Nation because the farmers of tomorrow will be those who correctly read the signs today and make necessary adjustments in public relations and farming operations.

Farmers today are in a price cost squeeze comparable in many respects to the early 1920's when the farm problem first received prominent public attention. Did you know that since 1952 farm prices have dropped 17 percent, farm wages have gone up 41 percent. Production per farm worker has increased 21 percent since 1952 while the industrial output per worker is up only 5 percent. Industrial wages are up 38 percent but net farm income is down 27 percent compared with 1952.

Farmers received \$1 billion less last year than they did in 1951 for 11 percent more food, but we as consumers paid \$7.4 billion more than we did in 1952. The consuming public is now being brainwashed with the idea that the subsidy payments paid to the farmers is largely the reason for the high prices that they have to pay for food and this is a long ways from the truth.

It is evident that farmers are not responsible for the increased cost of wheat products and I'll give you this example: While a wheat farmer is getting less for what he produces he is paying far more for what industry produces, such as machinery, fuel, and supplies. In 1947 wheat sold for \$2.80 a bushel and a loaf of bread cost 17 cents. When wheat had gone down to \$2.30 bread was 24 cents, now wheat is about \$1.70 and bread is a quarter. You know that there is very little or no connection between the price of wheat and the price of bread.

Do you know that if the farmer gave his products away the consumers would still pay very nearly the same price that they are now paying because the farmers actually get less than 50 cents of the consumer's dollar? Tillman County is an agricultural community and always will be and is the industry upon which all of you businessmen depend. Of course, other industries that have been brought into the county have added greatly to our good economic conditions and have also made it possible for some of the farmers who otherwise could not have stayed on the farm to stay. The farmer, as a group, even though a very small group in our whole economy, is now only approximately 12 percent of our total population, however, he affects the whole economy of the Nation more than any single group and this has been vividly demonstrated last year when the farmers of this Nation had an excellent crop. The purchasing power was felt throughout the industrial east.

You might be surprised to know that the farmers in the United States use more steel than all the automobiles sold and as much rubber as it would take to outfit 600 million cars. Did you know that the farmers have doubled their efficiency since 1939 but during the same period their purchasing power has increased less than than 25 percent. In 1940 farmers received 22 percent of our total income and only 7 percent in 1956.

You might be interested to know that Tillman County's income from wheat in 1958 was \$7½ million, during the same year the farmers in Tillman County received \$7 million from the income from cotton. The total income from livestock and all other farm income was in excess of \$20 million during 1958. Farmers are now facing the greatest dilemma of all times. The Government must decide whether it will continue to support farm prices. If the Government says "No," then the farmers are left with even a harder choice.

They may decide to go back to the free market with roller coaster price rides and accompanying business failures. Now if they choose to take this road they will be faced with this record. According to the records that have been kept over the past 100 years, farm prices have been on a roller coaster. Farm and nonfarm prices get together only during war times, twice over the past 100 years farm prices have exceeded nonfarm prices and that was at the peak of World War I and World War II,

Now for those of you who believe that the farmers would be better off in a free market, let's trace the agricultural history and this is what you will find: That except for a few brief years at the turn of the century farmers have never prospered in a free market during peacetime, so according to experts it is a big myth that agriculture will right itself at a good level of production and prices if the Government will just get out and leave it alone.

There is much said about the cost to the Government of farm price supports, incentive payments, soil bank payments, and other types of support. Please notice Government aids to business over the past 20 years have exceeded \$47 billion. Farm price supports cost for the past 25 years has been only \$5 billion. For businessmen who are continually asking why don't you stand on your own two feet, these facts have been presented for your consideration.

It has been said by businessmen here in Frederick that they would like to put their business in the soil bank like we farmers put our farms in the soil bank. But let me ask you, if you were confronted with the proposition advising you that you could receive 75 percent of what you made last year in your business do you think that you would be overanxious to sign a contract to put your business in the soil bank for a 5-or 10-year period?

Now in my opinion the farmer is confronted with another problem that I believe will destroy the American farm system of free and competitive enterprise as we now know it. This is the system that is now working in certain areas of the United States and is spreading out more and more each year. It is what is known as contract farming or integration. This has come about during the time of rising cost and capital requirements and because of thin margins of profits.

Integration in one form or another has been going on in this country for a long time, in the processing of canned foods, frozen fruits and vegetables. It also exists in the pulpwood processing business. It is fast expanding in the broiler business and now appears to be coming into the egg and hog production. I would not be presumptious to state that even in Tillman County this system of farming will be introduced to a large degree in the next 10 years. Vegetables are being raised in the Tipton area on this basis now. If this type of farming becomes widespread, farmers as we know them will cease to be the individualists they once were and will be reduced to mere sharecroppers.

Did you know that in Tillman County in 1945 there were 2,081 farm operators. Now this includes farmers of every size, including small acreages in towns. The record in 1955, 10 years later, show that the number of farms had been reduced to 1,450 farms. Do you know that the average size farm 25 years ago was 160 acres and in 1955 the average size farm in Tillman County was 395 acres. I believe that the trend toward larger farms has largely been made necessary by economic conditions and mechanized farming.

It has been estimated that the average farm operator in Tillman County has invested in machinery and equipment approximately \$20,000 and the average owner-operator has invested in land, machinery, and equipment in excess of \$70,000. The records also show that 75 percent of the farms in Tillman County are operated by tenants as compared with 25 percent who are owner operators. Now here are some facts that are even more startling than the ones just revealed. Did you know that the average age of farmers in Tillman County is 50 years. A recent survey was completed on 200 farms in the Frederick school district and a breakdown of this survey showed that

there are 89 farmers in this age group, 45 to 54. Fifty-four farmers ages 55 to 65, 40 farmers 35 to 44, 10 farmers 25 to 35, 10 farmers over 62, and 2, 15 to 25.

Now according to the mortality rate in 10 years from this date Tillman County will need replacement for at least 50 percent of the farmers in this area which means there will have to be 700 new farmers to take the place of those who have passed on or retired. In Oklahoma, where there are 111,700 farm operators, it will take 55,800 replacements to replace those who have retired or passed away in the next 10 years. So you can see there is an excellent opportunity for a limited number of young men and women in the next few years to fill the vacancy in agriculture that has been created by those farmers who have retired or passed away.

The small farmers, as we once knew him in Tillman County and the rest of the country, has been eliminated to a large degree and others are going one by one. Small farmers are leaving the farm in such great numbers that many people are saying that the day of the small farmer is gone. Now in my humble opinion this is the first sign of the decaying of our Nation. Now no one would say that squeezing of the small farmer off the land will of itself bring a Nation to disaster but I would say, with emphasis, that the forcing of small farmers off the land is one of the sure symptoms of a highly complex disease that leads to national disaster.

America needs to awaken to some of these symptoms while there is still time to cure the disease. Now, in conclusion, I would like to say that I have pointed out some of the farmer's problems, of which I am a part by virtue of my position I have been caught in the whirlpool of intricate farm problems and I offer no solution to them. But I would like for you to consider them as a part of your problems. Let me leave this thought with you: Agriculture is the foundation upon which this Nation is built and there is no limit to progress where people work together.

Our Defense Posture

EXTENSION OF REMARKS

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. SANTANGELO. Mr. Speaker, our defense budget this year amounts to \$39,337,867,000, an increase of \$2,867,000 over the amount which the President requested in his budget for 1961. The committee reduced in certain areas appropriations totaling \$1,407,800,000 and added \$1,529,700,000, a net of \$2,800,000. The committee hearings disclosed solid achievements in certain areas, useless programs wasting \$4 billion, and many wasteful practices in procurement. The

programs wasting \$4 billion, and many wasteful practices in procurement. The committee hearings also disclosed that this Nation possesses the greatest overall strength in the world, despite its secondary place in missiles with the Soviet Union. Our position is strong, but we must not remain complacently smus. Programs in being will eventually overcome, it is hoped, the Soviet superiority in missiles and maintain our overall superiority with its deterrent capacity.

All these appropriations are provided for

with the hope of achieving a peace but nevertheless preparing our defense.

I have read with interest the three articles in the New York Times during the week of May 2, 1960, in which there is set forth an explanation of our defense posture—the areas in which we are strong, those in which we are secondary, and which make certain recommendations which will prove interesting to the readers and will help them to understand the detailed expenditures for our national security.

A further article in the New York Times of May 6, 1960, by Hanson W. Baldwin sets forth a critical analysis of our defense posture and the thinking which motivated the redirection of expenditures, the justifications of the various items of expenditures which make up this appropriation for our defense needs, approximating more than 50 percent of our total budget.

In my amendment to the defense appropriation bill, I tried to eliminate the excessive costs, the wastes, and mismanagement. This amendment, to bar defense contractors from payment where they hire retired commissioned officers for purposes of selling to the Defense Department, was defeated by the House yesterday on the ground mainly that recent legislation was adequate to correct the situation and that legislative committees should enact legislation carrying out the intent of my amendment.

There follows for the perusal of the readers Mr. Baldwin's timely article: [From the New York Times, May 6, 1960]
THE DEFENSE BUDGET—DEBATE REFLECTS APPRAISALS OF SOVIET STRENGTH AND COSTS OF NEW WEAPONS

(By Hanson W. Baldwin)

Details of Soviet strength and costs of new weapons are some of the factors influencing the current congressional debate on next year's defense budget.

Washington experts declare that there is still no evidence of existence of any Soviet launching sites for long-range missiles except the two known sites at Kapustin Yar, near Stalingrad, and Tyuratam, near the Aral Sea. These two sites have been used for the launching of Soviet developmental missiles. No other operational sites are known to exist, despite intensive and at least partly successful efforts to penetrate the Iron Curtain. Even the smaller sites for intermediate-range ballistic missiles are conspicuous by their absence.

Similarly, there is as yet no evidence that any Soviet nuclear-powered submarines are in operation, although the technological timetable would indicate that the Russlans should now have several in commission.

BURKE'S TESTIMONY NOTED

Adm. Arleigh A. Burke, Chief of Naval Operations, testified recently that Soviet destroyers were being armed with missiles, presumably antiaircraft missiles, but he noted no other unexpected technological naval advances by the Russians.

A Soviet hydrographic ship recently spent sometime charting the Gulf Stream off the east coast of the United States, and one or more Soviet trawlers have displayed obvious interest in our Polaris-missile-firing submarines

One of our own hydrographic ships, on the other hand, has been conducting soundings and taking readings in the Norwegian Sea, a sea earmarked as one of the principal operating areas for our missile-firing submarines and for the attack aircraft carriers of the

United States (and North Atlantic Treaty

Organization's) 2d Fleet.
Soviet production of piloted bombers is continuing at a slow rate and Soviet pilots are practicing aerial refueling, although on nothing like the scale of our Strategic Air Command.

MANY REVISE ATTITUDES

This evidence—or lack of evidence—has led many experts to the opinion that the Soviet nuclear-delivery capability is not so major as many had once believed.

On the other hand, the factors of dollar costs have, as always, influenced the defense budget. The costs of operating and overhauling nuclear-powered ships, as well as the great construction costs, dominated part of the testimony given to Congress.

of the testimony given to Congress.

The House Appropriations Subcommittee refused to provide funds for another Forestal-class carrier. The Navy had asked for a conventionally powered carrier, but Vice Adm. Hyman G. Rickover, maverick of the Navy and a law unto himself, opposed this request by telling the subcommittee the conventionally powered carrier would be obsolete as soon as it hit the water.

In denying this, the Navy testified that it would like a second nuclear-powered carrier—one, the Enterprise, is being built—but said it feit that the increased costs of \$130 million to \$170 million over those for a conventional-powered carrier were not warranted, given a strictly limited budget, by the improved operational characteristics.

For submarines, nuclear power provides one invaluable asset: independence of the earth's atmosphere for protracted periods of high-speed submerged cruising.

But in the case of a carrier, it would extend the "cycle" of combat time perhaps from 3 or 4 days to 5 or 6. The carrier's main propulsion plant would not have to be refueled, but the limited storage place available for aircraft fuel, bomb stowage, etc., means that once every 5 or 6 days the carrier, even if propelled by the power furnished by a nuclear reactor, would have to break off combat operations and take on aviation gasoline, supplies and personnel from tankers and supply ships.

The cost factor of nuclear-propelled ships also enters the debate. The Forrestal, first of the big new class of modern carriers, cost about \$190 million to construct. The Constellation, latest of the conventionally powered vessels of the same class, cost \$275 million. The Enterprise, the only nuclear-powered carrier now under construction will cost more than \$444 million.

HIGH MAINTENANCE COST

Navy witnesses also testified that it cost three to four times as much to operate a nuclear submarine as it did to operate a conventional diesel-engined electric battery boat.

Moreover, the cost of overhauling the Nautilus, first of our nuclear-powered submarines, and the time required to give her a thorough going-over have surprised the experts. The Nautilus has been in the dockyard for more than a year and her overhaul has cost about \$11 million so far.

One estimate is that this cost-time factor is about four times that of a conventional powered submarine; others think it is much higher. Some Navy experts estimate that it will cost the Navy more in the near future to overhaul our fleet of nuclear submarines than the present overhaul bill for the entire Navy.

There are, of course, caveats to these somewhat alarming statistics. The Nautilus is the first of our nuclear submarines to receive an extensive overhaul.

Moreover, her core life has been steadily extended; the first nuclear core provided about 60,000 miles of cruising; the third, now being installed, is expected to provide about

130,000 miles. Thus, the cost per mile of operation will be reduced.

Safety factors, inexperience and the sabotage suffered by the *Nautilus* during overhaul, although this sabotage presented only a minor problem, added to costs and time. With greater experience overhaul costs will be reduced.

Nevertheless, many in the Navy—while agreeing that the increased costs are necessary in the case of the submarine—doubt that the dream of a nuclear-powered surface Navy can be justified if the improved operational characteristics are weighed against the greatly increased costs.

President Truman Appraises President Rhee

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article just published by former President Harry S. Truman, a section giving his appraisal of former President Syngman Rhee of Korea. These two former Presidents had more to do with bringing into being and preserving the Republic of Korea than any others. In the turmoil following the upsurge of the Koreans' will to regain full freedom and democracy after a clique of unscrupulous selfseekers had muscled into powerful positions in President Rhee's government, without the aged patriarch's quite realizing it, it would be easy to lose sight of the true greatness of the man and his 65 years of unswerving single-minded struggle for the independence of his country. No better or truer tribute to Mr. Rhee could be given than this by Mr. Truman: "A person of sterling character, a fine mind, and undaunted courage. He was dedicated, not only to his people, but to the ideals of freedom—a great patriot and father of the republic he created." TRUMAN ASSESSES KOREA—SAYS UPRISINGS

TRUMAN ASSESSES KOREA—SAYS UPRISINGS SHOW PUBLIC WILL NOT FORFEIT DIGNITY

(By Harry S. Truman)

In the recent demonstrations and acts of violence on several continents I see a clear reaffirmation of what I have always believed—that people are no longer content to settle for economic betterment at the expense of human dignity.

Throughout history there has been an unremitting struggle against rule by dictatorship or repression by force. And today's events in Korea, Turkey, South Africa and Cuba reveal that some governments have not kept up with the times in meeting the reasonable aspirations of their people.

I was shocked and saddened by the circumstances that led to revolt in South Korea to preserve democracy there. It was an ironic turn of events that Syngman Rhee, whom history will record as a great patriot and father of the republic he created, should himself, at this time of life, be the cause of uprising. I would like to say this to the Korean people, who know how I feel toward them as a brave and free people, that they must have learned their lesson in democracy well under Syngman Rhee to rise up even against him in order to preserve their democracy.

I had been wondering for some time about what was going wrong with the Government of Korea and watched with misgiving the last election. I could only conclude and have now been able to confirm that Syngman Rhee was a victim of misplaced trust in some of the people around him. Every head of government, especially strong men in critical times, finds it difficult to pass on authority for fear that his policies may be jeopardized.

And, unfortunately, in the history of great leaders there is always a temptation to overstay. I knew Syngman Rhee as a person of sterling character, a fine mind and un-daunted courage. He was dedicated not only to his people but to the ideals of freedom. He was a stanch partner of the West, and a bulwark against international communism. In his present difficulties let us not forget it, lest we malign him out of all proportion to his errors and misjudgments in trying to cling to power.

I hope that Korea will quickly mend the wounds of civil strife and that law and order and responsible democratic government, confirmed by a free election, can be restored. It is encouraging to see that steps are being taken to correct the wrongs and mistakes of the situation in that country. I am glad to see that this is being done by civilian author-ity and that the military is cooperating by keeping its place and maintaining its calm.
For the threat to the independence of

Korea from the North, where Communist forces are still poised for invasion, is as acute today as at the time of th 1950 aggression. Prolonged internal dissension through inability or delay to reestablish a functioning republic could lead to chaos and play into

the hand of Red China. I was glad to see Secretary of State Christian Herter advise Syngman Rhee of the dangers and possible consequences of popdissatisfaction with the manner which the Presidential elections were held. I think it was not only proper for the Secretary of State to interpose our Government's opinion on a matter involving the preservation of Korean democracy, but it was wise in view of our responsibilities to that country under the United Nations.

For me, Korea is the symbol of a people's determination to resist not only invasion but the imposition of a form of government which does not meet the aspirations of freedom and human dignity of people today.

Helping the Handicapped

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. RODINO. Mr. Speaker, earlier this session Congressman Addonizio introduced a bill to provide an additional \$600 exemption for disabled individuals. Because I have received many letters on this problem, and because my personal experience persuades me that this is an excellent proposal, I wish to support Mr. ADDONIZIO today by introducing a similar

For the past 2 years I have served as Essex County chairman for the Sister Kenny Fund, which in that time raised over \$110,000 for the Sister Kenny Institute. In this capacity, I have had the opportunity to learn at firsthand the problems and almost insurmountable

difficulties which face the disabled individual in his struggle to achieve economic independence.

The disabled person not only has trouble supporting himself; he has needs and expenses which the average person does not even contemplate. Even such a matter as buying shoes, which most of us take for granted, can become a terrible burden, when the shoes must be specially designed and frequently replaced. A sudden disability may make the family home inadequate, and the family may have to move to a one-story house for the benefit of the disabled member. Taxicabs for those who can no longer use public transportation suddenly become a necessity. Prosthetic devices, specially equipped cars and special equipment for the household are matters which the handicapped must take for granted.

In addition to unique needs and expenses, the handicapped individual faces an uphill struggle in obtaining employment. Attention is now being focused on this problem by the President's Committee on the Physically Handicapped. which is currently meeting.

All these reasons are cogent ones, in my opinion, for giving the disabled some tax relief and thereby helping his economic adjustment.

A precedent for this measure lies in the additional exemption already accorded the blind.

Citizens Foreign Aid Committee

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release issued by the Citizens Foreign Aid Committee which will be of interest with reference to our foreign aid program:

Charges were leveled today by the National Citizens Foreign Aid Committee as a result of President Eisenhower's two major addresses yesterday which the committee claimed had championed, in effect, widely divergent fiscal philosophies.

were made in a statement The charges issued by Walter Harnischfeger, of Mil-waukee, national chairman of the 45-member committee, the sole nationwide organization exclusively crusading to kill the foreign aid program and simultaneously to seek a broad reevaluation of the national defense program to assure air and space supremacy. The committee is composed of well-known leaders in industry and business, attorneys, and five retired military men of general rank.

"The American people today are witnessing the spectacle of publication by the press two addresses delivered yesterday Washington by President Eisenhower which are inconsistent and irreconcilable. In addressing the U.S. Chamber of Commerce he stated that world peace and stability depend upon the soundness of the American dollar. He pleaded for a balanced budget, financial prudence, fiscal responsibility.

"A few hours later, in an address during which representatives of 15 nations beneficiary of our foreign aid program sat on the platform and applauded, the President urgently pleaded for Congress to vote every penny of his \$4.175 billion foreign aid

We urgently ask the question: How can the White House reconcile a plea for fiscal responsibility and a balanced budget with a continuing giveaway program of \$4.175 bil-lion this year added to approximately \$80 billion already funneled overseas, much of it to nations which long since have recovered from the ravages of war and already have hurt us in world markets.

"The revolts in Turkey, Cuba, Venezuela, Panama, and Korea, all beneficiaries of our foreign aid giveaway program, provide con-clusive evidence that you cannot buy yourself out of communism. If our present policy prevails the Soviet Union will take us

over without firing a shot.

"Our committee takes justifiable pride in contributing to the fight which last year witnessed a cut by Congress in the President's foreign aid request from \$3.9 billion to \$3.2 billion. An aroused citizenry today is urging Members of Congress to make heavy slashes in the President's current \$4,175 billion request. Note that the President is asking not for a lesser amount, in the face of fiscal difficulties and a rising tide of imports, much of it emanating from factories built in full or in part with American taxpayer money, but he is asking for an even greater amount.

"Ask management and labor what is happening to their industries and their jobs as a result of increasing and heavy imports of foreign goods from the big industrialized, prosperous nations where we have exorbitant foreign aid gifts. In 1957, for example, we exported 5.2 million tons of finished steel. Last year our exports dropped to 1.5 million tons, a decline of 3.7 million tons in 2 years. Ask management and labor in other industries like automobiles, textiles, ceramics, etc.

Programs of this kind, plus the cry in some quarters for free trade, are completely unrealistic in the light of our high labor costs. A selective tariff is the only solution. Our giveaway policy undermines our econ-omy and will bring about more unemployment and inflation.

The President's advisers and speechwriters conveniently omitted from his speeches any reference to the fact that Uncle Sam today may be facing bankruptcy in the not too far distant future if our financial house is not quickly set in order. Today, our gold stocks are less than \$19.36 billion, of which an estimated \$23 billion in gold is subject to call by foreigners, if they so desire. Anyone who recalls the 1929 panic knows that it doesn't take much to tip the scales of public confidence and start a run on the bank.

"The President's advisers and speechwriters also conveniently omitted any reference to the recent statement by the President's own Budget Director that Government spending was gaining a momentum threatening to wreck our economy, with our present public debt and future commitments now reaching 'the almost incredible total of about \$750 billion'—three-quarters of a trillion dollars, apart from operating expenses.

'American industry cannot indefinitely sustain these huge expenditures which can only result in lowering our standards of liv-

ing or worse.
"Our committee, from its findings, has every reason to believe that a countrywide taxpayer revolt is developing in the United States, a tarpayer resistance that inevitably will kill the foreign aid program, provided that this Nation has not spent itself into something resembling something resembling bankruptcy in the meantime." Report by Alonzo F. Young

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. TOLLEFSON. Mr. Speaker, I was privileged to attend the Second Annual Conference of the Iron Shipbuilders International Marine Council, International Brotherhood of Boilermakers, Iron Shipbuilders, Blacksmiths, Forgers and Helpers here in the Nation's Capital on March 9, 1960. An excellent report on the present outlook for the shipbuilding industry was given by Mr. Alonzo F. Young, administrative director of the conference. I believe every Member of Congress who is interested in the Welfare of our shipbuilding industry will want to read it. Therefore, I an insert-ing it herewith in the Congressional RECORD.

REPORT BY ALONZO F. YOUNG

It is, as always, a privilege to welcome each of you as we assemble to attend the Second Annual Conference of the Iron Shipbuilders International Marine Council of the International Brotherhood of Boilermakers, Iron Shipbuilders, Blacksmiths, Forgers and Helpers, AFL-CIO. I wish that the present outlook for the shipbuilding industry was such as would add to the pleasure which invariably prevails when old friends get together. The facts, however, do not permit words of optimism. To the contrary, I must, at the very outset, advise you that the shipbuilding industry is in the throes of a serious depression. Its impact throes of a serious depression. is worldwide. The gravity of the situation cannot be overemphasized. The reasons are varied and complex. We do not profess to know all the answers, but by the same token, neither are we oblivious to the many ills Which, if not speedily remedied, portend disaster for our merchant marine and related industrial activity. The present administration is guilty of neglecting the shipbuild-ing industry, both naval and private; in fact, it has circumvented the will of Congress in refusing to expend the appropria-tions made available, notwithstanding their obvious inadequacy. Although I recognize that statistics are dull, nevertheless, I must portray the realities existent in shipyard areas of the Nation in order that you may have a true picture of the impending hardship and despair which invariably from gross unemployment. The number of Workers in American shipyards on January 1, 1960, was at the lowest level in 10 years; in fact, with the exceptions of the years 1949, and 1950, the lowest since 1940. In the final days of 1959, there was a grand total of less than 200,000 employees in all U.S. shipyards, naval and private. This is 20,000 less than were employed in these yards in the final months of 1958. In naval shipyards on January 1, 1960, there were 90,000 as compared with 95,000 a year previous; in private yards, 100,000 as against 125,000 on January 1, 1959; in the shippards of the North Atlantic, our last figures show about 92,000 against a little more than 100,000 a year ago; South Atlantic 35,000, very little change; Gulf, less than 20,000 compared with about 30,000 in September 20,000 compared with about 30,000 compared with 30,000 compa tember of 1958; Pacific, 38,000 in October 1959 against 51,000 10 months previous; Great Lakes and Inland Waterways, 8,000 last October as compared with 10,000 in March 1959. A cursory analysis of these figures shows a 30 percent drop in employment in Sulf yards, approximately the same on the

west coast, and a 20 percent cut in force on the Great Lakes and Inland waterways. is not necessary to elaborate here on the principal cause of the fluctuation on the west coast. The tremendous increase in the number of unemployed shipyard workers, so vividly depicted by the figures applicable to the gulf coast (30 percent) and the Great Lakes and inland waterways (20 percent), substantiates our assertion that we are in deed confronted with catastrophe. The figures for the latter days of 1958 and early 1959, used as a yardstick above, are far less than those regarded as adequate to maintain appropriate economic and security standards in the shipbuilding industry. There were 50,000 fewer employees in these yards in 1959 than in 1952. Assuming 300,-000 as the bare minimum of shipyard employees, properly balanced geographically, as the nucleus vital to the well-being of industry, you can readily see we are truly in a state of worsening depression. Cutbacks on the Atlantic coast are already in progress and, although the figures herein are not as black as for the other regions, the future is just as bleak unless new contracts are quickly attained. Large scale RIF's have been and are now being effected in our naval shipyards. This, coupled with the proposed disestablishemnt of forge shops, among others, and the consolidation of various shops, as signaled by the Bureau of Ships Instruction 5450.94 underdated of January 8, 1960, constitutes a challenge which has been and must continue to be resisted through every conceivable recourse. The Metal Trades Department of the AFL-CIO, with the full participation of its affiliated national and international unions, of which we are one, have met this onslaught head on, and its full resources and universally recognized prestige are being utilized to combat these bureaucratic acts designed, we believe, to destroy craft identity throughout government installations.

Thousands of our members depend upon the ship repair yards for their livelihood. Employment in 26 major ship repair yards in mid-1957 was about 25,000 employees. The average over the last 6 months of 1959 dropped to approximately 12,500. There were 5,000 fewer employees in these same yards on January 1, 1960, than in 1954 when Congress found conditions in the industry to be so critical that it enacted the now expired Emergency Ship Repair Act of 1954. It is obvious that the yards capable of handling the repair of oceangoing vessels are in desperate need of more work right now-if this country is to maintain even a skeleton of ship repairing defense potential.

It was reported at the annual meeting of the American Bureau of Shipping that:

"On January 1, 1960, 292 seagoing vessels of 6,064,921 gross tons and 2 Great Lakes vessels of 32,500 tons were under construction and/or under contract to be classed with the Bureau. In addition, there were 98 smaller miscellaneous type vessels aggregating 67,110 gross tons also contracted for to be built under the supervision of the surveyors to class with the Bureau. This new construction totals 392 vessels of 6,164,531 gross tons. This is a decrease of 1,475,000 tons from the tonnage totals of 1 year ago, and 2,500,000 tons from the figures of 2 years ago. One year ago, contracts were in existence for the construction of 546 vessels of 7,639,686 gross tons to bureau class.

'Of these 392 new vessels now being built to bureau class, 121 of 968,365 gross tons are on order in U.S. shipyards, compared with 1,244,310 tons in January 1959. This includes 56 oceangoing cargo ships, tankers, and a passenger vessel, of 888,450 tons, 2 Great Lakes bulk carriers of 32,500 tons; and 63 miscellaneous vessels such as tugs, towboats, barges, ferries, offshore oil well drill-ing rigs, etc., aggregating 47,415 gross tons.

"A total of 271 new vessels of 5,196,166

gross tons are on order in yards outside of the United States to be built to American Bureau of Shipping Classification. more than five times the amount of tonnage currently underway in American yards. A number of these will be finished in 1960, but others will not be completed until 1964. These 271 new vessels are being built in 19 countries, and include 5 under way in United Kingdom shipyards, 16 in France, 9 in Belgium, 9 in Sweden, 49 in Germany, 44 in Italy, 7 in Spain, 25 in Holland, 2 in Turkey, 77 in Japan, 2 in Argentina, 6 in Denmark, 4 in Greece, 2 in Israel, 3 in Taiwan, 1 in Brazil, 5 in Egypt, 3 in Yugoslavia, and 2 in the Philippines. These new vessels include tankers, bulk-ore carriers, cargo ships, passenger liners, ferries, dredges, tugs and barges.

"A total of 124 new vessels were completed to bureau class in shipyards outside of the United States during 1959, these aggregating 1,793,240 gross tons. This represents an increase of 156,202 tons over the 1958 results. For the seventh time in the 98-year history of the Bureau, more new tonnage was completed to bureau class in shipyards abroad than in U.S. yards. Again, as in recent years, a large number, 43 were constructed in Japan, while 33 were finished in Italy, 4 in Great Britain, 6 in Belgium, 16 in Germany, 7 in Holland, 5 in France, 3 in Sweden, 2 in Canada, 1 in Lebanon, 1 in Spain, 1 in Brazil, 1 in Taiwan and 1 in Netherlands Antilles. In addition, some repairs and alteration work, on existing vessels was accomplished in ports abroad under bureau supervision."

In his report to the 49th Convention of the Metal Trades Department, AFL-CIO which convened in San Francisco, Calif., September 14, 1959, James A. Brownlow, president, points up more clearly than I could ever hope to do the stark specter of foreign ship construction and repair con-

tract awards and I quote:

"It is almost impossible to realize that U.S. companies and their foreign affiliates, on January 1, 1959, were building or had ordered in foreign yards a total of 150 merchant vessels of almost 4 million gross tons, all of which were scheduled for foreign flag operation upon being commissioned. On January 1, 1959, U.S. companies and their foreign affiliates were then operating a fleet foreign aminates were almost 51/4 million gross of 422 vessels of almost 51/4 million gross tons under foreign flags. The additional tons under foreign flags. The additional vessels presently on order will bring the total foreign flag fleets of such U.S. companies and their foreign affiliates to 577 vessels totaling almost 91/3 million gross tons.

"The great majority of these oversea or-ders were for tankers. One hundred and thirty tankers were under construction or on order for these U.S. firms in foreign yards. with a tonnage of 3% million gross tons; 8 dry cargo vessels of about 100,000 gross tons and 12 ore carriers of almost one-fourth

million gross tons.

"Let us look briefly at some of the U.S. companies and their foreign affiliates which have the largest orders for new vessels in foreign yards:
"Standard Oil of New Jersey, 47 tankers.

"Standard Oil of California, 20 tankers. "Gulf Oil Corp., 16 tankers.

"Tidewater Oil Co., 15 tankers.
"Socony-Mobil Oil Co., 13 tankers.

"The Texas Co., 10 tankers.

"Of the eight dry cargo vessels being built foreign, six are on order for the United Fruit Co. and its affiliates, and two for the State Marine Corp.

"Of the 12 ore carriers on foreign order, 8 were for D. K. Ludwig's Universe Tank Ships, Inc., and 3 for Bethlehem Steel's Interocean Shipping Co. The remaining ore carrier is being built for the Aluminum Co. of America's Alcoa Steamship Co. subsidiary.

"The figures which we have just presented on foreign construction and foreign-flag operation by U.S. companies and their affiliates are particularly applicable to the petroleum industry as the figures themselves show. The percentage of the imports of petroleum into the United States which comes in on U.S.-flag tankers has dropped from 55 percent in 1950 to approximately 7 percent in 1958.

"It is a travesty indeed that, with every gallon of petroleum products which he purchases from the major petroleum companies, the U.S. worker is in effect contributing to the growth of foreign construction and foreign-flag operation of the tankers which haul petroleum products to our shores for our major oil companies."

Harry E. O'Reilly, executive secretarytreasurer of the Maritime Trades Department, AFL-CIO speaking of obsolescene, said:

"Our merchant marine is not only dwindling, it is dying of old age. The vast majority of our merchant ships were built before or during World War II, and are obsolete. Foreign fleets, not only the fleets of genuine maritime powers, but the American-owned ships operating under foreign flag, are, by comparison, newer, stronger, faster, and more efficient than our ships. This is so, and will remain so unless corrected, because there is no incentive to risk the vast amount of capital required to build ships in a dying industry whose doom is sealed.

"These, and other grave problems, have humbled and paralyzed the American maritime industry. Today, we rank fifth or sixth among maritime powers, and far lower in the efficiency of our ships. More Americanowned ships are now flying the Liberian flag than our flag. Russla and Communist China, both of which appreciate the importance of the merchant marine, are rapidly closing the gap between us in numbers, and are already excelling us in quality of ships

and efficiency of operation.

"It is amazing and shocking that this great Nation, its President and Cabinet, and its Congress can look at these facts complacently. But that is what is happening. Our industry is the only great national industry which is in deep depression.

"But the cancer of that depression is spreading to related industries. And, the existence of that depression is undermining

our national defense.

The miserable wages as illustrated in my last report continue to prevail. The menace from these shipyards in Europe and Asia is greater today than ever, a condition which makes it mandatory that the total potential of the American Federation of Labor and Congress of Industrial Organizations be immediately mobilized to repel the intensified efforts of these foreign shipyards to acquire additional contracts from U.S. industry. Shipbuilding Survey, a bulletin published by the Committee of American Steamship Lines, reported through the press on February 10, 1960, that:

"Washington.—Bargain construction rates are the order of the day at shipbuilding yards throughout the world * * * says that low prices have created a buyers' market in the

ndustry.

"Some yards are trying to drum up business by approaching financially sound owners with new plans at attractive prices.

"As a result, the survey notes, a shipowner can select the country in which he wishes to build and negotiate a price lower than the lowest bid received in international bidding.

"PROFITS REMOVED

"The survey points out that German shipyards, in an effort to survive in the fiercely competitive market, seem to be removing from their proposals most of their profit, both declared and hidden. Overhead reductions have been reported as high as 22 percent, according to the survey, which went on to predict that further price reductions will be made. "Japanese shipbuilders, the report says, face an order shortage during fiscal 1960 in spite of low shipbuilding prices. Expected new orders will amount to about 900,000 gross tons against a capacity of 1,800,000 gross tons per year.

"Production costs are under study in Japan, the report shows, to make shippards there even more competitive in the ship export market. 'Besides attempting to reduce their own costs,' the report says, 'shipbuilders are asking for cooperation from related industries and aid from the Government.'

"In the United Kingdom, the survey says that \$450 million in plant improvements in recent years have produced increased production rates that should make prices more competitive. One example of this increased productivity is a 15,050-ton cargo vessel being delivered 10 weeks after a sister ship from the same berth.

"SUBSIDY MOVE

"The Italian Government has legislated a new loan of about \$16 million applicable to the renewal of the merchant fleet, according to the survey. Italian shipowners who wish to scrap their old vessels, but who will order new tonnage equal to at least 75 percent of that scrapped, will receive a sub-

"The Committee of American Steamship Lines, publishers of the report is comprised of American flag companies on all U.S. coasts serving American commerce on essential trade routes under operating differential subsidy contracts with the Government."

A militant program to arouse the American public from their attitude of complacancy, relative to our maritime industry, must not be delayed. All available facilities for the dissemination of factual information on this subject must be utilized. We have insisted that the Merchant Marine Act must be amended to eliminate the 50-percent limitation on construction differential subsidies and legislation for this purpose is currently before the appropriate committees of the House and Senate of the 86th Congress. The shipyard owners of America are in accord with our desires in this respect. I quote from a letter sent to Senator WARREN G. Magnuson, chairman of the Interstate and Foreign Commerce Committee, under date of February 23, 1960, by L. R. Sanford, president of the Shipbuilders Council of America:

"There is today a clear-cut and definite buyers market in the construction of new ships. This is the time, of all times, when a shipowner can get the most for his money in the way of a ship. On the other hand, if through timidity, a failure to realize the real situation, or a lack of available funds, either on the part of the owner or the Government, construction is postponed or deferred until next year, or the following year, or the year after that, both the owner has a contract with the Government to build a replacement ship and the Government who has agreed to share the cost of that replacement to the extent of the construction subsidy will inevitably find themselves in a field of higher costs with resultant greater cost to each, and incidentally closer to that bugaboo of all shipowners and merchant marine, block obsolescence.

"Postponing the decision on whether to rebuild now or wait until later solves no problems. Even in the unlikely event that the actual differential in the foreseeable future might drop back below 50 percent, the actual differential would always be used and no harm would have resulted from the elimination of the 50-percent limitation, the mere fact of which will enable the continuation of the parity concept if at any time the differential should exceed 50 percent. The 50-percent limitation originally placed in the bill had no particular significance—it was purely arbitrary. It is still arbitrary. Parity is the meat of the differential, not an arbitrary limitation.

"Five months have elapsed since a contract has been executed in this country for a seagoing commercial vessel. This hiatus alone has a definite effect on the continuity of future workloads. The Maritime Administration's contractual replacement program is dragging badly due to lack of adequate appropriations. An annual construction subsidy appropriation which averages for a period of 6 years less than one ship per shipyard per year cannot sustain the shipbuilding industry.

"There is no present prospect for additional tanker orders to supplement the tanker workload carryover from the aftermath of the Suez crisis. There likewise is no present prospect of replacements by the nonsubsidized lines and certainly very little prospect of tramp ship replacements, or of ore carrier replacements for other than

domestic services.

"The replacement vessels for which the Maritime Administration still has or will have appropriated funds which could be expended for construction-differential subsidies during the balance of the year are sufficient to cover 16 ships from prior appropriations and 14 ships from fiscal 1961 appropriations and 14 ships from fiscal 1961 appropriations if approved. Awards are usually made on a 3, 4, or 5 ship group basis, which for a total of 30 ships, could mean participation by probably 7 or 8 shipyards provided each group went to a different yard. The net result could be that those yards fortunate enough or desperate enough to obtain such an award might be able to recoup their diminishing workloads, but not necessarily their profit status, whereas the balance of the shipyards by the end of 1960, or shortly thereafter, will have reached a period in which they must face the critical fact of survival."

Throughout the deliberations upon the 1936 act, it was clear that Congress intended to place the domestic shipyards in a position to sell vessels to U.S. operators at prices on a parity with foreign construction costs. At the same time Congress also provided safeguards to insure that there would be no payments in excess of parity.

Since 1936 the policy of the act, including the parity principle of shipbuilding subsidies, has been frequently reviewed by the responsible congressional committees, the Maritime Commission and its successor agencies (Federal Maritime Board and Maritime Administration), the Department of Commerce, and the succeeding administrations in the White House. In each instance that policy and the underlying principle of parity have been reaffirmed.

Congress assumed that the 50-percent limitation provided in section 502(b) would more than cover the actual differential. The report of the Senate Committee on Commerce expressly found, "it is now believed by all experts on the subject that the differential on cargo ships is approximately 40 percent"; and the then existing differentials on passenger and combination cargo-passenger vessels were lower than on rargo vessels. By fixing the ceiling at 50 percent, Congress clearly intended not to limit payments short of parity, but to provide a margin of safety to insure that payments in all cases would equal parity.

Since 1936 the differential between domestic and foreign construction costs has increased. On several occasions Congress has reexamined the 50-perent limitation, in light of this widening differential, to be certain that the limitation did not interfere with the basic parity principle.

The New York Times on March 4, 1960, in reporting on the hearings being conducted before the House Merchant Marine and Fisheries Subcommittee, said in part, and I quote:

"George Killion said studies by his group showed that the price spread between this

country and abroad was exceeding 50 per-

"In his testimony, Mr. Killion, who heads the American President Lines, said the differential was expected to increase further.

"'As long as the construction differential actually exceeds 50 percent and the act remains unamended, the United States in effect is requiring private steamship operators to use their own funds to subsidize domestic shipyards,' he said.

"CALLED RESTRICTIVE

"Frank A. Nemec senior vice president of the Lykes Brothers Steamship Co. of New Orleans, stated the industry's case more bluntly. He called the statutory limitation 'restrictive and unrealistic.'

"If it is not lifted, he warned, nonsubsidized operators will be discouraged from future building.

"Congressional inaction would also have serious consequences on the ability of subsidized companies to progress with their building programs,' he declared.

"Mr. Nemec cited examples of the burdens imposed by the law. He said a Japanese 'S' vessel, an 18-knot cargo type with a capacity of 600,000 cubic feet, could be built in Japan for \$3,700,000.

"An American counterpart, he adds, 'after giving effect to the construction subsidies,' would cost more than \$5 million.

"This difference in cost represents an excess capital cost that must be recovered by the shipowner before his ship is competi-

tively equal to the Japanese liner operator,' he said.

"Burke J. Piper, vice president and treasurer of the Grace Line, said his company's replacement program would not be completed on an economically sound basis unless the parity principle was made effective.

"'It was not the intent of Congress to have American shipowners absorb part of the cost of subsidizing the shipbuilding industry, he testified. 'It would not be realistic try, he testified. 'It would not be realistic to expect private investors to participate in such a basically unsound economic ven-

Our phenomenal economic and social progress as a nation has rendered impotent many palliatives of yesterday. Assuredly the conditions of 1936 cannot be likened to those of 1960. To achieve the parity intended by the architects of the 1936 act, it must be amended, now. This in my considered judgment is the prime objective of the moment. Please contact your Senators and Congressmen-ask your members to write them individually-urging them to support Senate bill S. 2584 and House companion bill H.R. 10129, designed to eliminate the 50 percent subsidy limitation.

It is definitely not our desire to create an atmosphere of gloom and doom. It is our desire and duty to keep you informed, candidly and completely. The advisory released by the Maritime Administration January 11, 1960, announcing that American Export Lines and the Federal Maritime Board have reached agreement on a new 20-year operating differential subsidy contract, radiates a little sunshine.

The new contract makes provision for the replacement by American Export Lines of 22 ships of its 30-ship fleet, including the SS Independence and the SS Constitution, two of the major cargo-passenger vessels of the American Merchant Marine. The other eight vessels of American Export Lines' replacement program are already underway, in keeping with a former contract, which expired December 31, 1959, and is replaced by the new 20-year contract beginning January 1, 1960.

The American Export Lines' replacement program is estimated to have a contract potential of approximately \$436.2 million in shipyard construction. At present Export has eight ships at an estimated contract value of \$96.2 million under construction in two American shipyards.

It is estimated that new construction of 18 freight ships and two combination cargopassenger or 20 freight ships to be replaced, in keeping with provisions of the new contract, would entail shipyard building of approximately \$236 million and the replacement of the Independence and the Constitution possibly another \$104 million. Thus, the total possible outlay under replacement obligations undertaken and underway by American Export Lines could reach the estimated construction cost of \$436.2 million.

The events of the last days, I am happy to tell you, indicate that the Navy brass are preparing plans for a tremendous expansion its Polaris-missile-submarine building program. The administration's present budget request for fiscal 1961, which begins in July, calls for construction of three Polaris-firing submarines and work on some complex parts for three more. In fiscal 1962, under present plans, three more Polaris subs would be completed.

Adm. Arleigh Burke, Chief of Naval Operations, told a Senate committee recently that construction of nine submarines would be possible and desirable in 1961. Navy officials are now studying a formal request for supplemental appropriation of about \$1 billion to pay for this. In addition, it is reliably reported, a request is under con-sideration in the Navy for money for long lead items for 12 more subs, rather than the three already requested. The only problem seems to be the necessary approval of Secretary of the Navy Franke, Secretary of De-fense Gates, and finally the President.

House bill HR. 6483, introduced by Congressman James E. Van Zandt, of Pennsylvania, commands our vigorous support. The references in this report to specific bills should in no sense be interpreted as reflect-ing upon the merits of a multitude of others presently before the 86th Congress relating to the maritime industry.

The steel strike, dearth of ship construction, repair, and conversion in U.S. shipyards, are among the many factors that have impeded our impetus toward the attainment of the goals sought through the establishment of the Iron Shipbuilders International Marine Council. It became obvious in the early days of 1959 that a substantial segment of U.S. industry was adroitly perfecting a blueprint designd to cripple American trade unions. Subsequent happenings proved these contentions and the biggest strike in our history was precipitated by a comparatively few sinister men. They failed miser-ably, primarily because they grossly underestimated the unity which invariably prevails when we are violently attacked. Numerous events, political and economic, during the past year, engendered an extraordinary at-mosphere of hostility in our collective bargaining efforts. The resistance to many legitimate proposals meriting mutual agreement must be attributed, to a degree at least, to the hysteria resulting from the acts of a punitive Congress and a prejudiced press. We have through a series of meetings drafted a skeleton agreement embracing vital identical provisions which will be submitted to those Atlantic coast shipyards with whom we will soon be negotiating. Wage parity, pensions, etc., etc., we repeat, will not be achieved overnight. We have and will encounter a rigidity of opposition to the application of agreement uniformity, from some, which will challenge to the fullest our collective bargaining ingenuity. The master shippard agreement on the Pacific coast and the several area agreements covering our building and construction trade members are symbols of success toward which our progress will be constant and attainment inexorable.

Our naval shipyards have long been a bulwark of our defense system. Their future is

jeopardized by the drastic curtailment of functions apparently emanating from the White House. I reiterate that all of our navy yards are vital to our national security and we will fight any curtailment thereof. We seek expansion not constriction of naval facilities.

I would be derelect did I not acknowledge and express my appreciation for the advice and cooperation afforded me by Vice Prestdent Boggs, International Representative Buoy, and Walter Mason, legislative representative of the AFL-CIO. Our international brotherhood is indeed fortunate and can well be proud of the prestige which they enjoy the Washington level.

Shipyard employees, everywhere, owe a debt of gratitude to International President Walliam A. Calvin. Any attempt here to enumerate his contributions and achievements in this area of endeavor would be nugacious. The stature of President Calvin, especially in those circles which have been or are now identified with shipbuilding, is unsurpassed. He is admired and respected by a host of friends serving our Government in the Halls of Congress and elsewhere. Bill Calvin charted the course and established the beacons which I hope to always observe and follow.

Attached to these remarks is a detailed picture of shipbuilding in the United States as of January 1, 1960, a copy of which has been distributed to the delegates here in attendance.

Tell Khrushchev We Are Ready for War, if Necessary

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Gen. Albert C. Wedemeyer, retired, which will be very interesting to my colleagues and readers of the RECORD:

TELL KHRUSHCHEV WE ARE READY FOR WAR, IF NECESSARY

(By Gen. Albert C. Wedemeyer, retired)

DEAN MANION. With me at this microphone now is one of the most distinguished military strategists of World War II. He has accepted my invitation to talk to you about the dangers that confront this country in the forthcoming summit conference. my pleasure to present the universally respected and widely experienced Gen. Albert C. Wedemeyer.

General Wedemeyer Thank you, Dean Manion, During World War II, Britain's wartime leader Sir Winston Churchill re-ferred to the Soviet Union as "a riddle wrapped in a mystery inside an enigma." This phrase was widely heralded.

To me, however, there was then, and there is now, nothing enigmatic about the Soviet Union. The entire world has been told re-peatedly since 1917 about the Communist plan for world domination. Lenin, Stalin, and now Khrushchev have at all times made their sinister purposes clear—the commu-nization of the world and the destruction of capitalist nations.

Actually, the real enigma or mystery is that we in the United States continue to delude ourselves that we can coexist with the Communists and that American dollars

will buy loyal friends.

Since my childhood, May 16 has always been a day symbolic of happiness, tranquility and peace, for it was my mother's birthday. She has passed on to her richly deserved eternal rest.

May 16 this year could very well be a symbol of abject defeat for freedom-loving people-of surrender to arrogant conspirators who have the avowed purpose of destroying us. We Americans, in fact most people in the free world, are sincere in the desire to maintain peace-peace with honor-peace in

an atmosphere of freedom.

I wonder how many Americans within range of my voice realize the importance of May 16 to our national well-being and security? If the so-called man on the street, the housewife on a shopping tour, the millions of young people in high schools and colleges, the workers in the factory, really understood the dangerous implications of the summit meeting scheduled to be held in Paris on May 16, there would be a wave of protest arising from the grassroots and exhorting the American representatives maintain a firm and realistic position in the finest American tradition.

Analyzing the summit meetings held over the past several years, we find a pattern of carefully conceived preparations on the part of the Communists. The initial step taken by Khrushchev was practically to blackmail our President into agreeing to a summit conference, under the guise of promoting peace.

Next, Khrushchev arranged a series of meetings with key Communist leaders to whom he carefully outlined the courses of action to be followed at the summit meeting. Obviously this will insure solidarity on the Communist front.

Further, Khrushchev made special commitments, economic and otherwise, to neutral nations and uncommitted peoples hoping to win support for the Communist position, or at least to insure that they remain rigidly on the fence.

Next, Khrushchev visited many important countries, outlining his so-called peaceful purposes and announcing his unqualified support of disarmament, the abandonment of nuclear tests, and the feasibility of friend-

ly coexistence.

His association with leaders in the countries visited is depicted behind the Iron and Bamboo Curtains as their approval of Khrushchev's leadership, his policies and plans. His prestige is thereby greatly en-hanced within the Communist bloc nations

and also among the neutrals.

Finally, when the summit meeting occurs, Khrushchev will attempt to seize the initiative by promptly submitting cleverly couched proposals which have double meaning and only propaganda intent. Skillfully and ruthwill make Communist demands upon the free nations while denying to them the opportunity of introducing any subject which might reveal communism in its true light. Every time we have gone to a summit meeting, the cards have been stacked against

We know all too well that it is accepted practice for Communists to lie and distort the truth. Their party discipline requires them to defend anything as true which supports the party line. Such is the dogma of all true Communists.

Why should we make any agreement, therefore, with their representatives at the sumor elsewhere without requiring irrefutable evidence and proof that the facts are not of their own making?

I hold that our representatives at the conference would be wise to question every statement the Communists make. What they present as truth may not be truth at all.

IKE CALLED THE TURN IN 1959

President Eisenhower said that the Communists' disregard of their pledges is one of the greatest obstacles to success in substituting the rule of law for rule by force. In his 1959 state of the Union message, he declared a basic rule for Western self-preservation, as follows:

"We have learned the bitter lesson that international agreements, historically considered by us as sacred, are regarded in Communist doctrine and in practice to be mere scraps of paper. As a consequence, we can have no confidence in any treaty to which the Communists are a party, except where such a treaty provides within itself for self-enforcing mechanisms."

Under these circumstances, as described by the President, I don't understand why we should go to a summit conference. But, we have made the commitment to do so and therefore the American people must do their utmost to insure that our representatives counteract intelligently and courageously the bullying tactics and machinations of Khrushchev.

Certainly, we should not forget that the idea of the summit meeting is Khrushchev's, who is the recognized leader of a regime which is directly or indirectly responsible for the murder of 30 million people since

Our own Nation's representatives come with clean hands and good hearts, for America has not killed masses of people nor ruthlessly seized territories.

On the contrary, America has made great sacrifices in blood and treasure to help the oppressed, the afflicted and less fortunate peoples of the world. We should make certain that everyone on both sides of the Iron Curtain understands those facts.

Khrushchev, the mass murderer, would use the President of the United States, Mr. Macmillan of Great Britain, and General de Gaulle of France, as stooges to convince the satellite countries of Eastern Europe and the Far East that leaders of the Western World are glad to sit in conference with the Soviet leader to discuss peace. He slyly conveys the impression that peace prevails only so long as they knuckle under the hammer and sickle of Soviet Russia.

The summit conference in Paris could very well be the death knell for this Republic and in fact for all free nations unless our representatives fully realize the nature of Communism and prepare to cope realistically with

They must keep in mind at all times that the morals, truth, and decency upon which Western civilization has been built simply do not exist in the Communist world.

They must be fully aware that communism is a destructive philosophy which sweeps aside all human values hitherto held sacred by civilized man. They must never forget the fact that the Communists have violated every treaty and agreement to which they put their signatures, if such violation would bring advantage to their side.

I am an old soldier and dedicated to the survival of this Nation as the last haven of human freedoms. I realize that it is a fait accompli that our representatives will confer in Paris on May 16 with the champion despoilers and killers of all time. How, therefore, should the American representatives conduct themselves at the meetings?

On the opening day, after the official amenities are over, I suggest that our representatives seize the initiative and state unequivocally that the question of Berlin is not subject to negotiation.

They should point out that the allied nations, including Russia, all agreed at the end of the war to the present status of Berlin and that there have been no developments which would justify breaking that agreement.

I suggest further in connection with Berlin and the German areas that our representatives insist upon a United Nations-supervised plebescite in both East and West Germany to permit the peoples living there to determine how and by whom they would be governed.

If Khrushchev's conduct at former conferences is any criterion, when he receives these forthright and realistic proposals from the West, he will immediately resort to his wornout threat of signing a separate peace treaty with East Germany and of establishing Berlin as its capital.

Our representatives, along with those of other Western powers, should then state as one man: "Go right ahead, Mr. Krushchev. If entrance to and egress from Berlin are disturbed, you will be responsible for the catastrophe that will unequestionably follow."

TELL NIK TO GET OUT OF SATELLITES

If Krushchev introduces the controversial question of admitting Red China to the United Nations, our representatives should "That question will be decided in say: plenary session of the United Nations Organization; however, we should relterate our determination to deny membership to Red China or to any other nation which fails to uphold international morality and which defies by word and deed the principles of the United Nations Charter."

When Krushchev demands that the United States abandon its foreign bases and withdraw its troops from foreign soil, I suggest that our representatives announce firmly that we will consider such proposal when the Red army and all Communist-inspired and supported influences are withdrawn from Rumania, Hungary, Czechoslovakia, Poland, Yugoslavia, the Baltic States, and East Ger-

Every member of the United States delegation to the summit conference should know that Khrushchev comes to the conference table under false colors, mouthing deceitful lies about easing tensions, peace and coexistence.

Every Western delegate should know the Russians will use the conference as a rostrum of propaganda, as they have used the United Nations for 15 years.

What will delegates from the West be doing at Paris while this inevitable Kremlin barrage is going on? Sitting on their hands?

Is there nobody on our side who will rise and lay bare the facts for the whole world to hear—the history of communism, Communist bloodletting, Communist conquest, Communist lies, and Communist tyranny?

Will there be no man from the free world seated at that conference table on May 16 strong or resolute enough to hurl Khru-shchev's lies back into his teeth and let mankind know the fiendish works and satanic ritual of communism?

Will there be no delegate with enough backbone to expose with irrefutable documentation the rape of Hungary, Poland, the Baltic States, East Germany, Czechoslovakia, Bulgaria and the other satellites?

Our delegation at Paris must realize at all times that the men across the table are not diplomats, as Western civilization understands that word; they are not dealing with gentlemen; they are "negotiating" with fanatically mad, atheistic materialists, who have been taught by their God, Nicoli Lenin, that every kind of deception and coercion must be used to further Communist conquest of the world and to destroy the capitalist system.

Our delegates to Paris must not be swayed to the belief that our people want "peace at any price." The American people prize human freedom and they would fight to defend it against any lethal weapon the scientists can dream up in their laboratories.

My fellow Americans, if you share my concern about the current world situation and what may develop at the May 16 "sumplease write or wire the Presimit meeting, dent or your Senator suggesting, first, a firm and realistic stand-indicating clearly that we do not seek war but are prepared to use every means at our disposal, including war, in order to maintain peace-peace with honor-peace in an atmosphere of freedom.

Finally, as the President himself suggested, the Western World should make no more treatles or agreements with representatives of the Communist world unless there are foolproof mechanisms provided for their enforcement. Concessions at the Paris "summit" meeting in May could be the twilight of freedom on this planet.

Thank you and God bless you.

Progress on Passports

EXTENSION OF REMARKS OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. TABER. Mr. Speaker, pursuant to the consent granted me today I submit herewith for printing an article showing some of the progress which has been made in the work of the Passport Office. This article appeared in the New York Times on Sunday, May 1, in its section relating to travel.

The article follows:

PASSPORT PROGRESS REPORT—PROCESSING OF TOURISTS AT NEW PEAK OF EFFICIENCY AS U.S. BUREAU GIRDS FOR ANOTHER RECORD SEASON

(By Alvin Shuster)

WASHINGTON.-The State Department's Passport Office today closes out precisely 5 years under the direction of Miss Frances G. Knight, and she and her colleagues are Purring with self-satisfaction. So, incidentally, are their customers, the citizens Who are taking out passports in ever-increasing numbers.

In one sense, the anniversary was marked on April 18, when the office received more passport applications in a single day than before in its history. The total was 7,024, which was 200 more than the record set one day in the previous week.

Miss Knight and her officials are not claiming credit for stimulating travel to such new heights. However, they are taking a great deal of satisfaction in public praise for the fast processing they have been providing

these days for passport applicants.

When Miss Knight became Director of the Passport Office 5 years ago it generally took 3 to 6 weeks—depending on the time of year—to get a passport after an application was filed. Today Miss Knight reports that passports are being processed in most cases in just 3 days, despite the fact that passport in the applications have jumped 61 percent in the last 5 years.

In all, the Passport Office expects to process a total of 810,000 applications for new pass-Ports and renewals this year, as against 732,000 in 1959 and about 500,000 in 1955. By 1962 the office expects to be handling close to 1 million applications a year.

Looking back over her 5 years in office, Miss Knight points with the most pride at the achievement of prompt passport processing. She notes that it has been reached through better organization, better training of passport employees, modernization, and mechanization.

While this may well be the major result of Miss Knight's work in the last 5 years, there have been some other changes too. range from the modernization of passport offices to the simplification of passport applications. For example, the word "spouse" was changed to "husband or wife." It seems that some applicants did not know just who or what their spouse was.

Color photographs were authorized and, whether owing to vanity or not, more men have been taking advantage of the option. In this connection the Knight campaign to get Americans to smile, so that they look at least happy if not beauteous, has paid off in more bright faces peering out of passport

CHANGE IN FORM

The passport itself has undergone some slight changes. It is now valid for 3 years instead of 2, and it may be renewed for another 2 years instead of 1. It is also thin-ner. This came about after Miss Knight found that 87 percent of passport holders were using fewer than 16 pages for all their visa stamps. So the passport's size was trimmed from 32 to 20 pages, although Miss Knight is now considering a special, thicker edition, even up to 48 pages, for professional travelers who can demonstrate that they need more space for the many visas they require in their journeys.

Moreover, to speed the mechanics of passport handling, the data page-that which gives descriptive information on the traveler-was changed from a vertical to a horizontal listing. This was final recognition of the typewriter as a timesaving instrument, and the fact that it writes horizontally.

Looking to the future, Miss Knight has other ideas on improving the passport, involving possible changes in the cover color, size, and format. There are plenty of the green ones now in use on hand, so any changes that do come about would not be effective until next January.

Among the proposals under study is a

shift of the page for the passport holder's photograph. Miss Knight would like to see it put opposite the data sheet so that entry officials would not have to flip a page to compare the description with the photo-

Another change in format under consideration would be the abolition of the great seal of the United States directly above the signature of the Secretary of State. Miss Knight believes that the red seal is meaningless on the passport and putting it on means extra expense. The Secretary of State's message asking foreign Governments "to pass" the passport holder and protect him if need be may be shortened and shifted to another

SIGNATURE PROBLEM

The facsimile signature of the Secretary of State may be eliminated to avoid the problems that rise every time there is a change in Secretaries. After Secretary of State John Foster Dulles died, the office had to stamp Mr. Herter's signature over Mr. Dulles'. not only meant extra work but it also detracted somewhat from the passport's appearance. New Herter passports are now in stock, but it has been proposed simply to run the words "Secretary of State" without any name at the bottom of his message.

Ast for the outward appearance of the passport, Miss Knight is thinking of perhaps another color and another cover. In her files are several experimental models in blue, yellow, tan, and other colors, in plastic and other sturdy materials.

A reduction in the size of the passport is another proposal. The present one is roughly $3\frac{34}{2}$ inches by 6 inches. The smaller one would be about $3\frac{1}{2}$ inches by $5\frac{1}{4}$ inches.

POINTS TO CONSIDER

"We have a lot of things to consider before we decide on any of these changes," Miss Knight said. "A smaller passport certainly would be easier to carry in a woman's hand-bag or a man's wallet. But what about all those leather passport holders that businessmen have in stock? We would hurt that business. And, besides, women are carrying larger handbags these days."

Further consideration, Miss Knight said. would have to be given to the point that visa stamps for some countries—notably the Soviet Union-already take up the space of a full page. Also, a reduction in size might tend to make the descriptive data concerning the passport-holder illegible.

"Something really ought to be done, though, to make the passport more durable," she said. Look at this shabby one I have in my hand. There is no reason why any American traveling abroad should have to present such a soiled, torn passport to an

entry official.

'We have been experimenting with plastics, but have found they slip more easily out of a man's inside jacket pocket where many men like to carry them. The loss rate on passports, now running close to 4,000 a year, might go up. As it is, we find that most men who lose their passports lose them in countries like Spain and Italy where the climate is warm and where they are likely to walk carrying their jackets across their

What we would really like to come up with is a simple streamlined passport that would serve as a model to other countries. If others like it, it could eventually be the forerunner for an international travel card.

"One thing is sure around here. We are

not married to old ways."

A walk through passport headquarters here, with its new automatic equipment, presents testimony to just that phrase. Indeed, the only evidence of "old ways" are six hand irons that are still used for applying heat and pressure in gluing on passport photos.

"For those," one official said, "we have found no better substitute. But we are still

looking."

The National Defense

EXTENSION OF REMARKS OF

HON, JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. LINDSAY. Mr. Speaker, in con-nection with the defense appropriation bill which we enacted yesterday, I think it important that my colleagues' attention be brought to a series of three editorials which appeared in the New York Times, Tuesday, Wednesday, and Thursday of this week, entitled "The National Defense." Part I in this series appears on page A3793 of the Record for May 3, 1960. I would like to include parts II and III at this point.

The editorials follow:

[From the New York Times, May 4, 1960] THE NATIONAL DEFENSE-II

In this, the second of three editorials on the subject of national security, we consider the question of the so-called missile

Missiles and other systems capable of delivering nuclear warheads on targets hundreds or thousands, of miles away obviously ly are of key importance to deterrence against general war. Their development, production, and procurement is generously funded in the 1961 budget, but critics say the funding is not generous enough and that by 1962 the Soviet Union will have ready for use two to three times as many inter-continental ballistic missiles as we shall have.

At the outset, several points seem clear. First, in a matter that could mean life or

death to the Nation, budgetary considerations must not be the limiting factor. The United States is spending for security only about 9 to 10 percent of its gross national product, as compared to Russia's 25 percent.

Second, deterrence is a complex problem. Successful deterrence—that is convincing any potential enemy before the event that it would be foolhardy, indeed ruinous, to attack us or our allies—obviously cannot be keyed to any one weapons system or, indeed, to weapons alone. Deterrence, in its broadest sense, implies defensive as well as offensive weapons of many types, passive or civil defense, and political, psychological, and economic measures.

Third, Congress should avoid what the services call "the numbers racket." Numbers of weapons alone, without reference to strategic requirements, have no meaning. To put the same point in another way, deterrent strength must be keyed to the Nation's strategic concept. Our entire strategy has been based upon the idea that we shall not strike first; in other words, our deterrent-if it is to deter-should be able to survive any enemy surprise attack and then to inflict unacceptable damage upon the enemy. This means that our offensive nuclear capability must be more or less invulnerable to enemy attack; it must be hidden, protected or mobile.

DETERRENT POWER

All these considerations profoundly influence any dispassionate and nonpartisan consideration of the defense budget. Judged by these yardsticks it becomes immediately apparent that the kind of deterrent—its degree of invulnerability and its flexibility—is far more important than number of missiles. Judged by the same yardsticks it is clear that our present ICBM—the Atlas missile—is only one element of our deterrent power, though an important one.

Judged again by the same yardsticks, one is forced to conclude that the United States, influenced too much by service rivalries, industrial pressures, technological uncertainties and the numbers racket, has developed a tremendous "overkill capability" (the capability of devastating Russia many times over) and a very expensive yet fractionally effective warning and defensive system against enemy attack. The bulk of our missiles and planes are at fixed land bases—the locations of which are well known to Russia, and which cannot be protected against surprise attack.

Congress should recognize that the best defense is a good offense, and that the tremendous and expensive defensive systemsthe DEW line, Nike-Hercules, and so oncannot insure anything like an invulnerable deterrent. We have produced weapon after weapon which has approached technical obsolescence even before it was fully operational. Therefore the recent decision of the Air Force virtually to eliminate the Bomarc B long-range defensive missile program and to cut back heavily the SAGE control system are sensible decisions, even though they were forced by budgetary limitations, rather than technological logic. Similarly the Defense Department is wise today to restrict the Nike-Zeus antiballistic missile to development funds until its utility has been proved.

FOR CONGRESS TO CONSIDER

But Congress will find that some things have been left undone. The ballistic missile nuclear-powered submarine, with its ability to cruise submerged across oceans and under the Polar icecap and to launch 1,200-mile city-destroying rockets from beneath the sea, best fulfills today the definition of an invulnerable deterrent. It is mobile; hence its position cannot be preplotted; enemy missiles cannot "zero in" on it. It is hidden in the vastness of the sea and extremely difficult to find. These missile-firing submarines can be

constructed and put into service much more quickly than we have been doing; if there is real concern about years of danger between now and 1965 we should speed up the Polaris program, rather than pour more tons of concrete for more fixed land sites.

A fleet of 45 to 50 missile-firing submarines, plus several hundred land-based ICBM's to reach those targets Polaris cannot reach, plus the newer bombers of the Strategic Air Command (on ground or air alert) equipped with air-to-surface long-range missiles, constitute a formidable deterrent.

But we must look to the future. Missiles, once launched, cannot be recalled; they have a strategic inflexibility which means they must be supplemented by other delivery systems. The piloted missile-firing plane, provided it can keep the air for days at a time, can become tomorrow another form of invulnerable mobile deterrent, similar in a different medium to the Polaris submarine today. Most professional opinion now believes that there will continue to be military use for the piloted aircraft as long as one can foresee.

In this light, the decision to cut back so severely the North American B-70 Valkyrie supersonic bomber program would appear to be a mistake, unless a compensating additional amount had been added to the development funds for a nuclear-powered bomber.

Thus, the U.S. defense budget must be studied in detail, not condemned or supported on the basis of a "gap" in one weapon or one system. Enough money is being made available to provide a reasonable deterrent against nuclear aggression, but not enough of it is going to the most important element of defense today—a mobile missile-launching capability, and to a flexible instrument of strategy—the piloted plane.

[From the New York Times, May 5, 1960] THE NATIONAL DEFENSE—III

The doctrine of massive retaliation—"at a time and place of our choosing"—is, of course, an essential component, indeed a primary component, of our strategic concept, but it provides no total answer to our defense needs. In considering the national defense budget, Congress must determine whether or not the Nation has made sufficient provision for limited war forces. For limited war, as current history has clearly demonstrated, is by far the most likely kind of military emergency we face.

Congressional committees have already highlighted some of our principal weak-nesses in deterring and fighting limited wars. In general, our first and greatest weakness is the increasing obsolescence of much of the Army, Navy, Air Force, and Marine Corps equipment and weapons useful for so-called conventional war. Put quite simply, the great stockpiles of weapons and equipment accumulated during World War II and Korea are being worn out, or are reaching technological senility more rapidly than we are replacing them. The numerical size of our forces also has been shrinking steadily-not only in number of men in uniform but in number of modern and effective arms in use and in stockpile. This shrinkage does not necessarily imply a proportionate decrease in the Nation's combat effectiveness. For new weapons, with greater speeds, ranges, firepower, and so on, can obviously accomplish the same combat tasks as a larger number of older weapons.

There is, however, a clear-cut limitation to the shrinkage process—and in ships, planes, and men—in particular—the services are reaching the point of no return. Admiral Burke, in recent testimony, pointed out that since 1955—the year he took office—the fleet's strength has declined from 1,030 ships to about 817, and from 9,761 aircraft to about 6,800. The construction and mod-

ernization program is by no means keeping pace with the increase of obsolescence.

The reduction in numbers is of particular importance in air strength in any situation imited to the use of conventional weapons only. For no missile has yet been developed—or is soon likely to be developed—that can replace the flexibility and effectiveness of piloted aircraft in attacks on tactical targets. Congress should hoist a warning signal against further reductions in numerical strength—particularly in air strength in the fighter, fighter-bomber, attack and light bomber categories.

THE OBSOLESCENCE FACTOR

The obsolescence factor affects all our services. The Army has a particularly good case to make for modernization and replacement. The Army and Marines have many effective new weapons either on the drawing board, in advance stages of development or in small-scale production. But testimony already given to Congress indicates that the Army is actually barely holding its own. The funds which the Administration has provided are not ample to fully replace brokendown, old, or wornout equipment.

The same observations can be made about the Military Air Transport Service, and the Navy's amphibious fleet. These are the two elements of conventional strength which must provide mobility. MATS is now operating only one really modern cargo plane; there is no doubt that modernization of its fleet is badly needed. Similarly, the Navy's amphibious groups require faster and larger ships.

There are also weaknesses in antisubmarine warfare and in other fields. Most important is the fighting man himself. Many steps to improve his morale and strengthen the incentives for service careers have been taken in recent years; others are still needed. Above all, Congress must avoid the overload factor; the manpower strength of the Armed Forces should be maintained at a level sufficient to avoid overloading those in uniform with constant exercises, alerts and oversea obligations. At the same time the manpower level must be high enough to maintain operational units-particularly those in forward positions-at top manning levels. It is disgraceful, for instance, that the U.S. Army apparently finds it necessary to flesh out its two skeletonized divisions in Korea—divisions closer to the common enemy than any other combat units-with Koreans. Congress should ascertain whether this is a result of budget parsimony or Army misuse of manpower.

There is still another problem Congress should consider—the entire broad problem of the procurement of military manpower, and especially the status and utility of the Reserve Officers Training Corps. The size of the Reserves, particularly of the ground forces of the National Guard and the Reserves, would appear, too, to be growing while the Regular Army is shrinking, a fact that will inevitably result in time in a lop-sided ground force.

Thus it is clear there are many problems and many weaknesses in our capability for deterring or fighting limited war. Not all of these problems or weaknesses are as yet really dangerous. It is not necessary, perhaps, to point out to the more extremist critics that we still have, as Lebanon and other incidents have shown, a very considerable capability to react with strength to limited threats. Nevertheless, unless the weaknesses discussed are soon eliminated, our conventional forces will become in furture years a wasting asset.

THE NEED FOR ALLIES

It is clear that the defense budget requires some major carpentry. But the structure of our security, no matter how strengthened by Congress, can never be firm without additional support.

These editorials have focused upon the contemporary needs of our armed services and our standing in the space race. But the formula for security in the atomic age is far more complex than this; the Atomic Energy Commission, for instance, and the political, economic and psychological elements of na-tional power are major factors.

Above all, it should be reemphasized, particularly at a time when some are urging a go-it-alone policy, that the United States is not now-and can never be again-"an island entire of itself." The days of selfsufficiency and isolation are over; the technological revolution in warfare has doomed forever the "Fortress America" concept. We need bases, outpost lines, friends and allies overseas; we need the world and the world needs us and our military and economic aid.

Modern security means mutual security-NATO, SEATO, and other ties. It means a global view, not a Maginot Line complex.

We cannot stand alone.

Take These Insults, Ike?

EXTENSION OF REMARKS OF

HON, ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. BOSCH. Mr. Speaker, with every passing day we hear or read of additional acts of outright disrespect to our Nation and its leaders by the ruler of the Kremlin. Here is one person who is a past master in doubledealing and doubletalking, most of the time out of both sides of his mouth. The record is replete with instances of disregard of common decency, to say nothing of the willful abrogation of treaties and understandings.

Now we have the experience of Mr. Khrushchev boastfully telling his puppets of the shooting down of an American airplane and threatening to destroy American bases throughout the world. If ever there was an act which could be interpreted as substantiating the belief of many of us that the ruler in the Kremlin could not be trusted, this is most assuredly that case. I should hope that our esteemed President will seriously consider canceling any summit conference unless and until a justifiable explanation with appropriate apologies and reparations are forthcoming.

Under leave to extend my remarks, I include the following editorial on this subject from the New York Daily News

of May 6, 1960:

TAKE THESE INSULTS, IKE?

N. S. Khrushchev triumphantly told his rubberstamp "parliament" in Moscow yesterday that Soviet armed forces have shot down what he called a U.S. military plane over Russian territory. His hearers cheered wildly.

The butcher of Hungary and the Ukraine also threatened to bomb U.S. bases in other countries, and/or those countries them-

He used grossly insulting language about Vice President RICHARD M. NIXON, and said General Eisenhower's insistence on limiting the summit conference to a week or so shows our President to be a flunky of "aggressive forces in the United States.

Having belched these boasts, threats, and insults, Moscow's No. 1 so-and-so accused the Western Allies of dimming the prospects for success at the summit.

The incident looks to us like an urgent cue for the President (1) to demand absolute proof that the downed U.S. plane was military and was violating Soviet territory, and (2) to torpedo the summit conferencesink it without trace—unless Khrushchev promptly and fully apologizes for his insults to Eisenhower and Nixon and his threats to our allies.

To sweet-talk this rat at this time would only encourage him to further presummit impudence and make Eisenhower and his fellow Americans look like fainthearted fools.

The Public Community Junior College Construction Act

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. ULLMAN. Mr. Speaker, I find that the interest across the Nation in my proposal for Federal assistance to States in carrying out a program of establishing and expanding community junior colleges continues to grow. I am receiving an increasing number of letters expressing support for my bill, H.R. 967, and asking for further information about it. So that my colleagues and others may have the benefit of a short explanation of my proposal, I wish, under leave to extend my remarks, to insert into the RECORD the brief statement I made before the Special Education Subcommittee of the House Education and Labor Committee earlier this year:

THE PUBLIC COMMUNITY JUNIOR COLLEGE CONSTRUCTION ACT

(Statement of Hon. AL ULLMAN before Special Education Subcommittee, House Education and Labor Committee, March 23, 1960)

Mr. Chairman, I am grateful to the members of this subcommittee for the opportunity to appear here today. The current and future needs of America's institutions of higher education certainly demand the kind of careful examination which you are now undertaking. I heartily commend the fine and very necessary work my colleagues are doing by holding these hearings to survey the needs and to consider what legisla-

tion would best serve them.

It is not necessary for me, I am sure, to repeat the statistical evidence of the rising enrollments in our institutions of higher education, the projections of even greater enrollments, and the resulting demands being made on the Nation's colleges and universities. The problems are manifold. The challenges of solving them are multiplying. And the diversity of American higher education implies that no single solution can suf-

Last year I introduced H.R. 967-the Public Community Junior College Act-which I believe represents one method of approaching the increasing demands being placed on our institutions of higher education. This proposal also is intended to make education beyond the high school more readily available to many more of our young people. I do not presume, however, to imply that this proposal is the only way to meet the needs which confront higher education today. Our 4-year colleges and universities, of course, also require expanded facilities. Moreover, I endorse proposals which would assist this

necessary expansion.

The fact remains, Mr. Chairman, that the 4-year colleges have not been able to grow in proportion to the tremendously increasing enrollments. Recognition of this fact is one of the major reasons behind my interest in the community college idea. value and unique advantages of the community college have received considerable attention from educational authorities throughout the Nation, Dr. Edmund J. Gleazer, Jr., executive director of the American Association of Junior Colleges, accounts for the growing popularity of the community college idea with these facts:

1. They are economical to attend; tuition fees are either very low or nonexistent.

2. They are close to the homes of their

students.

They are responsive to local needs.
 Their programs are flexible yet thorough.

5. Through their adult programs they provide opportunities for continuing education.

In my opinion, one of the most significant benefits of the expansion of community college facilities is that such expansion would almost certainly encourage more of the Nation's high school graduates to pursue further education. The Nation needs more highly trained persons. The availability of public junior colleges would surely help to increase opportunities for such training. Furthermore, junior colleges also help to relieve freshmen and sophomore overcrowding at 4-year colleges and universities.

Another distinct advantage of the 2-year college is the semiprofessional or technical training which it provides. This is an espe-cially attractive feature for students who wish to pursue courses of terminal in-

struction.

The community college also helps many students who plan to continue their studies in a 4-year institution by reducing their matriculation and adjustment difficulties.

Also significant is the fact that public community colleges strengthen the American tradition of providing educational oppor-tunity for all since these institutions further extend opportunities for the fuller development of more students.

Two other very practical aspects of pro-viding more public community college facilities are those of economy and geograph-These institutions provide ical proximity. low-cost education for many capable stu-dents who otherwise would be unable to afford post-high-school education. Also, studies made in a number of States confirm the fact that proximity to an institution of higher education is directly related to student enrollment.

Mr. Chairman, at the present time there are 400 publicly supported junior colleges in the country serving over 800,000 students. In fact, one out of every four students who entered a college in 1959 enrolled in a 2year institution. Since college enrollments continue to rise, obviously these junior college facilities must grow concurrently along with those of the 4-year institution.

But, just as clearly, the expansion of State educational programs on the junior college level cannot be undertaken by States and localities fast enough and on a large enough scale without Federal assistance. Letters which I have received from numerous persons in the field of junior college education and several discussions with others con-cerned with community colleges indicate a nationwide need for expanded facilities and the value of Federal financial support. For example, the superintendent of public in-struction and director of education of the State of California, Mr. Roy E. Simpson, informs me that:

"We here in California are deeply concerned about the tremendous pressures we face with the expanding enrollments in posthigh-school education. * * Actually, this year the junior college enrollments exceeded the projection * * * and we now have over 91,000 full-time students enrolled. It is now our belief that we will have over 220,000 fulltime students in the junior colleges by 1970. The increases in enrollments in the State colleges and the university are also serious problems. * * At the same time we are building junior colleges we are also having to expand our State college system and also the campuses of the University of California, so we have a three-way burden.

"Actually, at the present time we have as many full-time students enrolled in junior colleges as we have in the total enrollments in the State colleges and the campuses of the University of California. We believe that the junior college is performing a very significant and unique higher education function in our State; and it is reaching a point where the financial strain of providing facilities for all three is causing deep concern. Your bill, H.R. 967, if enacted into law, would provide a very substantial relief to our problem of meeting post-high-school needs."

From the Midwest, Dr. Harvey D. Martin, of the Education Department of Keokuk Community College, Keokuk, Iowa, writes:

"The community colleges need help in meeting the demands placed upon them by the ever-increasing student body. Our own college, presently bursting at the seams with more than the projected anticipated enrollment for 1958-59, is a good example depicting the needs of the community colleges throughout the United States."

Mr. Chairman, my bill is specifically designed to meet these demands. It would provide assistance to the participating States for the initial establishment of public community junior colleges and for the expansion of those public 2-year institutions which now exist either as subsidiaries of senior institutions or as separate junior colleges. Of equal importance at this time is the assistance that the bill would make available for the public technical institutions which are, under great handicaps, providing us with a large percentage of the technicians and skilled persons our Nation requires.

Not only will this proposal help to meet the demands of increasing enrollments, but it will also encourage the States to expand their diversified educational programs and provide education for many more thousands at reduced financial costs to the student.

H.R. 967 proposes to establish a 5-year program of grants-in-aid to the States for construction and expansion of public junior

The total authorized appropriation for each year of the program would be \$200 million, of which one-half or \$100 million would be apportioned equally among the 50 States, the District of Columbia, and the territory of Puerto Rico. The remaining \$100 million would be apportioned among the States according to the ratio of their total public elementary and secondary enrollment as compared with the national enrollment for these grades. The States would be required to match this second amount on a dollar-fordollar basis.

I believe that the system of a flat Federal grant and a variable Federal grant allows for the greatest amount of equity in meeting the varying enrollment potential among the States. In other words, the flat Federal grant guarantees that each State shall receive at least a minimum amount of Federal assistance through the allotment of an equal share of \$100 million. An equitable share of the other \$100 million would be apportioned to each State on the basis of its public school enrollment. This provision gives special consideration to the States with the highest potential public junior college enrollment.

The bill also provides that funds apportioned shall be used only for the construction of public community junior college facilities, public technical institutes and junior colleges of public senior institutions of higher education, and for the expansion of the facilities of these institutions.

Bearing in mind the importance of reaching those areas within the States which need public community funior colleges the most. have provided within the framework of the bill that consideration would be given under the State plan to those communities which: are geographically removed from other State colleges and universities: desire the establishment or expansion of a community college; are making an effort commensurate with their economic resources; and are unable, solely because of a lack of such resources, to finance the full cost of the needed facilities. H.R. 967 also would require that the State educational agency determine those communities in which the need for community colleges is most urgent. I believe that this bill offers a dynamic, workable, and positive approach to junior college needs of all areas of the Nation.

The construction cost of junior colleges, of course, would vary with the location of those colleges. However, it has been estimated that the average cost of expanded plant per student is \$2,500, or 125 square feet per student at \$20 per square foot. Using this estimate, for example, and calculating on the basis of an authorized appropriation of \$200 million, H.R. 967 could provide for an expansion of public junior college facilities to accommodate approximately 80,000 additional students. This number is equal to almost 10 percent of all those enrolled in public junior college in 1958-59. Moreover, State matching funds provided for under the bill would further increase the number of classrooms available.

Of course, in view of projected enrollments the amount authorized under H.R. 967 is but a small portion of the funds which will be required for needed college classroom expansion in the future. The fact remains, Mr. Chairman, that legislation of this kind would certainly serve as a stimulus to the States and local communities in their efforts to meet the increasing demands for more and better education beyond the high school.

I wish to thank the members of this subcommittee once again for the opportunity to discuss this bill and my reasons for sponsoring it.

Dedication Ceremonies at Jewish Hospital of Brooklyn, N.Y.—Address by Senator Kenneth B. Keating, of New York

EXTENSION OF REMARKS

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mrs. KELLY. Mr. Speaker, the Jewish Hospital of Brooklyn, which is non-sectarian, is located in the 10th Congressional District, which district I have the honor and privilege to represent. On Sunday, May 1, dedication ceremonies of the new wing to this great institution were held. It is the hope of all to create here a greater center of healing and research. This noteworthy institution has already established a mark in medical history as the institution in which the Rh factor was discovered. This alone has added so much to the

protection of families and persons to which we all are dedicated.

There was a magnificent representation of public officials—doctors of neighboring institutions, the president of the Borough of Brooklyn, Hon. John Cashmore, and the mayor of the city of New York, Hon. Robert F. Wagner. They as well as I were proud to participate in these dedication ceremonies. My colleague, the Honorable Kenneth B. Keating, of New York, gave the following address to the noteworthy assemblage:

Text of Address by Senator Kenneth B. Keating at Dedication Ceremonies of New Pavilion of the Jewish Hospital of Brooklyn, Brooklyn, N.Y., Sunday, May 1

Mr. Chairman, Mr. Leviton, ladies and gentlemen, this is an occasion my heart would not let me miss. I feel, in a sense, like the man who was present when the acorn of hope was planted, and who returns to join in admiration at the sight of the great full-grown oak of accomplishment. For, in 1958, at the 60th anniversary dinner of the Brooklyn Jewish Hospital, it was my high privilege to pay tribute to the blueprint of a dream that stands before us today as a towering citadel of accomplishment.

There are two ways in which one can view the magnificent new pavilion which opens its doors to humanity this day. We can see it with the physical eye, and marvel at the stone and steel immensity of it—the infinite complexity of its modern equipment, the amazing scope of its medical facilities. Or—and this is the view I would take with you today—we can see it with the vision of the human heart—and here, here only, do we peer through to the true significance, the enduring spiritual achievement that the building of this splendid pavilion represents.

For the human heart sees not the cold beauty of towers and steel, but the warm compassion of this dwelling place. It sees not the electronic wonders, but the relief from pain, the surcease of sorrow, the hope of healing that those wonders exemplify. The heart does not count the bricks and the girders. It counts the blessings-it counts the smiles of those healed and made happyit counts the lives saved and the lives extended-it counts the tender acts of care and kindness-the days and the years of care and kindness that will make this great pavilion a monument not merely to those who built it but especially to those who are to labor in it, who are to dedicate the supreme gifts of their skill and their love to the conquest of pain, the conquest of sorrow.

And the heart looks deeper still to see the true meaning of this great home of healing. It looks back across the years to the brave and good people who—before the turn of the century—joined their wealth of humanitarianism with their poverty of resources to open that tiny dispensary at 70 Johnson Street here in Brooklyn—that dispensary built mostly on love and hope—but whose creation was the seed that has now come to the full and glowing flower in the present justly famous Jewish Hospital of Brooklyn.—In this magnificent and inspiring story of

growth, we find the spirit of America. We find, as well, the spirit of Israel. And, indeed, I believe it to be a common spirit, a spirit shared—the striving of the human soul to ever higher levels of achievement, of richer self-fulfillment.

When I speak of Israel, I speak from my personal experience—one of the deepest and most moving experiences of my life. It was my privilege to visit that dynamic young Republic last November, to attend the dedication ceremonies of a forest in the Judaean hills. The Israeli Government paid me the high and memorable honor of naming this new forest project "The Ken Keating Forest,"

and I know of no honor in my life that means

Before going to Israel I had abosorbed an imposing fund of statistics attesting to her growth, to the teeming energy of her people. Such statistics are impressive in themselves, but they are mere arithmentic until life is breathed into them by the fact of one's own physical presence in Israel.

Israel was built, as this splendid new pavilion was built, from the heart outward. If you will permit an apt allusion, Israel, too, was once a tiny hope at her own 70 Johnson Street, but today she stands, in a dramatic and heart-lifting sense, as a victory of the human spirit over adversity. She has thrived, rather than withered, in the face of difficulties. By sheer force of will, of dedication, of zeal, she has lifted herself to a plateau of prestige in the world that has no parallel in history.

Israel, again like this fine building that We dedicate today-is an act of faith-an act of faith translated into dynamic reality. Everything man-dreamed and man-made in Israel today is a part of that act of faith. Every experiment in human betterment, every probing into the scientific unknown, every eager response to the challenge of the manifold problems that beset a new na-tion—these are the marks of greatness that must inevitably prevail against the forces of frustration and of enmity. We are aware only too vividly of the island status of the Republic of Israel in an unfriendly sea. But to me-as one who has been there-the great force and influence of Israel is like a tide breaking upon the shore. The shore in-escapably must change. It cannot ignore the tide. It must feel its pressures, it must take nourishment from its waters. It must one day realize the tremendous flow of vitality and health and human progress that this beneficent tide represents. eye view would be incomplete unless it brought into focus the thousands of wonderful, devoted, and generous people by whose efforts, by whose sacrifices, the blueprint of an idea has been transformed into the distinguished and imposing actuality that stands before us today. I speak not only of the prime movers—of men like Judge Bel-. Isidor Leviton, Harry Pearlman, Irving Baldinger-and other members of the board of trustees. Their role was vital. indispensable. But in this struggle they had a magnificent army behind them-the loyal and dedicated friends of the Jewish Hospital whose generous and unselfish support has been translated, here before our eyes, into this great monument symbolizing man's humanity to man.

For my part, I cannot think of a finer, more rewarding investment of time, of money, of energy. Each of you, for so long as you live, will receive the richest dividends that humanity can pay to those who befriend it in the spirit of brotherhood. This magnificent pavilion will repay you in the currency that circulates between heart and heart—the currency of kindness and of love.

Dime Store New Deal

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. DORN of South Carolina, Mr. Speaker, regardless of politics, many Americans are beginning to talk "Goldwarer for President." The following

statement by Senator Goldwater as it appeared in the Washington Evening Star is another reason why millions admire the forthright Senator from Arizona:

AGED PLAN HIT BY GOLDWATER—TAGGED AS "DIME STORE NEW DEAL"

Senator Goldwater, Republican, of Arizona, today blasted the Eisenhower administration medical care for the aged program as part of a "dime store New Deal."

The conservative westerner, who heads the Republican Senatorial Campaign Committee, said the health plan unfolded by the administration yesterday is "socialized medicine" no matter how much it is dressed up, painted and network as yountery

and pictured as voluntary.

"What is voluntary about a plan which will entall the participation of every taxpayer whether he wants to or not?" Senator Goldwarer asked. "What is free about a plan which has the Federal Government intervening in any way at all? Where in the Constitution is the Federal Government given the right to become a Federal doctor?

"STRANGE DRAMA

"This is but another act in the strange drama of an administration which gives full support to a sound dollar, a balanced budget and less Federal control, but which in actuality has suggested time and again measures which mean more Federal control, measures which result in less chance to balance our budget and measures which attack the value of our dollar. We could well call these actions the dime store New Deal."

The administration's health plan would be financed jointly by the Federal Government and the States for those aged persons with limited income who voluntarily join the program. It was offered in place of Democratic proposals to add health insurance to the social security system with a small increase in the payroll tax.

NOTES EMPLOYER SETUP

Senator Goldwater accused his party of having spent 30 years saying that the welfare state and centralized government are wrong, but arguing that "a little of it is all right."

He mentioned Federal aid to schools, depressed areas and the \$1 minimum wage law as categories in which Republicans have offered plans for a little Federal control.

Senator Goldwater said he knows he will be charged with being callous, but pointed out that in his own business he and his brother provide their employees with health and life insurance and a profit-sharing plan. He inquired why Welfare Secretary Flemming could not have solved this problem by proposing full deductions from taxes for any amount for medical care provided by an individual or a company.

How Do You Stand?

EXTENSION OF REMARKS

HON. HAMER H. BUDGE

OF DAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial by the Honorable BARRY GOLDWATER, Senator from Arizona, appearing in the May 3 edition of the Idaho Daily Statesman, published at Boise, Idaho.

The distinguished Senator from Ari-

zona is to be commended for his forthright statement on Americanism. It is a statement which will further endear Senator Goldwater to millions of loyal Americans who look to the Constitution of the United States for the protection of their liberty.

The editorial follows:

How Do You Stand, Sir?
(By Senator Barry Goldwater)

How did it happen? How did our national Government grow from a servant with sharply limited powers into a master with virtually unlimited power?

In part, we were swindled. We have elevated men and political parties to power who promised to restore limited Government and who proceeded, after their election, to expand the activities of Government.

But let us be honest with ourselves. Broken promises are not the major causes of our trouble. Kept promises are. All too often we have put men in office who have suggested spending a little more on this, a little more on that, who have proposed a new welfare program, who have thought of another variety of security. We have taken the bait, preferring to put off to another day the recapture of freedom and the restoration of our constitutional system. We have gone the way of many a democratic society which has lost its freedom by persuading itself that if the people rule, all is well.

has lost its freedom by persuading itself that if the people rule, all is well.

The Frenchman, Alexis de Tocqueville, probably the most clairvoyant political observer of modern times, saw the danger when he visited this country in the 1830's. Even then he foresaw decay for a society that tended to put more emphasis on its democracy than on its republicanism.

He predicted that America would produce, not tyrants, but guardians. And that the American people would "console themselves for being in tutelage by the reflection that they have chosen their own guardians. Every man allows himself to be put in lead-strings, because he sees that it is not a person nor a class of persons, but the people at large that hold the end of his chain."

Our tendency to concentrate power in the hands of a few men deeply concerns me. We can be conquered by bombs or by subversion; but we can also be conquered by neglect—by ignoring the Constitution and disregarding the principles of limited government. Our defenses against the accumulation of unlimited power in Washington are in poorer shape, I fear, than our defenses against the aggressive designs of Moscow. Like so many other nations before us, we may succumb through internal weakness rather than fall before a foreign foe.

I am convinced that most Americans now want to reverse the trend. I think their concern for our vanishing freedoms is genuine. I think that the people's uneasiness in the stifling omnipresence of government has turned into something approaching alarm. But bemoaning the evil will not drive it back and accusing fingers will not shrink government.

The turn will come when we entrust the conduct of our affairs to men who understand that their first duty as public officials is to divest themselves of the power they have been given.

It will come when Americans, in hundreds of communities throughout the Nation decide to put the man in office who is pledged to enforce the Constitution and restore the Republic; who will proclaim in a campaign speech: "I have little interest in streamining government or in making it more efficient, for I mean to reduce its size. I do not undertake to promote welfare, for I propose to extend freedom. My aim is not to pass laws, but to repeal them.

"It is not to inaugurate new programs, but to cancel old ones that do violence to the Constitution-or that have failed in their purpose-or that impose on the people an unwarranted financial burden.

"I will not attempt to discover whether legislation is needed before I have first determined whether it is constitutionally per-

"And if I should be attacked for neglecting my constituents' interests, I shall reply that I was informed their main interest is liberty and that in that cause I am doing the very best I can." How do you stand, sir?

Piercing the Iron Curtain

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I would like to include an article which appeared in the New York Mirror on Sunday, April 17.

With Communist forces working unceasingly to rob mankind of all human dignity, and using every low, under-handed, barbarous tactic ever conceived to accomplish their malevolent aims, this feature story serves to inject a refreshing note into the free world's struggle to survive.

Two Catholic priests, with an assist from a third, have been quietly engaged in a down-to-earth activity that, in my opinion, will do more to promote world peace and good feeling than many of the verbose negotiations presently being conducted at Geneva and elsewhere.

These clergymen, the Reverend Charles McTague and the Reverend Richard P. O'Brien, of St. John the Baptist Roman Catholic Church in Fairview, N.J., stuck some pins in a map of the Soviet Union, rounded up an antiquated Russian typewriter, and proceeded to bombard small Soviet villages with an awesome weapon-the truth: And the truth unleashed by Fathers McTague and O'Brien consisted simply of bundles containing pamphlets on Christian doctrine and the philosophy of freedom-translated into Russian and east European languages-which were mailed in bulk to one address in each Russian town.

This great example of democracy by doing has been so effective that Radio Moscow is now seeking to throttle these American saboteurs whom they accuse of filling the mails with obscene literature.

Part of this remarkable people-topeople program, which is working without the benefit of huge government appropriations, began during the 1956 Hungarian revolt.

At that time the two priests-guided and encouraged only by love for their fellowman-started helping refugees to find a free life in America. Hundreds of Fairview, N.J., residents were contacted and responded with homes and jobs for the newcomers. In this great venture, aid also came from an outstanding clergyman in neighboring Ridgefield.

N.J., the Reverend James J. Carroll, of St. Matthews Roman Catholic Church.

The refugees, Hungarians, Yugoslavians, and even some Arabs from Israel, have in turn helped the priests in their truth crusade by acting as translators.

All Americans can join in praising the extraordinary accomplishments of these three clergymen, Father McTague, Father O'Brien, and Father Carroll, as well as the open-hearted citizens of Fairview.

The intemperate outbursts of the godless Russian Communist masters are the best proof that an indefensible area has been reached by the truth packets and. further, that the fundamental desire of the Russian people is for freedom with religious training if they so choose.

This article from the New York Mirror, according to its coauthor, Miss Claire Curran, only skims the surface of what has been done by the Fairview and Ridgefield priests. Miss Curran, who is an experienced and highly regarded newspaperwoman in the New York-New Jersey metropolitan area, has told me:

I can't remember in years any story that gave me as much satisfaction as I received from this wonderfully human account.

The article follows:

PIERCING THE IRON CURTAIN

(By Claire Curran and Harry Altchuler)

For once, Radio Moscow was right-well. almost.

"One hundred thousand American saboteurs are flooding our mails with obscene literature," was the thundered warning over the Soviet airwaves.

Pretty close to the truth for Radio Mos-

Of course the number wasn't 100,000, it

was exactly 2. And they weren't saboteurs, they were two Roman Catholic priests from Fairview, N.J. And what the Reds termed "obscene lit-

erature" was a mimeographed catechism in Russian.

The Reverend Charles McTague and the Reverend Richard P. O'Brien, of St. John the Baptist Roman Catholic Church, on Anderson Avenue, Fairview, were delighted when they heard of the broadcast warning.

It meant their Operation Contact was off the ground to a flying start.

Sticking a hundred pins into a huge map of the Soviet Union, they had selected 100 towns and sent a bundle containing 35 copies of the catechism to an address in each town.

The squawk of rage meant they were get-

ting through.
Since then they have busily sent more bundles to more towns behind the Iron Curtain; not only catechisms but pamphlets spelling out Christian doctrine and the philosophy of freedom, put into Russian, Hungarian, Polish, and other East European languages by refugees who have escaped to America.

The genesis of their project goes back to a day in the 1930's when Father McTaguethen a slight, dark-haired teenager from Buffalo-shipped out as an apprentice seaman during one summer vacation from high school. Standing on the deck of a Honolulu-bound freighter, he heard a fervent Communist agitator exhorting the sailors.

"Why," the boy wondered, "doesn't some-body do something about this?"

And instantly in his heart another ques-tion echoed: "Why don't I?"

The nerve center of Operation Contact is an old-fashioned desk littered with books and papers and a creaky Russian typewriter in the study of the church. A detailed map of the Iron Curtain countries on one wall is pricked with the pins which show each village where the story of free worship and unfettered thought has been sent.

It is ironic that Fairview should be the center of this pamphleteering activity; for it was there, along the same Anderson Avenue, that Leon Trotsky, the passionate pamphleteer of communism's early days, traveled daily when he worked as a smalltime bit actor in a Fort Lee movie studio.

Another large and more personal projectwhich fits hand-in-glove into Operation Contact-began with a phone call from Camp Kilmer.

It was in the wake of the 1956 freedom flight of Hungarians from the blood-bathed Danube Valley. The refugees were processed at Kilmer for resettlement all around the country. When the work was just about over, the military commandant called Father McTague. "If you would take the last three," he said hopefully, "we could close down the camp."

"Send them along," was the word. The priests rented quarters for the three Hungarians and arranged for a retired Ho-boken policeman to become their "house-father" until they could get along by themuntil they could get along by themselves.

But that was only the start of the story. Within 3 years there were 168 of these refugees to be settled around the area. priests walked the streets of Fairview, Cliffside Park, Edgewater, Fort Lee, and North Bergen, searching out vacant rooms and apartments.

Landlords were difficult. The prospective tenants had no money, no jobs, few could speak English, some of them had large families. But the rooms were found and the money scraped together, much of it from the priests' own modest stipends.

Snowy mornings; Father McTague, a band of Hungarians trailing him, would ring doorbells to find them jobs sweeping sidewalks and driveways. Father O'Brien canvassed local industries, persuading embroideryplant operators to hire refugees. Restaurants took them on as dishwashers, countermen, and chefs' assistants. Carpenters hired apprentices.

Father McTague and the Reverend James J. Carroll of St. Matthew's Roman Catholic Church in neighboring Ridgefield pooled their savings of \$400 to start a credit union, lending money to the escapees. It is flourishing now, and all the early loans have been

A co-op was opened with a bright, pretty 13-year-old blond youngster from Austria as storekeeper. When one of the refugees ran short in his budget because of an employment agency fee to get him a job, Father McTague and a woman parishioner began an employment agency on their own with no fees.

The entire little town of Fairview-population 10,000-put its heart into welcoming the refugees. Homes were thrown open, jobs were turned up, English classes were also

Along with receiving, the refugees had things to give. Several of them entered the Army and have found spots in the translating division of the Intelligence Corps. And with a score of willing translators on hand, the priests have been able to step up their output of pamphlets.

Father O'Brien, with almost 40 years in the priesthood behind him, and his young curate, Father McTague, have turned group action into a dynamic anti-Communist movement. Call it a phase of the cold war-but "cold" is hardly the right adjective. For this is warm, human, people to people. And they have shown that it works.

Two Thousand One Hundred Eighty Residents of the 20th Congressional District of Pennsylvania Participate in Post Card Survey of Public Opinion

EXTENSION OF REMARKS

HON, JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. VAN ZANDT. Mr. Speaker, over the past several weeks 6,000 residents representing a good cross section of the 20th Congressional District of Pennsylvania were invited to participate in a post card poll of public opinion on 15 vital issues being discussed by the American people and their representatives in Congress. It is encouraging to report that 2,180 of my constituents favored me with their opinions on the questions submitted, some of them taking the time to elaborate on their views by attaching explanatory letters which proved very interesting because the position often taken on a subject was the result of personal experience and observations. The number of replies received represents a response from over 36 percent of those polled which is recognized as a very fine average in a public opinion poll by mail. In a few instances, questions were not answered on the grounds that the person lacked adequate information to form a definite opinion.

The idea of using various mailing lists in conducting a survey of public opinion from the residents of my congressional district was an effort to obtain assurance that the sentiment expressed would represent a good cross section of opinion from constituents. The result has been that it has been possible to secure the benefit of the views of persons in all walks of life including ministers, doctors, dentists, veterans, teachers, farmers, members of various professions, housewives, businessmen, and members of labor organizations.

The number of persons participating in the post card poll in the three-county area was as follows: Blair County 1,095, Centre County 536, Clearfield County 549, making a grand total of 2,180 persons responding out of the 6,000 polled.

The question receiving the greatest number of favorable replies was the query concerning the advisability of concentrating on building an all-around defense rather than specializing on missiles. A total of 90.5 percent favored an all-around defense with 9.5 in favor of concentrating on missiles. On the question as to whether the Eisenhower-Nixon-Khrushchev meetings are means of promoting world peace 78.4 percent favored such meetings while 21.6 percent doubted their value in restoring peace to a troubled world. total of 80.6 percent of the 2,180 replies favored retention of the loyalty oath required for student loans under the national defense student loan program while 19.4 percent expressed dissenting opinions.

Concerning the proposal to extend Federal aid to depressed areas suffering from chronic unemployment 77.1 percent favored such assistance. With respect to the questions concerning Government controls over agriculture 79.1 percent favored their abolishment. The question of providing Federal aid to education revealed 57.9 percent in favor with 42.1 percent against such assistance.

Another question which resulted in a very close division in public opinion concerned the proposal to increase the hourly minimum wage from \$1 to \$1.25 with 50.2 percent favoring such an increase and 49.8 percent in opposition. On the subject of the so-called Forand bill designed to provide medical and hospital care to persons receiving social security benefits, the cost to be borne by an increase in payroll taxes, 39.3 percent went on record in favor of the proposal with 60.7 percent against it. In regard to favoring a pension at age 65 for World War I veterans, 65.5 percent were in favor of a pension, while 34.5 percent opposed it.

It is my desire to thank all of those who cooperated in my efforts to obtain a good cross section of public opinion on vital issues of the day. The letters that accompanied the post cards revealed a sincere desire to provide constructive criticism where it was felt that such action was merited. This attitude on the part of the participants in the poll is deeply appreciated, as some of the writers stated that they welcomed the opportunity to express their views through the medium of an opinion poll because of reluctance in writing a personal letter to their Representative in Congress. By aiding me in the poll the result has proven mutually beneficial.

The tabulation of the 15 questions representing the views of the 2,180 persons in the 3 counties in my congressional district is as follows:

1. Are the Eisenhower-Nixon-Khrushchev meetings a means of promoting world peace? Yes. 78.4 percent: no. 21.6 percent.

Yes, 78.4 percent; no. 21.6 percent.
2. Should foreign aid in all forms be reduced? Yes, 69.2 percent; no. 30.8 percent.
3. Should the \$1 Federal minimum hourly

3. Should the \$1 Federal minimum hourly wage be increased? Yes, 50.2 percent; no, 49.8 percent.

49.8 percent.

4. Do you believe the loyalty oath now required under the national defense student loan program should be retained?
Yes, 80.6 percent; no, 19.4 percent.

5. Do you favor Federal aid to depressed areas suffering from chronic unemployment? Yes, 77.1 percent; no, 22.9 percent.

6. Do you believe that Government controls over agriculture should be eliminated? Yes, 79.1 percent; no, 20.9 percent.

7. Are you in favor of increasing the postal rate on letters from 4 cents to 5 cents? Yes, 34.1 percent; no, 65.9 percent.

8. Do you believe the limitation of \$1,200 on outside earnings of those drawing social security benefits should be increased? Yes, 68.2 percent; no, 31.8 percent.

9. Would you favor giving the President the right to veto or accept specific items in an appropriation bill instead of the present requirement that he accept all or nothing? Yes, 77.1 percent; no, 22.9 percent.

10. Do you think that the United States should try to place a man in space ahead of the Russians regardless of the cost? Yes, 13.9 percent; no, 86.1 percent.

11. Should we concentrate on building an all-round national defense or specialize on missiles? Yes, 90.5 percent; no, 9.5 percent.

12. Do you favor Federal aid to education? Yes, 57.9 percent; no, 42.1 percent.

13. Are you in favor of the proposal to provide medical and hospital care to persons receiving social security benefits and paying the cost by increasing payroll taxes? Yes, 39.3 percent; no, 60.7 percent.

14. Do you favor approval of a GI educational benefit program for peacetime veterans? Yes, 36.6 percent; no, 63.4 percent.

15. Do you favor a pension for World War I veterans when they reach age 65? Yes, 65.5 percent; no, 34.5 percent.

The Navy's Role in Missile Warfare

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include a fine address delivered by Vice Adm. John T. Hayward, Deputy Chief of Naval Operations for Development, at the Loyalty Day program held at Nanticoke, Pa., near Wilkes-Barre, on Saturday, April 30, 1960. It was a great pleasure for me to appear on the same program with Admiral Hayward and the admiral appeared at my invitation, for which I am most appreciative. Admiral Hayward's address on the Navy's role in missile warfare was highly informative and very well received by those attending that impressive program. It is my hope that Admiral Hayward will appear again at some future date to participate in another program in my congressional district.

The address follows:

THE NAVY'S ROLE IN MISSILE WARFARE, LOY-ALTY DAY, WILKES-BARRE, PA., APRIL 30, 1960

(By Vice Adm. John T. Hayward, U.S. Navy)

It is indeed an honor and a pleasure to be here to talk with you today. When Congressman Floor invited me to talk before you who are joined together by the medium of loyalty, I was reminded of the great sense of pride and satisfaction that we in the service experience aboard ship at sea where loyalty is required both "up and down" in order that the internal integrity of the ship is secure from all sources of danger. There are few sailors who have never experienced this truly great feeling. This feeling is also experienced in the civilian world, I'm sure. And as we in Washington are using all efforts possible to have the best defense posture for our country, I would like to discuss with you the Navy's role in missile warfare.

First, I am assuming that some of you may have a somewhat confused opinion concerning the responsibilities and roles of a specific service which has caused "interservice strife or bickering." To a certain extent this is dependent on what publication one reads. As it was said not so long ago, according to many publications, Congress debates, the Supreme Court deliberates, but we in the services bicker.

So there can be no misunderstanding on the subject, I would like to make it clear we in the Navy realize fully that we need the best Air Force and Army in the world if we are to meet the challenge.

My friends General Schriever of the Air Force and General Trudeau of the Army (who are both in research and development work as myself) I'm sure, would agree we need the best Navy. We are a team. However, as in all of our way of life we are also to some extent competitors but at the same time loyal to our service and country. In spite of what people say competition is not malum per se. On occasion it has done more good than harm.

As you know, many people in our country are very concerned over the problems that face the free world today. Unfortunately, we in the United States have a tendency to oversimplify issues. It has always been an either/or situation. As an example, many people believe it is either missiles or aircraft, submarines or aircraft carriers. An objective look at the problem quickly shows that there is no easy solution or an answer such as this.

A foreign relations committee in the U.S. Senate who are concerned on the impact on our national policy of modern technology had a study made on the subject by a very able group at the Washington Center of Foreign Policy Research of Johns Hopkins University. This study is not classified and their very fine recommendations can be used to give you a picture of the Navy's role in the present challenge that faces our country.

As a result of their analysis of the impact of modern military technology the following recommendations were made.

The first was that a high degree of security is essential for the deterrence of strategic surprise attack and top priority should be given to increased efforts to reduce the vulnerability of American and allied strategic forces.

What better way of saying that the sea and the inherent mobility one obtains with systems based on it is one of our greatest assets. We have in Polaris submarine weapons system one of the finest deterrent systems possible. It is a tremendous step for us.

The second recommendation was that a strenuous effort be made to accelerate the development of solid fuel ICBM's amenable to large-scale production and mobile sitting.

With the Polaris system we have mobility on the high seas and is in fact an ICBM and is the first solid propellant one in the deterrent system. We, in the Navy, have all the problems of the other services compounded by our environment, the sea. We fly above it, sail on it, and roam its depths. With our confined spaces and the fact that we must live and sleep with our missiles made us produce the solid propellant. We have ploneered in this field.

The third recommendation is that the objective of a strategic weapons system should not be the matching of the Soviet capabilities in number of ICBM's, but instead should be the early attainment of such diverse and relatively secure retallatory systems that the potential aggressor could not have confidence in a surprise attack.

Here again is a vote of confidence for the Polaris system, but, in addition, brings into focus the fact of our advantage of having deployed seagoing forces such as the four fleets. These fleets fly our flag and roam that priceless asset, the sea. It is only an asset as long as we can maintain freedom of the seas. The performance of these farflung forces in projecting our power across the seas to help our friends in the 15 years since World War II are familiar to all of you, I am sure. Do not forget that in order to maintain the freedom we need free access to control the air above it and have the power to actually use it. The success of the Navy's Side-

winder air-to-air missile loaned to the Chinese Nationalists is a good example.

You can be assured that in resisting aggression if we are called to go against enemy aircraft it will be against the best the opposition has. This is why it is mandatory the Navy has modern up-to-date high performance aircraft. And so it follows it is also necessary in order to accommodate planes of this type that we have a landing space of 750 feet. This is why we need the modern carrier. I wouldn't want to put down a 707 or DC-8 jet airliner at your airport here in Wilkes-Barre, excellent though it is for the purpose of its design. Similarly the World War II carriers are inadequate for the operations of modern jet aircraft.

The fourth recommendation was that in view of the decreasing deterrent value of the U.S. strategic force with respect to a broad area of lesser aggressions, greatly increased American and allied effort should be devoted to a strengthening of an alternative to U.S. strategic deterrence.

Once again it emphasizes we must have something besides great strategic retaliatory forces if we are to meet the total spectrum of the challenge.

The fifth recommendation is that, though we equip ourselves and allies with weapons appropriate to tactical nuclear war, which is necessary to deter the Soviet Union from resorting to tactical nuclear war, it should not be treated as a substitute for the establishment of nonnuclear forces, for two reasons: The first, dependence on nuclear weapons, even though tactical, means great destruction, and, secondly, such weapons will not compensate for the numerical inferiority of the troops employing them against forces similarly armed. Nonnuclear capabilities must be increased, and allies should be encouraged to give priority to building up nonstrategic dual-purpose forces able to stop or deter attacks.

This leads to several thoughts on our ability to respond to situations wherever they are. This is why one needs a manned airplane. You need precise delivery of weapons on military objectives. This is our job in the Navy, and we will most certainly employ a manned aircraft for the job for many years. One must always remember we haven't been able to give any missile the flexibility and judgment a man possesses.

You can see and appreciate that the challenge we face is a grave one, for it calls for a response across the entire spectrum. It is political, economic, and psychological, as well as military, and the above should give you a feel for how your Navy fits across the whole military challenge in this struggle the free world faces. Remember, the United States of America is the heart of the free alliance and this alliance is bound together by the sea. If we lose access to the sea, the free alliance will fail. Let me assure you we in the Navy are working hard to employ all modern technology in order to make sure we don't lose this precious asset for the free world.

Remembering that man has not and probably never will conceive an ultimate weapon, it is apparent that, despite differences in the degree of invulnerability between systems, we cannot afford to concentrate our total effort on just one weapon system for deterrence.

This policy will provide the degree of flexibility and control so necessary for our Government in internal negotiations to prevent general war. Simultaneously, this policy will provide sufficient conventional forces to let our Government negotiate from strength in limited situations in the face of blackmail threats of general war. We in the Navy believe we can meet this challenge.

Dr. Goddard's Enigma

EXTENSION OF REMARKS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the Record and include therein biographical data relative to the career of the world-famous scientist, Dr. Robert Hutchings Goddard, the pioneer of modern rocketry and space flight.

The Congress, in passing my resolution, House Joint Resolution 19, which has now become Public Law 86-277, 86th Congress, has authorized a suitable gold medal honoring this great American scientist who, with great faith and vision, once said: "It is difficult to say what is impossible, for the dream of yesterday is the hope of today and the reality of tomorrow."

Dr. Goddard's brilliant, epic, career typified the truth of this statement because he lived to see his basic ideas of rockets and space flights accepted and implemented during his lifetime.

Great as his achievements were in fabricating workable rockets for national defense and in piercing the mysteries of space, there are tragic overtones indeed to some of his very unhappy experiences with the American public and with high-ranking armed services officials of this Government during his time.

It is a bitter irony indeed that at the time Dr. Goddard was successfully developing his rockets, the value of his work to the Nation was not appreciated and recognized by the leaders of our armed services until a relatively late date. It is stated authoritatively that if his countrymen, at the time, had listened to Dr. Goddard, the United States would be far ahead of its present position in the international space race, and, of course, would also be far ahead in the military implementation of rocket and missile systems.

It is asserted, for example, that there might, in fact, have been no race in this field such as we know today, had Dr. Goddard's experiments and discoveries been rightly appraised.

been rightly appraised.

Several times in his career, and espe-

several times in his career, and especially in 1940 when we were on the threshold of World War II, he tried to interest our Armed Forces in the potential of rockets, but, alas, met only with courteous inaction.

This tragic failure to comprehend the real meaning and incalculable value of Dr. Goddard's experiments was a colossal blunder, and it is quite impossible at this time to appraise the real magnitude of its costly results to our defense and space programs. Only the future can now lift this yeil.

America can ill afford the luxury of such grave errors of judgment on the part of leaders in any generation. Yet, the results of these failures in this instance are both shocking and pathetic, indicating as they do, such stupendous oversight and lack of judgment on the part of high-ranking officials.

It is sad commentary, too, that this blunder occurred about the same time that Gen. Billy Mitchell was being castigated, disciplined, and severely punished for daring to assert the true value and potential of military airpower.

Thus, at about the same time, some of our leaders were demonstrating the almost incredible and fantastic misjudgments that rejected and stubbornly refused to recognize the value of airpower,

rockets, and space missiles.

I seriously doubt whether there is any similar instance in all history where ideas, experiments, and scientific programs so vital to the survival of freedom in the world were so unceremoniously and carelessly swept into the wastepaper basket.

It will be many years before the free peoples of the world can possibly know just how harmful and disastrous these ghastly mistakes may be. But even at this late date, there should be a lesson in these instances for contemporary American leaders and for this Congress never to allow such terrible misjudgments and miscalculations to occur again. God forbid that this Congress should allow them to occur at this time.

Dr. Goddard's scientific work has changed the history of man. Let us hope and pray that it will change it to avoid war and further the cause of lasting

Members of Congress may be interested to know that the distinguishd Director of the Mint, Mr. W. H. Brett, has now been authorized to proceed with the work on the Dr. Goddard Medal, and the sculptors and engravers at the Philadelphia Mint are already working on the preparation of designs and models, suitable emblems, devices, and inscriptionsthese to be determined by the distinguished chairman of the House Committee on Science and Astronautics, our esteemed friend, Congressman Overton Brooks, and by our distinguished, esteemed former colleague, Senator Lyn-DON JOHNSON, the chairman of the Senate Committee on Aeronautical and Space Sciences.

I am deeply indebted to Mrs. Goddard, the widow and most admirable helpmate of Dr. Goddard, for the splended bio-

graphical data which follow:

BIOGRAPHICAL DATA-DR. ROBERT HUTCHINGS GODDARD, AMERICAN PHYSICIST: PIONEER OF MODERN ROCKETRY AND SPACE FLIGHT (1882 - 1945)

Dr. Robert Hutchings Goddard, American physicist and engineer, was the pioneer scientist and engineer who laid down the technical foundations for most of today's prodigious developments in long-range rockets, missiles, earth satellites, and space flight. He founded a whole new field of science and engineering, now grown into a multibillion-dollar industry. In the course of his pioneering work, Dr.

1. Was first to develop a rocket motor using liquid propellants (liquid oxygen and gasoline) (1920-25).

2. Was first to develop and launch a liquidfuel rocket (March 16, 1926, at Auburn, Mass.).

3. Was first to launch a liquid-fuel rocket which attained a speed greater than that of sound (mach 1) (1935, near Roswell, N. Mex.).

4. First developed gyrostabilization apparatus for rockets (1932).
6. Received the first U.S. patent on the

idea of multistage rockets (1914)

7. First explored mathematically the prac-

ticality of using rocket power to reach high altitudes and escape velocity (1912). 8. Was first to publish in the United States a basic mathematical theory underlying rocket propulsion and rocket flight

9. First proved experimentally that a rocket will provide thrust in a vacuum

(1915).

10. Developed and demonstrated the basic idea of the bazooka during World War I (1918), though his plans lay unused in the U.S. Army files until they were put to use in World War II.

11. First developed pumps suitable for rocket fuels, self-cooling rocket motors, variable-thrust rocket motors, practical rocket landing devices, and forecast jet-driven air-planes, rocket-borne mail and express, and

travel in space.

At his rocket proving range near Roswell, N. Mex., Dr. Goddard developed during the 1930's large and successful rockets which anticipated many features of the later German V-2 rockets, including gyroscopic control, steering by means of vanes in the jet stream of the rocket motor, gimbal-steering, power-driven propellant pumps and other devices.

A crowning irony is that if his countrymen had listened to Dr. Goddard, the United States today would be far ahead of its present position in the international space race. There might, in fact, have been no race. Several times in his career, and especially in 1940, he tried to interest our Armed Forces in the potential of rockets, but met only with courteous inaction.

Dr. Goddard began his ploneer experiments in rocketry long before other scientists or engineers in the United States or Europe had perceived the full value and promise of the rocket. He continued until his death in 1945, at which time he was engaged in developing jet-assisted takeoff and variable thrust liquid propellent rocket motors for

the U.S. Navy.

Dr. Goddard was born in Worcester, Mass., on October 5, 1882. He was graduated from Worcester Polytechnic Institute in 1908. Upon graduation he obtained a position as an instructor of physics at WPI, and at the same time began graduate work at Clark University. He received his M.A. from Clark in 1910, his Ph. D. in 1911. He was a research fellow in physics at Princeton University in 1912-13, and the following year joined the faculty of Clark University, where he became a full professor in 1919.

He began his interest in rockets at the age of 17, in 1899. As early as 1908 he carried out static tests with small solid-fuel rockets at Worcester Polytechnic Institute. In 1912 he worked out the detailed mathematical theory of rocket propulsion, and showed that the rocket, because it needs no air to push against, could be sent to the moon or into space, provided an efficient motor could be

developed.

Upon returning to Clark University in 1914, he began to experiment with larger rockets. By 1916, he had reached the limit of what he could do on his own resources. Smithsonian Institution came to his aid, and with this help he was able not only to continue his work on solid-propellent rockets, but to begin the development of liquid-propellent rockets as well.

After the entry of the United States into the First World War in 1917, Dr. Goddard volunteered his services to the Nation, and

was sent by the U.S. Signal Corps to the task of exploring the military possibilities of rockets. He succeeded in developing several types of solid-propellent rockets intended to be fired at tanks or other military objectives, from a launching tube held in the hands or steadied by two short legs-devices similar in many respects to the bazooka of World War II. These developments he successfully demonstrated at Aberdeen Proving Ground a few days before the close of the First World War. They were the basis of the great U.S. developments in solid-propellent rockets in the Second World War.

In 1919 he summarized his mathematical

explorations, the results of his solid pro-pellent research, and some of his space flight ideas, in a classic paper entitled "A Method of Reaching Extreme Altitudes," published by the Smithsonian Institution. That paper today is one of the basic documents in technical rocket and jet propulsion literature, and the source of numerous developments that have come about since its ap-

pearance.

In the following two decades he produced a number of large liquid-propellent rockets at his shop and rocket range at Roswell, N. Mex. These rockets are now in the Nation Air Museum, Washington, D.C. Other early components are displayed at the museum at Roswell, N. Mex.

This research work was made possible by financial assistance from Smithsonian Institution, Daniel Guggenheim and the Daniel and Florence Guggenheim Foundation. In the mid-1930's he reported on the progress of his liquid-propellent work in "Liquid Propellent Rocket Development," published by the Smithsonian Institution in 1936. The work in New Mexico was described in further detail in 1948 in a book edited posthumously from Dr. Goddard's notes, and published by Prentice-Hall, Inc., under the title "Rocket Development."

He again offered his services in the Second World War, and was assigned by the U.S. Navy to the development of practical jetassisted takeoff, and liquid propellent rocket motors capable of variable thrust. In both areas he was successful, and demonstrated the resulting devices in tests at Annapolis. The work continued until his death in 1945.

Dr. Goddard was the first modern scientist who both perceived the possibilities of rockets and space flight, and undertook the enormous work of bringing them to practical realization. He lived to see his dream of rocket power come to fruition. His idea of the ultimate in rocket development-flight into space—has now become a reality. His contributions are recognized as among the most important technical achievements of modern times, marking as they do a turning point in the history of mankind.

Law Day and World Peace Through Law

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. McDONOUGH. Mr. Speaker, on May 1 Law Day was observed throughout the United States. In Los Angeles, Calif., Law Day ceremonies were cli-maxed by a Law Day luncheon meeting at the Ambassador Cocoanut Grove which was presided over by Attorney Adele I. Springer, of Los Angeles, national chairman for Law Day of the National Association of Women Lawyers of which she is past president, who delivered an address on "Law Day and

World Peace Through Law."

The meeting also heard Law Day addresses by Justice Mildred L. Lillie of the California District Court of Appeal, Second District, who is the highest ranking woman judge in the Nation, and Mr. Loyd Wright of Los Angeles, president of the International Bar Association and past president of the American Bar Association.

I am including the three addresses delivered at the Law Day meeting in Los Angeles, and am sure that my colleagues will find the remarks of these outstanding members of the legal profession on Law Day of special interest.

LAW DAY AND WORLD PEACE THROUGH LAW

(Address by Adele I. Springer, of Los Angeles, member of the bar of California and New York: past president, National Association of Women Lawyers; national chairman of its Nationwide Committees on Law Day and World Peace Through Law, delivered at Law Day luncheon of National Association of Women Lawyers with 70 participating women's organizations, May 1, 1960, at the Ambassador Hotel Cocoanut Grove in Los Angeles)

Law Day and world peace through law-it can be done.

As we observe Law Day, let us not overlook the fact that justice is universally symbolized by woman.

The greatest unreleased power in the world today is woman power.

Women, with concerted action, can make their voice heard in the world councils for

world peace through law. Seventy women presidents are assembled at the president's table here participating in the observance of Law Day. They represent a cross-section of the leading women's civic clubs and business and professional women's associations in the Los Angeles area. will report the message of Law Day to the many thousands of women in their respective organizations—a formidable force.

The support of women throughout the world will be enlisted in the battle for world peace through law, to make every day Law

Day.

Why cannot law displace force in the settlement of international disputes? Why cannot nations taken their cases against each other to a world court, just as people sue one another in local, State, and Federal courts; and why cannot proper measures be taken for enforcement of judgments by a world tribunal, just as people are forced by police to obey the laws of God and man?

Why not? It can be done.

Women have had no easy road to recognition in their chosen fields, but they proved it could be done.

When Myra Bradwell, first woman in the world to apply for a license to practice law. in 1869, was refused because of her sex, the galiant women did not give up. Determined women relentlessly pursued their cause for decades, all the way up to the Supreme Court of the United States and through Congress and State legislatures, from the time Arabella Mansfield became the first woman lawyer in 1869, until the last of the States granted to women "equal justice under law" as lawyers.

Though the intrepid ladies who pioneered in medicine for women preceded by two decades the pioneering Portias, their aims and gains were the same. When Elizabeth Blackwell, the first woman doctor, found all hospital doors closed to her because of her sex, that didn't stop her-she built her own

The story was the same, with little variance, in other fields. And so it was, with all the other courageous women of yesteryear who fought the good fight to enable them and succeeding generations to invade the masculine strongholds and attain the distinguished place that women now occupy in all the professions and occupations.

We are the successors of those great and courageous trailblazers, those heroic pioneers who fought, and won, against seemingly insurmountable odds, the battle of the sexes, which opened all doors to the women of our

That each one here is conscious of your responsibilities to the women who come after us and to future generations, is made evident by this assembly of thinking women. and also of brave men who have invaded this predominantly female stronghold this day to balance the scales of our Law Day ceremonies.

The guidance and activity of women are greatly needed in government housekeep-The world can be enriched, as the home has been endowed, by having both sexes contributing to the well-being of this Nation, and for the objective of world peace through law.

With united action, world peace through law can be made a fact and not a phrase. Let's go to court instead of to war.

LAW DAY, U.S.A.

(Address by Loyd Wright, president, International Bar Association; past president, American Bar Association; member of ABA Special Committee on World Peace Through Law, delivered at Law Day luncheon of National Association of Woman Lawyers at Ambassador Hotel Cocoanut Grove, May 1, 1960)

I am gratified because of the opportunity of visiting with so many of the influential women of our communities, for it has been my observation that it is the womenfolk who get things done, and who are not easily sidetracked by the Wall Street Journal news of the office balance sheet.

Law Day was conceived by Mr. Charles Rhyne when he was president of the American Bar in 1958. His proposal was approved by the Board of Governors of ABA. The President of the United States designated May 1 as Law Day, U.S.A. It is, as the name implies, a day for the American people to pay tribute to our judicial systems and our inherent rights and responsibilities under the rule of law.

Because all lawyers take pride in the contribution the profession made it is with restraint, of course, that I desist extolling the virtues and accomplishments of my profession in the establishment of our form of government, which lays emphasis upon the dignity of the individual, but rather I choose simply to acknowledge our debt to the citizens and statesmen who conceived the principle of government that freemen have certain inalienable rights which may not be transgressed, even by their own government.

Today is May Day in other parts of the world. The contrast between Law Day, U.S.A., and May Day in the iron-curtained The contrast between Law Day, world is plain for all to see. No other day demonstrates with such clarity the vast gulf that separates the earth into two contending powers. Our meeting here symbolizes the faith that guides America and the free world, our faith in the rule of law and the dignity of the individual.

The American Bar has undertaken through a committee called World Peace Through Law to try and indoctrinate other peoples and other governments with our concept of the dignity of the individual under the rule of law. Law Day. U.S.A., and World Peace Through Law have no connection whatever except so far as through the press and other media of communication we may inspire the thinking citizens of other nations who follow the continental idea of centralized government, to inquire into the benefits of our great experiment of government.

World peace through law is the antithesis of brute force and murder on the battlefield. It is not a new idea, but has been lingering in the hearts of men since the dawn of time. It is the purpose of the American Bar Association, recognizing that this is not a new idea but a long-range program, to hold conferences not only in America but in other nations as well, to implement the under-

standing of what we enjoy.

I know of no decent citizen who does not in his heart hope that some day there will evolve on this battlescarred world a brotherhood of mankind, but I know of no one, who is realistic, but realizes that this is a long evolutionary process, a process of education and a process in which each of us must accept responsibility, as our opportunities af-ford us, to spread the gospel of rule of law.

I had the honor of appointing a committee of world peace through law of the International Bar Association. You may be surprised to know that peoples of other nations schooled in the art of diplomacy look somewhat askance at the thought of abandoning the historic method of conducting business between nations and substituting the submission of problems to a court chiefly composed of judges from countries who have entirely different philosophies of govern-ment, and it was with some reluctance that the International Bar Association finally agreed to institute its own committee. Sir Edwin Herbert, one of the most noted solicitors of England, is the chairman of the IBA Committee, and its membership is comprised of representatives from England, Canada, Denmark, France, Germany, Japan, Mexico, Turkey, and the United States of America. This committee has agreed to progress slowly but surely, and its first effort is going to be to endeavor to get the businessmen of various nations to submit their legal controversies to arbitration or to an international court. It so happens that Sir Edwin Herbert has beeen working on this very thing in the International Chamber of Commerce for a number of years, and it is our hope that we will break down the barriers and can progress as we accomplish.

In this field of substituting judicial determination for mass murder, you and I can make our best contribution, I believe, by availing ourselves of the opportunity to inform other peoples, as well as our own people, of the blessings we have enjoyed under the rule of law, and thus through propa-ganda, if you wish to call it such, enlighten all the world to the fact that there is a great nation which holds fast to its belief in God and the dignity of the individual, and that there is a great nation whose laws protect the individual even against his own government. While it is a long road, this would not deter us, but it seems to me we should rather look upon it as a challenge to perpetuate the freedoms, privileges, and opportunities as well as the responsibilities that we have inherited in our own glorious experiment of government.

One who seeks the living Constitution must look not into the Library of Congress but in the hearts and minds of the American

An enduring truth that makes itself felt in times of crisis and upheaval is the fact that the principal custodian of liberty the judiciary. In any land and at any time, the human rights that can be said to exist are those that the courts stand ready to enforce. Through the work of the judges, life is breathed into the principles of the Constitution; through their judgments and decrees the ideals of freedom are transmuted into actuality. It is important then, that on Law Day, U.S.A., we pay just tribute to our judiciary, Federal and State.

LAW DAY, 1960

(Address by Justice Mildred L. Lillie, highest ranking woman judge, justice of the California District Court of Appeal, Second District, delivered at Law Day luncheon of National Association of Women Lawyers at Ambassador Hotel, Cocoanut Grove, in Los Angeles, May 1, 1960)

Law Day and the May Day of the Soviet Union, both occurring on May 1, dramatize the contrast between the American concept of human freedom and justice under law, and the suppression of individual freedom under communism and tyranny which enslaves the people of one-third of the world today. As despots flaunt their military might of rule through force, fear, and total immorality (symbol of the philosophy of the Communist world) we Americans have set this day aside to affirm our faith in the rule of law as the only safeguard of human freedom and dignity.

Law Day was inaugurated by Presidential proclamation in 1958, the President recognizing the supremacy of the rule of law as essential to the protection of the rights of the individual citizen and the existence of our Nation, and its great potential as a force in world peace. And it is on this crucial role of law in world affairs and the hope it offers for settlement of disputes among nations that we, as lawyers, today focus our attention.

The function and purpose of the law, then, is to protect man in the enjoyment of those rights, against excesses and abuses of government and the majorities. Without law there could be no freedom-no liberty-no man could be safe in his person or in the enjoyment of his property. Government by rule of law is a means certain of thwarting the ambitions of every would-be dictator. The crux of our legal philosophy and the essence of our way of life is the profound concern with the individual-his rights, his duties, his dignity, his equality; as contrasted with the system in which the main concern is the state, to which human beings are expendable. This is the strength of America.

But the rule of law does more than insure freedom from the arbitrary action of rulers. It insures justice between man and man. To Americans the law is our ally. It evokes no dread, no fear, no suspicion, as to those living under the shadow of communism. The police is our protection; the courthouse the symbol of a free judiciary, the law a guarantee of justice and equality regardless of social, economic, or political status, race, color, or creed. Carved in marble above the U.S. Supreme Court Building are the words "Equal justice under law." This concept of equality is not new. America has become the greatest Nation in the world in large part on account of the su-

preme productive capacity of the American citizen assured to him by our law.

But Americans seem to be slow in the realization that maintaining their way of life presents a continuous challenge from generation to generation. The fact that we are a democracy now is no assurance that we forever remain one. The admonition that "eternal vigilence is the price of liberty" is a living, breathing one which serves well to remind us of the essential role of law and the courts in the American way of life, and it is only in this way that we can convince the other nations of the great potential and the workability of the rule of law as a force for peace; and it is only as the world comes to accept the rule of law and agrees on its common principles that there will be hope for a lasting peace.

In this age of the atom and outer space, to prevent total destruction, it is enevitable that the peaceful administration of international disputes be substituted for the slaughter of the battlefield.

What we need now is the universal will to recognize the necessity and workability of the rule of law in a democracy such as our own and to accept peaceful settlement of disputes among nations in a framework of law. We have demonstrated to other countries that the supremacy of law is the strength of America; we have served as an example of a people who can live in peace and harmony, security, and freedom under law. Perhaps our actions will convince other nations of the world that this same framework can, as well, permit them to live together in peace and harmony, security, and freedom.

So, as this traditional day is celebrated in Red Square in Moscow and in the cities throughout the Communist world, glorifying the spirit of a powerful lawless conspiracy in a government of self-appointed and self-perpetuating dictators whose words and whims are the law of the land, is this not a most appropriate time for us to demonstrate our faith in the rule of law, not for America alone, but for the world.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representa-

tives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Daily Digest

HIGHLIGHTS

Senate cleared for President bills on area redevelopment and bank mergers. House passed AEC authorization bill. See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 9002-9008

Bills Introduced: Four bills were introduced, as follows: S. 3501-3504.

Bill Referred: H.R. 11998, Defense Department appropriations for fiscal year 1961, passed by House on May 5, was referred to Committee on Appropriations.

Page 8983

Tariff—Shoe Lathes and Casein—Correction: Daily Digest on May 5, page D380, in reporting passage of H.R. 9862, to continue for 2 years the existing suspension of duty on certain lathes used for shoe-last roughing or for shoe-last finishing, incorrectly stated that Senate amended committee amendment by adopting an amendment by Senator Hartke to limit suspension of duty on imports of casein to March 31, 1961. As a matter of fact, this Hartke amendment was rejected and the suspension of duty on casein until June 30, 1963, as provided by committee amendment, was retained in the bill.

Pages 8892-8899

Area Redevelopment: By 45 yeas to 33 nays (motion to reconsider tabled), Senate adopted Johnson (Texas) motion to agree to House amendment to S. 722, to establish an effective program to alleviate conditions of unemployment and underemployment in certain economically depressed areas. This action cleared the bill for President.

Pages 8983-9002

Bank Mergers: S. 1062, to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidations of insured banks, was cleared for President when Senate adopted Fulbright motion to agree to House amendment thereto. Motion to reconsider this action was tabled.

Pages 9009-9013

Great Lakes Pilots: Senate passed with committee amendments S. 3019, providing for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes.

Pages 9016–9019

Air Transportation Rates: H.R. 4049, to authorize free or reduced rate air transportation for certain additional persons, was passed with committee amendments.

Pages 9020-9021

Naval Vessels Construction: Senate made its unfinished business H.R. 10474, authorizing construction of naval vessels.

Page 9021

Legislative Program: Majority leader announced that as soon as House adopts conference report on H.R. 11510, Mutual Security Act of 1960, Senate will proceed promptly to its consideration; also, that in scheduling bills for action, priority will be given to appropriation bills.

Record Vote: During Senate proceedings today one record vote was taken, which appears on page 9002.

Treaty Received: Agreement between U.S. and India for avoidance of double taxation with respect to taxes on income, signed at Washington on November 10, 1959, was received and referred to Committee on Foreign Relations (Ex. H, 86th Cong., 2d sess.). Page 9008

Nominations: Senate received the following nominations: 3 judicial; 5 Army; 44 Air Force; and 26 in the Public Health Service.

Poges 9027-9028

Program for Monday: Senate met today at 9:30 a.m. and adjourned at 12:36 p.m. until noon Monday, May 9, when its unfinished business will be H.R. 10474, construction of naval vessels. As soon as House has adopted conference report on H.R. 11510, Mutual Security Act of 1960, Senate will consider it.

Foreign Economic Policy—On the Road to Peace

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1960

Mr. HAYDEN. Mr. President, on May 1, the distinguished junior Senator from Missouri [Mr. Symington] appeared before the Tucson, Ariz., Sunday Evening Forum, a public-affairs forum of national stature, and spoke to an audience of over 2,000 on the need for a long-range foreign economic policy.

His remarks that evening are especially timely if one hopes to understand the interrelationship of tariffs, foreign aid, and foreign investment in developing a dynamic American foreign policy. Therefore, I ask unanimous consent that the text of his address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN ECONOMIC POLICY—ON THE ROAD TO PEACE

(Address by Senator Symington, Sunday Evening Forum, Tucson, Ariz., May 1, 1960)

Whether we like it or not, the United States is no longer an island of freedom and strength, safely surrounded by great oceans on the East and West, and great friends on the North and South.

The freedom and strength are still here, and so are the oceans and our friendly neighbors. But distances between nations have shrunk almost overnight—and the oceans are hidden tunnels for potential aggressors.

The subject of foreign policy is no longer a weekend exercise, and the alternative of noninvolvement is no longer ours.

We are involved—and the involvement is bound to become greater, not less,

Our lives, and the lives of our children and grandchildren, will of necessity become increasingly affected by what happens all over the world, and—let us not forget—

throughout space as well.

This we can readily see—whether it be a threatened attack upon one of many nations with which we have defense commitments or whether it be the prestige effect of Soviet satellites upon uncommitted nations.

There is, however, another interrelationship in world affairs—one which is too often overlooked. I refer to the interrelationship between tariffs foreign aid, and foreign investments.

Each of these affects the other. None can be handled in isolation, any more than we can have a policy about the unification of Germany without regard to the pronouncements from the Kremlin.

THE RELATIONSHIP OF EXPORTS AND IMPORTS

Yet, so far as I can discover, our Government has no policy which meshes these important things together. Nor has it explained their interrelationship to the American people.

Rather, the question of imports of goods is treated as a special type of economic invasion of our country—for the purpose of depriving American laborers of their jobs and American stockholders of their profits.

Exports, on the other hand, are considered to be good business, and any effort of some other nation to undersell us abroad is termed unfriendly—and even Communist-inspired.

Of course, any sound businessman knows that his sales are a total loss unless he gets paid for them. The same is true in the world of foreign trade. Imports are the means of payment for our exports; hence, anything that cuts down on imports makes it more difficult to export. A policy which tends to encourage exports and another policy which tends to discourage imports are operating against each other.

In the short run, there is little difference between exports for which we do not receive comparable value of imports in return, and foreign aid grants. The latter are also exports, generally, of goods produced here in the United States—but given away, rather than paid for by returning imports.

Yet, if you were in Washington, you would soon see that the same organization, or even the same Government official, urges an expansion of exports, a curtailment of imports, and a decrease in foreign aid.

To understand the interrelationship of these things, however, does not automatically

solve the problem.

Take the businessman who is having difficulty competing with foreign imports. It doesn't help him to know that some other businessman is benefiting because such imports are the means by which the latter businessman gets paid for his export sales.

A TWO-EDGED TARIFF POLICY

I believe we should have a two-edged tariff policy, based on a full realization of the economic significance of both edges.

First, for good practical reasons we should keep down our tariff barriers. The reasons are as follows:

- Tariffs are taxes paid by American consumers—not by foreign sellers.
- 2. Tariffs are inflationary. They are taxes added onto the price of imported goods; or, if they are sufficiently protective, they permit higher prices for domestic goods.
- 3. Tariffs encourage other countries to raise barriers against our export goods and therefore cost us part of our foreign market.
- 4. Tariffs encourage the investment of American capital abroad. Some of this money could well be used in building up our own country.
- 5. Tariffs may even cause unemployment in the United States, in that they decrease sales of our most efficient large-scale production industries.

The other edge of the tariff policy, however, should be this: when commodities flow into our country, underselling U.S. goods and threatening the employment of U.S. labor and capital, the facts in each individual case should be examined carefully to see if the damage to our own people is such as to merit an exception to the general tariff policy and give that industry at least temporary added protection.

In each case in which such a decision is made, the Federal Government should cooperate with local governments and private organizations to see if new industries and new production cannot be introduced into the areas which have been hurt by the foreign competition.

The argument that tariffs protect domestic industries and their profits and therefore cause a greater flow of income tax revenue to the Government is, to put it bluntly, non-sense.

Curtailment of international trade decreases income tax revenue to the Government.

Nonetheless, I would not make individual tariff judgments on a Government revenue basis, but on how the people in the areas concerned are affected.

I am convinced that the added tax revenues from increased exports would be more than sufficient to foot the bill for the research and the Government financial assistance which may be necessary to modernize those industries which find they cannot beat foreign competition.

The United States is the greatest exporter of goods in the world. We undersell other countries in a large volume of goods. It is obvious that we could do this only if our costs and prices were lower in those goods. Otherwise, foreigners would buy them someplace else.

There is no basis for complacency in this situation, however, as an examination of our recent trade statistics reveals. We have to keep improving both quality and our production efficiency if we are to maintain the advantage we have held for so many years.

SOVIET COMPETITION

There is, moreover, an increasing concern—and rightly so—about the threat of economic competition from Soviet Russia. So far, this is not serious in the sense of free competition, because no one seriously considers that Russian costs of production are generally as low as ours. For example, some of the top production men from our steel industry visited Russia recently, went through their plants, and examined their techniques. Their conclusion was that Russian costs of producing steel—a commodity so basic to the production of other goods—was far above ours.

The serious aspect of Soviet competition lies in the fact that their prices are not determined on the basis of cost. Rather, they are set by the dictator at whatever level he considers would best serve the aims of this foreign policy.

As example, the Russians put the aluminum industry into something of a frenzy last year by the simple process of dumping a small amount of aluminum on the world market at a price well below the existing level. This was done even though Russia has not enough aluminum to meet its own needs, and undoubtedly offered the aluminum at a net loss if figured in our own accounting terms.

With a population about 15 percent greater than ours, and a gross national product about 55 percent less than ours, Russia is in no position to take away much of the world market from the United States. Yet, we are in danger of losing it anyway if we don't change our policies.

If our Government continues to push up interest rates, and certain of our large basic industries continue to take advantage of their semimonopolistic position to set high prices, we will lose customers. It will not help to blame the Communists.

AN AMERICAN ECONOMIC OFFENSIVE

Anybody who doesn't believe that this country, with its free labor market, its vast amount of investment capital, its successful business experience, and its wealth of natural resources, cannot meet competition with other countries, bases his conclusion on fear and not on facts.

Curiously enough, our export business is threatened more by our own policy weak-nesses than by any Soviet dictator, or lowwage rates in other countries.

I hasten to emphasize that I do not minimize the significance of either the Communist economic potential or the occasional advantages which may accrue to those whose labor costs are lower than ours.

But, I am convinced that, with sound policy leadership in our Government and astute management in our private businesses, the United States can launch an economic offensive which cannot be matched by any country or any combination of countries throughout the world.

FOREIGN AID

Closely related to the foreign trade problem is the matter of foreign aid.

This question is greeted with fewer facts and more emotion than almost any other is-

sue before the country.

Mostly, foreign aid is viewed as an unnecessary tax burden or as an example of undue generosity on the part of the United

It is true that foreign aid costs money, and therefore the taxpayers have to pay for it. It is not necessarily true, however, that economic foreign aid over the long run adds to the total tax burden. Whether it does or not depends more on our foreign aid policies and how they are administered than on the amount of money involved.

Most Government grants as well as loans to foreigners increase our exports of goods. Almost all of the money we spend for foreign aid is spent in this country-to buy our agricultural surpluses, our machinery, and our other manufactured goods.

In addition, to the extent that foreign assistance builds up underdeveloped countries, we are adding potential customers for more of our goods through commercial channels.

If everyone who consumed alcoholic beverages in the United States cut out every third drink-and I do not take a position on that one way or the other-the amount saved would pay for our entire foreign ald programs, both military and economic.

I mention that just to put the size of the program in perspective.

The entire mutual security appropriation will amount this year to less than eighttenths of 1 percent of our gross national

With the exception of emergency gifts of medical supplies, food, and similar essentials, there is little room in a foreign aid policy for what might be called altruism or generosity for generosity's sake.

Rather, we should evaluate each foreign aid program on the basis of whether it will benefit the citizens of this country. This is only reasonable, and is the only fair approach as far as our taxpayers are concerned.

In talking about foreign aid, I want to emphasize that assistance to our distressed areas here at home must always have a higher priority than aid to other countries.

On that premise, it is my belief that well administered foreign aid can do several things, all of which can benefit this country.

First. It can help build up the underdeveloped countries and forge ties of trade and friendly relations with the United States.

Second, it can blunt the Communist propaganda and economic offensives, or at least make these Communist programs very much more expensive to the Soviets.

Third, it can establish a realistic basis for uncommitted countries to support the United States as the free world leader in the United Nations, as well as in high level international negotiations.

If the less fortunate countries of the world could achieve, through the stimulus of a well managed foreign aid program, a per capita income increase of 1 percent a year during the coming decade, they could well offer to the United States alone a \$14 billion market for our goods. This would amount to double the present market in those areas.

It is a matter of good business sense, if you want to increase your sales, to look for new markets.

So far as the makeup of a foreign aid program is concerned. I favor an increased proportion of the total aid to be economic rather than military, and believe such aid should be primarily in the form of longterm loans rather than outright grants.

LONG-TERM PLANNING NEEDED

Such programing should be on a longterm basis-not chopped into annual, unplanned segments, as is currently the situation.

For example, to get the best return on our investment, our Development Loan Fund should be financed over a period of a minimum of 5 years.

One major feature of a long-term program could and should be an increased flow of our surplus agricultural commodities. It is my belief that this could be accomplished. much more effectively on a 5-year basis than on a 1-year basis.

The foreign assistance-investment program of the 1960's should be a cooperative venture of all free industrialized nations. To be most effective, such cooperative efforts should be directed toward investment to stimulate growth-not toward investment for immediate profit returns. Before such investment can bring real growth, both time and money must go into what are called preinvestment activities.

Such activities should be carefully planned and programed, and should range from labor resource surveys to educational and technical assistance.

High on the list of such programs would be those which would raise the skill level of the labor force in those countries.

Along with such training should go a clear understanding of the benefits of private enterprise and the knowledge that benefits from economic improvement can be enjoyed by the population as a whole only under democratic types of government.

SOUNDNESS OF THE DOLLAR

We can have a sound overall foreign economic policy without impairing the integrity of the dollar. It is true that in the last few years there has been some outflow of gold-and even some talk of devaluing the

The facts are that this outflow of gold has in no way affected our economic growth or the soundness of our financial structure. Incidentally, we still have more than half of the total supply of gold in the free world. If such an outflow were to continue indefinitely, there might come a time when we would have to worry about it.

However, that time has not come-and there is no reason for it ever to come.

Until the last 7 years, the rate of economic growth in the United States has been such as to attract foreign investment; and those who accumulated funds here as a result of sales of goods and services have been eager to invest those funds in our thriving economy.

Recently, however, our growth rate has slowed to a walk and has been surpassed by other countries. Hence, there has been some encouragement for those who accumulated balances here to withdraw them in the form of gold, and either hoard them in their banking systems or invest them elsewhere.

I am convinced that we can and we must, with firm leadership in our Federal Government, reinstate the previous high growth

If we do that, the steady outflow of gold will cease and gold in international finance will revert to its customary role of adjustment of international banking balances.

It is my conclusion that there is nothing wrong with our international economic position which sound foreign policies and firm leadership will not cure and cure promptly.

As Usual Hanson W. Baldwin of the New York Times Brings Some Much-Needed Commonsense and Perspective to Another Vital Issue Affecting Our National Security and Survival in an Age of Challenge-The Recent U-2 Plane Incident

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 21, 1960

Mr. STRATTON. Mr. Speaker, I trust that before any of us in this body, or any other American, for that matter, is tempted to sound off at our Government in connection with the recent incident involving the U-2 plane he will first read the thoughtful and extremely timely article that appeared this morning in the New York Times of May 9 under the byline of Hanson W. Baldwin, the distinguished military editor of that great newspaper who always brings to its pages a much-needed element of hardheaded commonsense and perspective based upon sound realism. Let us not lightly forget the nature of the threat which faces us in the world today. Let us not lose sight of the high obligation that we as Members of Congress have to see that this country never foolishly lets down its guard against that threat. Let us not forget how many times the charge has been raised, in this body as well as elsewhere, that America has in the past been "caught napping" when it comes to knowing what the enemy has been up to-at Pearl Harbor, Bogota, Suez, and Korea. And let us not forget how quickly we too would raise that same charge again were we to find that our military and intelligence leaders had deliberately left undone any possible action they should have taken to make fully certain this country would never again be caught by surprise. The article follows: INTELLIGENCE AND SURVIVAL-PLANE INCIDENT

POINTS UP DILEMMA INVOLVED IN INFOS-MATION MISSIONS

(By Hanson W. Baldwin)

One young American faced his "moment of truth" about 65,000 feet over the Soviet Union a week ago yesterday. He apparently decided that life was better than death and his instinctive reaction produced an international incident of unpredictable consequences. The capture of Francis G. Powers, pilot of a U.S. reconnaissance aircraft, gave Premier Khrushchev an important political

and psychological advantage just prior to the East-West summit conference. It was an advantage the Soviet leader was quick to exploit.

The U.S. Government, many Members of Congress, and much of the press had been mousetrapped into premature denials. Mr. Khrushchev was able to show—with the capture of the pilot—that these were, as he bluntly put it, "complete lies." The United States had been caught redhanded in a major espionage operation, with all the embarrassment that such a coup causes.

All these and other consequences stemmed from one man's instinct for survival in the few seconds when Francis Powers faced his crucial decision.

The negative aspects, from the U.S. point of view, of the young pilot's decision are obvious. They are so obvious that the demand for the scalps of the "guilty" officials already has started. Harold E. Stassen, former disarmament adviser to President Eisenhower, implied Saturday that "some of our military officers" had engineered Mr. Powers' flight to upset the prospects for the summit conference.

But the negative aspects of the Soviet

But the negative aspects of the Soviet counter-espionage coup must be balanced by the entire history of the Lockheed U-2 project. It is a history that effectively answers Mr. Stassen's accusation.

The U-2's essential feature is its amazing high-altitude capability. The plane has extremely long wings and its very light wing loading enables high subsonic speed and maneuverability in very thin air. Mr. Khrushchev said Mr. Powers' craft was flying at 65,000 feet when shot down; presumably even that rarefied altitude is not its absolute ceiling.

Thus the U-2 must have had, when it first became operational about 5 years ago, a ceiling considerably higher than any of the far faster but heavier of the world's fighter-interceptors.

HIGHER ALTITUDES REACHED

The latest U.S. interceptors produced since the U-2 was designed are able to reach 60,000 to 70,000 feet; in fact, altitude records above 90,000 feet have been established by both United States and Soviet military aircraft. But these records were established by high-speed "zoomups," that is, sharp pullups with maximum power from straight and level fight. Maneuvering ability at these high altitudes is extremely limited and interception at such altitudes by a piloted fighter, especially if the interceptor must take up a "stern chase," is very difficult.

Thus the U-2's high-altitude capability gave it until a week ago a certain degree of invulnerability to antiair defense.

It is noteworthy that it was an antiair-craft rocket fired from the ground—not a piloted interceptor—that brought down the first U-2 lost to Soviet attack in 5 years of operations. The feat of rocketry, despite the Soviet boasting about it, is not remarkable. It has, in fact, been within the U.S. capability for a long time.

The U.S. Nike-Hercules antiaircraft missile, which can carry either a nuclear or a conventional warhead, has shot down targets traveling at three times the speed of sound and has hit targets at altitudes ranging from 1,000 to 100,000 feet. Even the Nike-Ajax, which has been operational for 7 years, has an altitude capability of at least 60,000 to 70,000 feet.

SOVIET LAG INDICATED

The shooting down of Mr. Powers' U-2 on May 1 indicates not a Soviet lead in defensive antiaircraft missiles but, on the contrary, a Soviet lag. There have been rumors that the Russians were having trouble with their antiaircraft missiles and there had been little hard evidence of the tremendous defensive strength so often credited to the Soviet Union.

Two deductions are possible from this successful firing of an antiaircraft missile against the U-2.

The shot could have been lucky—that is, the pilot might have blundered within firing range of a missile battery that reconnaissance planes normally would try to avoid.

On the other hand, the Soviet Union may at last have corrected some of the faults in its antiaircraft missile and may now have in operation missiles comparable in effectiveness to the United States earlier Nike-Ajax, or perhaps approximating the Nike-Hercules.

Both deductions are probably correct.

A broader evaluation of the U-2's career gives reason to conclude that it probably has been one of the most successful reconnaissance planes ever built.

MANY FLIGHTS ALONG BORDERS

Judging from the Government's own account, the U-2 has made numerous flights in the last 5 years along the Communist frontiers. It has operated from Alaska, Japan, Germany, the Middle East and elsewhere. Mr. Khrushchev declared in his first speech on the incident that another U.S. alreraft, presumably also a U-2, had crossed Soviet frontiers on April 9 from the direction of Afghanistan, and that that one, through detected, was not intercepted.

All this would seem to indicate that the U-2's flight plan on May 1, which according to Mr. Khrushchev was to take it straight across the Soviet Union, from south to north, was not unusual. It seems likely, judging from the Soviet revelations that the U.S. Government's somewhat equivocal admissions, that similar flights had occurred in the past.

If this is so, the data gained in photographs and by other means must have been of immense importance. The U-2 project and other secret methods of intelligence collection presumably explained in part the Government's confidence about U.S. military strength relative to that of the Soviet Union.

Moreover, if repeated flights over the Soviet Union actually occurred, the conclusion would seem to be that Soviet defenses have been weaker than the world realized. In fact, if photographs similar to those from the downed U-2 that Mr. Khrushchev proudly exhibited were taken in previous flights, the U-2 program must have been until 8 days ago the most successful reconnaissance-espionage project in history.

This chapter abruptly came to an end May 1 when Mr. Powers made his decision to live.

DATE OF THE FLIGHT SIGNIFICANT

Numerous questions remain:

Why was such a flight made just before the summit conference? It may be noted that the incident occurred on May Day, a day dedicated in the Soviet Union to glorification of the Communist regime, and at a time when the Russians were widely expected to attempt a spectacular presummit space or missile shot.

Was the flight authorized by Washington? Saturday's somewhat equivocal U.S. statement, probably deliberately cloudy on this point, declared that "insofar as the authorities are concerned, there was no authorization for any such flights as described by Mr. Khrushchev."

But it would be stretching a very long bow to infer from this, as Mr. Stassen did, that some U.S. military commander had gone off halfcocked" on his own initiative. The whole history of the U-2 project, as revealed piecemeal in Washington and through Mr. Khrushchev's revelations, shows clearly that the activities were managed and probably closely directed by Washington.

What was the directing authority?

What was the directing authority?

It has been acknowledged that the initial version of the incident issued in Washing-

ton—that the U-2 was a weather plane operated by the National Aeronautics and Space Administration—was false. It is easy to deduce from this, from Mr. Khrushchev's assertions, which there seems no reason to doubt, and from the United States own somewhat lame explanations, that the U-2 project was a Central Intelligence Agency effort, and a very successful one.

SPACE AGENCY SEEN AS COVER

The NASA and the Lockheed Aircraft Corp. were probably so-called cover agencies. The pilots, judging from Mr. Powers' background, were apparently former Air Force or Air Force Reserve pilots on inactive duty, attracted to their hazardous occupation by adventure and very high pay.

Do the Russians do this sort of thing?

Do the Russians do this sort of thing? Of course, and perhaps much more. Soviet planes do not have the advantage of bases close to the continental United States. But Soviet aircraft have flown over parts of Alaska, northern Canada, Japan, and other Western defense areas. The Communist espionage system is one of the world's most efficient, whereas that of the United States has always been handicapped by the Iron Curtain.

Why did the pilot survive?

This is a question that only Mr. Powers can answer, and he may spend the rest of his life trying to answer it satisfactorily.

The instinct of self-preservation is strong in every human and it is contrary to the Judean-Christian and the American ethic to destroy one's own life.

Yet an unwritten law of every secret intelligence organization postulates the suicide of an agent rather than capture, possible torture, and revelations of importance to an enemy.

Mr. Khrushchev has quoted from an alleged confession by Mr. Powers and has declared that a hypodermic needle or pin and pistol were recovered. These, he said, were for use by the pilot to prevent his capture alive.

The photograph of the wreckage of the U-2 released by Moscow and the fact that Mr. Powers lived to fall into Soviet hands indicates something of how the flier must have reacted in time of crisis.

The plane apparently was hit by a fragment of the rocket's explosive warhead and was disabled. Apparently Mr. Powers rode it down for some distance and then parachuted. The U-2 almost certainly had a self-destructive charge, which apparently was not set off.

FILMS AID KHRUSHCHEV

Mr. Powers' alleged confession, the plane's wreckage and even films from its camera thus have aided Mr. Khrushchev's dramatic psychological coup. It is safe to guess that all that Mr. Powers knew about the U-2 operations is now known to the Russians.

Thus the Central Intelligence Agency, an agency of a nation that is formally dedicated to the protection of human life, undoubtedly would have wanted Mr. Powers to destroy his plans and himself—a concept wholly antithetical to the average American.

Mr. Powers' dilemma in the few seconds of free choice he may have had is indeed the dilemma, not only of a secret intelligence agency in a democratic government, but of a democratic nation facing a secret Communist conspiracy in the atomic age.

It is part of the world we live in. Values often become mixed and truth often becomes falsehood. But the greatest value, and the reason for the U-2 program itself, is survival—not the survival of Francis Powers but national survival. The danger of surprise attack in the age of hydrogen bombs is so great that responsible government feels it must have all possible information.

Mr. Powers and his agonizing decision and the secrecy with which the whole U-2 project was necessarily surrounded, were inescapable results of this overriding need to know. West Conference Issues

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 9, 1960

Mr. WILEY. Mr. President, for some time now, the world has looked hopefully toward the upcoming summit conference.

As realists, we have not expected panacea-type solutions to East-West differences. Nevertheless, it has been hoped that at the summit conference involving and comprised of Premier Khrushchev. Prime Minister Macmillan, President de Gaulle and President Eisenhower, we can at least make some progress toward resolving East-West differ-

Now, the flight of a U.S. pilot deep into Soviet territory has raised significant

questions.

Apparently, the authorization for such a cross-country flight was not made in Washington. The President, the Secretary of State, and the Nation deserve an answer not only for scheduling of such a flight, not only for such deep penetra-tion into Soviet territory, but also for reaching such a decision at this critical time in international affairs.

To meet the situation forthrightly, I believe we might well adopt the follow-

ing course:

First, acknowledge to the Soviet Union the flight, designating that the decision was not made in Washington.

Second. Urge the Soviet Union to retain all data and information in possession of the pilot they deem necessary to their security.

Third. Point out that the pilot's armaments—a small, .322 caliber pistol—could hardly be a military threat to the Soviet Union, particularly in competition with what Mr. Khrushchev calls his "remarkable missiles."

Fourth. Request the return of the pilot to the United States for appropriate action in accordance with the situation.

Fifth. Again, stress-as President Eisenhower has done-the need for lessening of international tensions to allow greater freedom of airspace.

Regrettably, Soviet activities in subversion, espionage, and other similar activities has created the need for counterefforts to obtain information to protect ourselves against possible sneak attack-presumably the reason for the flight.

What effect will all this have on the proposed summit conference?

As yet, it is not possible to say, After the sensationalism of the incident has simmered down-and all the facts are in-perhaps it will be easier to assess the situation.

For the most part, I believe we-and the world-must attempt to put the incident in perspective—that the flight of one plane, over one country certainly is not enough to upset the global applecart.

We can expect, of course, that Mr. Khrushchev will play the incident to the

Need for Public Understanding of East- hilt for propaganda purposes. However, perhaps a greater question in the whole affair now is whether or not Khrushchev will go off the deep end far enough to make it appear questionable as to whether a summit conference, scheduled to open on May 16, should be held at all.

If, however, it still appears that such a meeting would have a chance to lessen world tensions, there are, I believe, fundamental issues which would need to

be considered at such a time.

Recently, I was privileged to review a few of the major issues in an address over radio station WGN in Chicago reviewing the situation. I ask unanimous consent to have the text of my address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

EXCERPTS OF ADDRESS BY SENATOR WILLY

WILEY STRESSES NEED FOR PUBLIC UNDERSTAND-ING OF EAST-WEST CONFERENCE ISSUES-SAYS WORLD OPINION WILL BE FIFTH POWER AT CONFERENCE

Friends, I weclome the opportunity to discuss with you the major challenge facing America and the world—that is, keeping the peace; or conversely, preventing World War III, which would wound, dismember, if not destroy mankind.

If a major war can be averted, however, then we can all look forward to a better.

brighter future.

In the modern world, the idea of a fortress America, go-it-alone kind of policy has been made obsolete by development of jet planes, missiles, nuclear bombs, and other modern weapons of destruction that eliminate distance, oceans, and terrain as barriers. result, we cannot close our eyes; pull in our personal, family, and community interests around us; and hope that the dangerous ogre, communism-the major threat to world peace-will vanish.

To the contrary, we must either face its threat and defeat its purposes of world conquest-if possible in a peaceful way-or be-

come its slaves.

Outlook for summit conference-opening May 16, 1960

As you know, the summit conference, comprised of President Eisenhower, Prime Minister Macmillan, President de Gaulle, and Premier Khrushchev, will begin meeting in Paris, France, on May 16-about a week from now. The world is waiting, watching ex-pectantly and prayerfully, hoping that these leaders of two conflicting ideologies will find a way: to resolve some of the international differences, and to establish a pattern of followup action—perhaps by successive top— or lower—level conferences to continue efforts to ease the tensions between the East-West blocs.

In reviewing the summit outlook, I shall not attempt to be a prophet-to be all knowing on such crucial international matters affecting us.

In an election year-with a ringful of hats for the Presidency; and a corral full of dark horses for both the No. 1 and No. 2 spotsthere are more than enough self-styled ex-perts floating around the country declaring condemning, criticizing, admonishing, at the tops of their voices—with the last word on every issue.

As a Senator and citizen, and a human being who, along with each of you, deeply desires peace, I believe, however, we all must obtain as clear an understanding as possible of the challenges ahead, and the alternative ways in which to meet such challenges.

World opinion-Fifth power at summit

Generally, the summit will be considered a conference of four great powers. However, I

believe there will be a fifth power at the conference—that is, world opinion. Neither the East nor the West can ignore this fifth

Around the globe there is a deep-seated yearning in the hearts of almost all people for the dawning of a peace in which the dark-cloud threat of nuclear annihilation will be lifted from above the heads of mankind.

During the negotiations, this great world-wide will for peace will, I believe, make its presence—and its force—felt by both East

Whatever agreements may be reached at the summit affecting the destiny of mankind, I believe, will bear the invisible signature of this fifth power.

Major issues of the conference

Now, what are the major issues at the upcoming conference?

The gamut of East-West differences, of course, is widespread and complex.

First, a major issue confronting the East-West conference is the problem of Germany, including Berlin. Why? For the following reasons: A lasting peace in Europe depends upon protecting the freedom and integrity of the 21/4 million West Berliners and finding a realistic solution for German unifica-Unless this is done, Germany will tion. remain a powder keg for years to come.

Settlement of the German question, too, represents a test of whether or not the Soviets can be depended upon to adhere to agreements—which are already established in relation to West Berlin—or whether again

they will be treatybreakers.

Second, attaining safeguarded agreements on reduction of armaments, including bans on nuclear testing, is essential to reducing tensions and lessening the possibility of war.
While these constitute major challenges

at the Paris summit meeting, additional issues—really as farflung as the world fronts-include:

Third, curbing the propaganda warfare by the Communists, which in itself constitutes a form of aggression.

Fourth, reaching agreements on limitation of arm shipments to such areas as Asia, Africa, and South America and other places in the world where "invasions of such mili-tary arsenals" would serve to stir up greater tensions and possibly create open conflicts.

Fifth, the question of the future status of the so-called captive nations, too, is legiti-mate subject matter for discussion. As in the past, however, we can expect that the Soviets will be reluctant to discuss this topic.

And a wide variety of other East-West differences that require ultimate solutionbefore there will be peace in the world.

East-West seek different objectives

The job of obtaining realistic achievements at the Summit is made particularly difficult because the East and the West leaders—although they will discuss the same issues—are actually seeking different goals.
The West—in accordance with its tradi-

tional policies—is attempting to obtain a settlement of the problem relating to Germany, of reduction of armaments and other major issues to establish a just and lasting peace.

By contrast, the Communists—although they give "lip service" to peace—have not yet disavowed their ultimate goal of world conquest.

Consequently, this narrows the field of possible agreements to areas in which negotiations—or perhaps even mutual concessions—may service different objectives.

As humans, we, of course, wish for a panacea-type solution to the struggle: "Let's settle it and forget it." Unfortunately, the outlook is for no such accomplishment.

Even if the conference attained a high degree of success, it would still leave a great many unsolved problems.

Among other goals, the conference will need, I believe, to attempt to establish a

pattern of future negotiations to carry forward efforts for resolving the multitude of problems that will still exist between the free and Communist worlds.

Major free-world goals

Unfortunately, in the complex jungle of East-West negotiations—including false Communist propaganda and our efforts to refute it, we-and the world-may lose sight of our goals in international affairs. Consequently a restatement of United States and Western objectives would, I believe serve a useful purpose.

The major objectives include:

1. A unified Germany, free to elect its own government by vote of the people.

2. Existence of the European nations—now the so-called captive nations-under selfdetermined governments.

3. The attainment of realistic agreements for reduction of armaments to: reduce the fear of war, and enable nations to channel more of their resources, manpower and brainpower to benefiting-not threatening to destroy-mankind

4. Creating greater respect for, and willingness to abide by, international law, to preserve peace and order on the globe.

5. A redefinition of world relations-as recently emphasized by Under Secretary of State Douglas Dillon—declaring that coexistence among nations should not necessarily be by international agreement. Rather, the rights of separate states and systems to exist should be unquestioned-so long as the respective governments are determined by the people within each country.

Coexistence has always been, and should continue to be, a minimal condition of peaceful international relations-not a subject for negotiation or for ratification by the

Kremlin.

6. A restatement of our willingness, as evidenced by postwar programs, and reaffirmed recently by President Eisenhower-to channel more of our resources-particularly savings resulting from safeguarded agreements for reduction of armaments, to aiding the less developed nations of the world to create a better way of life for their people.

In essence, this would mean emphasis on our adherence to a philosophy, not just of live and let live, but also to help others live

better.

Overall, there are a great many ways-economic, intellectual, cultural, spiritual—in which nations, instead of threatening to destroy each other, could cooperate construc-tively to provide a better climate and a brighter future.

Government "of, by, and for the people"— not communism—most revolutionary

Prior to concluding, I would like to knock down one more strawman created by Communist propaganda: that is, that commuhism is a new, revolutionary political-economic system, designed to create a better life for people under its dominion.

Actually, this is contrary to the truth.

Communism, as we know it today, is really totalitarian dictatorship. Throughout his-tory, dictatorial ideas and individuals have paraded behind many facades and masks to attain their goal of absolute power—and that means the decisions, not just of rights and privileges, but of life and death (and too often, the latter) over a people.

The Soviet Union and Red China, representative of modern-day communismno different from the bloody tyrannical regimes of the past that have subjugated peoples, deprived them of fundamental rights—and yes, annihilated them if it served

the purposes of the state.

Realistically speaking, our form of government—"of, by, and for" a free people—is the most revolutionary in history.

As a novel adventure in self-government by a people—vigilant to preserve for themselves the maximum freedom consistent with an orderly society-our free system stands unique.

Only by constant vigilance and selfless dedication to high principles and ideals—consistent with our traditions—however, can we expect to remain a free people.

Conclusion

Today, we are beseiged by the Communist menace, employing all kinds of tactics, military and nonmilitary, to attain its objectives of world domination.

Can we defeat it?

Yes. I believe we will prove that freedom is the superior system.

To accomplish this, however, will require an ever-greater understanding by our citizens-you and me-of the scope of the danger; as well as a rededication of time, manpower, brainpower, and resources to further strengthen our system for withstanding one of the great tests of its life.

As we face this great challenge, however, I am confident that we will come through

with flying colors.

U.S. participation in the summit con-ference—with President Eisenhower representing us-illustrates, once more, the President's willingness-reflecting the will of our people to go the "extra mile"-if it offers promise of promoting lasting peace.

Thank you for listening.

If Reds Hold U.S. Pilot, America's Duty Is Clear

EXTENSION OF REMARKS

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD. I include an editorial from the Nashville (Tenn.) Banner, which points up rather clearly America's duty in connection with the unfortunate occurrence of a few days ago when Francis Gerry Powers was allegedly shot down over Soviet Russia. The very minimum demands of our State Department in connection with this matter are set forth in this editorial; namely, access to Powers by our Ambassador, to interrogate him on the facts of the case; to provide counsel, looking forward to his early release, and to assure the protection to which he is entitled in any trial contemplated. The editorial follows:

[From the Nashville Banner, May 7, 1960] IF REDS HOLD U.S. PILOT, AMERICA'S DUTY CLEAR

If, as Nikita Khrushchev now boasts, Russia is holding the pilot of an American plane shot down over Soviet territory on May 1, justice decrees direct access to him by U.S. authorities-both to establish the truth of the case and to assure the protection to

which he is entitled by full, official repre-sentation in any "trial" contemplated.

America does not and cannot take the Soviet word for what has happened. It cannot blindly accept either the report that Francis Gerry Powers is in custody, or that, under whatever circumstances, he has "confessed" to charges conveniently rigged to suit Khrushchev's propaganda purposes.

Ambassador Llewellyn E. Thompson is this Nation's representative in Russia—both available and by duty commissioned to bear its responsibilities in that land. Certainly he has every right to demand access to the

reported prisoner, to interrogate him on the facts of the case by which America's own course will be doubly clarified, and to provide counsel, looking to his immediate release.

That the allegations to date incorporate a tissue of lies is evident not only from information at hand respecting Powers' assignment in Europe-the mission on which his single-motor, unarmed plane was engaged from its base in Turkey; but in Khrushchev's bombastic claim that he was shot down by some powerful new "rocket," of unerring, single-shot accuracy. For now it is claimed that he bailed out.

President Eisenhower has indicated as of yesterday that he is calling off his scheduled visit to Russia. Such a decision is in order. as this newspaper observed when the case broke. He also should notify Khrushchev that he is attending no summit conference so long as this state of renewed tensions, deliberately revived by the Soviet, persists.

They menace the discussions, and assuredly foredoom them to failure.

Specifically, he could instruct the Kremlin that he is not going to the Soviet unless and until Pilot Francis Gerry Powers is free, and a full apology has been received for this whole infamous incident.

Let the whole world be on notice that America does not do business, nor fraternize, with outlaws. It must yield to neither the blandishments nor the blackmail of this enemy.

Address by Associate Justice John M. Harlan at Law Day Exercises in U.S. District Court for the District of Co-

EXTENSION OF REMARKS

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES Monday, May 9, 1960

Mr. BIBLE. Mr. President, a highlight of the observance of Law Day in the District of Columbia was an address by Associate Justice John M. Harlan of the U.S. Supreme Court at Law Day exercises on May 2 in the ceremonial courtroom of the U.S. District Court in Washington, and under the sponsorship of the District of Columbia Bar Association in cooperation with the Federal Bar Association, the Women's Bar Association, and the Washington Bar Association.

I ask unanimous consent that the remarks of Mr. Justice Harlan be printed in the Appendix of the RECORD, for I believe his observations on American citizenship are indeed worthy of thought not only to lawyers, but to the public in general.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF JOHN M. HARLAN, ASSOCIATE JUS-TICE OF THE SUPREME COURT OF THE UNITED STATES, AT LAW DAY EXERCISES IN THE U.S. DISTRICT COURT, WASHINGTON, D.C., MAY 2, 1960

No more appropriate event could have been chosen to mark our part in this third nationwide observance of Law Day than the admission of a new group of American citizens. Such an occasion symbolizes much for which this country stands.

Fifteen foreign lands are represented in this citizen group; Brazil, Canada, Czechoslovakia, Denmark, Germany, Great Britain, Greece, Japan, Pakistan, Panama, Philippines, Russia, Spain, Sweden, and Yugoslavia. My few remarks this morning will be addressed to you new citizens. I shall venture to say something of the promise and of the obligations, which I believe the future holds for the important step you are taking today.

First of all you are most welcome in our midst. This is so because your oath of allegiance evidences your faith in this country's institutions and free society, and also because, like the many who have come be-fore you from foreign lands, we expect you to enrich our outlook. For my part I have never much admired the term "the great American melting pot," for it connotes some things that are quite out of keeping with the American concept of the dignity of the individual. In assuming your place as citizens you will not be asked to relinquish in any degree your own diverse cultural her-itages and backgrounds. You will be ex-pected to conform only in one respect, namely, in steadfastness to what we hear so often referred to in these times as "the American way of life." This means a society free of enforced conformity and dedicated to the protection of individual rights, habits, points of view, and tastes—a society which finds its unity in the common purpose to assure to each individual the right to lead his life according to his own lights, subject to his recognizing the same right in others, and to not abusing his own right at the expense of others. This is what the Declaration of Independence meant when it stated that "all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

It was to make that ideal a reality that the Constitution of the United States was ordained. This annual ceremonial exercise is dedicated to the same objective. No one would pretend that we have achieved our goal in all respects. Yet, without undue sentimentality or boastfulness, this much, I believe, can fairly be said: We have gone further than most other nations toward achieving a society in which the individual can proceed as far as his abilities may carry him. In the areas of our national life where it may justly be said that we are still deficient we are honestly facing up to the problems and striving to overcome them.

More concretely from the point of view of those of you who come to us from abroad, you need have no fear lest your foreign heritage may place you under handicap. Indeed, in our dynamic and competitive society the special skills and talents which you bring with you from your homelands will find an eager and ready market, provided you are ambitious, imaginative, and do not shun hard work.

If any of you are doubtful about the validity of this prediction, you can easily satisfy yourself of its truth simply by glancing at the impressive past and present rosters of distinguished non-Anglo-Saxon names reflected in various facets of American life—whether it be in business, the professions, the arts, the labor movement, the world of sport, or the field of government, including, I may say with satisfaction, the Supreme Court of the United States. Indeed the only preferment that will be closed to you is the office of the Presidency of the United States. But I daresay few of you will find that constitutional limitation a serious handicap in working out a useful and satisfying life in your adopted country.

American citizenship in this era also carries with it deep responsibilities for all thoughtful persons, requiring of them an informed interest in public affairs. Too often such responsibilities are associated only

with those who happen to be in public office. It is not uncommon to hear said such things as that "the President, the Congress, the Governor, the State legislature, or one or the other of the numerous regulatory agencles will protect us." or that "our basic liberties are guaranteed by the Constitution and, failing all else, are secure in the hands of the courts." To be sure that point of view is, by and large, happily well founded, and it does bespeak the fundamental soundness of our institutions. Yet such an attitude frequently also evidences a complacency towards public affairs which ill fits the kind of society we have, in which the people themselves are the final guardians of freedom. It is sometimes forgotten that the Constitution and Bill of Rights are not a selfexecuting guaranty of liberty. Their strength as the charter of our liberties depends upon two things-a willingness at all levels of government to follow their principles, and the determination of an enlightened and self-reliant people to preserve the institutions which the Constitution establishes, and to respect their just authority. This is what is meant by the expressions "ordered liberty" and "the rule of law."

So my hope is that you will take an active interest in the affairs of your country. As a beginning I am sure you would find it a repaying experience to sit down and read the Constitution of the United States. It will not take long for you to read it from cover to cover, for it is a short document: and you need not be a lawyer to grasp at least the extraordinary confidence it breathes in the ability of our then young nation to prosper and grow strong under principles of ordered freedom. At a time when such principles are being challenged as inadequate to meet the aspirations of the modern world, the brilliant fulfillment of the vision of our forefathers surely gives us every reason for facing the future with calm resolution and assurance.

Finally, let me close with an expression of two wishes that I hold for you as you start on this great adventure of American citizenship. The first is that you will be citizens of independent thinking, humility, and tolerance, qualities which are sorely needed in these turbulent times. My second wish is that you will be citizens of great pride in the traditions of this country, and with sure confidence in its ability to preserve its own free way of life and to take its full part in helping other peoples to do the same within the framework of their own national traditions

I am grateful to Chief Judge Pine and the Committee on Arrangements for giving me the opportunity to participate in these ceremonies, and particularly to talk to you new fellow Americans on what I hope will always be for you a memorable day.

Godspeed to all of you.

Syngman Rhee

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. SMITH of Kansas. Mr. Speaker, much has been printed recently about the fall of Syngman Rhee's government in Korea. Of course, as usual, the "sob sisters" and international dogooders loudly proclaim Syngman Rhee a dictator who should be classed slong with Hitler

and Mussolini. Many eyebrows have been raised as to just what our own State Department was doing.

It has been quite evident for a long time that genuine patriots, either at home or abroad, are generally downgraded—that patriotism in this so-called international age is archaic and must be forgotten if we are to build a new international world where the watchword is "togetherness."

"togetherness."
Mr. R. L. Thompson, editor of the Moran Sentinel, Moran, Kans., knows from firsthand knowledge some of the pitfalls we have fallen into in our handling of Korean matters.

I commend the following article by Colonel Thompson:

SYNGMAN RHEE

Syngman Rhee must be nurturing some unpleasant thoughts as he sits in retirement, sneered at by his own countrymen and reviled by his former friends of the outside would who betrayed him. He is a very old man but he may yet live long anough to witness the collapse of his tiny Republic and hence the shattering of a dream that has been dear to his heart for more than a half century.

During his entire lifetime this man has been the Far East's most conspicuous champion of human liberty. For precisely 40 years he fought unremittingly and courageously to break the yoke of Japanese imperialism and to put down Japanese exploitation in Korea. For the past 12 years he has fought equally hard to unite Korea and establish a working democracy.

He has failed, I incline to think, not be-

He has failed, I incline to think, not because of holes in his own armor but because of the inepitudes of a timorous ally, the United States. Three times this 85-year-old patriot has been sold down the river. The first occurred when Roosevelt and Churchill agreed to partition Korea at the 38th parallel in their negotiations with Stalin during World War II; the second when the United States removed its troops from Korea in 1948; the third when the United Nations, with our concurrence, declined to carry the Korean war through to a complete victory.

The first faux pas was, of course, inexcusable; the second was completely asinine, and the third will be remembered in history as an act of unparalleled cowardice.

During the past fortnight Mr. Rhee has come in for a cruel blistering from the American and British press. In plastering him these editorial writers reached a new low in impudence and unrestrained journalistic license. Nothing they have written remotely touches upon the truth about the man's character and the impediments that have been thrown in his way, both from without and from within. His motives have been distorted and his so-called ruthlessness has been magnified in a scandalous manner.

Mr. Rhee is a man of exemplary character. He has, to be sure, employed rough methods to put down lawlessness, but there was no other alternative in a land infested with thousands of Communists. His lone objective has been to unite North and South Korea and to give the nation a free and honest government. There is no evidence at all that the election of last March was rigged; the Communists have made that charge ever since the first election which was held in 1948. It has not been Rhee's government but the Communist agitators who have sought to stuff the ballot boxes.

Rhee's troubles began late in 1945 when the Western Powers acquiesced in the communization of North Korea. Since then the agents of the Kremlin have been active in South Korea and there seems to be little doubt that the recent uprising against the Rhee government was inspired by them.

It has always seemed strange to me that the historians, who are still eulogizing the late Mr. Roosevelt, have not sought to explain why Korea, at least our spiritual ally during War II, was partitioned and Japan, our enemy, was not.

As I have said, old Mr. Rhee must be harboring some bitter thoughts at the moment. He was right in 1944 when he protested against the partitioning of his country; he was right in 1948 when he begged the United States not to remove its troops from Korea; and he was certainly right in 1953 when he opposed the armistice and urged the United Nations to quit talking and win the war.

What the future holds for South Korea is anyone's guess. With Rhee safely benched at our insistence, it seems fairly certain that the Communists will find it easy to make further inroads and ultimately grasp the reins of government.

Thus, the \$5 billion and the 50,000 lives the Korean war cost us seem destined to go up in smoke. If this happens it will attest not only to our own folly but to the greatness of Syngman Rhee who, along with General de Gaulle, seems certain to have his judgments vindicated by time.

Needed: Watchdog Committee for Defense Expenditures

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 9, 1960

Mr. WILEY. Mr. President, the creation of an ever-stronger defense is a major challenge confronting the country.

Today, almost \$40 billion, or over onehalf the Federal budget, is earmarked for national defense.

As a nation-faced with a threat to its survival by a powerful Communist blocwe cannot afford to be less than adequately prepared.

Particularly, the rocket rumbling of Mr. Khrushchev's recent statement creates more evidence that the Communists will continue to try to play power politics, utilizing their armed might as devices of threat and blackmail to attempt to attain their goals.

In view of the fact that a substantially large portion of the Federal budget-supported out of taxpayers' pockets-is earmarked for security programs, the Defense Department, I believe, has a special obligation to the American people to guard against waste, duplication, unnecessary stockpiling, and any other type of mishandling or mismanagement of

My colleagues will recall that earlier this year, I proposed the establishment of a watchdog committee on defense expenditures. Frankly, I believe that this Would not only be in the best interests of the American taxpayer, but also of our defense itself.

To help assure that the taxpayers' dollars are being spent efficiently and effectively for necessary costs of defense, I believe the establishment of an economic watchdog committee, perhaps within the Department of Defense, would serve a useful purpose.

I am aware, of course, that currently there are administrative procedures to accomplish this purpose. Unfortunately, the recurring reports of excessive waste stockpiling and other such actions require, I believe, special action to guard against any such waste of the taxpayers'

The creation of such a special watchdog committee, I believe, would not only serve to enable the Defense Department to keep a more watchful eye on its expenditures, but also help to reassure the American taxpayer that his hard-earned dollars are being earmarked-and utilized effectively-for the defense of the country.

Reflecting the public concern for guarding against such waste, I ask unanimous consent to have an editorial from the Milwaukee Journal entitled "Military Waste Continues" printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MILITARY WASTE CONTINUES

The military services do a gigantic annual business. Last year their purchases amounted to more than \$25 billion, and the value (this is pretty theoretical) of their personal property inventory on June 30 was almost \$50 billion. Just the surplus property disposed of during the course of the year had an acquisition cost of \$7.6

In so vast an operation, some waste is inevitable. Mistakes are bound to be made when out-of-this-world weapons are stantly being introduced. Just because of these hazards, one would expect the services-if only for their own good-to display extra zeal for saving and efficiency.

Such is hardly the case.

Now it is the House Appropriations Committee that has censured the military for bumbling purchasing procedures and lack of "normal good judgment." Cited is the case of the Air Force base in Germany that ordered 300 footlockers from this country, was sent 30,000 by mistake at a cost of \$100,000 for shipping, and turned the excess over to an Army depot in Germany from which it could have obtained the lockers in the first place.

Subject for special criticism, however, was the services' "seeming inability" to switch from negotiated contracts to purchasing on a competitive bid basis even though savings are inherent in the competitive process. Army, for instance, cut the cost of missile items 3 percent to 15 percent by competitive bids, and the Navy reduced the cost of a disposable wing tank from \$2,200 to \$900.

The most telling evidence of the advantage of competitive bidding, however, was noted in the procurement of an electronic unit for the SAGE information gathering system. The item was obtained in 1956 and 1957 through negotiation with a manufacturer. In 1958 and 1959, some of the items were able to be obtained through bids, with these price results: 1958, \$21,400 per item by bids and \$41,000 on a negotiated basis; 1959, \$18,849 by bids and \$28,850 on a negotiated contract. In 1959, when all the items were acquired through bids, the unit price under one contract was \$16,450 and under another \$22 .-

"This is unfortunately not an isolated example," said the committee dolefully.

Small wonder, then, that the committee recommended a flat 3-percent reduction in various appropriations for items the military must purchase. The saving is expected to be a sizable \$400 million.

Hon, Graham A. Barden, of North Carolina, Honored

EXTENSION OF REMARKS

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. COLMER. Mr. Speaker, on April 30 last the American Good Government Society, a nonprofit, patriotic institution, dedicated to the cause of good government in these United States, held its annual dinner and made its annual awards to two outstanding Americans. Each year this splendid institution presents the George Washington Award to two outstanding American patriots. This year these highly coveted honors went to the Honorable GRAHAM A. BAR-DEN, a Member of the U.S. House of Representatives from the State of North Carolina, and to the Honorable BARRY GOLDWATER, a Member of the U.S. Senate from the State of Arizona.

The dinner was held in the Sheraton-Park Hotel. In attendance were some 600 or more guests who are interested in seeing good government perpetuated in this Republic. The American Good Government Dinner speaker was the Honorable Maurice H. Stans, the highly respected Director of the Bureau of the Budget.

The Honorable STROM THURMOND, a Senator from the State of South Carolina, made the presentation of the award to his colleague, Senator Gold-

The Honorable Charles A. Halleck, the minority leader of the House of Representatives and a distinguished Member of that body from the State of Indiana. made the presentation of the award to the Honorable GRAHAM A. BARDEN.

Mr. HALLECK's remarks in presenting this highly coveted award to Mr. BARDEN, together with the text of the award of the society to this splendid North Carolinian follows:

REMARKS OF HON. CHARLES A. HALLECK

This is one of those occasions which finds me happy and somewhat sad at the same

I'm happy that the chance has come my way to join in tribute to a great American, the Honorable Graham A. Barden, of North Carolina. But I am sad in the knowledge that this high honor is coming to him at the close of a distinguished career in the Congress of the United States.

You know, Graham, some people-who don't think I have the right philosophy of government—have announced that they are going to end my political career come next November.

But I think maybe the people of the Second District of Indiana are going to have something to say about that, and I expect to be back down here next January.

But, folks, things won't be quite the same

as far as I'm concerned.

Our honored guest and beloved friend has announced his decision to retire, and I shall miss him more than I can tell.

I know of no Member of the Congress of the United States who more richly deserves this recognition from your fine organization than my long-time friend and col"Hap" and I were both freshmen in the '74th Congress. But he has a few months' seniority on me, because I won a seat in the House of Representatives in a special election just after the Congress convened.

Through the years he has been a generous, warmhearted, loyal friend of mine, and I have come to feel a devotion toward him that can only be appreciated by men who have stood side by side and shoulder to shoulder through the smoke and fire of legislative battle.

The fact that he is a Democrat, and I am a Republican by allegiance, has never been a consideration, as we have fought together for common ideals, common principles, and a common faith in the inherent strength and majesty of our constitutional way of life.

Early in my career in the Congress I saw in Graham Barden a public servant who could be counted upon to put the well-being of his country above private or party considerations.

I saw in him a stalwart American who had the courage to stand up and be counted when the chips were down on issues vital to the maintenance of the freedoms we cherish as citizens of this great Republic.

ish as citizens of this great Republic.

I saw in "Hap" Barden an able, articulate and dedicated Representative of the people, who time and again brought his considerable talents and energies to bear against what on many occasions seemed to be an irresistible tide of political radicalism.

As I look back over the years of our service in the Congress together, I am well aware that in spite of our best efforts there seems to have been an erosion of some of the old-fashioned virtues that made this country the greatest on the face of the earth.

Thrift, self-reliance, faith in the future, the willingness to put forth sustained effort, and the courage to face adversity, seems, in too many instances, to have been abandoned in favor of what has been falsely sold as the easy way of life—let Washington do it.

But I am convinced of this: It is to the everlasting credit of men like Graham Barden that this Nation of our has not gone the whole way of so many other liberty-loving people: into socialism or something worse.

And I am also convinced of this: We are now witnessing a reawakening of our citizenry to a sense of values we might well have lost forever.

And I foresee that with the continuing support of the kind of people here tonight—citizens who recognize the worth of men like "Hap" Barden—we will see a steady resurgence of support for those principles of government for which he has fought so nobly and so long.

"Hap", my most sincere congratulations to you on the occasion of this recognition you have so well earned by your distinguished contributions to the cause of good govern-

And before I read this citation I just want to say one more thing:

If you don't invite me to come down your way to help you catch some of those fish you are going after in your leisure I'm going to publicly repudiate all of the nice things I've said about you tonight.

said about you tonight.

Now, it is with a deep sense of personal satisfaction that I read this citation symbolic of the American Good Government Society's award for 1960:

TEXT OF THE AWARD TO HON. GRAHAM A. BARDEN

Patriot, jurist, and legislator, has devoted half his years to the service of his native State of North Carolina and to the Nation more than a quarter-century of them in the U.S. House of Representatives.

Courage, integrity, and wisdom have made him a major constructive force in the movement for responsible labor legislation and tower of strength against one-sided and unbalanced proposals, destructive of the mutual interests of employees, employers, and the public. In the field of education he has been a steadfast leader in the continuing struggle to keep control of public education in the States and their communities.

Representative Barden, over the years of his service, has exerted a powerful influence for good on the work of the Congress of the United States. In well-earned retirement, he will be long remembered as one of North Carolina's most illustrious sons.

Butte, Mont., Man Invents Satellite Tracker

EXTENSION OF REMARKS

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1960

Mr. MURRAY. Mr. President, I rise to commend an intrepid inventor from my home town of Butte, Mont., Mr. W. O. Holmes.

When he was a boy in Butte, Mr. Holmes engaged in a common boyhood pastime of dropping rocks down abandoned mine shafts. He noted that when a rock was dropped down a straight shaft it would hit a side of the shaft before it hit bottom, because of the earth's rotation. He continued his interest in physics and space and recently devised a satellite tracker.

Mr. Holmes called my office, and said he would like to bring the satellite tracker to the office. This created some consternation, as it was expected that a satellite tracker would be of launching pad proportions. However, he easily brought up not one but many trackers, in his brief case.

Mr. Holmes also determined, by scientific calculation, a new center of the United States, following the admission of Hawaii into the Union. He located it in northeastern Oregon. This was a personal disappointment to me, because the calculations of a member of my staff had indicated that the new center of the United States, following the admission of Alaska, was in the State of Montana, in Fritz Massar's pasture near the town of Circle. Nevertheless, I shall always entertain new evidence.

Mr. President, recently articles about Mr. Holmes and his invention, which was successfully used by schoolchildren, appeared in the Redwood City (Calif.) Tribune and the San Jose (Calif.) Mercury. I ask unanimous consent to have them printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Redwood City (Calif.) Tribune, Nov. 12, 1959]

SATELLITE TRACKED BY PUPILS (By Louise Evans)

Nine excited eighth grade satellite trackers last Saturday predicted the moment of separation of the nose cone from the satelliterocket, Discoverer VII—and missed by only 2 minutes.

Time of separation was predicted by the youngsters, after careful calculations, as 3:26 p.m., Pacific standard time, Sunday, November 8, west of Hawaii, at 161 west longitude and 25°, 30 minutes north latitude, during the Discoverer's 17th orbit of the earth's poles.

Actually, Vandenburg authorities disclosed, the nose cone was scheduled to discharge at 3:28 p.m. Sunday, but a failure in the satellite's electrical system caused a malfunction.

Had the Vandenburg test been successful, the youngsters' calculations would have been only 2 minutes off.

Enthusiastic but nervous, they gave up their usual Saturday afternoon play activities to return to McKinley School for an hour and a quarter of arithmetic, utilizing the Holmes Satellite Tracker as the guide for their calculations.

After learning the firing time of the Discoverer from Vandenburg Air Force Base and the orbital time, the seven boys and two girls, all 12 and 13 years old, made their predictions. They used pencil, paper, and blackboard, plus the graphs and charts printed on another large sheet of paper, the Holmes Satellite Tracker.

U.S. DEPARTMENT OF EDUCATION CALLS NA-TIONAL NOTE TO SATELLITE TRACKER

SAN CARLOS.—The U.S. Department of Health, Education, and Welfare has included the Holmes Satellite Tracker in its new Aviation Education Series, edited by Willis C. Brown, specialist for aviation education in Washington, D.C.

Decision to circulate the information about the tracker to all the school administrators and teachers in the country was made after the Holmes Satellite Tracker was selected at the First World Forum of Aerospace education leaders in association with the World Congress of Flight held at Las Vegas, Nev.

In a letter to Research Publications, Inc., publishers of the Holmes Satellite Tracker, Mr. Brown stated that, "Certainly all school administrators and teachers should know of this great teaching aid."

[From the San Jose Mercury, Oct. 22, 1959]
ASTRONOMER DEVELOPS CHARTS FOR EASY
SATELLITE TRACKING

San Carlos.—A small scientific publishing firm here has come out with a complete home tracking station for \$1.50 with which the man in the street can calculate the orbits of earth satellites.

The home tracker was developed by W. O. Holmes, an inventor, writer, and astronomer, who was perched in his private observatory in the ghost town of Dayton, Nev., when the Russians launched Sputnik I in October 1957. Celestial navigation was his specialty and he immediately went to work tracking the Soviet satellite and later, others launched from both sides of the Iron Curtain.

Holmes found that, using a few fairly simple charts, he could calculate where a satellite would be at any particular time once he knew its farthest distance from earth (apogee), its closest distance (perigee), and the time it needed to complete one orbit.

He developed these charts further and then conferred with several space scientists. Next, Research Publications, Inc., added some space art and the charts were ready for anyone interested in tracking the manmade moons.

George Bunton, manager of the Alex Morrison Planetarium in San Francisco, said it is possible to keep track of satellites by Holmes' method.

Other experts agreed, but pointed to the system's limitations. Joseph Brady, a missle expert at the University of California, said, for example, it was unlikely any such tracker could take atmospheric drag into account.

Using only the home tracker and maps, a 16-year-old boy was able to predict accurately the times when Discoverer V would pass over various cities of the world.

When the Air Force launched the satellite last August 13, George Kirchner, a student at Sequola High School in Redwood City, Calif., wrote down the perigee, apogee, and orbit time, which had been published in the newspapers.

Then he went to work with his home tracker and 2 hours later had drawn up a schedule of a dozen cities with the time the

satellite would pass over each.

George calculated that the Discoverer would be over Hawaii, where it was to drop its space capsule, on its 17th trip around the world, between 2:38 and 2:45 p.m., Friday afternoon. The time was actually 2:42 p.m.

According to Holmes, his tracking system can be used for any satellite, with any kind of orbit. All the user needs are the basic facts of perigee, apogee, and orbit time.

The tracker charts, maps, and instructions are printed on a large sheet of heavy paper about 2 feet by 4 feet. Holmes doesn't claim it can beat the big computers, but he does believe his charts will do the job.

America's First Radical

EXTENSION OF REMARKS

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record I include therein an oration delivered by a high school senior from my congressional district, Fred C. Hubbel, of Waynesville, Ohio, which won him first place in the oratory contest of the Ohio Society of the Sons of the American Revolution held recently in Cleveland. As first-prize winner in Ohio, Fred was awarded \$100 and the right to represent our State next month at the society's national contest in Memphis, Tenn.

I am sure the House of Representatives will join with me in congratulating this student on his excellent discourse on Thomas Paine, "America's First Radical," which is as follows:

AMERICA'S FIRST RADICAL

Preceding the Revolutionary War, we were thinking about independence from England, but many of the colonists were afraid to take such a radical step. If the American colonists were to overthrow English rule, how would they self their products? If they did declare their independence, there would be no turning back. George Washington, Thomas Jefferson, and Ben Franklin had thought and talked privately about American freedom but had never come right out and said so. However, our first free-speaking American, Thomas Paine, not only talked privately about freedom but shouted for it publicly. He, and he alone, united America for the first time against a common enemy, the mother country.

This situation may be compared to that of a chemical process where several elements are brought together to form a single compound. If all of the elements are present, they will not unite until a catalyst is added to them. The catalyst in America's fight for freedom was Thomas Paine. While Wash-

ington whispered for independence, Thomas Paine shouted for it.

Thomas Paine could be called our first radical. Many of the colonial leaders wanted to work out a compromise with England, to improve a bad situation, but not to break away completely. Thomas Paine wanted no part of this. He wanted complete inde-pendence or nothing. Paine had been brought up in England, and was a staymaker by trade. When he went to London in his early manhood, he met Ben Franklin. From him Paine probably got his first impression of America. When Paine came to America about 10 years after he met Franklin, Franklin gave Paine a letter of introduction to the editor of the Pennsylvania magazine. Here Paine published many of his articles. The Pennsylvania magazine was located in Philadelphia, the center for the movement of American independence. Here Paine wrote a pamphlet called "Common Sense." In his pamphlet he pointed out the In his pamphlet he pointed out the folly of a strong, self-reliant people who were taking order from a nation across the sea. This article brought the revolutionary impulses to a head and sent the colonists moving in the direction of independence.

George Washington said of "Common Sense." "I find Paine's 'Common Sense' is working a wonderful change in the minds of my men." Only now do we realize the full extent of Paine's influence and accept the fact that he kept the spirit of the Amer-

ican Revolution alive.

Our democratic process has kept us strong for 188 years, but are we now becoming a weaker nation? Will we fall from within instead of without? Are we a do-nothing nation, celebrating victories of former wars? Are the Sons of the American Revolution worthy of the ancestors through whose names membership is determined? Does the organization represent the same patriotic people who were willing to sacrifice and to fight for our idependence? Is the organization looking forward sanely and enthusiastically—but unselfishly—to the future? Are you helping prepare the young people for the future?

The American Revolution brought out the best in men for the best in a country. The colonists proved to England that men will fight and endure almost any hardship to secure freedom. No democratic practices or processes can work without the presence of one essential element—the sensitive, individual conscience. Many must be sensitive to his rights, his obligations, and his responsibilities if freedom is to work. Are the Sons of the American Revolution making sure that the American youth know their rights and obligations and that they shoulder responsibilities?

Our American youth, adults too, are too complacent. There are 43 seniors in my class. I asked my government teacher to ask them four questions: (1) Who were Ohio's two U.S. Senators? (2) Who was their U.S. Representative to Congress? (3) Who was their State Senator? (4) Who was their State Representative? Out of 43 seniors, 5 could answer all of these questions. Thirty-eight of tomorrow's voters didn't know who helped run our country. What's more, they didn't care.

A stanch nation is a religious nation. Are we losing our respect to God? Are we really and truly a Christian nation? When Sunday morning comes, are we in church giving thanks to God for this great and wonderful Nation? The patriots who founded our Nation were religious men. Are we following in their footsteps?

We can respect the past, but we must depend on the present as we look to the future. Two of our greatest living Americans today, as I see them, are Richard Nixon and Lyndon Johnson. Richard Nixon was the first American to stand up to Khrushchev and tell him what he thought. If he had

the guts to stand up to Mr. K., and walk through mobs in South America, he's the kind of man I want to lead our country, whether he be Republican or Democrat. RICHARD NIXON is the strength of America, the ordinary American who grows in stature and earns respect not because of his position but because of his ability and his dedication to his country.

tion to his country.

Thomas Paine was so patriotic that he pleaded that fellow Americans follow him and support his beliefs in order that Americans be freed from oppression. He never hinted that this would be easy. Like Thomas Paine, other Americans who care, Americans who are informed, Americans who are God fearing, who are patriotic and dedicated, Americans who dare to stand by their convictions, will recognize the times "that try their souls" and find a solution to the problems.

Future Rests on Continued Development of Young Minds

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1960

Mr. WILEY. Mr. President, last week, May 1-7, the Nation observed Youth Fitness Week.

As President Eisenhower stated in proclaiming a special week:

The fitness of our young people is essential to the strength and progress of our Nation; we must always strive to improve the wellbeing of our youth by determined and coordinated efforts in their areas of learning, work, play, and matters of the spirit; and in this challenging world, fraught with peril on every side, it is imperative that our young people recognize their obligations to themselves, to their families, and to all of us, in order to prepare themselves for lives of satisfying and useful citizenship.

Currently, the Torch, a splendid publication of the Milwaukee Advertising Club, is presenting to its readers a review of articles on various aspects of community life essential to progress.

The April edition contains a useful, constructive article by Robert A. Kidera, entitled: "Your Milwaukee—Its Future Rests on Continued Development of Young Minds,"

Among the conclusions in the article are the following:

Even a cursory review of the schools serving the city of Milwaukee indicates that Milwaukee citizens have struggled for decades to give this community a truly outstanding school system—uniquely suited to the needs of this community.

The result over the years has been a rather articulate and well-informed citizenry which has contributed to a considerable extent, to the healthy state of political life in this community.

Citizens of Milwaukee have long recognized that the future growth and development of their city depends upon the education of their young people—upon the minds of the young—and they have built a tremendous school system as evidence of this belief.

Reflecting creative efforts to provide educational and other opportunities for youth, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR MILWAUKEE-ITS FUTURE RESTS ON CONTINUED DEVELOPMENT OF YOUNG MINDS

(By Robert A. Kidera)

Even a cursory review of the schools serving the city of Milwaukee indicates that Milwaukee citizens have struggled for decades to give this community a truly outstanding school system-uniquely suited to the needs of this community.

The result over the years has been a rather articulate and well-informed citizenry which has contributed to a considerable extent, to the healthy state of political life in this community.

Citizens of Milwaukee have long recognized that the future growth and development of their city depends upon the education of their young people-upon the minds of the young-and they have built a tremendous school system as evidence of this belief.

When analysts and researchers attempt to evaluate the assets of a city such as Milwaukee, they usually talk in terms of its geographic location, its power supply, its transportation facilities, its trained labor supply and other similar tangible physical factors, Seldom do they add in one of its most important assetts—the minds of its young people.

Presumably the task of evaluating the intellectual capacities of a city's youth is just too difficult for the scientific researchers and so they omit it, giving the impression that they consider it of little importance.

But if the analysts appear to overlook the importance of the minds of the young people, citizens of Milwaukee certainly don't. And it didn't take the threat of the Russian Communists and their beeping sputniks to spur the citizens of Milwaukee into this awareness.

The citizens of Milwaukee have exhibited a deep interest in the minds of their youth and the education of these young people. Even a cursory review of the schools serving the city of Milwaukee indicates that Milwaukee citizens have struggled for decades to give this community a truly outstanding school system, uniquely suited to the needs of this community.

Today more than 180,000 young people are enrolled in Milwaukee schools ranging from kindergartens for 5-year-olds to graduate schools for Ph. D candidates.

On the elementary level, the Milwaukee city school board operates 122 schools with an enrollment last fall of 69,158. Milwaukee is also served by 76 Catholic and 19 Lutheran schools with an enrollment of parochial 40,523 and 3,850, respectively.

On the secondary level, Milwaukee is served by 48 junior and senior high schools, of which 28 are public schools, 14 Catholic, 3 Lutheran, and 3 nonsectarian private in-The public schools enroll 33,262 stitutions. students, while the private schools serve 12.570.

In the technical area, three institutions dominate. These are the Milwaukee Institute of Techology, which is operated in con-junction with the Milwaukee Vocational and Adult School; the Milwaukee School of Engineering, a private institution which offers wide training for technicians and engineers; and the Layton School of Art, perhaps the outstanding institution of its kind in the State.

On the college and university level, almost 20,000 students, are regularly enrolled. The University of Wisconsin-Milwaukee, with an enrollment last semester of 5,362, offers a 4-year degree program in most fields of the liberal arts.

Of the six private Milwaukee institutions of higher learning, one, Milwaukee Downer, is nonsectarian and offers a quality education for young women with emphasis on the

humanities and social sciences. Its present enrollment is 178.

Concordia College, located on the west side of the city, is operated by the Missouri synod of the Lutheran Church and offers a liberal training for 174 young men.

Three Catholic colleges for women offer liberal education with specialties in music, education, home economics and art. They are Mount Mary College, 1,062 students. verno College, 979 students; and Cardinal Stritch College, 352 students.

Marquette University with its 11 separate schools and colleges-including a graduate school offering doctorate degrees-enrolls 10,746 students-almost 60 percent of all the regularly enrolled students attending college Milwaukee.

The tremendous amount of learning which takes place daily in the minds of these 180,-000 young people represents the single most important asset to this community-and it continues to grow and compound year after year to provide this community with the knowledges, skills, and wisdom needed if Milwaukee is to meet the complex challenges of the future.

Like all Americans-in fact, like free peo ples throughout the world-Milwaukee citizens are being faced with increasingly complicated problems concerning their safety, welfare, and happiness in a world gripped in death struggle between contradictory ideologies backed by military might. But in addition to these general problems Milwau-kee has many unique problems of its own.

The problems of urban living, its industrial specialization, its human problems of providing better health, recreational, and cultural services, its adjustment to its new role as a world port and international trade center-all these provide a unique challenge to the Milwaukee of the future and to its citizens of the future.

Fortunately, the minds which must wrestle with these problems in quest of a solution are now being educated in one of the Nation's outstanding school systems, truly unique in that it is especially adapted to the cultural, economic, and pluralistic nature of this city.

Basically, the Milwaukee school system is distinctive and unique in four ways:

provided the First. Opportunities are young people of the community for study in virtually every profession and technical field. While continuing to live in his Milwaukee home and avoiding the cost of living away from home, the Milwaukee youngster can select from hundreds of vocations, ranging from the simplest trade to the most complicated profession.

All the engineering and manufacturing fields are covered; all the health service fields are represented; teacher training. business education, and artistic skills are also available. Generally speaking, only pharmacy and architecture are the main areas of specialization required by the city which are not provided for in the Milwaukee area.

Second. The quality of education is the highest. Its elementary schools have pio-neered in special teacher benefits insuring a superior teaching staff; special sections are provided for special problems-such as the blind, the hard of hearing, and various other physically or mentally handicapped. instance, 8 special teachers are employed for teaching the blind and 21 teachers for instructing the hard of hearing. The test-ing and counseling programs of the Milwaukee system have also been the models for many other cities.)

Especially in the college and university area, emphasis has been on quality rather than quantity. This is reflected in the national reputation of many of these schools and their ability to attract to Milwaukee many outstanding students, many of whom then elect to make Milwaukee their perma-

Third. The Milwaukee school system includes a wide variety of different types of schools, many with distinctive emphasis or orientation, reflecting the pluralistic nature of the community.

Milwaukee's large Catholic and Lutheran populations have established many schools aimed at serving the needs and wishes of the parents and students who seek a type of education which the city or State schools in our democratic society cannot provide. Catholic parents and students support 76 elementary schools, 14 high schools, 3 colleges, and 1 university. Lutheran parents in Milwaukee support 19 elementary schools, 3 high schools, and 1 college.

In addition, several nonsectarian private high schools and one nonsectarian colege are provided for students seeking this type of education. On the elementary and sec-ondary level, more than 35 percent of all students attend these private schools, while on the college level more than 70 percent are enrolled in the private institutions.

This diversity of type of school representing in general the diversity of the population of the community, is an extremely healthy situation insuring the growth of all the religious, cultural, and ethnic groups which contribute to the thriving pluralism of our community. By encouraging parents to educate their children according to their own way of life, the Milwaukee school system makes a genuine contribution to our free and democratic society.

Fourth. The large number of private

schools on all levels means that the cost of maintaining this extensive school system is relatively light on the Milwaukee taxpayer. With almost 40 percent of all the students in the schools in Milwaukee attending nontax-supported institutions, the burden left to the regular tax-supported institutions is considerably reduced.

On the elementary and secondary level these privately operated institutions are being subsidized to a considerable extent by the various churches which operate them. On the college and university level, how the private institutions are self-sustaining for the most part-depending for their income upon student tuition and the philanthropy of the Milwaukee community.

One result of this has been the relatively low tax rate for citizens of the Milwaukee area for the support of the city and Stateoperated schools. Most industries have found it much more economical to contribute to the support of the private schools so that they may continue to provide for their share of the school population, rather than depend upon tax-supported institutions to provide for Milwaukee's educational needs.

There is still another large area of education not counted for. This is the adult of continuing education activities in this community. Almost all of the colleges and universities offer some type of evening part-time education. Some of these courses are almedat developing hobbies or special skills in the crafts, while others are meant to be a continuation of the formal education of the students enrolled. Perhaps it is the long winter season that has influenced Milwaukee's development into one of the Nation's leading continuing education centers.

Thousands of different courses are available in the evening, ranging from basket weaving to Aristotelian philosophy. The result over the years has been a rather articulate and well-informed citizenry which has contributed to a considerable extent, to the healthy state of political life in this community. These excellent opportunities for continuing education will also be available to the citizens of tomorrow.

In the spring of 1958, the Governor's Conference on Higher Education in Wisconsin held a 2-day session based on the theme, "Education: Key to Wisconsin's Future." Citizens of Milwaukee have long recognized that the future growth and development of their city depends upon the education of their young people—upon the minds of the young—and they have built a tremendous school system as evidence of this belief.

Secretary of the Interior Fred A. Seaton Outlines Dramatic Electric Power Gains Under Eisenhower Administration

EXTENSION OF REMARKS

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. WEAVER. Mr. Speaker, under permission to extend my remarks, I would like to call the attention of my colleagues to one of the most important policy statements made by the Eisenhower administration concerning the development of hydroelectric power in the United States. Secretary of the Interior Fred A. Seaton made this statement before the American Public Power Association at its annual convention here in Washington on Wednesday May

The speech was met of course by mixed reaction but on the whole most favorably. Afterward I heard many comments that this was the most forthright, hard-hitting statement of the administration's position on this vital subject in many years. In his speech, Mr. Seaton not only outlined the tremendous sains made in the orderly development of our natural resources under the Eisenhower administration, and more particularly under his own administration of the Department of Interior, but also pointed the way to a vital growing future in this area.

It is an honor and a real pleasure to present this speech to my colleagues. It follows:

The American Public Power Association represents a vital component of the electric power industry of the United States. For that, and other reasons, it is a great pleasure to participate in your program.

As Secretary of the Interior, by way of the Bureau of Reclamation, and the Southeastern, Southwestern, and Bonneville Power Administrations, I am myself directly involved in the great industry of which you are a part.

You and I have many interests in common. Most important of these, as servants of the American public, is our joint concern that this Nation always has sufficient electric power to meet its present and future needs.

In 78 years, electric power has moved from the status of just a new-fangled item of public curiosity to that of an absolute necessity.

Gone from use now, with only rare exceptions, are the gas lamp and kerosene lantern. In their place there is electricity, for use in lighting, for powering industry and the home, for making possible everything from the X-ray to our whole vast electronic system of communication. It affects our daily lives and even our national security in hundreds and thousands of different ways.

Today the annual electric energy requirements of the United States total more than 700 billion kilowatt-hours, almost double

that of 10 years ago. By 1980, this Nation likely will need over 2,100 billion kilowatthours each year—three times more than today. Even so, there is no doubt in my mind as to our ability to stay ahead of this increasing demand. Two factors, in particular, warrant that conclusion.

The first is the tremendous technological progress of the industry itself. Where Edison's original Pearl Street Sta-

tion in New York had 6 dynamos, each with the capability of lighting 800 incandescent lamps, today the Nation's largest generator is turning out enough energy to provide

electric power for a city of 500,000 people.

And even larger generators are being designed and constructed.

It took 10 pounds of coal to produce 1 kilowatt-hour in 1882; last year about nine-tenths of a pound did the same job. In 1940, 16 cubic feet of natural gas were required to produce a kilowatt-hour; in 1958, 1114 cubic feet.

Taken together, these facts represent solid reasons to foresee more efficient generation, higher transmission voltages, advances in plant design, and a whole host of other improvements to come. Encouraging, too, is the fact that technological advances are now coming at a faster rate than ever before in

your industry's history.

These achievements, coupled with the greater efficiency made possible by volume operations, have enabled you to meet an ever-increasing demand and at the same time reduce the cost of electricity. Thirty-four years ago the consumer paid just under 3 cents a kilowatt-hour. The average price today is a penny less. And I don't need to remind you that this was accomplished during a period when general living costs have skyrocketed.

Without question, your members have contributed materially to the operating practices and efficiencies which have brought these cost reductions about.

The second reason for my optimism that the United States will have enough electric power to meet its future needs is the record of accomplishment made by the several segments of the electric power industry during the past 7 years.

Less than a decade ago, you will recall, a serious power shortage existed in the Pacific Northwest. Mandatory curtailment of power consumption adversely affected the economic development of the area. Existing industry was seriously hampered, if not prevented from expanding. New industries were unable to locate in the region, simply because there was not enough available power. Most unfortunately, even important defense production was affected.

Such an intolerable situation demanded action—action which would put added kilowatts on the line rather than merely mouthing political promises of power sometime in an uncertain future.

You and I know there are no brownouts today. To the contrary, the Nation's power additions remain well ahead of predicted load growth.

Let's look at the record.

During the two decades from 1932 to 1952, additions to the net generating capacity of the United States were made at an average of 2.723,000 kilowatts per year. Over the last 7 years ending December 31, 1959, annual additions averaged in excess of 11 million kilowatts. In simple arithmetic, this represents a difference of 4 to 1.

Despite the fact that annual energy requirements almost doubled from 1952 to 1959, reserve capacity last year was more than four times what it had been in 1952.

Between June 30, 1953, and June 30, 1959, the United States added to its generating capacity 65 million kilowatts. That is the largest amount added in any 6-year period in this Nation's history. And it is 88 percent greater than the amount added in the last 6 years of the preceding administration.

The facts are that we have made a better record in every type of power: In Federal power, 10.4 million kilowatts to 5.6 million; in non-Federal power, 54.7 million to 28.9 million.

Within less than the short space of one decade, the United States has moved from a period of electricity shortage to one of plenty, and a firm foundation has been laid for expanding requirements in the future.

This accomplishment speaks for itself. The principal reason for the dramatic change is because the Eisenhower administration has created a climate for the development of water resources, including hydroelectric power, which has been favorable for a triple teamwork assault on the job.

In 1953 President Eisenhower freed our economy of stifling and needless controls. In the electric power field his action meant two very important things.

First, it abolished the futile and foolish Federal policy of preemption of all water power sites.

Second, it removed material controls which had made it difficult, to say the least, for your industry to design and obtain necessary equipment.

This administration believes that neither any area of Government nor of private industry has the exclusive right or responsibility for the construction of dams or the generation, transmission, and sale of hydroelectric energy.

We do believe that all licensed non-Federal development must be consistent with the overall requirements of wise and multi-purpose use of our natural resources. When non-Federal projects meet that test, why then should the Federal Government insist on preempting the site and prevent either private or public organizations from making their contribution in the electric power field?

In the public interest, privately owned utilities are strictly regulated, and they should be. Consumer-owned utilities are, of course, responsible to the people they serve.

As to whether electrical energy should be supplied by a consumer-owned or a private agency in any particular area, I firmly believe that is a decision for the people affected to determine.

For instance, in my State of Nebraska, the people have themselves determined that all power distribution shall be by public and consumer-owned agencies.

In the State of Kansas, where I grew up, much of the production and distribution of power is in the hands of private utilities.

Each State, and the areas and municipalities within it, made its own decision. What is wrong with that?

As the Secretary of the Interior, I shall continue to support the right of any State to make its own choice and, consistent with State laws, for the right of any locality to itself decide whether it wants public or private or Federal power. But I will not support the fallacious and dangerous proposition that the Federal Government has a public utility responsibility, the inevitable end result of the which could only be a Federal monopoly and a complete lack of local determination and control.

In the power field, as in all other areas, the proper function of the Federal Government is to do only that which must be done in the national interest and then only when non-Federal agencies cannot or will not do it.

With that principle firmly in mind, the Federal Government, by cooperative effort with other power services, is now setting an example in assuring the fullest possible utilization of the capabilities of all the elements in the power industry—public, private, and Federal. A long-standing example of this kind of cooperative effort is the Northwest Power Pool, pulled together largely by

means of the Bonneville Power Administration's backbone transmission grid.

Another possibility of this kind lies in the Missouri Basin. Last December, a group of consultants, led by former Senator Arthur V. Watkins, recommended to me that steps be taken to bring about the general coordination of all Missouri Basin power supplies by means of pooling, integration, and interchange arrangements utilizing the Bureau of Reclamation's backbone transmission grid.

I am hopeful that this grid can be the means of working out arrangements to make the best possible use of all available power

resources in this area.

I have read with much interest the article concerning the proposed upper Colorado storage project transmission system which appeared in your Public Power magazine for April 1960. The author states that the "biggest decision will be to determine who will build the backbone transmission system and to decide whether Arizona will be within the marketing area."

This past week the Bureau of Reclamation submitted to my staff for review recom-mendations upon which a decision as to the marketing area may be based. The Bureau also suggested basic data against which proposals for the construction of the transmission system may be weighed. Previously, the Department of the Interior had concurred with five basic principles which transmission system proposals must meet.
As of now, it seems highly unlikely that

any non-Federal organization will be able to provide a backbone transmission system which will meet the necessary principles, and particularly the requirements of the project itself.

In any event, let me assure you that these decisions will be made promptly and that both the spirit and letter of the preference

clause provisions of Federal law will be

ance.

The provisions of Federal law which provide preference be given to public agencies in the sale and distribution of power generated at Federal installations do not have

be spelled out to your association. You and I regard the preference clause as the hallmark of the power marketing policy of the Federal Government. And I am opposed to repealing it by legislative action or eroding it by administrative noncompli-

Here again, let us look at the record.

For example, Federal power sales to preference customers, for the fiscal year commencing July 1, 1959, totaled 37½ billion kilowatt-hours. Notwithstanding the fact that many public agencies throughout the United States materially increased their own generating capacity in the 7-year period, this is an increase of some 74 percent over 1952.

Furthermore, we have underway largest water resources program in history. For fiscal year 1961 alone, \$1.4 billion are programed. This fiscal year we are investing nearly \$1.3 billion in these programs. Thus, we have set an alltime record.

It would be shortsighted and extremely wasteful if hydropower were not added to Federal water control and conservation projects wherever economically feasible. fore, the Corps of Engineers and the Bureau of Reclamation have programed, for the years 1960 through 1965, the installation of hydrogeneration in excess of 41/2 million kilowatts.

All in all, the Eisenhower administration has already installed in Federal multipurpose projects generating units having a capacity of 5.7 million kilowatts.

In its 7 years, this administration has completed more than 7,000 circuit miles of transmission lines to transport power to market centers. This is almost one-third the circuit miles completed by Federal agencies in the

preceding half century.

Even more important to future prospects in the electric energy field, in my opinion, has been the stimulation we have given to consumer and privately owned non-Federal agencies for the development of hydroelectric

During the 7-year period 1952-59, applications for non-Federal power projects having an aggregate capacity of more than 33 million kilowatts were filed with the Federal Power Commission. This is an amount far greater than ever applied for in any comparable

previous period.

Outstanding projects being undertaken by consumer and private non-Federal entities, which have been licensed or for which applications have been pending, include the New York State Power Authority's Niagara project of over 2 million kilowatts-the largest single project of its kind in the country. Included also are the joint Ontario Province-New York State Power Authority's St. Lawrence project of 940,000 kilowatts; the private Coosa River project of about 420,000 kilowatts; and several projects, both consumer and private, in California and in the Pacific Northwest, totaling about 7 million kilowatts.

Non-Federal agencies are now able to act on their own initiative, always subject, of course, to proper licensing procedures. Each of you in your association can now plan your development program without having to beg someone in Washington for permission to do that which, in your judgment, is in the best interest of the public in your community.

Surely, most of us will agree that the strength of America, in large part, lies in the massive diffusion of power, of knowledge, of skills, and of initiative going down to the very roots of our economic and social

If the day ever comes when any group, private or Federal, can monopolize control of the electric power field in this Nation, that day your segment of the industry at best will begin its decline. In the long run, it will lose its identity altogether.

In spite of all forces to the contrary, I am confident that your organization, following the traditions of this great Republic, will insist on preserving your role in power de-velopment for the future.

Comparison of Federal Grants-in-Aid With Federal Taxes

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, May 9, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Own Money," which was published in the Philadelphia Inquirer of April 13, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR OWN MONEY

Uncle Sam treats his children, the States, with free-handed generosity. To Pennsylvania, for instance, he gave in fiscal 1959, in grants-in-aid, the impressive sum of \$489,-158.000.

This was received here with rejoicing. We Pennsylvanians did not look at the adjoining column in the accounts which showed how much our taxpayers chipped in to make this liberality possible. Federal taxes levied on Pennsylvanians totaled in the same pe-

riod \$5,392,798,000.
You don't get something for nothing. even if you live in Mississippi, which paid in only \$193,120,000 and got back \$175,-

115.000.

The difference between our gifts from Uncle Sam and what we paid to get them went, of course, to support national defense, foreign ald, interest on the debt, and a horde of Federal employees. But our grants-in-aid come out of our own money; we pay for them through the nose. It would be a mistake to regard them as velvet. When we ask for more we might well reflect on which of our pockets it is to be taken from.

The Legacy of the South

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on Confederate Memorial Day, April 26. a distinguished Georgian delivered an eloquent address at memorial exercises in Augusta, Ga. The speaker was Hon. William M. Lester, a prominent attorney of Augusta, who has served with great distinction in both houses of the Georgia General Assembly.

In his able address Mr. Lester presented views on several important current questions. There are, of course, varied opinions regarding some of the views stated. However, they are thought provoking and well worth reading. Pursuant to unanimous consent previously granted, I insert Mr. Lester's address herewith:

THE LEGACY OF THE SOUTH-HEREIN LIES OUR STRENGTH

I deeply appreciate your invitation to address you today. I deem it a great privilege to be with you and to have a part in this

The armies of the Confederate States were disbanded almost a century ago. The period since that time has been not only an important and extraordinary one for people of the South, but for the entire world. A number of wars and other events have attracted our attention during this time, but the period of 1860 to 1865 is still the most important in the history of world, because of the valor, loyalty, endur-ance, and sacrifice of the men and women of the South during the 4 years of the War Between the States.

The battle scenes which the heroes of the South have painted, the memories of heroism, fortitude, and courage of our Confederate veterans, the more than Spartan inspiration of the women of the South, and the principles for which the South fought will dignify for all time the annals of the civilized world. We of the South will always cherish their recollections, and are justly proud of being descended from such men and women. We have, therefore, come today to this sacred place to stand again with uncovered heads beside the silent mounds, and above the sacred dust of our soldiers, who laid down their lives for us in war's grim struggle, and to commen-orate the great deeds of the men who wore the grav.

All of our soldiers have now answered the last rollcall. We have come today to their camping ground to beautify the white stones with flowers so that the world may know of our love. We rejoice in the spirit that guards so tenderly their memory, loves even their dust, and strips our homes of their rarest flowers to scatter on their graves.

WOMEN MADE GREATER SACRIFICE

It is not only of the Confederate soldier that we think on this day. There were many whose sex forbade them to offer their lives, but who gave instead their happiness. The women of the South sent their husbands and sons to fight, and if need be, die for the rights of the States as provided by our forefathers. When the sad messages came that darkened their homes forever, they pressed their lips more tightly together and went forth to fight life's battle alone. It was woman's soft hand that cooled the fevered brow of our soldiers; it was woman's sweet voice that spake comfort and hope to the dying, and we will never be able to repay the debt that we owe them.

We are also grateful to the women of the Memorial Association, the United Daughters of the Confederacy, and other patriotic organizations for preserving the history of the War Between the States. Through you a fallen cause has been glorified. The world would have never known how nobly our forefathers fought and died if you had not kept their memory in tender reverence. The tragedy of the Confederacy must not be forsotten. We are depending upon you seeing that the unborn generations hear the story

of our southern heroes.

Stirred by the inspiration of this hour, memory sweeps back the years. We are not here, though, to draw into notice the deeds of our heroes, because they are known to every man, woman, and child of the South. The record of the armies of our Confederate States has like a meteor streamed upward and onward in an unbroken track of light in spite of opposition from the northern People. Stonewall Jackson's fame is known to all the world today. Lee is recognized as the greatest and most stainless of earthly commanders. It will not be possible for me to mention the names of all the leaders of our armies, but the world treasures no names more worthy than those of our officers.

The volunteer soldiers of our armies have received the highest praise. The private soldier did not have the promise of military glory. They endured hunger, though, thirst, weary marches, faced death on the battlefield, bared their breast to lead and steel, for the rights of the South. They were inspired by duty, patriotism, love for the South, and in the book of the chronicles of the brave it is recorded that they were a hero's heart within.

LOSS SUFFERED BY SOUTH

Te heroism of the men and women of the South did not stop when the armies were disbanded. When the men in grey returned home in 1865, the South was prostrate, exhausted, and drained of its material resources. It had lost one-tenth of its population, \$31/2 billion of its wealth, and an effort was being made by an Army which occupied its territory to destroy its social order. Its loss was so great that the South did not regain its per capita wealth of 1860 until the beginning of the 20th century. Our soldiers did not give up in despair, but accepted the bitter award of the bloody arbitration. It is due to the fidelity of the men and women of that period, and their sons and daughters which followed them, that our social order and southern customs Were maintained.

The blackest spot in the history of the world is the period following the War Between the States, the period characterized by carpetbagger and Negro rule in the South. Although living in fear and despondency,

our forefathers waged and consummated a victory against the most overwhelming odds that ever confronted a defeated people. Their success was due to their willingness to make sacrifices, commit resources, incur risk for the common good, and to remain united in the cause for which they had fought without any thought of compromise. This is our legacy. It is a priceless birthright which should be deeply felt, deeply valued and more adequately expressed than I am capable of doing.

LEGACY BEQUEATHED

This legacy has given us the South. A land that has known sorrow; a land scarred and riven by the plowshares of war and billowed with the graves of her dead, but a land of legend, a land of song, a land of hallowed and heroic memories. It came into existence during the Missouri Compromise debates in the U.S. Senate. The rising storm of jealousy and hate preceding the War Between the States made us a nation on February 4, 1861, when delegates from six of the lower South met in a convention at Montgomery, Ala., and formed the Confederate States.

Our forefathers lived under this government for 4 years. Many of them gave their lives for it. All gave of their wealth to support and maintain it. They were compelled to yield to overwhelming numbers and resources in 1865, but were never conquered or subjugated. An embittered North attempted to do this for 10 years after the war, but failed in 1876 when our forefathers drove the carpetbaggers from the South.

The War Between the States and the Reconstruction period which followed made the South. It was an experience which had never happened to anyone else in the world. We were made one in our political and cultural ties. Many writers have attempted to describe the South and its people. In "The Swallow Barn," Kennedy pictured the popular conception of the South as one great plantation, "open as an inn and as rich as a castle." This tradition reached its full flower in the 1850's under South Carolina's Gilmore Simms. The romantic conception of the South survived the War Between the States.

None of the writers, though, from Nelson to Caldwell have given a true picture of the South. Prof. Norman Foerster described the South in the University of North Carolina Press as "a land of varied forest and varied contour from mountain to sea, a land of exceptional natural beauty, inhabited by a people who impresses one at once with their different voices and different accent."

The South of today, as suggested by Workman in his "Case for the South." is a family closer united than any of the other regions by ties of blood, belief and behavior which distinguish us from other sections of our country. A major portion of this common bond stems from a heritage which might be termed Anglo-Saxon or Celtic-Teutonic, as we never had the successive waves of immigrants from southern Europe and other foreign lands that swept into the North and West to dilute their customs and traditions. We are a paradoxical and individualistic people, yet friendly and hospitable which is our greatest attraction.

We are a land also inhabited by two races living separately. We are the only States of the Union that are a part of it by force of its armies. Further distinctions could be made, but these are sufficient to show that we are different as to our customs, institutions, and ways of life.

STRUGGLE FOR SURVIVAL

Many changes have come to the South and to the Nation during the past century. During this period we have had three calamitous wars with revolutionary consequences, a technological transformation, migration of peoples, the growth of great cities, impor-

tant cultural and educational developments.
We have shared in all of these changes,
but have at the same time maintained our

southern institutions, customs and way of life. This has brought about a continued relentless effort from the rest of the world to force us to modify these peculiar customs and institutions.

In view of the recent school and transportation decisions of the U.S. Supreme Court and the threat of discriminatory and punitive legislation by Congress, we are faced with a crisis in the South. In fact we are facing a great test in a struggle for survival of the South.

Some of our people have an idea that a change in our southern institutions and customs are inevitable. I am sure this idea does not exist in this State or in the other States of the South which were a part of the Confederate States. Our southern institutions and customs are a part of the Union. It began before the organization of the Union, and grew to fruition under the Federal Government, with the North and West each having a peculiar trait. The expanse of our country is so great that the high regions of the North have scarcely thrown off their icy mantle, when the southern planter is preparing to discontinue the cultivation of his cotton. While the morning sun tips our eastern hills, the valley of the West reposes in midnight darkness. Our different customs and institutions are due to this vast territory and is authentic American, and as such is entitled to the protection of the Federal Government. This protection can be obtained under the Federal Constitution.

As we look back to 1860, we find many important issues were facing our forefathers. They were complicated, and the deeper implications were not clear. These issues were largely political. They were mostly concerned with the existence in America of the institution of human slavery. In the cotton States of the Deep South this institution was a going concern, immensely profitable to a small but powerful group. In prior years slavery had existed in all of our States and was recognized by our Constitution when adopted.

In the Southern States, as time went on,

In the Southern States, as time went on, slaves became more numerous. This was due to the difference in climate, soil, and industrial development, and not in any degree to moral consideration. There was no real unanimity of feeling about it anywhere. The question of slave and free States became, though, a political football which forced the South to leave the Union.

Going back a century in our history, we find in the spring of 1860 that the people were preparing for a presidential election just as you and I are preparing for a presidential election. The Democratic Party had met in Charleston, S.C., for the purpose of nominating a candidate for President. The convention, after convening on April 23, became involved in a fearful difference between the northern and southern wings for party control. The attempt to find a compromise platform or candidate failed. The one party which could claim to be truly national divided into sectional groups. The northern section nominated Stephen Douglas, of Illinois, and the southern group named John C. Breckinridge, of Kentucky.

The Republicans, a purely northern party, took advantage of this division and concentrated on finding a candidate who could win the election. Abraham Lincoln was, of course, nominated and elected, by a minority vote. South Carolina seceded from the Union on December 20, and the inevitable conflict between the North and South followed. The essential sovereignty of our States was destroyed in our defeat at Appomattox and under the amendments to the Constitution which were passed by an embittered North during the Reconstruction period. Our interest once represented by

our States must now be protected as a section. We have common needs, common hopes common fears, and common dangers, In the future we must act as a section and speak with our votes as a solid South. The strength of our States lies in a solid South.

There are many lessons to be learned from the War Between the States for us and the rest of the country. Our first lesson should be that our forefathers left us a legacy of southern institutions and customs which differ from the rest of the world. In the coming struggle we must be prepared to tell the world of the advantages of our civilization and be unafraid to defend it. The world must understand, as well as the South, that our institutions and customs follow God's design for mankind.

He made all of us after His image, but each one different from every other one. Even no two humans ever born have exactly the same fingerprints. Differences in individuals extend to their physical, mental, and moral characteristics.

If we have faith in God, we must realize that He had a purpose in designing us so that no person is like any other person. Each person is a distinct individual who should be free to find his place in the scheme of things as determined by his own Godgiven abilities and as a result of his own freedom of choice.

Variation among human beings has allowed one person to procure more than another, with resulting differences in material possessions. Any effort to equalize the social and economic status of all individuals by the coercive force of government is a contradiction of Nature's laws.

No one in the South is opposed to any individual having the equal right to the development of their personality, so far as may be compatible with the common good. This is proven by the opportunities we have given the colored people, for an education and for economic development.

Our two races can be compared to the key-board of a plane with its white and black You can play a tune of sorts on the white keys and you can play a tune of sorts on the black keys, but for harmony you must use both black and white. Our institutions and customs are built upon this foundation. and our future depends upon the world recognizing this harmony. Our customs and institutions are certainly of no concern of Russia or other nations of the world. The claim that Russia and other countries of the world are interested in our problems of race relations has been distorted by demagogs of the North and West. Our race problem is sectional and cannot be made an international question.

MUST REMAIN IN DEMOCRATIC PARTY

The lesson that we should begin with. though, and remember forever is that we must never again leave the Democratic Party as we did in 1860. Our leaving the Democratic Party then brought on the War Between the States. The division in the Democratic Party elected Lincoln President. After becoming President, he disregarded the recognized rights of the South to withdraw from the Union, cast aside the Constitution and made war on the South before convening Congress. If the South had remained in the Democratic Party, someone else would have been elected President, and the war would have been avoided. The South would never have gone to war over slavery. It would have been abolished within a few years with the industrialization of the South.

A southern militant group must be organized and maintained in the Democratic Party. but we of the South cannot join any other party. Failure to do this can have but one result. Under a two party system in the South, our people will be divided into two groups. In such a situation the colored minority could and would determine who won. In this way they would control the local and State governments of the South. We experienced this situation during the Reconstruction period and know the waste and corruption of such a government.

We may release our presidential electors from any obligation to vote for the party nominee, abolish our primary system, nominate candidates in local and State conventions, and do whatever else is necessary to control our elections. We must be united throughout the South in one party, and at this time the only party for us is the party of our forefathers.

SEPARATE PUBLIC SCHOOLS

The important lesson for the South, though, is that we must maintain our separate public school system for each race, as established by our forefathers following the Reconstruction period. We must recognize that education is not mere learning or even discipline, but a force that molds the character and customs of the Southland.

In the emotional excitement of the Supreme Court's decision in May 1954, we have overlooked that an effort was made to operate integrated schools in the South during the Reconstruction period when the carpetbagger governments were supported by troops, but they were unsuccessful. Although 6 years have passed since the Supreme Court's decision, we still have separate schools for the races in most of our Southern States. They can continue even though further far-reaching decisions have been made by the Supreme Court of the United States, if we continue an uncomprosing united front.

Pupil placement laws mean a compromise. Private schools will not give us the educational system required for the continual ad-vancement of the South. The responsibility is upon the general assembly or legislatures of the various States to maintain adequate State supported separate schools for both This can be done through the appropriation act and fiscal policies of the State. It cannot be done, however, by appropriating money to the State department of education or the board of regents. The appropriation must be made direct to the school on an annual basis, and made after the enrollment is determined each year. Wherever integra-tion appears as a problem, the appropriation to that school could be eliminated and the children placed in other schools, or given grants in sufficient amount which will enable them to attend private schools. The appropriation act could even be used to eliminate couress, grades, or departments whenever such action was necessary to continue the school or college on a segregated basis.

Time will not permit a discussion of the details of this plan, but the procedure will be within the constitutional rights of our States and would minimize the inconvenience to our people. The rights of the South were obtained during the Reconstruction period through acts of the legislatures of the various States. Our forefathers have given us the way to protect our southern way of life and our southern institutions through our State legislature under the constitutional rights which they have.

CONCLUSION

Our forefathers were dedicated to the preservation of our southern customs and institutions. They held fast to this purpose through the years. There was frustration and agony in the war and during the Re-construction period. They won in the end. Our fields became fertile farms, hamlets grew into industrial cities, and we are today a part of a Federal Government of 50 States.

Our security lies in the legacy left us by our forefathers. It lies in our willingness to make sacrifices, commit resources, and incur risk for the common good, as our forefathers did. We have been given a birth-

right of freedom and the heritage of a goodly land. We must keep, hold, cherish and preserve this legacy for generations unborn.

Franklin D. Roosevelt told the Nation in 1936 that "There is a mysterious cycle in human affairs. To some generations much is given. Of other generations much is ex-We have been given a great legacy. The light of a grander day appears on the horizon. Through this legacy and the selfreliant efforts of the men and women of this generation and the generations to follow, we will master the weapons of an industrial civilization and keep in step with the spirit of the 20th century, without sacrificing our southern political and social instincts of our institutions and customs. There will always be a South. Herein lies our strength.

Polish Constitution Day

SPEECH

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. BENTLEY. Mr. Speaker, it is a great privilege to join many of my colleagues who have called attention to the fact that last Tuesday, May 3, marked the 169th anniversary of Poland's Constitution Day. This is indeed a great day for all peoples of Polish origin as well as for the many other friends of Poland who are desirous of assisting the Polish people in their efforts to regain their

liberty and independence.

It was most fitting and timely that Postmaster General Arthur E. Summerfield saw fit to announce that the "champion of liberty" postage stamp in commemoration of the 100th anniversary of the birth of Ignace Jan Paderewski will be issued sometime during the fall of 1960. I was equally happy to join many of my colleagues on both sides of the aisle in pointing out to the Postmaster General the numerous historical facts and qualities of Mr. Paderewski and in urging that appropriate recognition be given to this eminent statesman and patriot who was a true champion of liberty for his native country of Poland and the Western European nations. It was gratifying to know that the Postmaster General confirmed our admiration for Mr. Paderewski as a worldknown personality in the field of music and for his service to the Western World in the struggle for freedom and independence of all mankind. Both the memory of Ignace Jan Paderewski and our deep regard for Poland and its brave people have been amply shown by this significant commemoration. It should also be pointed out that 1960 marks the 150th anniversary of the birth of another great son of Poland, Frederic Chopin.

In calling attention to this memorable day in Polish history, it is indeed inspiring to learn that the next half-dozen years will serve to prepare the appropriate celebrations to be held in 1966 on the millennial adoption by the Polish Nation of the Christian religion. The faith of the Polish people in our common Christian heritage has served to support this brave nation throughout her long and troublesome history and, I am convinced, will again serve to bolster the fires of freedom in the hearts of the Polish people until that day comes when they may again know true liberty and independence.

Captain Robert E. Roeder U.S. Army Reserve Center Dedicated at Schuylkill Haven, Pa.

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. FENTON. Mr. Speaker, the Captain Robert E. Roeder U.S. Army Reserve Center was formally dedicated on April 30, 1960, at Schuylkill Haven, Pa., and I had the privilege of attending the very impressive ceremonies.

This fine \$200,000 center will stand as a monument to Capt. Robert E. Roeder, of Summit Station, who gave his life for his country in the defense of Mount Battaglia, Italy, in 1944. He was one of Schuylkill County's four Congressional Medal of Honor winners.

Mr. Speaker, I would like to state at this point that down through the wars Schuylkill County has had 12 Congressional Medal of Honor winners, a record probably unsurpassed by any other part of the Nation.

It was indeed very fitting that one of America's alltime great heroes, Gen. Matthew B. Ridgway, came to Schuylkill County as the principal speaker at the dedication ceremonies. General Ridgway paid high tribute to Captain Roeder and other heroes of our Nation in his dedicatory address.

A memorial plaque which will be permanently placed in the lobby of the Reserve Center was unveiled by Captain Roeder's mother, Mrs. Cora M. Roeder, and Maj. Gen. Ralph C. Cooper, commanding general, Headquarters, 21st U.S. Army Corps Reserve, Indiantown Gap Military Reservation.

Also participating in the unveiling were M. Sgt. Charles Roeder, his wife Gloria, and their son Robert, who was named for his uncle. Sergeant Roeder, a brother of the Medal of Honor winner, is a member of the 365th Engineer Battalion, Headquarters Company, one of the three units which train at the new center.

The inscription on the plaque is:

In memory of Capt. Robert E. Roeder, U.S. Army, who made the supreme sacrifice, World War II.

Much of the success for the dedication program can be attributed to the dedication committee, headed by Attorney John Lewis and ably assisted by John Bamford, John Schimmel, Hon. Mark Bast, Russell Farley, Maj. Russell Yoder, U.S. Army Reserve, and Elwood Bodenhorn. Capt. Charles Buchanan, senior

united adviser for the units that train at the center, assisted as military adviser.

The formal dedication program opened with the Reverend Lee F. Adams, First Methodist Church, Schuylkill Haven, delivering the invocation.

The special guests and general public were welcomed to the new center by Capt. Charles Buchanan.

Col. James T. L. Schwenk, Schuylkill Haven's native son and West Point graduate, was the master of ceremonies. He is now assigned to the office of the

Joint Chiefs of Staff in Washington.
Following the introduction of civilian and military guests, General Cooper and Mrs. Roeder unveiled the plaque dedicating the center to Captain Roeder.

The Honorable Mark H. Bast, chief burgess of Schuylkill Haven, accepted the center for the community.

Following General Ridgway's address, the program closed with the benediction by the Reverend William J. Powers, St. Ambrose Church, Schuylkill Haven.

Musical selections for the dedication and open house were provided by the 324th U.S. Army Band from Aberdeen Proving Ground, Md., Pottsville's 3d Brigade Band, and Cressona Town Band.

Civilian and military guests introduced by Colonel Schwenk included myself, the Honorable John P. McCord, who represented Senator Hugh Scott: Col. Frank McCartney, Pennsylvania State Police commissioner; the Honorable G. E. Gangloff, president judge of the Schuylkill County Orphans' Court; State Representatives George Heffner and William Knecht; Mayor Michael Close, of Pottsville; Col. Sidney Brown, Jr., western Pennsylvania sector commander, 21st U.S. Army Reserve Corps; and Lt. Col. Robert G. Logan, deputy sector commander, the two officers who accompanied General Ridgway from Pittsburgh; and Lt. Col. Lester Derr, commander of the 365th Engineer Battalion with headquarters located at the Roeder

At this time Mr. Speaker, I ask unanimous consent to place in the Record the wonderful and impressive speech delivered by General Ridgway, as follows:

Mrs. Roeder, members of the Roeder family, members of the Army of the United States, and citizens of this community, we are here for a purpose which is both a high honor and a cherished duty.

The most appropriate way by which I believe we can fulfill that purpose, is to begin by reading the citation for the Congressional Medal of Honor, posthumously awarded to the splendid citizen-soldier of this community whose name this Reserve center is to bear.

"Roeder, Robert E., captain, Company G, 350th Infantry, 88th Infantry Division. Mount Battaglia, Italy, 27-28 September 1944. G.O. Mo. 31, 17 April 1945. Citation: For conspicuous gallantry and intrepidity at risk of life above and beyond the call of duty. Captain Roeder commanded his company in defense of the strategic Mount Battaglia. Shortly after the company had occupied the hill, the Germans launched the first of a series of determined counterattacks to regain this dominating height. Completely exposed to ceaseless enemy artillery and small-arms fire, Captain Roeder constantly circulated among his men, encouraging them and directing their defense against the persistent

enemy. During the sixth counterattack, the enemy, but using flamethrowers and taking advantage of the fog, succeeded in overrun-ning the position. Captain Roeder led his men in a flerce battle at close quarters, to repulse the attack with heavy losses to the Germans. The following morning, while the company was engaged in repulsing an enemy counterattack in force, Captain Roeder was seriously wounded and rendered unconscious by shell fragments. He was carried to the company command post, where he regained consciousness. Refusing medical treatment, he insisted on rejoining his men. Although in a weakened condition, Captain Roeder dragged himself to the door of the command post and, picking up a rifle, braced himself in a sitting position. He began firing his weapon, shouted words of encouragement, and issued orders to his men. He personally killed two Germans before he himself was killed instantly by an exploding shell. Through Captain Roeders able and intrepid leadership his men held Mount Battaglia against the aggressive and fanatical enemy attempts to retake this important and strategic height. His valorous performance is exemplary of the fighting spirit of the Army of the United States."

As we here today give play to our imagination, we recognize the significance of the many things the recital of this one man's actions represent. They include courage of the highest order, above and beyond the call of duty; love of country; dedication to the ideals and principles on which this country was built and by which it has been brought to greatness; awareness of the privilege, not the obligation, of military service. His actions exemplify many other of those intangible values which, as we each grow older, we come to see are the most tangible things in life.

Let me try, in simple language befitting the utter simplicity and dignity of Captain Roeder's heroic example, to relate these values to us and our problems of today.

Life to him must have been just as precious as to any of us. In his young and vigorous manhood he must have truly loved life. And because there is no true love without a deep inner willingness to sacrifice, if necessary, he stood ready, as his actions so amply proved, to sacrifice all that he had—his life.

He did not do this, we can be sure, in bravado. He did not respond to the challenge he faced in any accidental or impulsive manner unrelated to his upbringing. What he did and how he did it on that climactic day of his young life was the culminating fulfillment of all the training here received from childhood. Family, church, school, community, and his circle of friends had through the years and each, in its own way, contributed something virile and fine to the spirit which that day fiamed within him. Each exerted an influence. Each was a separate source of strength, which, when his ordeal came, merged into a mighty stream that raised him to the heights.

A scant few miles from here are other shrines ennobled in earlier days by other Americans, predecessors of Captain Roeder. They came of many stocks, of differing creeds, of varying environments and cultures, men from other lands besides our own. In Independence Hall these earlier Americans hammered out our first bonds of nationhood. At Valley Forge they, and other lovers of freedom from overseas, gave it life. At Gettysburg they fought and died to preserve our Union, the Union brought to life by our Constitution, which the wisdom of their forebears had created.

It is cleaning to look back, as these recollections lead us to do. It is sobering and humbling to perceive, as these memories so forcefully compel us to perceive, the incalculable debt we owe to those who conferred upon these honored shrines the enduring

fame they have and deserve.

And it is not just to those giants of physical, intellectual or spiritual stature, the leading figures in these accomplishments, to whom homage is due, but also to the countless other men and women, who in humbler circumstances and unknown to fame, yet made their indispensable contributions, bit by bit, to the attainment of our national goal.

need to recall these things. urgently need to look backward. For without a clear picture of the lessons of the past there is little chance of intelligently looking forward, of wisely applying those lessons to the immense problems of the great historical era we have only recently entered.

Most Americans have known only liberty and freedom. In our fortunate geographic detachment and material abundance, many are prone to regard these priceless possessions as a birthright forever ours, and beyond the reach of forces ceaselessly seeking to despoil

us for these treasures.

Many seem at times unmindful of the tremendous forces currently in movement among the peoples of this earth, and of the vital importance to us of understanding the origins of these forces, of perceiving the directions in which they are moving, of resolutely continuing to give of our spiritual as well as our material riches to encourage the good and to curtail the evil contained in these great world forces.

We should by now have learned, in many bitter lessons, that the continued possession of liberty depends as never before upon the characters of men and women individually, upon the spiritual strength of the groups into which they associate themselves, of the authorities they select to govern them, and of the international agencies they voluntarily form in their own collective interests.

Yet, neither material resources, nor scientific knowledge, nor managerial ability, nor industrial techniques will of themselves maintain our freedom. The simple basic qualities of courage, integrity, and steadfast perservance because of an abiding faith, alone offer the means whereby these other great assets can be employed to insure our future liberties.

Other peoples in the world have held liberty briefly, and through circumstances, in some cases beyond their control, have lost it, and for periods of yet undermined dura-

If we are to remain free, we may well ask ourselves, what is demanded of us?

First. I believe we should see with unmistakable clarity the lessons which Captain Roeder and the people who bred him, back through many generations, have written by their own sacrifices.

Then we should recognize that the preservation and the extension of liberty is, by God's law, a continuous struggle by freedom lovers in every generation. We must see that military service to our country and kin is not an obligation imposed by government, but a privilege freely acknowledged by our inner selves; not a routine chore to be avoided if possible, or to be sloughed off as a distasteful legal duty and as quickly as possible, but a responsibility of mature citigens resolved that their country, their government, their institutions, and their kin shall remain forever free. Finally should-we must-agree on what our Nation's goal is to be.

What is that goal? To me the answer is clear.

Freedom is our goal-the goal for which we strive-the goal for which any sacrifice that God may demand should be gladly made.

Today that goal is as difficult of attainment as ever it has been on this earth. The path by which it can be reached is studded as never before with obstacles which only strength of spirit, and willingness to sacrifice, and persevering courage can conquer. We confront a deadly, implacable, and openly avowed enemy overseas, and a scarcely less deadly, insidious, and conspiratorial foe within our borders. International commu-nism is the external enemy, ceaselessly seek-ing world domination, and wherever it gains control, extinguishing freedom. Selfishness, or materialism, with its evil companion complacency, is the inner foe-a silent partner communism. abetting

The challenge is here today staring each of us in the face, as it stared Captain Roeder in the face; as it confronted the men in Constitution Hall, the men on the icy ridges of Valley Forge, the men who faced the hail of fire at Gettysburg, and countless men and women in other crises before and since. Will the challenge be met? That is the question. and the question is to us and to our country.

So the answer must come from us: from the heart of each man, woman, and child who, as Captain Roeder did, really loves this country and what it stands for, who really loves freedom under God, and is willing gladly to fight for it.

Freedom and Self-Determination of Captive Peoples

SPEECH

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. BENTLEY. Mr. Speaker, I am happy to join my colleague from Wisconsin in supporting House Resolution 633, since I was the author of similar legislation, House Resolution 623.

I am very happy that the House of Representatives has gone on record as urging the President to bring up the question of the freedom and self-determination of the captive peoples at the forthcoming summit conference. Of course, I am well aware that on previous occasions the Russian leaders have refused to discuss this matter, alleging that it would constitute intervention in the internal affairs of those states. However, since it is my understanding that there is as yet no fixed agenda for the summit conference, and since there may very well be topics which Mr. Khrushchev is anxious to bring up for discussion, I feel that President Eisenhower should be fortified with this expression of intent on the part of the Congress, in the event it becomes feasible to place this item before the conference itself.

Unhappily, the free world has been unable to take little concrete or positive action on behalf of the captive peoples except to protest in the strongest terms against their continued enslavement. Even if the question of their captivity is broached by the President and even if it is again summarily rejected by Mr. Khrushchev, it would nevertheless serve two important purposes. In the first place, it would help to strengthen the hope of the captive peoples themselves

and would further show them that we and indeed the entire free world still believe in freedom, justice, and self-de-termination for them as for all other peoples of the world. In the second place, its expected rejection by the Soviet leader would serve again to point with clarity to the fact that the chains that bind them are linked directly with the Kremlin in spite of any Communist propaganda that may be heard to the contrary.

I certainly hope that the Senate will take similar speedy action on this resolution so that it may be in the President's hands as he proceeds on his important mission to the summit meeting in Paris.

Twilight of the FPC

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. DINGELL. Mr. Speaker, the sad and sorrowful history of the regulatory activities of the Federal Power Commission for the past few years has become a national disgrace.

There is strong evidence of conduct . which raises the inference of indifference to responsibility, complete lack of judgment, or corrupt activities on the part of members of the Federal Power Commission. The best things which may be said of most of the membership of this highly questionable Commission is that they lack good judgment. There are, however, many who feel considerably more strongly about the recent conduct of some of the members.

However, worse things than this may be said about the Commission with entire respect for the truth, and that is that the Commission has become a repository for papers and has resolutely refused to regulate the instrumentalities it was created to control.

The backlog of independent producer cases, pipeline cases, and the record of appeals stand out as sordid examples of improper reluctance to carry out appointed duties.

In the midst of this pathetic performance one man has stood out as representative not only of the consumer but of the people of the United States and that is Commissioner William R. Connole.

I herewith insert into the RECORD an editorial appearing in the St. Louis, Mo., Post-Dispatch of April 28, 1960, setting forth sound newspaper opinion on this subject:

[From the St. Louis Post-Dispatch, Apr. 28, 1960]

TWILIGHT OF THE FPC

President Eisenhower's weak explanation of his decision to scrap the only strong member of the Federal Power Commission, and charges by Congressmen that the Commission has stalled for 6 years on the Supreme Court decision directing it to regulate natural gas prices at the wellhead, bring that regulatory agency to a new low.

"I think I can get a better man, that's all," Mr. Elsenhower's only stated justification for not reappointing William R. Connole, is not really an explanation at all. Nor can he expect Congress or the public to accept his unsubstantiated judgment in regulatory matters as he has done in the military, on grounds that he knows more about it than anyone else. In what way would the new appointee be better than Mr. Connole, and what makes the President think so?

Surely President Elsenhower knows, what is as old as the history of the regulatory agencies, that the scarcest commodity on those commissions is courage. The easiest thing is to succumb to the temptation to follow the lead of the private agencies one is supposed to regulate, for they hold in their hands favors and the prospects of advancement. Yet one man on a commission who is dedicated to the public interest can sometimes put starch in the spines of two or three others who would never stand up without it.

If Mr. Elsenhower is aware of these vital intangibles in the regulatory function, how can he ignore the corollary that letting go a man with courage will be interpreted in all the regulatory agencies to mean that it is safer to be supine than it is to stand up and attract notice?

If the President has a case against his own appointee, he should state it. It will have to be a good one to counter the storm of protest that is blowing up in Mr. Connole's support. The mayors of more than 60 large cities, through the U.S. Mayors Committee on Natural Gas Legislation, have now urged the President to reappoint Connole as the only FPC member who has "held out for effective regulation" of the natural gas industry. Members of regulatory commissions in six New England States had already urged the President to reappoint their Connecticut colleague as "the most preeminently qualified person in New England in the field of regulation."

In view of the trouble brewing over FPC's nonenforcement of natural gas price regulation, the commission not only sadly needs Mr. Connole but several more of his caliber. Representatives Yarrs, of Illinois, and Vanik, of Ohio, accuse FPC of not even having worked out a formula for natural gas regulation after 6 years, much less putting regulation into effect as the Court determined it was its duty to do. How far is the decay of the regulatory function to be allowed to proceed before it is halted by a demand for courage, and by the reward of courage with reappointment?

Ike Speaks Out on the Farm Problem

EXTENSION OF REMARKS

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. McGOVERN. Mr. Speaker, in view of President Eisenhower's repeated use of the veto to block farm legislation bassed by the Congress, there has been considerable speculation of late as to what type of farm bill Congress could bass that would be acceptable to the President. Trying to clarify the situation, a newsman directed a question to the President at a recent press conference as to his attitude on farm legislation. The President's answer as re-

ported by Columnist Peter Edson was as follows:

Now, if there were any kind of reasonable plan that connected with other features of the thing they could bring something about that seemed reasonable and fair to the farmers, well, I would be glad to look at it and, because as I say, if it looks reasonable to me, I will approve it because I am just to this point—I know that we are in a bad fix, the farmers are, and I have had correspondence recently with some of my farmer friends because, individuals, to get statistics.

Mr. Speaker, I trust that this clarion call from the White House will inspire the Congress to be a little more reasonable about farm legislation.

Birmingham City Commissioners Sue New York Times and Harrison Salisbury

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. HUDDLESTON. Mr. Speaker, many citizens throughout the Nation are aware that the New York Times recently published two articles, written by Mr. Harrison Salisbury, which purported to be an accurate account of the political and racial situation in Birmingham, Ala., the city which, as part of my district, I am proud to represent. These articles were not, as I have previously attempted to demonstrate to my colleagues in the Congress and to all fairminded Americans, by any means accurate but were, to the contrary, a combination of gross exaggeration and pure fiction which served to defame the reputation of a decent community and its elected officials.

Though retractions have been demanded of the Times, none have been forthcoming. Thus, because of the serious nature of the charges made in these scurrilous articles, the commissioners of the city of Birmingham, who were especially pictured in a bad and totally false light, have felt constrained to bring suit against the New York Times and Reporter Salisbury.

I am inserting in the Record, under leave heretofore granted, a copy of the complaint filed by Hon. Eugene Connor, a member of the Birmingham City Commission, against the Times and Mr. Salisbury, and a copy of a statement Commissioner Connor made at the time the suit was filed. Similar suits have been filed by Hon. James W. Morgan, mayor of Birmingham and a member of the city commission, and by Hon. J. T. Waggoner, also a city commissioner.

The material referred to follows:

"(In the U.S. District Court for the Northern District of Alabama, southern division; Civil Action No. —: Eugene Connor, Plaintiff, v. the New York Times Co., a corporation, and Harrison E. Salisbury, Defendants.)

"COMPLAINT

"1. The jurisdiction of this court in this cause is founded on diversity of citizenship and amount in controversy.

"2. The plaintiff is a resident citizen of the State of Alabama.

"3. The defendant Harrison E. Salisbury is a resident citizen of the State of New York. The defendant the New York Times Co. is a corporation organized under the laws of the State of New York and is a resident-citizen of that State, with its principal office and place of business in the city of New York, in the State of New York.

"4. The matter in controversy exceeds,

"4. The matter in controversy exceeds, exclusive of interest and costs, the sum of \$10,000.

"5. The plaintiff, who is a commissioner and a member of the City Commission of the City of Birmingham, Ala., the governing body of said city, claims of the defendants the sum of \$500,000 as damages, for that they published, or caused to be published, in a daily newspaper known as the New York Times, on April 12, 1960, with intent to defame the plaintiff, falsely and maliciously, an article entitled 'Fear and Hatred Grip Birmingham,' a true and correct copy of which article is attached hereto, marked 'Exhibit A' and incorporated herein by reference.

"6. Plaintiff further avers that more than 5 days before the commencement of this action the plaintiff made written demand upon the defendants for a public retraction of the charge or matter published in said article, and that the defendants, and each of them, falled or refused to publish a full and fair retraction of the aforesaid charge or matter in as prominent and public a place or manner as that occupied by the charge or matter published in said article.

"7. Plaintiff avers that the said article of

"7. Plaintiff avers that the said article of April 12, 1960, subjected the plaintiff to public contempt, ridicule, shame and disgrace, and caused plaintiff to be embarrassed, damaged his reputation, personally and as a public official, and injured and damaged the plintiff in his office, profession, trade, calling or business, in that it falsely charged, falsely inferred or falsely insinuated, among others, the following separate and several matters with respect to plaintiff as an individual and as a commissioner of the city of Birmingham, viz:

"(a) That he was derelict in his duty as a

public official, as aforesaid.

"(b) That he encouraged or condoned racial hatred.

"(c) That he encouraged or condoned religious intolerance.

"(d) That he encouraged or condoned violence against members of the Negro race in the city of Birmingham, Ala., of which city he was at the time a commissioner.

"(e) That he encouraged or condoned the supplanting of law and order with fear, force, and violence in the city of Birmingham, Ala. at a time when he was a commissioner of said city.

"(f) That he conducted a campaign for public office on a platform of race hate.

"(g) That, as a member of the City Commission of the City of Birmingham, aforesaid, he approved or supported an alleged custom of mistreating persons charged with vagrancy by not permitting them to make ball and by holding them incommunicado for 3 days.

"(h) That he was guilty of malfeasance in discharging the duties imposed upon him as a commissioner of the city of Birmingham, aforesaid.

"(i) That he ignored the law and supported or aided in enacting ordinances inconsistent with law.

"(j) That he encouraged or condoned the support of racism by the police of said city at the time he was a commissioner thereof.

"(k) That he was guilty of, engaged in, or condoned oppression of the Negro race.

"(1) That he was guilty of, engaged in, or condoned oppression of persons charged with vagrancy.

"(m) That he encouraged or condoned violence or mob action.

"(n) That he encouraged or condoned the tapping of telephone lines.

"(o) That he encouraged or condoned the interception of mail.

"Wherefore, the plaintiff brings this action and demands judgment against the defendants, as actual and punitive damages, in the sum of \$500,000 and costs."

JAMES E. SIMPSON, WILLIAM L. CLARK, JAMES A. SIMPSON, Attorneys for Plaintiff.

Lange, Simpson, Robinson & Somerville, of counsel.

Address of attorneys and counsel for plaintiff: 317 North 20th Street, Birmingham, Ala

Jury demand: Plaintiff demands a trial by jury of the above case.

JAMES E. SIMPSON, Of Counsel for Plaintiff.

STATEMENT OF COMMISSIONER EUGENE CONNOR OF THE CITY OF BIRMINGHAM

Mayor Morgan, Mr. Waggoner, and I have given the New York Times ample opportunity to correct its incredible article.

We each wrote the paper, as well as the author, Mr. Salisbury, pointing out its vices and asking them to correct it. They have not only refused to do this, but have callously repeated it in part and reaffirmed it in whole.

Although our State courts are among the fairest in the Nation, we are taking this case directly to the U.S. courts. This is to forestall the cry of local prejudice if they go star the try of hence whipped of justice as they should.
We are rejuctant to file this suit. We have We are reluctant to file this suit. done everything we could to avoid it. There is a limit beyond which men, however averse to controversy, cannot be pushed and retain their self-respect.

This gross article and the cold disdain with which our protests have since been treated leave us no recourse but an American court

For a National Task, a National Program

EXTENSION OF REMARKS OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. METCALF. Mr. Speaker, the distinguished junior Senator from New Jersey [Mr. WILLIAMS], chairman of the Senate Subcommittee on Migratory Labor, recently addressed the Western Interstate Conference on Migratory Labor sponsored by the Council of State Governments and the American Public Health Association.

Hearings are currently being held before the General Education Subcommittee of the House Education and Labor Committee under the chairmanship of the gentleman from West Virginia [Mr. BAILEY] on measures to improve the educational opportunity for migrant children and adults. Members of the Congress will find the address of Senator WILLIAMS informative, factual, and persuasive in consideration of legislation to provide for a greater measure of human dignity to these unfortunate victims of our unbalanced agricultural economy.

Senator WILLIAMS' address follows:

FOR A NATIONAL TASK, A NATIONAL PROGRAM (Address by Senator Harrison A. WILLIAMS, Jr., at the Western Interstate Conference on Migratory Labor, April 10, 1960)

To be here today is more than an honor. It is an opportunity to meet the men and women with an interest in, and responsibility for, dealing with migrant problems in an area covered by almost one-fourth of the

States of our Nation.

For the chairman of a Senate subcommittee which is less than 1 year old, today's conference is an excellent way to receive the benefit of your years of experience; we can find ways in which your jobs and mine mesh on the question of migratory workers and those who use the services of those workers.

Men and governments do effective work when there is a goal in sight, and when they are working toward that goal and not away from it. We are here today, I think, to make that common goal a little clearer, a little closer.

We are here to speak up. First to each other; and then to every person who can be persuaded that he, too, has a part to play in remembering the "forgotten people," those "lonely wanderers on the face of our land."

And to do that we should offer a national program for a national task-one that will put all our resources to work: citizens' interest, State programs, Federal agencies, Congress, and the many organizations which have done so much already.

There is no one Federal program, or group of Federal programs, that will end the prob-lems affecting the migrants, the growers, and the citizens whose lives are affected in one way or another by the migrant.

From what the subcommittee has already learned, it is clear that individual states can do only part of the job. We know also that private citizens and organizations however energetic and sympathetic their workers are, look to their legislators and government administrators. Therefore, we must draw up a balance sheet of responsibility and action.

On one side of the sheet should go the details of the job that must be done. On the other side should go a listing of the forces that we can put to work to fight the many poblems which you and the subcommittee know about and some which we may not, even yet, know about.

When we have this fundamental tool-this worksheet for progress-then we will have a new perspective and a new impetus. The tob is hig enough for all, but not so hig that we can afford duplication of effort or no effort at all in areas which might be neglected if we concentrate on only a few of the more glaring inadequacies.

And we must remember, I think, that we are dealing with a sick industry. American agriculture is the marvel of the world; even the Soviet Union is willing to admit that our Nation can outdo theirs at least in this one segment of our economy. Yet American agriculture is the cause of the single most perplexing domestic problem facing us. The migrants and the growers are caught up in this malaise; no diagnosis of their problems can be separated from the stark fact that most agricultural income is going down, and that we as a Nation really don't yet have a good program at work to keep that income from going down even more.

If, therefore, we overlook farm problems and try to make the grower the villain of the migrant worker drama we shall have jettisoned a basic source of essential understanding and knowledge.

There are no villains and no heroes in the drama. But there should be, and there is, national concern. We must put that concern to work, and that is one reason we are here today in 1960-a clear-cut case of East meet-

ing West and liking it very much indeed.

And, it seems to me, 1960 is a good year for action. We're at the start of a new decade. Like the man who makes New Year's resolutions, we feel a need for freshness and change. We could not believe it, if someone were to tell us, that the sixties could pass with little or no progress on the problems to be described here in the next 2 days. The fact is, however, that someone has to work hard to make certain that progress is made, and we are part of that force of "someones" who must do the work.

This first year of the sixtles is a year of anniversaries. It is the silver jubilee of the great social legislation enacted under the leadership of Franklin D. Roosevelt. Twentyfive years have passed since Congress enacted laws to reduce the suffering and distresses caused by unemployment.

Americans watched in 1935, too, as Congress passed the Wagner Act. Here was another historic cornerstone in the structure of laws that express the conscience of our citizens, and their faith in Democratic pro-

The thirties brought us social security. Federal minimum wage legislation, and other bills based on the premise that no man's comfort or profit can be based, even partially, on another man's suffering or exploitation.

All this happened decades ago.

And so, in this great year of 1960, when we are assured that we Americans are living in a happy state of peace and prosperity, when an alltime record of 64 million employed Americans has been established, and when many Americans apparently really believe that this is the best of all possible years in the best of all possible worlds, it certainly behooves us to give special thought to the more than 1 million migrants who help bring food to our tables and fiber for our garments.

They-the migrant workers-could look with some bitterness on another anniversary which could be observed this year. It was just 21 years ago that John Steinbeck wrote the "Grapes of Wrath."

His Dust Bowl is now green; "Okies" are people of the past. But the open road and the shack by that road are still with us. Children are still dying in the 1960's, in highway tragedies and isolated outbreaks of avoidable illness and they are dying intellectually, too. They are dying in terms of limitations upon their lives—in education. in progress from one generation to the next, in their outlook and belief in the improvability of themselves or the children who will follow them. We have waste, and we cannot afford waste. It takes too great a toll of national conscience and national strength.

Suffering persists among the migrants who have taken to the road since World War II. County health officers shake their heads as they tell the subcommittee about the ditch used for drinking water or the child who knows no cleanliness. Teachers tell us how they make a little education go far, but they also tell us how much farther they have to go. Growers are not proud about much of the housing they offer, but they don't know how they can provide more. Migrant man and wife count their money at the end of a season and find that their earnings are only in the hundreds of dollars.

As for the future, there is little reason to think of it because the present is so hard.

Who are these migrants? What do they do for our Nation?

A 1959 series of articles in the Washington Post and Times Herald on the migratory worker in Maryland starts off with these

"Tally McNeil lives in a dingy, one-room shack on the eastern shore with his pregnant wife, five children and his worries.

"They share three cots, a two-burner stove and a gnawing uncertainty over where the next dollar will come from.

'In the last 2 days I ain't picked more than \$2 worth of tomatoes, said Tally, head hunched between his husky shoulders. "That don't buy us much."

"When the harvest is good, a migrant picks until his knees are sore and his back aches. In a bad season, there is the specter of empty stomachs for himself and his family.

"This summer the shore has been hit by a devastating combination of drought and heavy rain. Because of the weather, there has been only half the usual crop of tomatoes, cucumbers, beans, and peppers.

'Nevertheless, Tally McNeil, his parents, five brothers, and two sisters will be back from Pompano, Fla., next year to gamble again with nature, just as they have for the

last 11 years."

Our subcommittee's early studies indicate that almost half a million persons are in our domestic migrant forces: the Texas-Americans, the southern Negroes, the Puerto Ricans, the American Indians, and others.

Among the foreign migrants we have ap-Proximately 400,000 Mexican braceros and 12,000 British West Indians. Smaller numbers of Canadians and Japanese have worked in the fields.

If we were to add the wives and young-Sters who travel but who do not work with the men we would have to add hundreds of thousands more to the number of persons Who live the migrant way of life in this Nation.

All in all, there are at least 22 of our States which depend on a skilled or semiskilled labor force ranging from 6,000 to 205,000 persons to harvest their perishable fruits and vegetables. And their skills must often be Quite varied.

A president of a large New Jersey farm, has said that; "I think, actually, that the average farm laborer requires a great deal more skill and a much wider range of skill than the average industrial laborer does. Conditions on a farm are such that the job content changes constantly. You can't break a farm job down into series of repetitive, easily supervised operations like you can a factory job. I'm an engineer; I've run quite a few factories and I've run quite a few farms. I've never seen an honest job evaluation yet that didn't come to the conclusion that the farm job ought to be paid more than the factory job."

In Arizona, the migrant might work on citrus and cotton. In California, on peaches, huts, cotton, and strawberries; in Colorado, sugar beets and cherries; in Connecticut, tobacco; in Georgia, appropriately enough, On peaches. Idaho: potatoes; Illinois: peas; and so the story goes. Each State has, with some exceptions produced the crops most Adaptable to its soil and climatic conditions.

As Prof. Daniel H. Pollitt, of the Uni-versity of North Carolina, has said in a study

Prepared for our subcommittee:

These crops enrich our diet and our level of living. The sale of these crops brings Important revenues to the States; the average cumulative payroll of the migrants is substantial. If for no other reason than this economic one, the welfare of the mi-grant is worthy of investigation and improvement."

Of course, you here today are interested in more than economics. The very sponsorship of this conference, and the variety of Government agencies represented in audience, indicate how widespread these interests are.

The idea for the conference goes back to the September 1959 meeting of the Western Governors' Conference which adopted a resolution calling for a regional conference On the migratory labor problems facing the States. In furtherence of that resolution, the sponsors of this conference in Phoenixthe Council of State Governments and the American Public Health Association-have planned and devised the excellent 3-day program we are initiating here tonight.

WORK OF THE SUBCOMMITTEE

Already I've referred to the Senate subcommittee a few times. Let me tell you a little more about it and then discuss the part the subcommittee could play in the national program I discussed earlier.

The subcommittee was created last August. Two Senators from the West-James E. Mur-RAY, of Montana, and BARRY GOLDWATER, of this State-are among the members. others are JENNINGS RANDOLPH, of West Virgina, and JACOB K. JAVITS, of New York.

At its very inception the subcommittee had before it three bills which had been under consideration by the full Senate Committee on Labor and Public Welfare.

One, S. 1778, would require registration of crew leaders to protect workers and growers against the occasional unscrupulous labor contractor-the man who makes work arrangements between farmer and migrant. Another, S. 2141, would extend child labor provisions to migrant youngsters. Two very fine western Senators, Murray, of Montana, and Yarborough, of Texas, are among the cosponsors. S. 1085 would bring the migrant workers under minimum wage protection.

As soon as I was named chairman, I introduced another crew registration bill. had more detailed standard by which activities of crew leaders could be measured, whereas the earlier bill leaves a large discretionary area to be handled through regulations by the Department of Labor.

We began hearings in Washington last summer. The Department of Labor sent witnesses, and so did the Department of Agriculture. Even though, as you well know, there are differences of opinion between these two Departments, their witnesses did try to give constructive testimony. I am disappointed, however, about the failure of the Department of Labor to follow up the testimony with additional statements about specific legislation. Except for the crew leader bills, which they approve, the Department of Labor and the Department of Agriculture have thus far taken no position on the pending bills. Perhaps after the Departments have resolved their family feud, they will come forward with meaningful help and concrete legislative recommendations.

In October the subcommittee went to Wisconsin, Michigan, and Minnesota. We went out into the fields and had our first look at some housing that was fairly good and other housing that was unbelievably-shall I say

primitive? That's a polite word.

In New Jersey, in December, we found that bad housing is not limited to any one State or group of States. We also visited New York and Pennsylvania, and our witnesses included everyone from Eleanor Roosevelt to three crew leaders who send their workers in buses every morning from the streets of Philadelphia to fields 20 and 30 miles away.

To bring you up to date, we thought a few weeks ago that the subcommittee would spend 4 days on field trips and hearings in the vegetable belt of Florida. The roundthe-clock debate of a few weeks ago-known in some quarters as a filibuster—has forced us to postpone that trip.

As things stand now we may soon have another round of Washington hearings; after that we hope to reschedule the Florida hearings and also conduct a California hearing in middle or late July.

As a result of our early journeys, I intro-duced three bills in January. In some ways these bills—two on education and one on housing for migrants—are the essential foundation for other legislation, and I'd like to discuss them briefly.

Incidentally, I'd like to take a moment to thank any of you who may have been at

the White House Conference on Children and Youth last week. A forum at that conference endorsed the housing and education bills in principle, as well as other proposals now before the subcommittee.

KEY PROBLEMS: HOUSING AND EDUCATION

The White House Forum paid particular attention to education for migrants, and so will I.

One of the bills I introduced on January 20 would, in very brief terms, do these things:

1. The Federal Government would help bear the additional cost of educating these children during regular school sessions. Funds would be provided to pay 75 percent of the State's cost of educating the child for each day of attendance. The Federal share of 75 percent would be maintained for the first 2 years; thereafter, the Federal share would be 50 percent of the cost.

2. Another section of the bill would help communities pay the extra expense of educating migrant youngsters in special summer sessions: \$300,000 in grants would be available annually for this purpose over a 5-year period. Institutions of higher education programs would be eligible to sponsor a summer school under this part of the program.

3. Two hundred and fifty-thousand dollars annually, for 5 years, would be earmarked for State planning grants to encourage in-terstate cooperation and fact-gathering on educational programs. In other words, if Arizona has a good program, Idaho, and New Jersey need to know about it.

Not only would this program encourage fact-gathering; it would encourage fact-trading. Our hearings and field trips have convinced me that this could be a very valuable program.

All three programs proposed in this first education bill would, when added together,

cost only about \$2 million a year,

In terms of missiles or farm surplus storage costs, this is not much money. In terms of positive good to a large number of citizens, it is an impressive sum. Only youngsters of domestic migrant workers would participate in this program. Braceros live bachelor lives, I'm told, and do not have their children with them.

Youngsters aren't the only ones who would benefit from better education. Adult migrants can profit also.

The second bill I introduced on January 20 is the direct result of talks I have had with growers, public health officials, and others

Perhaps the strongest and most justifiable complaint expressed by growers again and again is the one which I'll paraphrase like

"Well, I've done a lot of things to improve the welfare of migrants on my farm. I've built them new housing, put in toilet facilitles, new showers, cooking facilities, nice new bedding, plenty of garbage cans. what happens? They mark up the walls, kick holes in the window screens, stop up the tollets, pull the knobs off the showers and stoves, tear the blankets, and tip over the garbage cans."

The farmer has a right to his hurt feelings and his resentment; often he has stretched his thin profits a little thinner so that he could build better quarters. Sometimes the migrant for whom the facilities were built, however, didn't even know what the facilities were for.

The root problem here is a lack of education in fundamentals of modern living. And it is to this problem that the second bill is directed. It would authorize \$250,000 annually for 5 years for a program of practical education for the workers themselves, and it would follow the path so successfully blazed by the Cooperative Extension Service, which now combines the efforts of some 11.000 county extension workers and 1.2 million voluntary local leaders to provide information about home economics and agricultural methods to more than 12 million persons.

You know, when you talk about education, you sometimes have a feeling of which came

first, the chicken or the egg.

If children receive proper education, won't child labor legislation be more effective? Or is it the other way-if a child does not have a school to go to, what does it benefit him to be forced from the fields. The same question arises about minimum wages. Unless adults are given some instruction in the benefits of good, healthful living, won't he lose some of the advantages that extra dollars in his pockets could give him?

In Fredericksburg, Va., last month I spoke before a group of church women. Though they were genteel, they had a hard-bitten appreciation of migrant problems—the kind of understanding possible only to those who have actually seen the migrants in their home camps. Their biggest response of the home camps. day came when I described the education bills; they seemed to believe that schooling

is the big first step forward.

Let me say here, too, that educational opportunities have been seized upon by mi-grants wherever they have been offered, to judge by what we have seen or heard about so far. The usual experience is that a summer school has more students each year; and the children look forward to the school session as one of enjoyable parts of their journeys to other States.

There was, for instance, a report we received at our hearings in Michigan. A superintendent of schools told about a 5-week demonstration summer school there.

read one paragraph:

"I have never found a nicer group of children to work with. For the most part they were smart children, eager to learn, appreclative, and loved books. Somewhere they have either learned good work habits in school or are just that eager to learn * * * many were constantly reading or looking at books. From their conversation it was very evident that they were happy with the opportunity to go to such a school and also to be able to ride to and from school in the

One of the little girls who went to a Michigan summer school wrote back to her teacher friends in Michigan. She said, among other

"Just a few lines to say that I am missing you a lot. I have started school already but I don't like it as much as I liked that school over there. My teacher over here is Mrs. Price and every day she buys a can of candy from Laura, a girl that I know for \$8, but you didn't buy us any but you are still the goodest teacher I have had and you will be. Well, I guess that's all for now. By-by, hope you get to come over here where it's warm. Your friend and yours truly, "MARY ANN CASTILLEJA."

Mary Ann still has to brush up a little on her grammar, but I think her enthusiasm for education is just about perfect.

You here today know about many of the State schools established to promote migrant education: the \$50,000 pilot plant in Oregon, Ohio's \$175,000 reimbursement program to school districts, action in New York and in New Jersey. I think that you must be interested in the 3-year study of special educational problems underway in Colorado, with the help of the U.S. Office of Education, Texas and Wisconsin are trying to find a good way to determine the educational needs of each child in the home district of that child and then transmitting that information to another State. Wisconsin could thus, for example, be in a position to give the child the educational program he should have when he arrives.

These and other efforts point up the need all the more, I think, for coordination, exchange of information, and encouragement from Federal levels down to the local school

board level. It would be shameful, in this day of massive emphasis on educational improvement, if we were to permit this educational lag to continue among large numbers of these migrant youth. We do know that the lag is there; one study, for example, estimates that more than 50 percent of 100,000 school-age migrants are from 1 to 4 years behind in school by the time they reach the age of 14.

THE HOUSING BILLS

Encouraging as the educational interest is, it is only part of the picture. We need good housing, too, but who is to provide it? many growers the migrant is a temporary visitor, and the grower frequently believes that the investment in housing should be kept to a minimum, often a very bare mini-The subcommittee has seen shacks mum. that have been made almost livable by the migrantsin one wooden frame hut not too far from Princeton University, a woman was happy when we met her because her husband had just nailed an orange crate to the wall, thus giving her a new shelf.

And the subcommittee has also seen fairly good buildings which have been almost wrecked within one growing season-another good illustration. I believe, of the need for the education bill I mentioned earlier.

Growers, of course, are at a disadvantage when they try to finance housing for migrants. Lenders generally don't regard such housing as good mortgage security; the farmer might discover that he would have to mortgage his entire farm to provide shelter for his temporary visitors—and it would take many arguments to persuade him that this is a wise thing to do.

To help deal with the housing question I introduced a bill on January 27. The first section would authorize the Secretary of Agriculture to insure loans up to \$35 million a year for migrant homes. Another section of the bill would authorize direct loans to farmers associations, and State or county governments.

The direct loans could be used for nonprofit housing of migrants and they would come from a \$25 million revolving fund to be established by congressional appropria-

The bill is intended to help the farmersand we have seen them-who try to provide good housing despite slim profit margins and no assurance that the competition will pro-

vide equally good housing.

We have inspected, for example, camps in which central dining areas were provided, in which rooms were painted in attractive colors, and in which sanitary facilities were new, well-maintained, and adequate. grower told us that his model camp is a source of pride to him. And he gave one practical reason for being so proud. He said that his camp helps attract a steady supply of skilled workers to his farm each year, thus cutting down his turnover rate and replacement costs.

Other growers have found that improved educational apportunities have the same effect—workers want to come back year after year because they have found something they want. Sometimes that something is a feeling of growing self-respect and self-understanding.

Housing is a subject of such importance and complexity that I feel the subcommittee must give it intensive attention. What can be done, for instance, about the migrant who actually owns his own small plot of land? He lives in his makeshift quarters there and goes into the surrounding countryside to harvest crops. You delegates from Califor-I understand, are fully aware of this problem and will probably agree that it is worth an entire study in itself.

OTHER BILLS BEFORE THE SUBCOMMITTEE

Earlier I briefly described the other bills before the subcommittee. Each one has its own part to play in any national program on migratory workers.

Take the minimum wage, for instance. This is a very difficult legislative field, be-cause in devising such legislation I think we must give great weight to the fact that the piece-rate system of payment, in many instances, is prized more dearly by the worker than by the employer. In addition, fringe benefits of certain kinds should be into account. It is also desirable that such legislation produce an opportunity for orderly adjustment of the wide regional variation in farmworker wages. And, of course, as I have already indicated, we must be ever mindful of the general deterioration in national farm income.

Even though there are substantial problems still to be resolved on the minimumwage question, I believe we have made a good beginning in our study of the minimum-wage bill introduced last year by Senator McNamara, of Michigan. Senator Mc-Namara's bill, which has considerable merit, in my opinion, would apply a minimum-wage floor to employees of large farm enterprises.

Under its terms, farm operators employing more than 2,244 man-days of hired farm labor during a calendar year would be required to pay at least 75 cents an hour. This minimum would be adjusted upward to \$1 an hour within 3 years.

Reasonable men may disagree as to detail, such as the size of the farm enterprise to which this law should apply. But I believe that the principle proposed in the bill is sound and should be enacted into law.

You know the subcommittee has been asked to do something about minimum wages which, when we first heard it, sounded impossible. Crew leaders and workers, too, asked us to devise a minimum-wage standard for piece-work rates. Our first reaction was that it was a good trick if anyone could do it, but how to do it? Now we have heard that at least one western State actually makes such a system work, and work very well, indeed. I hope to learn more about that system while I am here.

Two bills before the subcommittee would require registration of crew leaders. All here have probably heard stories about the families who work all season only to find that, after they have paid their "debts" to an unscrupulous crew leader, they have earned only a few hundred dollars, even less than the \$892 per year which is the average annual income for all migrants.

Senator Javirs, of New York, introduced the administration bill for crew-leader registration; I have introduced a more comprehensive bill calling for greater control of these labor contractors.

The final bill now under consideration asks for child labor protection among migrants. I was startled last week when a magazine interviewer said she had heard from informed sources that it might take 10 years for such a bill to pass. I can't imagine that any one could stand for such a postponement of the inevitable and the imminent. The day is

fast coming for this basic reform.

Unfortunately-and this is particularly unfortunate because the American Public Health Association is one of the sponsors of this conference—the subcommittee as yet has no specific proposals for betterment health conditions about migrants. I think it is obvious, though, that the Federal role in this field should go far beyond mere technical advice and assistance. It's time to put to work the lessons we have learned through pilot projects and local demonstrations. We intend to take a close look at health problems among migrants, and to find out what should be done that isn't being done already.

A NATIONAL PROBLEM

As you may realize from this summary, the subcommittee still has much work to do, but its work won't mean much-as I said earlier—unless you and others elsewhere can define the role which you should play.

A great deal of thought, for instance, has

already been given this problem by Federal administrative officials. And, to judge from the events of recent weeks, much more

thought is yet to be given.

But the administration should decide where it's going, and so should Congress. So should the States. So should every county agent or schoolteacher, or social workers, or just plain citizen who has become concerned

about the migrants.

Growers, I think, have a special responsibility. They have not asked for the prob-lems that come with the migrant, but the Problems exist, all the same. As long as growers have peak labor needs—and call upon migrants to meet those needs-he, the grower, can't disassociate himself from some of the consequences which arise because he needs seasonal help.

As I said before, the subcommittee has already received much clearsighted appraisal and cooperation from farmers. We're going to need more as we go on with our job.

The fact is that reforms and improvements will come with the growers' help or without it. But, from the growers' view-point and the viewpoint of everybody else, it would be better if the farm contributes to that change and believes in it.

But I repeat, the improvements will be made, with such help from growers or with-

out it.

I have already mentioned that the average citizen looks to his legislators and Government administrators for help. Let me make it clear, too, that we shall need the advice and interest of citizens. Their role, in fact, is of the utmost importance.

Unless the small rural community recognizes its responsibility to help educate the migrant child, unless many millions of Americans believe that they have a direct responsibility whenever a migrant is killed in a highway accident, or whenever an honest proposal is made to correct some of these abuses-unless, in short, they are concerned. then the lawmaker and the administrator Will not have the kind of support he must have to do the work that is called for.

For a national effort, we need a national program and full use of all the resources. and I am grateful for the opportunity to be here and witness your determination.

I'd like to close, after taking so much of your time, with just a few paragraphs from Steinbeck's "Grapes of Wrath." He described a different time in history. But from the final lines, you will see why I read it here

"And the rain pattered relentlessly down, and the streams broke their banks and

spread out over the country.

"Huddled under sheds, lying in wet hay,
the hunger and the fear bred anger. Then boys went out, not to beg, but to steal; and men went out weakly, to try to steal.

"The sheriffs swore in new deputies and ordered new rifles; and the comfortable people in tight houses felt pity at first, and then distaste, and finally hatred for the

migrant people.

"In the wet hay of leaking barns babies were born to women who panted with pneumonia. And old people curled up in corners and died that way, so that the coroners could not straighten them. At night the frantic men walked boldly to hen roosts and carried off the sqawking chickens. If they were shot at, they did not run, but splashed sullenly away; and if they were hit, they sank tiredly in the mud.

"The rain stopped. On the fields the water stood, reflecting the gray sky, and the land whispered with moving water. And the men came out of the barns, out of the sheds. They squatted on their hams and looked out over the flooded land. And they were silent. And sometimes they talked very quietly.

No work till spring. No work. "And if no work-no money, no food.

"Fella had a team of horses, had to use em to plow an' cultivate an' mow, wouldn't think a turnin' 'em out to starve when they

"Them's horses-we're men.

wasn't workin'.

"The women watched the men, watched to see whether the break had come at last. The women stood silently and watched. And where a number of men gathered together, the fear went from their faces, and anger took its place. And the women sighed with re-lief, for they knew it was all right—the break had not come: and the break would never come as long as fear could turn to wrath.

"Tiny points of grass came through the earth, and in a few days the hills were pale

green with the beginning year."

If I might add just one thought, wrath has a kinship to hope because wrath is somehow impossible unless our sense of justice has been offended. And, in every nation where freedom persists and grows, a sense of justice persists and grows, too.

Washington Public Service Commission Opposes Federal Excise Tax on Communications Services

> EXTENSION OF REMARKS OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. MAGNUSON. Mr. Speaker, acting in behalf of the people of the State of Washington, the Washington Public Service Commission has unanimously adopted a resolution urging the Congress to disregard the administration's request to continue the Federal excise tax on local telephone calls, and to give consideration to eliminating Federal excise taxes on all communications services.

I concur in the resolution, which follows:

RESOLUTION BEFORE THE WASHINGTON PUBLIC SERVICE COMMISSION IN THE MATTER OF THE REMOVAL OF FEDERAL EXCISE TAX ON COM-MUNICATION SERVICES

At a regular meeting duly called and attended by all members of the Washington Public Service Commission on the 10th day of March 1960, at Olympia, Wash., the following resolution was unanimously adopted:

Whereas legislation was enacted by the Congress in 1959 terminating the Federal excise tax on local telephone service effective June 30, 1960; and

Whereas the President in his budget message calls for the continuance of the telephone excise tax on local telephone service during the fiscal year 1961; and

Whereas this commission has actively and consistently opposed the continuation of the Federal excise tax on all communication services: Now, therefore, be it

Resolved by the Washington Public Service Commission, That it urgently requests the Congress to disregard all attempts to continue the collection of Federal excise tax on local communication services and that such excise taxes be repealed on June 30, 1960, as previously voted by the Congress; and be it

Resolved, That consideration be given to the elimination of Federal excise taxes from all communication services at the earliest practicable time; and be it further

Resolved, That a copy of this resolution be forwarded to the congressional delegation from Washington; to the Ways and Means Committee of the House of Representatives; to the Senate Finance Committee; to the Governor of the State of Washington; to the secretary of the National Association of Railroad and Utilities Commissioners; to the Federal Communications Commission, and to the secretary of the U.S. Independent Telephone Association.

Made and entered at Olympia, Wash., this

14th day of March 1960. WASHINGTON PUBLIC SERVICE

COMMISSION. FRANCIS PEARSON. Chairman PATRICK D. SUTHERLAND,

Commissioner. DAYTON A. WITTEN,

Commissioner.

Attest:

WESLEY L. BARCLIFT. Executive Secretary.

U-2 Plane Incident

EXTENSION OF REMARKS

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks I wish to include excerpts from yesterday's NBC-TV program, Meet the Press, containing my remarks in answers to questions on the controversy over the U-2 plane incident. The panel members were Peter Lisagor of the Chicago Daily News, Chalmers Roberts of the Washington Post, John Steele of Time-Life, Inc., and Frank Bourgholtzer, NBC news. The moderator was Ned Brooks. The excerpts follow:

Mr. Brooks. Now, Congressman Bowles, if you are ready, we will start the questions with Mr. Bourgholtzer.

Mr. BOURGHOLTZER. Mr. Bowles, if you were foreign policy adviser to a President, rather than a candidate, would you advise him in this situation where an American pilot has been shot down by the Russians and has admitted being a spy, would you advise just admitting that he wis a spy as has been done?

Representative Bowles. You have asked a very tough question. It seems to me that the administration did about all it could with a very difficult, very unpleasant, and highly embarrassing situation. It is pretty clear that Mr. Khrushchev knew what was going on. He appears to have the evidence with which he could confront the world and presumably persuade the world. I think it is a very bad situation. I think it would have only made a bad situation worse if we had tried to cover it up.

Mr. BOURGHOLTZER. On the same question there are a lot of aspects but I am wondering particularly what your viewpoint would be, particularly thinking of the upcoming administration, to the point of the President being unaware of such an activity, as apparently is the case in this incident. Do you think the President should be kept purposely unaware of certain intelligence operations?

Representative Bowles. Well, let's start with the fact that I believe this will go down in history as probably the most embarrassing and in some ways shocking occurrence in the last 7 or 8 years. We are going to hear

a lot more of it.

I wish I were talking about it 2 or 3 days from now when, perhaps, we will have a better chance to settle down and think it through. Certainly I want to be sure that anything I say is very responsible and thoughtful, because no one has any desire to make this worse, certainly not for partisan reasons.

But it seems to me that the whole situation has placed the State Department in the position of having deliberately told a falsehood. I assume they did not know the actual facts, that these facts were initially simply given them.

I would go on to say that the President himself is placed in the position of not appearing to know a very major development in regard to our foreign policy. The Soviet Union has been encouraged to be suspicious of us—they are already very suspicious—on this whole matter of controls and inspections. They have always charged that the reason we want inspection in disarmament agreements is for spying work and espionage generally.

They now have been granted a beautiful opportunity, and they will certainly use it very adroitly to weaken our already weak position as we approach the summit. The whole world has been given a very deep contrast between our professed desire for peace, our desire to try to negotiate, while carrying on this kind of activity almost simultaneously. I think it is a very bad situation.

Mr. Steele. Mr. Bowles, I want to get one thing straight. Are you criticizing the activities of the plane or are you criticizing the pilot getting caught?

Representative Bowles. Well, let me say this. I don't think any one of us who is simply an outsider and a newspaper reader, as I am, can know what is essential here in the way of espionage. We all are realists. We all know that this is a difficult and complex world. We know we are at a disadvantage, and that the Soviet Union is a closed police state which has certain very great advantages over us.

However, it seems to me that this is not really the point here. Esplonage may be necessary under certain circumstances, depending of course on the technical problems, of how great our lack of knowledge really is. The point is the timing. The point is we are preparing for a summit meeting. The whole history of the world may depend upon our ability to negotiate with the Soviet Union, to talk with them with at least some degree of mutual trust. By timing this particular excursion at this particular time, we have certainly gone a long way to undermine that hope.

Mr. Stelle. Well, now let's see if I understand. You mean these activities are all right except when we have an international meeting; is that correct?

Representative Bowles. I don't know that they are all right at all, Mr. Steele, because I don't know the inside story of how much information we have or what we lack or what risks should be run to get it. I would assume that we should not do this sort of thing for a marginal gain but only if the gain was so very vital that it could be justified to the utmost degree on the basis of our national security.

But the point is that we are now in a very delicate position and certainly this would be a time to be far more circumspect than these people obviously have been. I think they have committed a gross case of misjudgment. I think the flight was highly reckless, dangerous, and hurtful.

Mr. STEELE. Mr. Bowles, you are the foreign policy adviser to Senator Kennedy and presumably will become the Secretary of State if he is elected President.

Representative Bowles. I wouldn't presume that for 1 minute.

Mr. Sterle. You would not presume it? Representatives Bowles. No. There will be lots of possibilities.

Mr. STEELE. There has been talk of keeping the candidates informed about developments in foreign policy. Have you been kept informed as to these flights, either as Senator Kennedy's foreign policy adviser or as a member of the House Foreign Affairs Committee?

Representative Bowles. No, I have not heard of them. I have not been kept advised in any way, and I doubt that he has. I am very sure that none of us have.

Mr. Lisacor. On another point, Mr. Bowles, in Milwaukee last night I believe you made a speech blaming a good deal of Mr. Khrushchev's bitter blasts at the United States recently on what you called China and the extreme rightists within the Soviet Union, suggesting, according to the accounts I read, that these people want to torpedo a summit conference.

Now how do you square that kind of a statement with the general belief here in Washington that Mr. Khrushchev needs peace and needs certain relaxation in order to get his 7 year plan to work?

Representative Bowles. I haven't seen the paper, the quotation wouldn't be quite accurate if that is the way it appeared.

I asked the question, How much influence have the Chinese had in this situation? How much influence does the old Stalinist regime still have within the Soviet Union? I asked that as a question, and I think it is a very proper question, too.

The Chinese have always timed a lot of their intransigence in the Far East, Quemoy and Matsu and the rest, for the periods when we were trying to negotiate and talk with the Soviet Union. It is my guess that Mr. Khrushchev would really like to try to develop an easier atmosphere here. I felt this strongly when I saw him and talked with him a little over 3 years ago in Moscow. I had a long 3-hour talk with him, and I came out of it quite convinced that he wanted a détente. He wanted to see the situation ease. He felt the need of it for his own country, but was highly suspicious and was feeling his way.

It would seem to me that this development is not necessarily in the interests of the Mao Tse-tung government in Peiping. They naturally want to keep the cold war between the Soviet Union and the United States just as active and vigorous as they possibly can, because this assures them of a flow of material and loans and the other things they need from the Soviet Union.

I would assume that there is at least a potential clash here between Chinese Communist interests and the Kremlin's interests.

Mr. Lisagor. But do you not believe that Mr. Khrushchev is secure enough today in Russia so that he can move on toward relaxation if he so chooses at a summit conference?

Representative Bowles. I don't think we really know. I hope so.

I visited Belgrade in November. I wanted to go there to talk to some of the Yugoslavs who often follow pretty much the Soviet line. For instance in regard to Berlin, their line is almost identical with the Soviet position. But they do have some insight on what is going on in the Soviet Union and also in China.

I found a general feeling in Belgrade that Mao Tse-tung's government in Peiping had some contracts and some hope for support for an extreme position from certain elements in the Soviet military. They were inclined to feel that this was the case. William Green, 1870-1952

EXTENSION OF REMARKS

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. LEVERING. Mr. Speaker, on May 2, President Eisenhower and Mr. George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, joined in the dedication of three stained glass windows honoring the late Samuel Gompers, Philip Murray, and William Green at the Washington Cathedral. It is fitting that such a fine tribute be made to these men of high idealism who led the free labor movement at various times in our Nation's history—they are among our finest citizens—our country is justly proud of them.

Mr. Speaker, I and the people I have the honor to represent in Congress from the 17th Ohio District are especially proud of one of these men, William Green, who was born and lived in the city of Coshocton. His charming daughter, Clara Green Scarr, still resides there.

Mr. Speaker, it was my privilege to know Bill Green personally as a man of high ideals and meticulous honesty dedicated to making our Nation the best and strongest in the world.

Under leave to extend my remarks in the Record, I include the following biographical sketch which was printed in connection with the window dedication ceremony which briefly relates the story of William Green as I knew him:

WILLIAM GREEN, 1870-1952

William Green was both a symbol of America and of the labor movement which he headed from 1924 to 1952.

Born in a small midwestern coal mining town in 1870, he literally followed the footsteps of his father into the coal mines and into the coal miners' union. He also bore the imprint of his deeply religious family; and as he grasped the problems of his fellow workers he recognized that they were being deprived not only of the material benefits which their labor helped to produce, but also of their God-given dignity as men. His dedication to social justice earned for him well-merited recognition as a champion of oppressed people everywhere.

For more than a quarter of a century he served America and his fellow trade unionists as the president of the American Federation of Labor. When he accepted this call for service in 1924, there was no indication of the turbulent decades which were just in the offing. For not only was there the economic catastrophe of the 1930's, but it was accompanied by a veritable revolution in the social thinking of America which challenged all but the most basic principles that had guided not only the trade union movement, but also the Nation itself. As though these social changes were not enough to test his fortitude, he saw the labor movement, which he headed, divided before his very eyes. Moreover, before these currents had sufficient time to run their course, the Nation was confronted with World War II which had been instigated by the dictatorship of the right and utilized by the dictatorship of the left.

A lesser man would have cowered before these challenges. William Green remained upright and confident that only by doing his utmost would he be doing his best. That utmost bore tangible results which are indelibly marked in the life of America, in the progress of the labor movement and in the hearts of that vast number of human beings who remember William Green as their gentle

Birmingham News Editorial Refutes New York Times Articles on City

EXTENSION OF REMARKS

HON, GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 21, 1960

Mr. HUDDLESTON. Mr. Speaker, in a series of two articles, under the byline of Harrison E. Salisbury, the New York Times recently attempted to portray the city of Birmingham as an area where fear and violence prevail and whose citizens and elected officials have no respect for law and order. Such a vicious attack, so totally unfounded on truth and so deceptively couched in innuendo, has to my knowledge never before been launched against a decent community by what is ordinarily conceded to be a decent newspaper.

Efforts have been made by many Birminghamians, including myself, and by interested and impartial citizens of other localities who know the truth about our city, to correct the falsities of the Times' articles and to counteract the great harm Which has been done, by such irresponsible reporting, to our citizenry and to good journalism. None of these efforts have been more forceful or effective than that manifested in an editorial appearing in the Birmingham News on May 8,

I insert that editorial, at this point, in the RECORD and earnestly commend it to the attention of my colleagues:

THE SALISBURY CASE

The citizens of Birmingham have read the Harrison Salisbury articles which appeared on the front page of the New York Times on April 12 and 13 and which were reprinted by the Birmingham News in full on April 14 and 15 in order that the people of this city and State might know the false and slanderous image of them circulated by an important

horthern newspaper.
The News on May 4 also reprinted a statement which was prepared in Birmingham and which was published in the New York

Times on May 4.

The latter statement was sent to the Times presumably to refute the Salisbury articles. If so, it completely failed of its purpose, because nowhere did it give the true for the true for the salisbury articles. true facts about the many half-truths or outright misstatements contained in the Salisbury articles.

The News believes that the people of Ala-

bama should have these facts.

On the same date that the Times printed the statement purporting to be Birming-ham's case, Mr. Turner Catledge, managing editor of the Times, printed a statement of his own in which, in essence, he defends his reporter outright.

In two particulars Mr. Catledge refers to Omissions in Mr. Salisbury's articles.

The Times' managing editor said:

"The articles did not stress the obvious fact that an overwhelming percentage of the citizens of Birmingham lead happy and peaceful lives in a growing and prosperous community.

"Neither did they stress the fact that this substantial element of the citizenry deplores any lawlessness that may exist and is working in its own way to correct and reduce such tensions as do exist."

Not only did Mr. Salisbury not "stress" these two points, he omitted them entirely.

CALLED ABLE, PERCEPTIVE REPORTER

In the same statement Mr. Catledge terms Mr. Salisbury "one of the ablest and most perceptive reporters of the New York Times.

"Mr. Salisbury has a background of many years as an outstanding newspaperman. He was recipient of the Pulitzer Prize Award for 1955 for his reporting from the Soviet Union.

"The controversial articles were based on interviews and observations he made in Birmingham and other parts of Alabama over

a span of 5½ days.
"Furthermore, he was aided in his researches by news items previously published

in Alabama newspapers.

The New York Times has every confidence that Mr. Salisbury reported the situation as he saw it through the eyes of an objective newspaperman. He did not go to Birming-ham 'seeking sensationalism' or anything else but the facts in a situation that involved Birmingham as well as other cities. We are only sorry that his findings had to be unpleasant to anvone."

INTERVIEWEES REMAIN ANONYMOUS

The Birmingham News does not doubt that Mr. Salisbury interviewed people and consulted newspaper clippings. But the interviewees all remain anonymous—though we know who some of them were.

Further, from every evidence at hand, his interviews did not represent a cross section of the people of this community. bulk, we believe, they were with people who had some special grievance with conditions

The fact that Mr. Salisbury used clippings from Alabama newspapers is a specious cover-up, and we believe that his managing editor, Mr. Catledge, an old hand at newspapering from Mississippi, well knows that injudicious use of such clippings can create impressions which are not true images of a situation or a community.

A reporter, in any city in the United States. can select elippings from its daily papers, ignoring all else, and write an article that does not truly reflect conditions in that

ABBREVIATED STUDY GIVES INCOMPLETE PICTURE

Mr. Salisbury's editor knows, as any competent newsman knows, that it takes more than 48 hours' study of any community with the complexity of Birmingham to learn enough to have any reasonable basis for a conclusion.

Birmingham does not resent and resist "outsiders" reporting-this is a free land with a free press permitting any duly assigned man to go about and make inquiry. But this was single-shotting and it was single-shotting at its worst.

Birmingham is not unaware of "unpleasant findings," as Mr. Catledge refers to them in expressing sorrow that this was the re-

The city's residents in vast majority do not believe, however, that it is the historic policy of the New York Times to present "un-pleasant findings" as a rounded picture. That is our point.

The New York Times can print stories about bombings, about series of bombings, about certain tensions that arise from time to time. Such have been reported to Birmingham and Alabama readers already.

But the two Salisbury articles were couched in terms of the whole picture, not just a report on some of Birmingham's problems.

STATEMENT LEAVES IMAGE OF BLACKNESS

Mr. Catledge concedes that the Times did not "stress the obvious fact that an overwhelming percentage of the citizens of Birmingham lead happy and peaceful lives in a growing and prosperous community." This is in sharp contrast to Mr. Salisbury's key conclusion-"every channel of communication, every medium of mutual interest, every reasonable approach, every inch of middle ground has been fragmented by the emotional dynamite of racism, reinforced by the whip, the razor, the gun, the bomb, the torch, the club, the knife, and the mob, the police and many branches of the State's apparatus."

Such a statement could only leave readers of the distinguished New York Times with

an image of utter blackness.

We know this was the reaction for, on the basis of the two Salisbury articles, editors of newspapers in other sections of the country sent personal letters to this newspaper expressing sheer horror that this had come about * * * and asking why had secrecy prevented the revelation of this situation.

The citizens of Birmingham know that these are not the facts, that fear does not dominate their days and nights. They know that there are those who would violate the laws of the city, the State, and even the Nation, just as there are those who violate such laws in every city.

NO MOB RULES BIRMINGHAM

Even the most prejudiced, the zealot with the wildest eye, knows that "the whip, the razor, the gun, the bomb, the torch, the club, the knife, the mob" do not rule Birmingham. Mr. Salisbury could have found this out if he had taken the trouble to look at the entire community.

Remember, now, that Mr. Catledge admitted in his statement that the Salisbury pieces did not "stress the fact that an overwhelming percentage of the citizens of Birmingham lead happy and peaceful lives in a growing and prosperous community.'

He said, too, but Salisbury did not, that this substantial element of the citizenry "deplores any lawlessness that may exist and is working in its own way to correct and reduce such tensions as do exist."

We contend that the picture of Birming-ham" could not have been objective and factual in the Times' report, according to Mr. Catledge's own admission, without this aspect of the community being fully and fairly reported along with the matters that Mr. Salisbury did report.

CITY DISTORTED BY SENSATIONALISM

It could easily be deduced from Mr. Catledge's statement that the Times' report reached over into the field of sensationalism. Birmingham people were shocked as much by this apparent surrender of the Times to sensationalism as by the distortion that was presented of their city, its people, its problems, and the manner in which the city was going about handling those problems.

Mr. Catledge said, "If in the further investigation the Times should find any statement in Mr. Salisbury's articles to be incorrect, or inaccurate in any respect, it will publish an appropriate correction.

The News invites Mr. Catledge to have his own southern staff writers investigate the following items of fact presented in Mr.

Salisbury's articles:
1. Mr. Salisbury said: "A drive is on to forbid Negro music on white radio stations."

See if this isn't true-this drive was a columnist's effort to substitute good music. Negro or white, for the trashiest kind of Negro music. In the same paragraph the originator of the drive, Roger Thames, the Birmingham News radio-TV editor, said, "There is much Negro music that is good, some even fine—this is not an objection to Negroes' records per se."

2. Mr. Salisbury said: "Mail has been intercepted and opened. Sometimes it does not reach its destination."

See if this isn't true-that only one complaint involving any possible racial angle has been made to opstal authorities mingham in many years. That this single complaint, from the Reverend F. L. Shuttlesworth, involved three packages of third-class That the Reverend Shuttlesworth was asked to bring the three packages to the postal authorities for further investigation, and failed to do so.

3. Mr. Salisbury said: "Dynamite attempts have been made against the two principal Jewish temples in the last 18 months.'

See if this isn't so-that there have been no Jewish temple dynamite attempts in Birmingham in the last 18 months. That the only such attempt at Temple Beth-El occurred April 28, 1958, when this community was shocked by an unsuccessful attempt to dynamite the house of worship. The community raised thousands of dollars of reward for the arrest of the culprits.

4. Mr. Salisbury said: "Mr. Connor is the author of many widely quoted aphorisms. He once said, "Damn the law—down here

we make our own law."

SEEKS TO ENFORCE LAW, REGARDLESS OF RACE

See if this is true—that Commissioner of Public Safety Eugene Connor since taking office for his present term has fully sought to enforce all laws in the city of Birmingham in relation to all persons, regardless of race, creed or color. And that Commissioner Connor said in a public statement published about 4 weeks before Mr. Salisbury's visit to Birmingham—"this is to notify all citizens, white and Negro, that the city of Bir-mingham will not tolerate activity on the part of anyone, or any group, that will breach the peace or infringe on the rights of others. The Department of Public Safety will guarantee the rights of all citizens to go about their affairs in a normal and proper way."

5. Mr. Salisbury said: "Both he (Shuttlesworth) and his wife were injured and a white pastor was badly manhandled by a Birmingham mob when the three of them sought to use the white waiting room of the local bus

depot."

See if this isn't true-that neither the Reverend Shuttlesworth nor his wife was injured in any way. That the incident oc-curred at the Terminal Railroad Station and not a local bus depot. That the Reverend Shuttlesworth and his wife successfully sat in the white waiting room and boarded a train without molestation. That an unsuccessful minor white political candidate, and not a pastor, was the man who came in conflict with a white group outside the station.

6. Mr. Salisbury said: "For weeks Negro children had to go to school an hour early and were held in school an hour later so they would not come in contact with white

children."

See if this isn't true-that Parker High School students (Negro) go to school 30 minutes later and leave school 30 minutes later as a means of relieving public trans-portation problems. And that this was done at the request of the Birmingham Transit

7. Mr. Salisbury said: "That his (Connor's) man apprehended two young men with an old-fashioned hearse in which dynamite and anti-Semitic literature were found. They had parked beside a synagogue and told a Negro watchman they were going to blow the place up. But the young men did not go to prison. They were freed on their own cognizance by the judge when the witness did not appear. Neither the witness nor the rabbi had been told the case was coming up.'

See if this isn't true-No dynamite was found in the hearse. The Negro watchman was present at the trial in which the two young men were given jail sentences of 180 days each, with the sentences suspended on condition they leave Birmingham.

There are other such statements as "telephones are tapped or there is fear of

tapping."

Can Mr. Salisbury prove a case of "tapping?" Birmingham cannot disprove that one of its more than 200,000 telephones have not been tapped.

Yet Mr. Salisbury has written that all this means "the eavesdropper, the informer, the spy have become a fact of life."

Does Mr. Salisbury intend really to convey to the people of New York and the many readers of the Times over the land that Birmingham is so marked?

INJUSTICE DONE BY ARTICLES NOT RECTIFIED

There are various reports of attacks and violence. Certainly most have occurred. But they range over a period of some years. Telescoped, they put upon us an ugly stamp.

But we need not go in such catalog. sadly concede that the Times apparently does want to put things in perspective.

The Times in its statements by Mr. Catledge and the Birmingham presentation, which Mr. Catledge did invite and which he did present in the columns of the Times as it was written, have not rectified the injustice done Birmingham by the Salisbury articles.

The statement published by the New York Times on May 4 made no attempt to point out to the New York Times readers the errors of fact, the half-truths and telescopic distortions enumerated above, which was the only reason for Birmingham to have a statement in the Times. The Birmingham statement did not in any way take advantage of the opportunity to refute the misstatements about the city before a national audience.

We repeat, the New York Times, long in an enviable position to present the full record, remains derelict, unhappily, because it has not returned to the scene, and it has not been supplied through the Birmingham statement with a documented refutation.

There is a real story.

We hope that Mr. Catledge will exercise the Times tradition and get Birmingham's real -the balanced story, the full story that he points up in his own statement as to omissions from Mr. Salisbury's reports to the New York Times.

Juvenile Crime Among Newsboys Practically Nonexistent

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Belleville (Ill.) News-Democrat on May 7, 1960. The editorial, "The End for Newsboys?" entitled follows:

THE END FOR NEWSBOYS?

Many forces are now at work to institute legislation which would make practically impossible any work by newspaperboys—the youngsters who deliver your daily News-Democrat. It is conceded that many of these forces are sincere, but it must be recognized that they are also misguided and definitely

unrealistic in their approach to the betterment of youth today.

Rather than concentrating on the work done by the newspaperboy these forces might well direct their energy toward the problem of juvenile delinquency in some other way than admitting that it is becoming a growing evil. Something should be done about it and the beginning is not to destroy the newspaperboy, FBI Chief J. Edgar Hoover has said many times that juvenile crime among newspaperboys is practically nonexistent. It is difficult, therefore, to understand the thinking of those who seek to destroy a situation which is a definite deterrent to youthful crime and misdemeanors.

Opportunity to work during leisure time. and without interference with school, is a good thing. It keeps young boys out of trou-ble because idleness is one of the major causes of delinquency. Busy boys have no time to join street gangs, to hang around street corners, to plan ways and means of getting-dishonestly-a few dollars. time is occupied and they earn their own They are learning lessons of thrift. of business methods, and of how to spend time to good advantage.

Intervention Movement in Cuba

EXTENSION OF REMARKS OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. BARRY. Mr. Speaker, on No-vember 24, 1959, the insurgent government of Cuba passed a law whereby its minister of labor was given discretionary power to appoint intervening authorities to take over any private property in Cuba. There is a question as to whether or not this so-called intervention constitutes a seizure. I say it is an arbitrary seizure, an imposition on the rights of our citizens who, through their investments, have contributed much to the progress of the Republic of Cuba-Furthermore, this action bears a serious lesson for the U.S. Government, which has encouraged private enterprise abroad. The deplorable policy of the Castro regime with respect to American business operations in Cuba is comparable to the story of the dog biting the hand that feeds it. The fact that the insurgent powers have so far refused to negotiate seriously with our State Department on outstanding differences is even more outrageous. I would like to invite the attention of

my colleagues to one typical case involved in the intervention movement. The facts of the case have been submitted to me by Mr. Percy Douglas, executive vice president, Otis Elevator Co., of Yonkers, N.Y. The Otis Co. established a plant in Cuba in November 1924 and has maintained a satisfactory operational relationship over the years. All of the permanent employees at the plant have been Cuban citizens, the total of which was 201 at the end of 1958. Pursuant to the enactment of the aforementioned law, the minister of labor appointed a native of Guatamala, Mr. Julio Caceres, a person 23 years of age with no apparent experience in the elevator

business as intervenor at the plant. Mr. Caceres' first action was to dismiss Mr. Vincent Pedre, a native Cuban with 34 years continuous service at Otis, 23 of Which were spent as the manager of the Cuban plant.

Immediately following are the claims presented by the minister of labor as Justification for the intervention at the Otis plant-and in contrast, the facts in connection with each assertion:

MEMORANDUM BY OTIS ELEVATOR CO.

Subject: Intervention of Otis Elevator Co., Cuba.

On November 19, 1924, Otis Elevator Co., a corporation formed under the laws of the State of Maine, United States of America, was registered in Havana to do business in Cuba and since that time it has actively carried on the business of installing and servicing elevators and escalators.

For the past 25 years all of the permanent employees of Otis Elevator Co. in Cuba have been Cuban citizens and the number of employees on its payroll at the end of 1958 totaled 201. Of this total number of employees 36 were in the office, 59 were engaged in servicing elevators, and the remaining 106 were assigned to the installation of elevators in new buildings.

On December 23, 1959, Mr. Julio Caceres presented to the Otis office in Havana a resolution of the minister of labor dated the same day which appointed Mr. Julio Caceres the intervenor and empowered him, pur-Suant to law 647 of November 24, 1959, to intervene the company and assume full charge of its operation.

Mr. Julio Caceres is a native of Guatemala, 23 years of age, and we understand arrived in Cuba during April 1959. So far as we know, Mr. Caceres has had no ex-perience in the elevator business.

Mr. Caceres' first action was to dismiss the Otis manager, Mr. Vincent Pedre, a native of Cuba who has been in the employ of the company for 34 years and as manager of Otis in Cuba for the past 23 years. Mr. Pedre is thoroughly experienced in the elevator business, both from a technical and managerial point of view.

The claims outlined in the attached resolution by the minister of labor as a justification for the intervention are completely unfounded and in order that there be no question on this point, the facts in connection With the claims made by the minister of labor are hereinafter stated:

1. It is claimed that the attitude assumed by the employer toward the workers is not satisfactory but the claim is not specific.

The fact is that for the past several decades, prior to the revolution in 1959, the labor and employee relations with the management of the Otis organization in Cuba had been normal.

2. It is claimed that the company refuses to discuss workers collective agreement pre-

sented by the laborers.

This is not a fact because the revolutionary minister of labor on August 24, 1959, advised the Otis management as well as Mr. Vincente Gonzalez, secretary-general of the local union, that further discussion of the Workers collective agreement would be postponed until after arriving at a formula for the release of some 60 surplus temporary construction men who had been working on the installation of elevators in new build-

This same minister, several weeks later after studying Otis' case thoroughly, agreed that all surplus workers could be released under a formula which was perfectly acceptable to both Otis and the union. ever, before the decision could be implemented, the minister was replaced by an-Other and all attempts to reopen the discussion on this subject with the new minister were unsuccessful.

Early in 1959 the end of an unprecedented building boom occurred when such large buildings as the Havana Hilton Hotel, Hotel Capri, Palacio Municipal, Hospital Nacional, Seguro del Medico, Hospital Mercedes, Hijas de Galicia, Terminal de Helicoptro, Immobiliarlo Golfo San Lazaro, reached completion.

In accordance with normal construction procedure, the Otis men assigned to the installation of elevators in these buildings became surplus when and as the elevator installations were completed and as many of these men were engaged originally as temporary constructors, they would under normal conditions have been released. The minister of labor, however, refused to allow Otls to discharge these temporary constructors even though Otis had no further work for them. In spite of this decision the company continued to negotiate with the workers and at the same time to plead its case with the minister of labor for the discharge of these surplus employees right up until August 24,

3. It is claimed that the company refused to allow the surplus employees, who were still being paid by the company, to be given

actual work on the job.

The fact here is obvious-there was no work to give the men. Otis made every possible effort to find work for the surplus employees even to the extent of advancing all

repair work schedules.

The minister of labor when he refused to permit the dismissal of the surplus employees early in 1959, agreed that if the company paid the employees and allowed them to use their time as they desired, the company would be fulfilling its obligation. This the company did and for many months Otis paid the surplus employees, which eventually totaled 60 in number, their full

The interventor has already assigned these surplus construction employees to-

(a) Installations from which the com-pany had withdrawn its construction workers due to the nonpayment of contract obligation on the part of the owner. Otis contract protection against nonpayment has therefore been removed by the interventor;

(b) Other jobs which were adequately manned thus creating the practice of

featherbedding.

It should be pointed out here that the construction business is of a cyclical nature and that the fluctuations in the volume of employment of construction workers must conform with the trend of construction contract awards. To attempt to maintain a constant volume of employment under the conditions prevalent in the building industry in Cuba over the past year is economically

4. It is claimed that the company threatened to close the office and did not attempt to secure new orders for the installation of elevators, as well as quoting unreasonably high prices in order to avoid obtaining new business, which all resulted in the slow dissolution of an enterprise where a large number of workers render their services.

These claims are completely unfounded in that Otis has taken no action to close its business in Cuba and it has submitted reasonably priced bids on new projects for elevators throughout 1959 with necessary credit precautions.

Why Otis Elevator Co. would consider withdrawing from such a market after 25 years of satisfactory operations in Cuba is hard to conceive.

Throughout the difficult period of 1959 Dr. Esteban Ferrer, attorney of the firm Bufete, Salaya-Casteleiro; has acted as our legal counsel and had continually assisted Otis in the filing of appeals to the Government, particularly to the Ministry of Labor. On January 6, 1960, Dr. Ferrer filed an appeal with the supreme court of Cuba for the removal of the interventor and the restoration of the business to Otis Elevator Co. on the ground that the intervention was unconstitutional.

The total loss to which Otis Elevator Co. is subjected from the intervention of its Cuban business is approximately \$500,000, not including past and prospective earning

Another concern arising from this inter-vention is the treatment to which Otis Elevator Co. is now being subjected after 35 years of continuous operations in Cuba, its employment of Cuban citizens, and its contribution to the economic development of the Republic of Cuba.

This memorandum is submitted in the hope that our Government may be of assistance to the Otis Elevator Co. in securing the restitution of the Otis interest in Cuba.

Mr. Speaker, this is a very disturbing report. I am deeply concerned. Fidel Castro and his government must be held accountable for any property belonging to the United States or her nationals that is seized without adequate compensation.

This particular action of Dr. Castro happens to be a direct blow to the people of my city of Yonkers, where is located the Otis elevator plant which has supplied the Cuban company with millions of dollars' worth of manufactured equipment. As a result of this seizure in Cuba, many jobs may be lost.

I would like to invite my colleagues' attention to these facts. It is clear that some way must be found to see to it that American property owners in Cuba are adequately compensated for these seizures.

Supreme Lack of Coordination in U-2 Incident

EXTENSION OF REMARKS OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks, I include a statement which I released earlier today on the controversy over the U-2 incident. The statement follows:

SUPREME LACK OF COORDINATION IN U-2 INCIDENT

People throughout the world have been profoundly shocked and disturbed by the news that an American espionage plane was shot down over the Soviet Union. There is no doubt that our Government has suffered a serious setback at a critical moment. As an incident this one is likely to go down in history as the greatest single item of national embarrassment in the 8 years of the Eisenhower administration. As a symbol of what is basically wrong with the present conduct of our foreign policy, it is of even greater importance. I am conscious of the delicacy of the situation itself. I am aware that while the administration has been embarrassed by these events, all Americans are embarrassed with it. I do not wish to add personal or partisan fuel to the controversy which will be raging for weeks ahead on this issue. Nor do I wish, in anything I say, to imply that I have any more information, official or unofficial, on the intelligence aspects of this case than does any other American

As I said on television yesterday afternoon ("Meet the Press," NBC-TV, Sunday, May 8, 1960):

"I don't think any one of us as outsiders can know what is essential in the way of espionage. We are all realists. We all know that this is a difficult and complex world. We know we are at a disadvantage, that the Soviet is a closed police state and has certain very great advantages over us. I don't know the inside story of how much information we have or what we lack or what risks should be required to get it. I would assume that we should not do this sort of thing for a marginal gain.

"But we are preparing for a summit meeting. The whole history of the world may depend upon our ability to negotiate with the Soviet Union. We are in a very delicate position and certainly this would be a time to be far more circumspect than obviously these people have been. I think they have committed a very gross case of misjudgment and I think it is highly reckless, dangerous,

and hurtful."

Here, as I see them, are the unalterable, embarassing facts which now face us.

1. The State Department has been caught in a dramatic falsehood. The Department may have been the victim of misinformation provided by other Government agencies. Nevertheless, foreign governments—both friendly and otherwise—are bound to press the point that the word of the U.S. State Department can no longer be trusted. In international negotiations, as in personal relationships, lack of trust is damaging and costiv.

2. If the flight really was not authorized in Washington, the incident demonstrates that the President has been kept in ignorance of critically important developments and activities within our own Government. This, in turn, seriously undermines the president of the President at a time when the world urgently needs his strength and in-

fluence in behalf of peace.

3. The Russian suspicions of our good faith in negotiating the control and inspection systems which are essential to disarmament programs have been increased. As a result, we will find them even more difficult to deal with on these critical questions at the Summit.

4. We have placed ourselves in a defensive position in our efforts to negotiate a step by step relaxation in cold war tensions. In contrast the Soviet position has been greatly strengthened. It is safe to assume that the Kremlin will use its advantage to the limit in mustering world opinion against us.

Hence this incident adds up to a devastating loss of faith in the quality of American leadership: A loss of faith in the reliability and straightforwardness of official U.S. statements; a loss of faith in the President's role in the conduct of critical policy matters; and a loss of faith in U.S. sincerity in easing tensions in advance of the summit meeting.

The role of clandestine operations is inherently difficult for a democracy. I do not underestimate it. But that is an argument for greater Presidential control, not less. The astonishment and incredulity of many millions of Americans today over the headlines is magnified by the knowledge that our President and his administration are simply not in control of their own operations. The bumbling nature of this whole incident—the supreme lack of coordination between one Department of our Government and the others—this is what is so serious and what merits our strongest dismay.

It symbolizes what is chiefly wrong with this administration's record in foreign policy. Indeed we can generalize from this

instance.

The administration is uncoordinated. No one is in control. The State Department is not—it doesn't even know what some of our military and intelligence people are doing.

The President is not a master in his own house. Each sector of the administration undermines another.

This has been the story all along—on defense, on disarmament, on foreign aid. No one has a firm grasp on where we are headed. Lacking overall goals, we continually let means get in the way of ends. Our military policy defeats our economic policy. Our intelligence policy defeats our diplomatic policy. Our short-term requirements defeat our long-term ones.

This Government and this Nation simply cannot survive piecemeal, uncoordinated administration where our vital national inter-

ests are clearly at stake.

This incident, embarrassing, dangerous, and damaging as we know it to be, may in the long run prove to be worthwhile if it will wake America and the world to the hideous dangers of this cold war struggle.

Every thoughtful person must now see that we are walking a tightrope in world affairs. Miscalculations either in Moscow or in Washington could plunge us all into a war that no one wants, that no one could win, and from which few could survive. The stupendous dangers we face have been clearly dramatized.

What is required of us now is a bipartisan effort to break the logjam in world affairs and to embark on a new study of methods to ease our way gradually out of the impasse into which the world has stumbled and to begin to lay the foundation for a

meaningful peace.

In saying this, I do not suggest that peace will come easily. On the contrary, the difficulties are enormous. I simply say that it is time that mankind took charge of its own destiny while we still have the opportunity to act rationally.

Substantial Pay Raises for Postal and Federal Employees Urged by Mrs. Maurine B. Neuberger

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following testimony by Mrs. Maurine Neuberger in support of pay increases for postal and Federal employees. Mrs. Neuberger appeared before the Senate Post Office and Civil Service Committee on May 5, 1960.

Her husband, the late Oregon Senator, served for almost 6 years as a member of the Post Office and Civil Service Committee. In 1958 Dick Neuberger was chairman of the Federal Pay Subcommittee which wrote the long-needed legislation giving Federal and postal employees a 10-percent pay raise.

Maurine Neuberger worked closely with her husband. In her testimony she has pointed up deficiencies which concerned Senator Neuberger and her. I was particularly interested in her observation that some agencies of the Government have realized the expense of today's high cost of living. She told the committee:

The Federal Housing Administration indicated that a letter carrier does not make enough money to purchase a \$15,000 house.

With minimum down payment a \$15,000 house on a 30-year mortgage payment requires an annual income of \$5,384, but the letter carrier in the top longevity grade with 25 years of service receives only \$5,175 a year.

The lumber industry is a major industry in Oregon. The inability of people to purchase homes they need starts a chain reaction which affects our economy adversely.

Mrs. Neuberger's full testimony follows:

TESTIMONY BY MRS. MAURINE NEUBERGER IN SUPPORT OF PAY INCREASES FOR FOSTAL AND FEDERAL EMPLOYEES, SENATE POST OFFICE AND CIVIL SERVICE COMMITTEE

Mr. Chairman and members of the Senate Post Office and Civil Service Committee, my name is Mrs. Maurine B. Neuberger, of Portland, Oreg., wife of the late Senator Richard L. Neuberger who served for many years as a member of your committee. I am pleased to have the opportunity of testifying in support of needed pay increases to our postal and Federal employees.

The administration spokesmen tell us that wage increases must wait, must wait for the completion of studies currently being made by the Bureau of Labor Statistics. We are told that these studies may be completed by December, and that if we wait until January of next year Congress then can consider wage increases based on the results of this study.

Of course by waiting this administration will leave office on January 20, 1961, and a new administration may well want to take a new look at pay proposals for Federal and postal employees. In other words, what the Eisenhower administration is suggesting is to brush under the carpet vitally needed wage increases and wait for the next administration.

As your committee well knows, the whole history of pay legislation for Federal employees under the present administration has been one of inaction and veto. Three times Congress has passed wage increases for Federal employees which were veteed by the President—in 1954, 1957, and 1958. We were successful in getting through in 1955 a 7-percent pay increase which was scaled down to meet administration objections, and a 10-cent pay increase in 1956 which was coupled with postal rate increases desired by the administration.

It is indeed ironic that this administration can spend billions for higher interest rates and cannot pay adequate salaries to its employees. For example, the cost of managing the interest on the Federal debt in fiscal 1953 was \$6.5 billion. The estimated cost of interest in 1961 is \$9.5 billion—12 percent of estimated 1961 budget expenditures. In fact, what the administration is telling us is "billions for interest; nothing for Federal employees."

While the administration prepares its so-called vital surveys of wage rates in its last year of office the Mitchell-Nixon settlement of the steel strike provided important new benefits for steelworkers. Steelworkers received a minimum 6½-cent immediate wage increase by company absorption of all health and welfare costs. Wages are pegged to the cost of living, and additional wage increases are provided effective the first of next year. Is it fair for the administration to sponsor pay increases for steelworkers and shirk its responsibility to Government employees? What about the inflationary effects for steelworkers and steel which is an item so important in our industrial society, as well as the high interest rates for those fortunate enough to hold Government and private notes?

Millions of Government employees cannot wait to eat and to live but must go ahead with their own individual family lives. For example, a letter carrier after 21 years of

Government service with a wife and children takes home \$86.95 per week. Another letter carrier, after 8 years of service and with a family of four takes home only \$76.

Some agencies of our Federal Government have realized the expense of today's high cost of living. The Federal Housing Administration indicated that a letter carrier does not make enough money to purchase a \$15,000 house. With minimum downpayment a \$15,000 house on a 30-year mortgage payment requires an annual income of \$5,384, but the letter carrier in the top longevity Brade with 25 years of service receives only \$5,175 a year.

While a laborer in my city of Portland, With a letter carrier's \$1.81½ in 1949, the laborer now earns \$2.67 per hour while the letter carrier income is \$2.34 an hour. Since 1949 the laborer has had 10 wage increases While the letter carrier has had but 4, and how receives 44 cents an hour more than the letter carrier. Seventy-five percent of all letter carriers either have a second job or the wife is forced to work.

Since July of 1951 until November 1959, Postal clerks received wage increases averaging 381/2 cents an hour, or approximately 20 percent, while workers in all industry received wage increases of 70 cents an hour, Or in excess of 45 percent. This represents a lag of 25 percent between July 1951 and November 1959 for postal clerks.

Mr. Chairman, I think it is obvious that

wages of people in private industry are far ahead of wages paid in Government employment. There are costs not just to the wage earner but to the Federal Government itself in this situation. Federal employment becomes less desirable, less sought after. There is a high turnover as qualified persons leave to seek better jobs and the less qualified seek employment with the Government. The cost of high turnover is indeed a very important factor in measuring the Government's so-called inability to grant needed pay increases.

If we assume that qualified employees were paid in 100-cent dollars in 1939 just prior to the start of World War II, the employee is actually worse off today than he was 21 years ago by \$100. Salaries in higher brackets show even a greater loss. The current GS-5 salary would have to be increased 5.2 percent to make it equal in terms of purchasing Power to the salary paid for the same grade in 1939. The loss has been more severe in higher grades. The GS-7 salary has lost 11 Percent, GS-9 has lost 13.6 percent, and GS-13 Durchasing power has declined 20.3 percent.

Sixty-four percent of all Federal ployees, or almost two-thirds, are paid either under the Classification Act or the Postal Pay Act. Approximately 31 percent of all employees salaries are in the per diem, or wage board, group. Wage board employees receive regulation pay raises based on salarles paid for comparable work in their areas.
For example, a wage board W-7 employee who received 86 cents an hour in 1943, in 1959 received \$2.19 per hour, or a 155 percent increase, while a GS-4 employee who received 89 cents an hour in 1943 is now up to \$1.85 Per hour, or an increase of 108 percent.

There is a need, my husband and I have telt for some time, for an automatic procedure for reviewing classified salaries at regular, stated intervals, so that changing conditions and new economic situations hight be taken into consideration. Wage board employees receive regular increases of substantial amounts at regular intervals, while classified employees lag far behind.

Mr. Chairman, while the administration in its last few months of office decides that the classified and other pay systems are outmoded and must be reviewed—in other words it wishes to stall any pay increases— Federal and postal employees must continue to live, to eat, to raise their families. It is for this reason that I strongly urge a substantial pay increase for all Government em-

For the National Welfare Summit Talks Should Be Kept Clear of Partisan

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF TLUNOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the St. Louis Post-Dispatch, which appeared in a reprint page of editorials appearing between April 25 and May 1, 1960. The editorial entitled "Clumsy Summit Politics" follows:

CLUMSY SUMMIT POLITICS

President Eisenhower used a heavy hand when he announced that Vice President NIXON might become his stand-in at the summit conference if it goes on too long. Almost anybody could see partisan politics sticking out of this gesture at 500 paces. The President will be wise if he quietly shelves

Ostensibly the announcement was a velled warning to Premier Khrushchev to be ready for business the first week of the talks, scheduled to open May 16. The President has agreed to visit Portugal May 23 and 24. If the summit talks are still going on then, he said, he would either return to Paris or, if "domestic requirements" necessitate a return to Washington, will send Mr. Nixon in

As 55 Democratic Congressmen almost instantly made clear with a loud cry of pain, this did not fool anybody. If the President was warning Khrushchev, he was clearly also revealing an intention to help Mr. Nixon's buildup as his successor by identifying him with the summit negotiations.

From a political standpoint such tactics are to be expected, and the Democrats might as well get accustomed to them. Every sitting President naturally makes use of the advantages of his position in behalf of himself or his party in the election. But wise Presidents recognize a limit, and Mr. Eisenhower should know that the limit lies somewhere this side of the summit conference. For the national welfare, these talks should be kept well clear of partisan politics.

The Vice President has no constitutional function whatever to perform at a summit conference. He has no authority and no responsibility that would make him anything more than an errand boy. The Secretary of State, as foreign policy adviser to the President, does have constitutional authority. If any stand-in were needed, Secretary Herter, who is intimately familiar with the negotiations, ought to fill the role.

But why a stand-in at all? The summit talks are important enough to warrant Mr. Eisenhower's sustained attention. important enough not to be hobbled with arbitrary closing dates. They are even important enough to justify the President in postponing a purely ceremonial Portugal visit if need be. Should the talks be making important progress at the end of a week, the President would be betraying his highest responsibilities if he allowed anything whatever to interfere with continuing them.

Advantages of Nez Perce Dam Cited in Public Power Address

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I want to insert the following item from the Wallowa County Chieftan of April 21. 1960. It provides a detailed statement from the proponents of a high dam at

Nez Perce regarding the recent and controversial filing on that site by the Washington Public Power Supply Sys-

[From the Wallowa County (Oreg.) Chieftan, Apr. 21, 1960]

ADVANTAGES OF NEZ PERCE DAM CITED IN PUBLIC POWER ADDRESS

An interesting discussion of the proposed Nez Perce high dam below the mouth of the Salmon River was presented at the Northwest Public Power Association, annual membership meeting at Eugene, Oreg., April 6, 7, and 8, 1960, by Owen W. Hurd, managing director, of Washington Public Power Supply System. Hurd spoke in part as follows:

"It is my privilege and assignment to discuss the key element of the middle Snake River development and the purpose and philosophy underlying the FPC license application by the Washington Public Power Supply System to construct this great Nez

Perce project.

"Mr. Cleaveland has oriented you with regard to its location below the confluence of the Salmon and Snake Rivers between Oregon and Idaho and a few miles below the southeast corner of the State of Washington. He has also indicated that the project layout contained in the Corps of Engineers current 308 review report would result in a 700-foot-high dam, impounding 41/2 million acre-feet of usable storage, with an initial installed capacity of 1,200,000 kilowatts and an ultimate capacity of 2,550,000 kilowatts. Of course, these plans provide for facilities to satisfactorily pass migratory fish. The corps estimated the project would result in an annual flood control benefits amounting to \$5,900,000 power benefits of \$38,100,000, and recreation benefits of \$115,000. Annual costs would be \$13,700,000, and the project would have a benefit-to-cost ratio as a Federal project of 3.21 to 1.

"It is not necessary to dwell on the recognized superiority of the Nez Perce project. All agencies, including the Corps of Engineers, the Federal Power Commission staff, and the Oregon Water Resources Board, who have studied potential unlicensed projects in the middle Snake, have concluded that any combination of projects which includes the Nez Perce is superior to any combination of projects that does not include the

Nez Perce.

"The Federal Power Commission in denying the Pacific Northwest Power Co. a license to build the Mount Sheep and Pleasant Valley projects (which would prohibit the construction of the Nez Perce project) did so without prejudice to the company making an application to construct the Nez Perce project." FPC FINDINGS ON NEE PERCE

The FPC staff in 1957 pointed out that: "1. The Nez Perce project was feasible for non-Federal public or private construc"'2. The flood control benefits of the Nez

Perce project were urgently needed.

"3. The problems of fish passage presented by the Nez Perce project were no different than at the Brownlee Dam of the Idaho Power Co. upstream from the Nez Perce project on the Snake River.

"'4. Recent biological and engineering accomplishments justify confidence that satisfactory means of passing downstream migrants at Nez Perce can be developed."

"In spite of this clear invitation by this sgency charged by Congress with the responsibility for maximum comprehensive development of the Nation's water resources to file on the Nez Perce project, the company, after nearly 2 years of delay, made application to construct the inferior Mount Sheep project.

"The Corps of Engineers, after amply documenting the superiority of the Nez Perce project, chose to ignore their own persuasive arguments in favor of the Nez Perce and have recommended the inferior Mount Sheep project as an element in the major water plan. The corps review report and recommendations are now being studied by the Governors of the Northwest States. Congress is not expected to have an opportunity to act on the review report during this session of Congress.

"As amended, Senate Concurrent Resolution 35, which would hold up licensing of projects in the middle Snake until Congress has had time to act upon the Corps of Engineers' review report and provide for an accelerated fisheries research program, is now in the Senate Interstate and Foreign Affairs Committee. The NWPPA has actively supported this resolution in hearings in Washington, D.C., and the Northwest. It is doubtful that Congress will take favorable action on this resolution. We hope the association will continue to support Senate Concurrent

"Senate bill 2586 would create a fish sanctuary on the Salmon River and would have the immediate effect of forever blocking the Nez Perce project and delay for many years, if not forever, the construction of any sizable project on the Salmon River. This bill is also presently in the Senate Interstate and Foreign Affairs Committee. This bill, although intended as a conservation measure, would actually be in direct opposition to true conservation and maximum use of our water resources.

Resolution 35.

"It will be recalled that the excuse the FPC examiner in the high Hells Canyon hearings gave for recommending the three low dams to the Idaho Power Co. was that neither Congress nor any other agency was proposing to build the vastly superior high Hells Canyon project. Many believe that had local public agencies applied for a license to construct the high Hells Canyon project, a full and orderly development of the middle Snake would have been assured."

NEZ PERCE APPLICATIONS

"The intervention of NWPPA and the National Hells Canyon Association in the Mount Sheep application faced a costly, futile, and unrealistic prospect to prevent the issuance of a license for the Mount Sheep project. It was with full knowledge and awareness of this situation and circumstances that the executive committee of the NHCA met in Portland on February 18 and unanimously recommended that the Washington Public Power Supply System make application to FPC for a license to construct the Nez Perce project.

"This recommendation did not take WPPSS by surprise. Since its organization, in 1957, the problems and feasibility of such a filing on the Nez Perce had been considered. The invitation of FPC in 1957 to the Pacific Northwest Power Co. to file on Nez

Perce and denying the low Mount Sheep application stimulated these considerations, and the matter was discussed rather widely throughout the region. We expected that the corps in its review report would take an uncompromising stand in favor of the Nez Perce project and Federal authorization. This argued against a filing on Nez Perce. When the corps failed to take such a stand, Senate Concurrent Resolution 35, which would delay the licensing of the Mount Sheep project, was considered preferable to a filing. With legislative action to save Nez Perce moving slowly and proceedings before FPC on the Mount Sheep application accelerating, it was obvious that the time for action on a Nez Perce filing by a non-Federal public agency was at hand.

"WPPSS moved swiftly and on March 15 (3 weeks and 2 days after the decision was made by the board of directors) an application to construct the great Nez Perce project was filed with the Federal Power Commission in Washington, D.C.

"It is generally recognized by all familiar with the situation that the action taken is a positive, constructive, and sound means of insuring proper consideration by FPC on the Nez Perce project and development of the middle Snake in the best public interest.

"However, this action has also been accompanied by honest and sincere expressions of concern by some and, of course, some outright criticism by a few who are not concerned with maximum usage of our water resources and the value of low-cost power to the economy of our region.

"I would like to devote the time remaining to me on this panel to briefly state our position with regard to those matters which appear to be of greatest concern to those desiring to make an objective evaluation of the merits of the WPPSS proposal to construct the Nez Perce project.

"First, there is the concern about the market and power allocation for a project utilizing the water resources common to three States by a municipal corporation composed of public utility districts in the State of Washington.

"Our position with regard to power allocation and power marketing can be summarized as follows:

"POWER ALLOCATION

"1. Low-cost power from the Nez Perce project as it becomes available will go to industrial users and public and private utilities who have executed power purchase contracts at the time the project is financed by the sale of revenue bonds.

"2. It is obvious that industries and utilities foreseeing the greatest need and benefit from this low-cost source of power will have the greatest incentive to execute power sales contracts. Power from this project, as with all other projects, will go where the need exists and where economics dictates regardless of geographical or political boundaries. This has been true of Federal projects and the large Columbia River projects of Grant and Chelan PUD's as well as the Pend Oreille PUD Box Canyon project.

"3. Public agencies in the Northwest participating with WPPSS in the development of this project will have equal opportunity to share in the future benefits of the project.

"4. This is equally true whether these agencies are in Oregon, Idaho, or western Montana. The main point is that when fuller development of any site is achieved, we have a bigger power pie to cut.

"5. The downstream benefits will be equal to another Bonneville Dam, creating still more kilowatts to distribute.

"The possible use of low cost Nez Perce power to develop and conserve the recovery of chemical and fertilizer phosphates from the low grade ore in southeastern Idaho will not be ignored. Surveys and appraisals will be made to fully explore this market.

"Nez Perce power will become available at a time when power contracts for Northwest aluminum plants expire and when it is expected there will be a need for additional aluminum production capacity. The retention of present plants and their expansion by low cost power will benefit the entire region.

"We have noted the commendable efforts of Governor Hatfield and business leaders in Oregon in an aggressive and forthright effort to create jobs and economic opportunities by inviting industrial and business expansion in Oregon. We hope that public and private utilities in Oregon, as well as in Idaho, Washington, and western Montana, will seize the opportunity to aid the efforts Governor Hatfield and others by cooperating in the development and use of Nez Perce power."

THE FISH PROBLEM

"Another concern is the possible adverse effect the Nez Perce project might have on future salmon reproduction in the upper reaches of the Salmon River. Our position on the fish problem can be stated as follows:

"1. The fisheries industry is important to many areas served by public and cooperative power agencies, particularly along the coast. We have a great stake in not only protecting the fisheries industry, but in expanding it. It has been said that power and fish are in conflict. What often is overlooked is that floods kill off fish in great numbers. Therefore, as we achieve flood control, we improve conditions for a bigger and healthier fishing industry.

"'2. A proposal for fish passage facilities to be incorporated in the design of the Nez Perce Dam utilizing methods of advanced and proven performance will shortly be submitted to the Federal and State fish agencies.

"3. It is expected that testimony to be presented during the Nez Perce-Mount Sheep hearings will bring into sharp focus the progress which has been made and the success achieved in passing fish over dams as well as the significance of recent developments in fields of stream improvement, disease control, artificial spawning grounds, fish farming and scientific management of our fish resources."

"Another concern on the part of some is that the Nez Perce application will result in a delay in bringing into production a source of power from the middle Snake. To this, our answer is that with the full cooperation of all concerned, Nez Perce power can be put on the line as early as any alternate and lesser project in the same reach of the Snake River. We will work to make this become a reality.

"The Nez Perce is only one of several large unscheduled projects that will be required to meet the region's growing power requirements during the next 10 years. Present estimates are that more than 3 million kilowatts of additional firm capacity will be required before 1970. The Nez Perce project can supply one-third of the needed new capacity.

"The Nez Perce does not have to be the next project developed in the region. There are alternative sites where we know we can achieve full development, such as Bruce's Eddy and Lower Monumental, not to mention the 700,000 to 900,000 kilowatt Hanford reactor.

"The superiority of Nez Perce is unquestioned. The region needs this project for flood control and the benefits of the low cost power it can provide. The fish problems can be satisfactorily solved. What is needed is more cooperation and less controversy."

How Do You Stand?

EXTENSION OF REMARKS OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the Record an editorial appearing in the May 2 edition of the Idaho Daily Statesman, published in Boise, Idaho.

Written by the Honorable BARRY GOLD-WATER, Senator from Arizona, the editorial is a short history of our Government from the days of the drafting of the Constitution down to the present time. It shows what the Founding Fathers intended, and what we have done to those intentions.

The distinguished Senator from Arizona has shown how far we have drifted away from the precepts of those noble Datriots who gave the United States the greatest form of government in the history of the world.

Mr. Speaker, we should return to them immediately.

The editorial follows:

[From the Boise (Idaho) Daily Statesman, May 2, 1960]

How Do You STAND, SIR?

(By Senator BARRY GOLDWATER)

To understand the importance of the Federal Constitution, we must recognize that it is primarily a system of restraints against the natural tendency of government to ex-Pand in the direction of absolutism.

We all know the main components of the system. The first is the limitation of the Federal Government's authority to specific, delegated powers. The second, a corollary of the first, is the reservation to the States and the people of all power not delegated to the Federal Government. The third is a careful division of the Federal Government's power among three separate branches. The fourth is a prohibition against impetuous alteration of the system—namely, article V's tortuous, but wise, amendment procedures.

Was it then a democracy the framers created? Hardly. The system of restraints, on the face of it, was directed not only against individual tyrants, but also against a tyranny of the masses. The framers were Well aware of the danger posed by self-seeking demagogs—that they might persuade a majority of the people to confer on government vast powers in return for deceptive

Promises of economic gain.

And so they forbade such a transfer of Power: first, by declaring, in effect, that cer-tain activities are outside the natural and legitimate scope of the public authority; and secondly, by dispersing public authority among several levels and branches of government in the hope that each seat of authority, jealous of its own prerogatives, would have a natural incentive to resist aggression by the others.

But the framers were not visionaries. They knew that rules of government, however brilliantly calculated to cope with the imperfect hature of man, however carefully designed to avoid the pitfalls of power, would be no match for men who were determined to disregard them.

In the last analysis their system of government would prosper only if the governed were sufficiently determined that it should. "What have you given us?" a woman asked Ben Franklin toward the close of the Constitutional Convention. "A republic," he said, "if you can keep it."

We have not kept it. The system of re-straints has fallen into disrepair. The Federal Government has moved into every field in which it believes its services are needed.

The State governments are either excluded from their rightful functions by Federal pre-emption, or they are allowed to act at the sufferance of the Federal Government. Inside the Federal Government both the executive and judicial branches have roamed far outside their constitutional boundary lines.

There are a number of ways in which the power of government can be measured.

One is the size of its financial operations. Federal spending is now approaching a hundred billion dollars a year (compared with 31/2 billion less than three decades ago).

Another is the scope of its activities. study recently conducted by the Chicago Tribune showed the Federal Government is now the biggest landowner, property manager, renter, mover and hauler, medical clinician, lender insurer, mortgage broker, employer, debtor, taxer, and splender in all history.

Still another is the portion of the people's earnings Government appropriates for its own use: nearly a third of earnings are taken

every year in the form of taxes.

A fourth is the extent of Government interference in the daily lives of individuals. The farmer is told how much wheat he can grow. The wage earner is at the mercy of national union leaders whose great power is a direct consequence of Federal labor legisla-The businessman is hampered by a maze of Government regulations, and often by direct Government competition.

The Government takes 6 percent of most payrolls in social security taxes and thus compels millions of individuals to postpone until later years the enjoyment of wealth they might otherwise enjoy today. Increasingly, the Federal Government sets standards of education, health, and safety.

The Constitution is not an antique document. It is as pertinent today as it was when it was written. Our great error has been in departing from the letter and the intent of the Constitution as a document to restrain the concentration of power. How do you stand, sir?

Washing a Few Brains at Taxpayers' Expense

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. DAVIS of Georgia. Mr. Speaker, the recently concluded White House Conference on Youth and Children has left many of us wondering if this "rigged" Conference had any purpose other than to indoctrinate and brainwash the youth of America. If this Conference had a legitimate purpose, it was surely lost among the pernicious rabble which paraded before it as speakers. The transparency of its speakers removed all doubt that this Conference was anything but a continuing effort for social revolution, at the taxpayers' expense, by radicals and leftwingers.

The Metropolitan Herald, one of the outstanding newspapers published in Atlanta, in my district, recently ran an editorial which had appeared originally in the Richmond News Leader. This editorial addresses itself to the very heart of this so-called White House Conference. It is a thought-provoking and thoroughly clear analysis of the effects this sham conference tried to achieve, and I commend it to the Members of this body.

Pursuant to unanimous consent, I insert this editorial herewith:

WASHING A FEW BRAINS AT TAXPAYERS' EXPENSE

The 1960 White House Conference on Children and Youth has come and gone. It has left no visible impression, so far as we can determine, upon most of the body politic. Virginia, at least, the sessions Here in claimed little newspaper attention; it would be doubtful if one person in a thousand could quote even one of the hundreds of recommendations the conference left behind. It is as if the participants walked across a beach without leaving footprints.

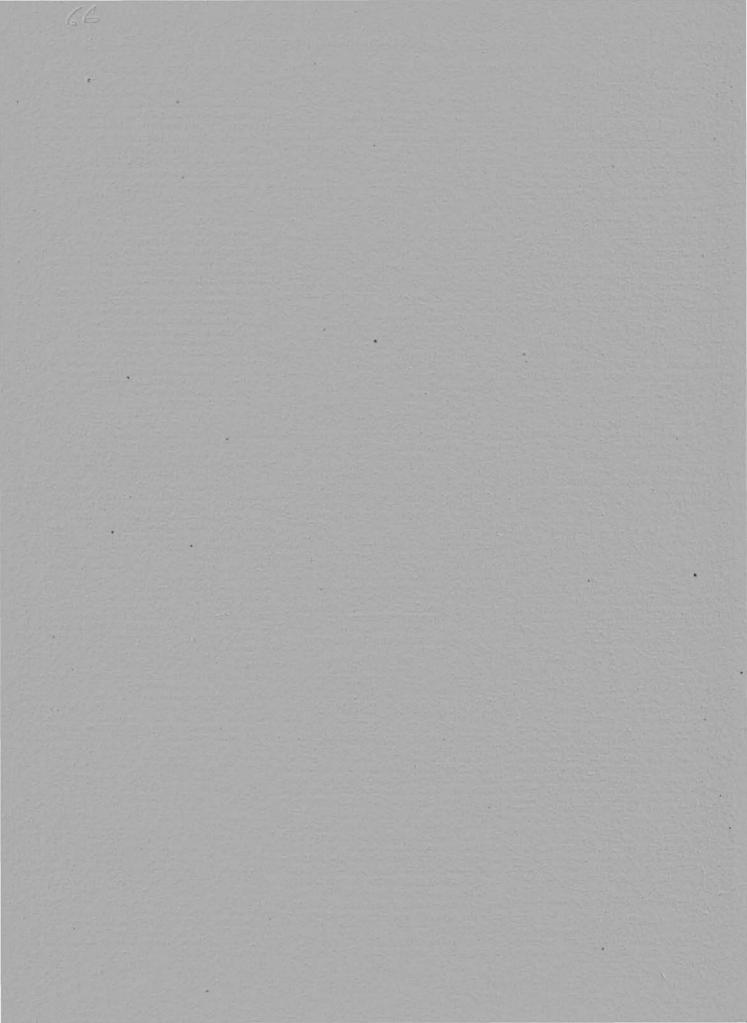

Yet this pianissimo record seems to us highly deceptive. Upward of 7,000 delegates attended these well organized and smoothly conducted sessions. They were subjected to a week of concentrated political and social indoctrination. The Conference was rigged by experts, so that nothing of importance would be left to chance.

The 7,000 return to their home communities like 7,000 smooth and unobtrusive pebbles dropped in 7,000 ponds; the ripples spread. In classrooms, in community centers, in young peoples' groups of the various churches, the influence of the White House Conference is bound to seep in.

What ideas are sucked up in this capillary action? If the 1960 Conference had one principal theme, it was the subordination of the individual. In one session after an-other, the delegates were subtly instructed in the doctrines of statism-no problem, large or small, is to be solved by the individual by means of self-reliance; on the contrary, all problems are to be approached with a sense of social consciousness, of solution by gov-ernmental action. There must be Federal aid to school construction, Federal aid to school operation, Federal housing, Federal health, Federal grants and subsidies in a thousand fields. The concept of "one world" is to be embraced; the United States, unjustly rich, must atone for its wealth by giving its wealth away. All men are brothers; national boundaries are relics of outmoded thinking; patriotism is a distasteful, embarrassing, and unsophisticated attitude. And, of course, the myth of "race" must be abolished through a steadily coerced plan of racial integration.

These were the recurring themes of the Conference as a whole. Pauline Frederick, NBC news commentator, lectured the delegates on an accommodation with Russia. Harold Fleming, director of the leftwing Southern Regional Council, deplored the extent to which local feelings have been respected in matters of integration. Dr. David R. Mace, a marriage counselor of the University of Pennsylvania, comfortably acknowledged that integration inevitably would result in racial intermarriage, until "coffee-colored compromise" had been achieved.

All this cost the American taxpayers \$350,-It is a high price for laundry, for bleaching out boldness and originality, and ironing away all the interesting wrinkles. We may be thankful these antiseptic Mon-days come only once every 10 years. So far as our young people are concerned, this is quite often enough to wash their most vital asset-their brains.

Appendix

Loyalty Day, 1960

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. VAN ZANDT, Mr. Speaker, the Veterans of Foreign Wars of the United States planned to observe Loyalty Day, 1960, at Valley Forge State Park, Valley Forge, Pa., on Sunday, May 1, but because of inclement weather the program was canceled. Another effort was made on Sunday, May 8, to stage the program, but rain again interfered, with the result that it has been necessary to abandon this year's observance of May Day at Valley Forge.

Having been invited to deliver the principal address at the May Day program at Valley Forge, I am inserting in the RECORD at this time the address which I had prepared for the occasion: SPEECH BY REPRESENTATIVE JAMES E. VAN

ZANDT, LOYALTY DAY CELEBRATION AT VAL-LEY FORGE STATE PARK, VALLEY FORGE, PA., SPONSORED BY THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, SUNDAY, MAY 1. 1960

The 1960 Loyalty Day celebration recalls years of effort by the Veterans of Foreign Wars of the United States to have May 1 of each year permanently designated as Loyalty

This occasion is further enhanced by the very nature of our geographical location, Valley Forge, which truly signifies heroic devotion to the principle of American loyalty.

The events that occurred here at Valley Forge almost 200 years ago have become sacred chapters in the annals of America's heritage.

It was a great honor to accept the invitation to bring you a loyalty day message and—as many of you know—my interest in this particular day holds both pride and

After years of persistent effort to have May 1 of each year designated as loyalty day-1958 the Congress endorsed a House joint resolution which it was my privilege to in-troduce as a Member of the House of Repre-

The resolution was duly signed by President Elsenhower on July 18, 1958 and thus May 1 of each year was established as Loyalty Day.

This legislation requests that the President of the United States issue an annual proclamation inviting the people of the United States to observe loyalty day with appropriate ceremonies—"In which all of our people may join in the expression and reaffirmance of their loyalty to the United States."

The 1960 loyalty day proclamation of President Eisenhower reminds us that "the existence of the United States as a free Nation is dependent upon the unswerving and enlightened loyalty of its people," that "our priceless heritage of freedom is in constant danger from forces inimical to our tradiwhich is our fundamental principle of lib-erty under law"—and "that on one special day of the year we give grateful expression to our country's deep hold upon our hearts

Fellow Americans, we can do no less than give these ideals so ably expressed by President Eisenhower our earnest attention as loyal and liberty-loying citizens of this great Republic.

Before I give you some of my thoughts on the subject of loyalty-I should like to extend a well-deserved tribute to the Veterans of Foreign Wars of the United States.

It had long been the goal of the VFW to secure a definite means by which we could counteract the demonstration of the Communists on May Day which often grew to large proportions in many cities, especially along our eastern seaboard.

Someone has said the VFW is not regarded as merely a lot of ex-servicemen engaged in

giving more lipservice to lofty ideals.
Since its inception in 1899—the VFW has to its credit an endless list of projects which have benefited communities across our entire Nation.

The "good of the public" has been kept in mind at all times.

The VFW has realistically believed that its members want to continue their service to their country through broad activities in time of peace to help strengthen the foundations of the Nation they helped defend by bearing arms against enemies on foreign battle-

It was appropriate-indeed-that the Veterans of Foreign Wars of the United States should take the initiative in establishing Lovalty Day.

This adds one more chapter to the VFW's record of patriotic service to America.

It is not incidental that the Veterans of Foreign Wars of the United States on February 22 of this year was again honored by the Freedoms Foundation at the foundation's 11th awards-presentation program.

It was the 10th consecutive year that the VFW has been named to receive a Freedoms Foundation distinguished service award-which was based on the VFW's nationwide leadership in the observance of Loyalty Day-May 1.

Fellow Americans-what should we emphasize today in our thoughts about loyalty to our country?

Often historical illustrations are overlooked in our rush to launch another satellite or another missile, however important such efforts may be.

It has been said that Americans today are living examples of the terse comment that "the one thing we learn from history is that we learn nothing from history."

May I relate to you a very interesting coin-

cidence of history.

Just as Edward Gibbon was nearing the

manumental work, "The Decline and Fall of the Roman Empire," small group of men, assembled in Philadelphia, was creating a new republic in the Western World.

No writer had ever attempted a larger task than Gibbon in the history of Rome.

No one would have believed that so many pages would ever again be required for the portrayal of such an epic.

We might well ask ourselves today these

(a) Will some future historian record on an equal scale the decline and fall of our Western civilization?

(b) As the years pass will there be an erosion of American ideals?

(c) As in many countries will the tide of our national ideals be turned back by a sudden reversion to a dictatorial form of

The Republics of Rome and America are not identical.

But some points of similarity might well give solemnity to the warning that the same fate which overtook the one might easily overtake the other.

Rome based its dominion on the powers of the Caesars, but the strength of our Western Republic is derived from the people.

Rome collapsed when it became drunk with

On the other hand, America faces the choice of maintaining the bulwark of its Constitution or slowly submitting to the numerous "isms" which crowd into the headlines of our lives.

Therefore, we are faced with these ques-

(a) Will the American people continue to uphold the Constitution?

(b) Can we continue to maintain our political and social equilibrium without destroying our liberty?

In considering these questions—one may wonder if the makers of the Constitution dreamed that such questions would arise in regard to that document.

The spirit of the Constitution is set forth in the words of Madison when he said that the general opinion of the Convention was to secure the private rights against majority factions-and at the same time-to preserve the spirit and form of popular government.

It is evident, therefore, that the American people must be brought to the realization that these objectives must be maintained or constitutional government will give way.

American ideals can be maintained—my fellow Americans, through the repetition of ideas-ideas that point up loyalty to our

Likewise, the repetition of ideas, which are contrary to our way of life will ulti-mately result in the acceptance of something less than the American form of government.

Does the average American citizen recognize that we are being literally deluged with propaganda of all kinds?

Since 1917, and with intensified force for the last two decades, the Communist masters of the Soviet Union have sought to sell the American people the thesis that the Communist system represents the tide of the

On the other hand, there has been a tendency in America to dwell upon our shortcomings and to place our thoughts upon the faults of our own system—a system that in reality is the envy of all the world.

It is unthinkable, yet true, that in some circles the very word "loyalty" has been frowned upon as being old fashioned and somewhat ridiculous.

It has been stated that the United States is both an obstacle to communism and a target for it.

Yes, it is an obstacle because our whole way of life reveals the falsity of the Com-munist claim that people find happiness and prosperity only under Communist rule.

Yes, it is likewise a target because our economic and industrial strength is built upon free institutions which Communist theory condemns as unworkable and doomed

Communist activities, therefore, should be of grave concern to loyal Americans.

To combat communism effectively we need to know how Communists are organized and how they operate.

We need to know and recognize their strat-

egy and tactics.

The graveness of the threat to a Nation's security from Communists within its borders cannot be measured merely by their numbers.

In fact, the Communists have been a minority-and often a very small one-in the

countries they have taken over.
So we cannot afford to take lightly the possible danger from Communists in this country just because the number of party members in our midst has been small

The Communist Party in the United States was outlawed by an act of Congress-signed by President Eisenhower on August 24, 1954.

Membership in the party is not a crime. But the Communist Party in the United States was stripped of the rights, privileges, and immunities of legal bodies created under the jurisdiction of the laws of the United States or any of its political subdivisions.

Presumably this means the party cannot

hold bank accounts, obtain aid from the courts in enforcing contracts, or run candidates for public offices.

The Communist Party in action has two parts.

One appears on the surface and its actions are open to view.

The other part operates underground.

The chief underground operations are esplonage and conspiracy against the Government of the United States.

The use of the printed word has become increasingly important to the Communist in light of our Government's ability to expose subversive activities of the Communists of the United States.

Congress has passed a number of laws dealing with specific problems in curbing

the Reds.

For example, individuals and organiza-tions acting on behalf of foreign powers in the United States are required to register with Federal authorities.

In addition, the Smith Act made it illegal to advocate overthrow of the Govern-

ment by force and violence.

The Congress also voted to take American citizenship away from any person convicted of conspiring to advocate violent overthrow of the Government of the United States.

Today peacetime spying is subject to the death penalty.

Fellow Americans, it is common knowledge that the Soviet Union betrayed the great alliance of World War II by launching the cold war that envelops the world at this moment.

The task of the Communists everywhere in the world is to undermine resistance to the Soviet Union and Red China through their phony appeals for peace.

Nations are persuaded to disarm, and confidence of the people of a free nation in their leadership is destroyed.

In short, free nation is set against free nation.

Therefore, it is paramount that in defending ourselves against Communist infiltration and Communist fronts, we be alert to identify and expose the real enemy and not attack each other.

There are weapons the average citizen

can use to combat communism.

We might appropriately call them indis-censable tools designed for daily use by each loyal American.

These weapons in our arsenal are many.

For example, information is a very important weapon.

In this field, we should keep abreast of current affairs because freedom of the press and freedom of speech are essential to political liberty.

Where men cannot freely convey their thoughts to one another-no freedom is se-

One may ask in all sincerity, "How can we distinguish truth from propaganda?'

The answer is-

(a) We must analyze rather than follow blindly the conflicting ideas that constantly enter a free society.

(b) We should maintain an intense and active loyalty to the principles upon which our Nation was founded-and finally

(c) These principles are a splendid guide to use in determining what is true and what

Another worthwhile weapon in our stockpile is "alertness."

In this connection, no one should permit himself to innocently support Communist

To the contrary—we should pay more attention to what Communist leaders tell us about the techniques they intend to adopt to underline the structure of our form of government.

Fellow Americans-loyalty day is a day which should bring us to our feet to salute the flag of our country.

it should bring us to our feet in a state of alertness to the factions that would undermine our Nation.

There is no doubt that the trend toward stricter control and greater unity of Com-munist thought and action throughout the world has intensified during the past 18 months.

Khrushchev's visit to the United States in the fall of 1959 and his activities since have made it clear that though the Communist leader emphasized in general terms his desire for peace, he reacted negatively to any proposal for a compromise on the concrete issues dividing the free world and communism.

We recall his appearance before the United Nations on September 18, 1959 when he proposed general total disarmament within 4 but confined himself to generalities, as the Soviet Union had done in two previous proposals of a similar nature made to the League of Nations by Soviet spokesmen.

It seems that we go through periods of hope for peace and goodwill and at times grow lukewarm toward the cold war which is all around us.

Those who expected Khrushchev's visit to the United States would change in substance the issues of the cold war have been disappointed.

Mark you, disappointment often breeds in-

Therefore, America must remain alert to new and more provocative incidents that overnight can affect the position of the United States in the eyes of the world.

There are many bright spots on the horizon as we view our world today, but there are also many dark spots.

Unfortunately, the basic problems have not been solved.

It is appropriate at this point to recall a statement made by President Eisenhower on March 1 of this year during his South American tour when he said in Santiago, Chile:

"The peace that we all seek, in justice and in freedom, can be based only on one thing, mutual understanding. Unless we have that among peoples, and eventually governments which are always seemingly be-hind the people rather than ahead of them unless we have that kind of understandingmutual understanding—we are not going to have true peace.

"Each of you that helps in the tiniest way to bring about this understanding is thereby promoting the peace for himself, his children, and those who are to come after him."

Fellow Americans, in striving for universal justice and freedom, it is essential that we keep in close touch with America's attitude toward its way of life-and its attitude toward political and economic problems.

Our loyalty demands that we be proud of many things-but it also demands we bear in mind that we are not perfect.

Our loyalty demands that we avoid the vice of self-complacency.

We should acknowledge the fact that the American system has many safeguards.

With the proper forces at work in the minds and hearts of the American people in the future—as in the past—the spirit of liberty will flourish in our beloved land.

Finally, my fellow Americans, our loyalty must keep this country militarily strong, mentally alert, and above all, ever mindful of the heritage on which we as liberty-loving Americans base our hopes for a peaceful future.

Senator Thurmond's George Washington Award Speech to Senator Goldwater

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. MUNDT. Mr. President, at the annual George Washington awards dinner of the American Good Government Society on April 30, attended by many of our colleagues in the Senate and the House, Senator BARRY GOLDWATER, of Arizona, and Congressman GRAHAM BAR-DEN, of North Carolina, were the award recipients. It was a great occasion attended by nearly 700 distinguished Americans.

Senator STROM THURMOND, of South Carolina, made the awards presentation speech to Senator Goldwater and I ask leave at this point to have his address printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR THURMOND IN MAKING PRESENTATION OF THE GEORGE WASHINGTON AWARD TO SENATOR GOLDWATER AT THE AN-NUAL GEORGE WASHINGTON DINNER OF THE AMERICAN GOOD GOVERNMENT SOCIETY. APRIL 30, 1960

I feel very highly honored tonight to have the privilege of making the presentation of a George Washington Award of the American Good Government Society. This award carries much distinction and honor because it is presented by a great organization which stands for the highest American principles and traditions and also because the award is based on the lofty ideals of the greatest American, the Father of our Country, George Washington. I am particularly pleased to have the opportunity to make the presentation of this award to one of my most valued friends, a man who has never hesitated to place principle above expediency, country above party, and honor above profit.

This man possesses all the basic qualities which are so vital in winning and holding the respect and confidence of his fellowman. He is a man of great intellect, wisdom, judgment, industry, integrity, sincerity, and courage. In addition, he is one of the most handsome and personable gentlemen in public life. All of these qualities have played an important part in the outstanding success he has attained as a businessman, an Air Force Reserve officer, and as a public servant.

Of all the qualities I have mentioned in describing the recipient of this award, there is one upon which we must place a premium in our country today, especially for public servants, and that quality is courage. Winston Churchill has well said that "courage is rightly esteemed the first of all human qualities because it is the quality which guarantees all others."

I do not know of any man who has demonstrated this priceless quality to a greater extent in performing his duties as a U.S. Senator than the recipient of this award. He has opposed the demands of special interest groups when their demands were not in the interest of the public. He has ex-posed and moved to correct the corrupt practices of big labor bosses in the interest of the working people even in the face of attempts by the labor bosses to retire him from public life. He has fought to preserve personal liberty during this period when conformity appears to be the order of the day. He has defended our great free en-terprise system against the rising tide of socialism. He has stood up for the Con-stitution and the rights of the States as against usurpation of power and a central-lization of Government in Washington. He has spoken up against deficit financing and in favor of fiscal sanity and a balanced budget. He has advocated a program of national defense which would insure ade-Quate strength and readiness to cope with the aggressive intentions of any enemy Power. And he has proposed a bold foreign Policy program of strength and wisdom in seeking victory for the free world in our struggle against the dictatorial and godless forces of communism.

The Republican Party of South Carolina, as well as his home State party, recently selected this man as their favorite nominee for President. Knowing the southern peo-ple as I do, it is my opinion that if he should be selected as the nominee of either major political party, he would carry the South; and if elected, he would make a great President.

It is a unique and distinct pleasure for me to present this very coveted award to an able Senator, an outstanding soldier, a dedicated statesman, a true patriot, a distinguished citizen, and a great and courageous American, my good friend, BARRY MORRIS GOLDWATER.

TEXT OF CITATION ON SCROLL—RESOLUTION OF TRIBUTE AND HONOR

BARRY MORRIS GOLDWATER

Merchant and soldier, statesman and political leader, has dedicated half of his adult Years to the service of his fellowmen-in the Army Air Corps, in the city council of Phoenix, and in the U.S. Senate.

Knowledge, energy, integrity, and courage characterize the service of this distinguished Senator. His belief that the protection of God-given personal liberty is the first pur-Pose of national independence has made him a leader of those who would revive and restore the blessing of liberty in this coun-

Instilled with the American heritage of Anglo-Saxon law, he is a resolute foe of those who would erase the sacred rights of mankind. Thus, he repudiates the idea that our National Government can delegate a sovereign power to tax men and to rule commerce and industry to trade unions. Senator Goldwarer has enriched the field of politics, the noblest calling any man can

Man's Work at Niagara

EXTENSION OF REMARKS OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. DOOLEY. Mr. Speaker, I ask unanimous consent to include in the RECORD an editorial from the New York Times of May 10, concerning the hydroelectric power project at Niagara Falls,

This project, which will cost threequarters of a billion dollars, will be the largest hydroelectric power project in the Western World.

The magnitude of what is being done at Niagara Falls challenges the imagination. It involves the creation of new parks, parkways, highways, and bridges, the relocation of railroad tracks, and the movement of great masses of earth and stone. When it is finished the project will serve a great area of New York State, Pennsylvania, and Ohio.

The editorial follows:

MAN'S WORK AT NIAGARA

No one has succeeded in describing adequately what nature has done at Niagara Falls and words are likewise unequal to convey the magnitude of what man is doing there now in construction of the \$720 million hydroelectric power project and related improvements to enhance visitor enjoyment of a trip to the falls. Old battles give way to new. The contests in Congress and the courts are history. What spring visitors now see when they turn away from the hypnotically beautiful sight of the torrents bearing the last of winter's ice, is man's mastery of a river whose cruel force would have seemed unconquerable.

Some measures of size and speed help in the comprehension of what the New York State Power Authority is building. This is the largest hydroelectric generating installa-tion in the Western World. First, power will flow in February 1961, 3 years after award of first construction contracts." Main elements are the water intake 21/2 miles above the falls, conduits whose inside measurements are 46 feet by 62 feet, two generating plants and a huge reservoir. In the month of April 9,000 men were on the job, yet so vast is the backdrop, so great the distances, that the tempo seems deceptively slow.

If Niagara Falls, the city, could have been evacuated of business, industry, and residents, the job would, of course, have been infinitely easier. But life had to go on much as usual. Utilities, railroads had to be relocated. Water had to be supplied to industry even though part of the river was temporarily dried up. This is not just a case of building great powerplants which are below the falls. It is a major project of creating new parks, parkways, highways, bridges, a tower with elevators creating new vistas—vast improvements for the visitor to the American side of the falls.

Basic to this whole construction are such incidentals of ponderous scope as the largest aggregate plant ever built to supply crushed rock and sand, and concrete mixing plants on the site, while rock gouged out of the gorge wall and elsewhere contributes material for fill for such widely varied purposes as roads, parking areas, a new housing subdivision, reservoir dikes, and all the massive fundamentals of the power project itself.

So there are two great sights at Niagara this summer—the falls and the power-construction tob-for visitors who will not soon or ever again have such an opportunity midway in construction. Robert Moses, as chairman of the power authority, has been giving up some jobs, taking on another big one in the World's Fair. But at Niagara he is in the midst of a rushing to completion a work that stands large and unmatched in his singular career of accomplishment.

One Hundredth Anniversary of First Treaty of Amity and Commerce With Japan

EXTENSION OF REMARKS

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. JOHNSON of Texas. Mr. President, I should like to briefly mention the observance in Dallas, Tex., of an important event which happened 100 years ago. That was the signing by the United States of the first treaty of amity and commerce with Japan, opening trade routes between the two nations.

That treaty is being commemorated in Texas, Mr. President, because it now represents an important source of prosperity for Texas and other States in the South and Southwest, as well as Japan. Last year the Japanese bought nearly \$100 million worth of American cotton. In return, America is an important customer for Japan's ancient, but still popular, luxury fiber-silk.

In recognition of this important trade relationship, Japan is sending to Dallas a silk exhibition which will feature scores of silk textiles and ladies' fashions created from them. I think it is of real significance that Dallas has been chosen as the site for this exhibition. I think it is of real significance that Japanese-American trade is once again healthy and prospering, and that the silk exhibition signifies these restored friendly relations.

I ask unanimous consent to have printed in the Appendix of the RECORD a letter on this subject which I have re-ceived from John H. Shoaf, executive secretary of the Dallas Manufacturers and Wholesalers Association.

There being no objection, the letter was ordered to be printed in the RECORD. as follows:

DALLAS MANUFACTURERS & WHOLESALERS ASSN., INC. Dallas, Tex., April 28, 1960. Senator LYNDON JOHNSON,

Senate Office Building, Washington, D.C.

DEAR SENATOR JOHNSON: Because our country and Japan this year celebrate the cen-tennial of their first treaty of amity and commerce, I wish to call your attention to a splendid example of such amity and commerce taking place in Texas this spring.

I feel this centennial is uniquely significant to Texas, because today much of our State's foreign commerce is with Japan. Cotton, of course, is one of our main ex-ports; and Japan buys most of the Texas

cotton that is shipped abroad. Last year she bought nearly \$100 million worth of American cotton, and much of even the part of that which was grown in other States is shipped from Texas ports.

Historically, Texas like the rest of the Nation has sold and shipped a great deal more to Japan than it has imported from Japan, and the Japanese trade has been important and profitable to our State.

This year, for the first time, Japan is sending to Dallas, Tex., its lavish and brilliant annual Japan Silk Exhibition, a display of newly woven silks all produced this year, and representing all the great silk mills of

It strikes me that this is a wonderful illustration of the importance of international trade at its best-demonstrating an exchange that can be mutually useful and profitable, and also the importance of Japanese-American trade not only to the whole United States, but especially to the South, and to individual States and cities,

Silk seems to me an extraordinarily happy symbol of the Japan-American trade which this year's centennial celebrates-and which today has vast new importance to the entire world and in fortifying free-world strength, stability, and prosperity in the danger areas of the Far East.

Silk was one of the first and most valued products of our trade with Japan from the time it began just 100 years ago, and throughout the generations until the Second World War.

During the war, not only the entire trade ended, but the industry in Japan was largely destroyed; by the time trade was reestab-lished, new synthetic textiles had largely replaced silk for American use.

But silk continues to be-as throughout all recorded history—the outstanding luxury fabric, and today it is enjoying the fashion revival of which it is worthy.

It also is symbolic of desirable interna-

tional trade in another way. Silk is an in-digenous product of Japan. We do not raise it in this country in any appreciable quantity. And because it is an unique natural product which duplicates no other and cannot be duplicated, it is a noncompetitive material. Japan exports silk; we export cotton. Both countries use and wear both materials, so that it makes a mutually fortunate trade.

The 1960 Japan Silk Exhibition in Dallas will display scores of Japan's newest silk textiles in an extraordinary variety of weave and design. Besides showing the beautiful silk materials themselves, it also presents a fashion show to demonstrate the use of these silks in international fashions. For this 10 of Japan's leading fashion designers created 30 original costumes, both American and Japanese-a spectacular array which is most fascinating and picturesque. You know how our Texas women love fashion

Personally, I feel that Dallas, Tex., is honored to be the only city in the Nation where this Exhibition is to be shown, outside New York and Los Angeles-and it occurs to me in view of the national observance of the Japan-American trade centennial, it would be most appropriate, and very gratifying to us in Dallas, if you could give it recognition by some suitable comment on the floor of the Senate.

It is interesting that in this centennial year, Japan has become of such vital importance to our country that for the first time in history a President in office is making it an official visit. This emphasizes anew the importance of Japan-American amity and commerce which led to the writing of that first treaty which was ratified just 100 years ago, on May 22, 1860.

If you could feel it worth while to make a Senate reference to the significance of the 1960 Japan Silk Exhibition in Dallas as an example of Japan-American trade relations at the end of the first 100 years, we certainly should appreciate it very much, and be enormously grateful.

With warmest good wishes and great regards,

Yours sincerely,

John H. Shoaf,

Manu Executive Secretary, Dallas Manufacturers Wholesalers Association, Inc.

DALLAS CHAMBER OF COMMERCE

Dallas, Tex., April 27, 1960. Acceptances received to date in reply to Mr. Potter's invitation to Washington diplomats to visit Dallas on May 10-11 indicate that over 30 foreign countries will be represented.

Your Dallas Chamber of Commerce is doing everything possible to encourage better trade relations between our business community and oversea markets throughout the world.

A first step was to extend invitations to all foreign embassies in Washington to send their commercial counselor to Dallas for 2 days for the purpose of seeing first hand, on a person to person basis, what Dallas is and what Dallas has.

Response to the invitation has been heart warming and we sincerely hope that you will take this opportunity to meet with the com-mercial counselors of the world during their Dallas visit.

Dallas Diplomats Day program includes:
1. Luncheon at the Dallas Trade Mart,

2100 Stemmons Expressway, Tuesday, May 10, 12 noon, \$3 per person.

2. Informal reception and dinner, grand ballroom, Sheraton-Dallas Hotel, Tuesday, May 10, 7:30 p.m., \$6 per person. Ladies invited.

3. Luncheon at the Century Room, Adolphus Hotel, Wednesday, May 11, 12:15 p.m., \$3 per person.

Appointments for consultations with commercial counselors may be arranged through the world trade department for Wednesday, May 11 from 1:30 to 3:30 p.m. on a first call, first served basis as time is very limited.

For luncheon or dinner reservations, please use the enclosed form.

Sincerely yours,

JOHN H. SHOAF, Secretary, World Trade Committee.

The Importance of Depressed Area Legislation to the Biddeford-Saco, Maine, Area

EXTENSION OF REMARKS

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. OLIVER. Mr. Speaker, legislation to assist the chronically depressed areas in our country is now before the President for signature. In many regions of the United States, the action taken by our Chief Executive will have a profound effect on millions of Americans. The chance to lead a full life for many who want to work but cannot find employment is at stake. Many of these men and women have been without work for months. Positive action, which will result in jobs for millions of unemployed Americans, is needed and needed now. I am convinced that the Area Redevelopment Act supplies this need.

As a means of underlining the importance of this legislation to one specific area, I would like to insert a statement prepared by Mr. Michael Schoonjans, director of the Biddeford-Saco, Maine, Joint Board of the Textile Union of America. Mr. Schoonjans clearly and accurately outlines the importance of this bill to the Biddeford-Saco, Maine, area where there has been substantial unemployment since 1954.

The statement follows:

The passing of the aid-to-depressed-area bill by the House of Representatives Wednesday, March 4, makes those of us who have worked untiringly for this bill very happy and we are indeed very grateful for the efforts of Democratic Congressmen FRANK M. COFFIN and JAMES C. OLIVER in working for the passage of this much-needed legislation. It is our sincere hope that President Eisenhower will sign this important piece of legislation because it could mean the salvation of the industrial area in the Biddeford-Saco

Certain sections of this bill would directly benefit all of the depressed areas in the State of Maine such as Portland, Biddeford-Saco, Sanford, and others. For instance, this bill would create a new area redevelopment administration who would designate industrial areas eligible for aid, the authorization of two \$75 million revolving funds from loans to help finance new industrial projects.

It would also set up a program of Federal loans and grants to help areas such as ours make an economic comeback. The Federal Government, under this bill, would foot up to 65 percent of the cost of the project.

Another section of this bill would also authorize the new agency to make up to \$50. million on a 40-year loan basis and \$35 million in outright grants to State and local governments to build water and sewage plants and other public facilities needed to stimulate economic growth. This would mean that the Saco River could be completely cleaned up with the results that the real estate values on both sides of this river would increase tremendously plus the added value of attracting new industry and a tremendous increase in tourist business as this would mean clean and healthful waters

for industry or recreational purposes.

Another section of this bill which is presently needed in this area and all of us should be very much concerned is the measure that would permit the grants of up to \$4,500,000 a year for depressed areas and up to \$1,500,000 to help the State provide vocational education to the jobless in these communities and \$10 million for jobless persons training for new jobs who are not receiving unemployment compensation.
This would be an immediate help to the Biddeford-Saco area and to the present existing industries such as the shoe and textile industry. It has become increasingly necessary to have skilled workers available so that the present industries would not be forced to import skilled help from other areas. There are, at present, approximately 1,000 unemployed workers in the Biddeford-Saco area who no longer can collect checks and would be helped by a vocational and training program which in turn would be an added potential for attracting new industries and retain the present ones.

It would also create an incentive for keep ing our youth in our particular areas and in the State of Maine. There are presently over 200 senior high school students of this area that have registered for full-time employment when they graduate in June. These are students who, because of economic conditions in their families, will not be able to continue their education; perhaps, after graduation day, many more students will register for permanent work.

The depressed area bill, as passed by the House of Representatives, is the answer to our immediate and future economic prob-

lems of the Biddeford-Saco area.

It is our sincere hope that President Eisenhower will sign the depressed area bill without further delay so that the Biddeford-Saco area may once more become the industrial areas they once were. If Mr. Eisenhower has any feeling for these unfortunate unemployed workers who want to stay and work in Maine, he will not hesitate to sign this very important piece of legislation.

Tribute to Joseph R. Knowland

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10, 1960

Mr. KUCHEL. Mr. President, the State of California is justly proud of its farflung series of parks, beaches, and other areas which, over the years, have been set aside by representatives of the People for the enjoyment of all.

During the last 25 years a distinguished Californian—one who was born in that State, and who has lived his long life there—has served as a member of, and, for 19 years, as chairman of, the California State Park Commission. I think it may be truthfully said that, in great part, he was responsible for the development of the California park system.

A few weeks ago he retired from service on the California Park Commission. He takes with him the satisfaction of unselfish work well done for his fellow Californians.

I believe it is of particular interest to the Members of the Senate to know that Joseph R. Knowland, of Oakland, once a Member of the House of Representatives from the county of Alameda, and the father of a former distinguished U.S. Senator, who, during a number of the years of his service here, graced the seat of Republican leader of the Senate, is the person to whom I refer.

Under date of April 18, the San Francisco Examiner commented on the unselfish service which Mr. Joseph R. Knowland has rendered; and I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNSELFISH SERVICE

Joseph R. Knowland, the Oakland publisher, has retired from the State park commission after nearly a quarter of a century of far-sighted and unselfish service to California's park system. He was the commission's chairman for 19 years.

During his long regime the State built a park system that preserves for all time its most important historic sites, its loveliest scenic spots and large recreational areas needed for our swiftly growing population. From today's vantage point it is evident that the creation of this system constitutes one of the wisest investments California ever made.

California history has been one of Mr. Knowland's lifelong interests. Even before he went on the commission he worked with another native son, the late William Randolph Hearst, to preserve famous structures dating back to California's Spanish and 49'er periods.

We salute him for a lifetime of distinguished service to the cause of California's

public parks.

C. & O. Canal National Historical Park and Parkway

EXTENSION OF REMARKS

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. FOLEY. Mr. Speaker, H.R. 2331, to establish the Chesapeake and Ohio Canal National Historical Park and Parkway, will come to the floor shortly. In order to provide the Members of the House with basic documentary material not included in printed 1959 hearings on H.R. 2331, I am inserting the following contract and substantive agreements in the Congressional Record.

On August 6, 1938, the U.S. Government purchased the C. & O. Canal from the Baltimore & Ohio Railroad. The contract of purchase and sale appears on page 85, House Document No. 687, 81st Congress, 2d session, August 16, 1950. The contract is as follows:

CONTRACT FOR SALE OF PROPERTY OF THE CHESAPEAKE & OHIO CANAL CO.

This agreement, made the 6th day of August 1938, by and between Edgar W. Young, R. S. B. Hartz, and G. L. Nicolson, receivers, as hereinafter mentioned (herein referred to as "receivers"), parties of the first part, and the United States of America, acting through the Secretary of the Interior or other authorized representative (hereinafter sometimes referred to as the "purchaser"), party of the second part.

Witnesseth:

Whereas, by order entered April 29, 1938, by the Circuit Court for Washington County, Md., in the equity case entitled "George S. Brown et al., Trustees, v. The Chesapeake and Ohio Canal Company et al., Nos. 4191 and 4198, Equity, Consolidated Causes," and by order entered May 2, 1938, by the District Court of the United States for the District of Columbia in the ancillary equity case entitled "George S. Brown et al., Trustees v. The Chesapeake and Ohio Canal Company et al., Equity No. 12240," the said courts upon petition of the Baltimore & Ohio Railroad filed in said causes, did appoint Edgar W. Young, R. S. B. Hartz, and G. L. Nicolson as receivers of all the property, estate, rights, and franchises of the Chsapeake & Ohio Canal Co. and authorized said receivers to negotiate for the sale and to enter into a contract or contracts for the sale of said property, estate, rights, and franchises in one or more parcels and upon such terms and conditions as they might deem to be in the best interests of the estate and creditors of the Chesapeake & Ohio Canal Co., subject, however, to the approval of said courts; and

Whereas said receivers have negotiated for the sale of said property, estate, rights and franchises, with certain reservations hereinafter set forth, to the United States of America, and believe, after a careful examination of the whole subject, that a sale upon the terms and conditions hereinafter set forth will be, under all the circumstances, a fair and adequate one, and are willing to report the same to said courts with the recommendation that the same shall be accepted by said courts and that thereupon such further proceedings shall be had in said cases as said courts shall direct to vest a good and satisfactory title to said property, estate, rights and franchises in the United States of America, or such Department, or nominee or nominees thereof, as it may direct, subject to the terms of this agreement; and

Whereas, as a preliminary to such report of said negotiations, it is necessary that the parties hereto execute this agreement, which is to be made a part of any report of sale of said property, estate, rights and franchises, and of the ratification thereof, and of any deed ordered by said courts to be made granting the same to said purchaser, and which is to be and become fully effective and binding as to all its parts, covenants and specifications between the parties hereto in case said courts shall approve said negotiations and contract to sell and by proper proceedings cause title to said property, estate, rights and franchises to be vested in said purchaser as aforesaid.

Now, therefore, in consideration of the premises and of \$1 cash in hand paid, and in order to carry out all the aforegoing objects and purposes, it is covenanted and agreed between the parties hereto as follows:

(1) Said receivers agree forthwith to recommend to said courts that all property. estate, rights, and franchises of the Chesapeake & Ohio Canal Co., now vested in them, excepting, however, the reserved portions hereinafter described, be sold to the United States of America for the sum of \$2 million, and it is understood and agreed by both parties hereto that the real property referred to above includes all of these parcels or tracts of land in the States of Maryland, Virginia, and West Virginia, as shown on the "property maps of the Chesapeake & Ohio Canal Co. as surveyed by B. F. Mackall under the direction of G. L. Nicolson, general manager," and all of those parcels or tracts of land in the District of Columbia as shown on the "plats of the Chesapeake & Ohio Canal Co. property as surveyed by H. W. Brewer, February 1894," to the extent that said property is now owned by the said receivers, together with any and all other parcels or tracts of land, the title to which is now vested in the said receivers.

(2) The United States of America agrees that in case said courts shall aprove this contract to sell and by proper proceedings cause a good and sufficient title to said property, estate, rights, and franchises to be vested on or before January 1, 1939, in the United States of America, or such department or nominee or nominees thereof, as it may designate, that it will pay in cash to said receivers, upon the execution and delivery of a proper deed, the sum of \$2 million.

(3) The United States of America agrees that it will not use or permit to be used all or any part of the property herein referred to for the conveyance of freight or passengers by land without the prior written consent of the Baltimore & Ohio Railroad Co.: Provided, however, That this covenant shall not extend to such transportation facilities on the lands covered by this agreement as are considered by the Secretary of the Interior, or his successors, to be reasonably necessary to provide accommodations for the visiting public.

(4) The portions of property of the Chesapeake & Ohio Canal Co. described in exhibit A, attached hereto and hereby made a part hereof, are reserved to said receivers for other disposition and are excluded from the operation of this contract of sale except as specifically provided therein.

(5) That all of the lands being reserved from sale in accordance with exhibit A of paragraph (4) of this contract shall be surveyed and the corner posts and boundary lines thereof definitely established by the receivers, or their agents, within 6 months of the date of approval of the final contract for

courts having jurisdiction over such prop-

(6) That before title to the lands covered by this contract shall be accepted by the United States, the said receivers, or their agents, shall secure from all occupants of land covered by this contract a cancellation or surrender of any leases, licenses, or other instruments, or termination of their right to occupancy, which such occupants may have covering such property, provided, how-ever, that this provision shall not extend to existing water leases. Any occupants failing to cancel or surrender such instruments, or whose rights have not been otherwise terminated, shall be removed by the said receivers, or their agents, before title to the canal property covered by this contract is accepted on behalf of the United States, unless the Secretary of the Interior, or his successors, shall waive this requirement as to any such occupants.

(7) That, upon the approval of this contract by courts of competent jurisdiction, the said receivers shall make available to the Secretary of the Interior, or his successors, all existent land and other records relating to the canal property, and such additional data, maps, reports, papers, documents, and personal property as bear upon the ownership and history of the canal. The said Secretary of the Interior, or his successors, shall then be entitled to possession of such of the material so made available as in his discretion is desirable for permanent retention by the United States when title to the said canal property is accepted by the United States of America. It is understood, however, that this provision does not obligate the said receivers to produce records, docu-ments, maps, etc., if they have no rights of possession or ownership thereto.

(8) That during the period covered by this instrument the said receivers do hereby grant to the officers and accredited agents and representatives of the United States of America, at all proper times, unrestricted right and privilege to survey or enter said property of the Chesapeake & Ohio Canal Co., for all proper and lawful purposes in connection with the negotiations for the acquisition

(9) That when the United States of Ameracting through the Secretary of the Interior or other authorized representative, shall have approved and signed this contract then, in that event, this instrument shall constitute a contract of bargain and sale

between the parties hereto.
(10) No Member of or Delegate to Congress or resident commissioner shall be admitted to any share or part of this contract or to any benefit that may arise therefrom. Nothing in this paragraph, however, shall invalidate this contract if made with a corporation for its general benefit.

In witness whereof, said receivers and the United States of America have caused this agreement to be executed in triplicate the

day and year aforesaid.

Signed, sealed, and delivered in the presence of (two witnesses to each signature):
[SEAL] EDGAR W. YOUNG,

D. WILLARD, Jr., HENRY J. MEIER. Sr., [SEAL] R. S. B. HARTZ, D. WILLARD, Jr., HENRY J. MEIER, Sr.,

[SEAL] G. L. NICHOLSON, D. WILLARD, Jr., F. J. WORTHINGTON.

Receivers of the Chesapeake & Ohio Canal Co.

THE UNITED STATES. OF AMERICA, By E. K. BURLEW, Acting Secretary of the Interior. Approved August 6, 1938.

On June 30, 1958, Conrad L. Wirth, Director, National Park Service appeared

the sale of the said canal property by the before the Public Lands Subcommittee of the House Interior and Insular Affairs Committee. He placed in the record recitals of basic understandings reached by the National Park Service and the Maryland Game and Inland Fish Commission on the C. & O. Canal National Historical Park. They appear on pages 20 to 22 of the 1958 85th Congress printed hearings. Since these agreements do not appear in the 1959 printed hearings, they are inserted at this point in the Con-GRESSIONAL RECORD:

> STATEMENT OF OBJECTIVES FOR THE PROPOSED CHESAPEAKE & OHIO CANAL NATIONAL HIS-TORICAL PARK

> 1. To preserve the historic and scenic values associated with the canal through the repair and restoration of essential canal structures and through such land acquisitions as are necessary for the preservation of the scenic and historic setting of the canal.

> 2. To increase the public use and enjoyment of the proposed park by rewatering segments of the canal, where feasible, to facilitate canoeing, fishing, winter sports, and other suitable recreation activities; by providing access and parking space, drinking water, and sanitary facilities; maintaining the towpath as a naturalistic trail suitable for hiking and bicycling; providing campgrounds and picnic areas, boat facilities and services, museum exhibits, and other interpretive devices to explain the story of the canal and the region it traverses.

> 3. To assist the State of Maryland and political subdivisions thereof in their programs for the propagation of wildlife, wilderness conservation, and public recreation, which are related to the proposed park. Federal lands especially suited to these State and local programs would be made available for such purposes, to the extent consistent with the preservation and public use of the park, under long-term cooperative agreements or leases.

> 4. To develop a scenic parkway, approximately 23 miles long, generally away from the canal, from State Route 51 to a State highway in the vicinity of the Woodmont

> 5. To encourage the establishment of overnight accommodations and other related visitor services outside the park.

> 6. To promote public use of the area through the use of informational literature and other mediums.

> STATEMENT OF RELATED PARK OPERATIONS AND PLANS

> 1. In accordance with section 1 of the Beall-Hyde bills, the Secretary of the Interior will continue to grant perpetual easements of rights-of-way through, over, or under canal lands for industrial and other utilitarian purposes as authorized and directed in the act of August 1, 1953.

2. Service regulations now permit hunters and others to cross canal lands, under reasonable regulations, for the purpose of gaining access to the Potomac River, islands in the river, and other hunting areas situated on either side of the park project. The Service would have no objection to such assurance being written into the pending bill.

3. The Service would not object to the placing of offshore duck blinds adjacent to park property in accordance with State law except at areas of concentrated public use where public safety might be involved. We would have no objection to such assurance being written into the pending bill.

4. Where park lands extend to the river, the Service would seek to provide boat access sites at appropriate intervals.

5. The Service would seek to avoid the development of visitor use facilities that would conflict with use of areas that are of primary interest to hunters or are utilized for wildilfe propagation.

GUIDELINES FOR THE ACQUISITION OF LANDS FOR THE PROPOSED CHESAPEAKE & OHIO CANAL NATIONAL HISTORICAL PARK

1. To acquire only such lands as are essential to (a) the preservation and public enjoyment of the scenic, natural, and historic values of the canal and its visible, immediate environs; (b) lands indicated by detailed planning to be required for public access, and for parking areas, for other public use sites such as campgrounds, picnic areas, boating facilities and services, and for access to the river where the river and canal are so close as to be visibly related recreation resources—generally, not more than onefourth mile apart; and (c) small areas of historic significance closely related to the active canal transportation era.

2. Except where clearly essential for the preservation of park values or public use of the park, club properties would not be acquired for park purposes. If a club by appropriate action, should express a desire for its property to be included in the park, the case would be considered on its merits.

3. Lands for the parkway right-of-way, between Maryland State Highway 51 and the vicinity of the Woodmont Club, will be selected in cooperation with the appropriate State agencies, according to the usual na-tional parkway standard of 100 acres per mile average.

4. In the selection of lands of primary value for park purposes and of lands of primary value for hunting, the Service will do everything it reasonably and properly can to reach accord with the Maryland State hunting program so that land designation for the two programs may be worked out

harmoniously and amicably.

In accordance with the preceding statements of objectives and guides for land acquisition, the Service believes that it should be possible to reach amicable agreement with the State of Maryland concerning lands that are to be included within the proposed park and lands that are not to be included within it because of their value for public hunting grounds, agriculture, industry, or other important purposes. It is expected that islands in the Potomac River would not be included within the proposed park and would remain available for hunting, as here-

A Great American Is Honored

EXTENSION OF REMARKS

HON. LEO E. ALLEN

OF HAINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. ALLEN. Mr. Speaker, through its 56 years the University Club of Washington has opened its clubhouse with cordiality to Members of Congress, both as members and as guests.

The University Club the other evening gave a testimonial dinner to Senator THEODORE F. GREEN and a feature of the occasion was the presentation to Senator Green of a scroll, written by my longtime good friend, Cecil J. Wilkinson, a past president of the club and author of the club's exhaustive 50th-anniversary history in 1954.

The text of the scroll reads as follows: Within the hospitable halls of our clubhouse on this 3d day of May 1960, the members of the University Club of Washington salute a distinguished statesman, scholar, and fellow member Theodore Francis Green.

Born in 1867 in Little Rhody, small in square mileage but tremendous in the measure of her native sons.

Graduated a bachelor of arts in 1887 from Brown University, ancient and tvy-covered. Recipient of the degree of master of arts from his alma mater in 1890.

Trained at Harvard Law School and admitted to the Rhode Island bar in 1892 and a practitioner in Providence since then.

Currently the senior fellow and oldest living alumnus of his university.

Wearer of the golden key of Phi Beta Kappa.

Thrice honored with the accolade of honorary degrees—doctor of laws from the University of Rhode Island and from Providence College and doctor of education from Rhode Island College of Education.

Infantry lieutenant during the Spanish-American War.

Proud bearer of the name and fame of his beloved Psi Upsilon.

Twice occupant of the Governor's mansion

of his State of nativity.

Elected to the exalted position of U.S. Sen-

ator in 1936, and thrice returned, serving as chairman of the Committee on Foreign Relations.

To the manner born, whose pattern has been woven brightly into the tapestry of the kaleidoscopic social life of the Capital City.

A nonagenarian, whose infinite variety age

cannot wither nor custom stale.

A jolly good fellow whom his university clubmates of a score of years hail upon this loyous occasion as a "verry parfait knight, sans peur et sans reproche."

Center for Cultural and Technical Interchange Between East and West

EXTENSION OF REMARKS

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10, 1960

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Security in Another Way," published in the Washington Daily News of today, May 10, 1960. The editorial relates to the unanimous action of the Senate in authorizing the Center for Cultural and Technical Interchange between East and West in Ha-Wall, and is succinct, forceful, and persuasive. I enjoy and respect the editorials apeparing in the News, of which Mr. John T. O'Rourke is the editor, but I have enjoyed reading none more than this one, which approves of the action of the Senate in this matter.

I think the idea of an East-West Cultural Center in Hawaii is a good one. I believe the conferees have retained the amendment adopted by the Senate. I hope it will be possible to secure a budget estimate during the year which will enable the actual start of work on the cultural center next year.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECURITY IN ANOTHER WAY

Two new ideas having no relation to tanks or guns, but which promise to help

strengthen the mutual security of the free world, have now been written into the House-Senate compromise of the foreign aid authorization bill.

First approved by large bipartisan majorities of the Senate, we hope they are confirmed by equally significant votes in the

One authorize a Center for Cultural and Technical Interchange Between East and West in Hawaii.

The other calls for a State Department report on the feasibility of creating in Puerto Rico another such center devoted solely to this hemisphere.

Senate Democratic Leader Lyndon Johnson of Texas, is the inventor of the East-West center. He proposed it more than a year ago. While our Governmental processes moved slowly, the Russian leaders stole the idea and moved fast. They have established such a center for Asians and Africans in Moscow. It was Senator George Smathers, Democrat of Florida, an expert on Latin America, who applied the original Johnson idea to this hemisphere.

The Hawaii center, when money is appropriated, will start with 125 scholarship students, building up to 2,000 after 5 years. Three-fourths will be from overseas, one-fourth from the United States. Additional qualified students will be accepted on payment of tuition fees. There will be an international college, where students from the East and West will learn together. There will be an international training facility, to provide technical instruction for Occidentals and Orientals alike, and an English language institute.

Construction and operating costs the first 3 years are estimated at \$32 million, with Hawaii contributing \$2 million. The total is somewhat less than one-tenth of the sum the Pentagon wanted for a new aircraft carrier.

This money, if spent as the sponsors intend, would do much good.

Facing Up

EXTENSION OF REMARKS

OF

HON, GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. LIPSCOMB. Mr. Speaker, a question uppermost in many minds over the last several days is what to make of the incident involving the U.S. airplane over the Soviet Union.

Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the May 9, 1960, Los Angeles Examiner, which sets forth what I believe is a well-reasoned and sound answer to this question:

FACING UP

The decision of President Eisenhower to acknowledge that our reconnaissance plane was deep over Soviet territory on an espionage mission when it was shot down, is the most intelligent and courageous move that could have been made in this acutely awkward situation.

To deny it, against the evidence Khrushchev has gloatingly assembled would play into his hands. It would enable him to exploit his propaganda-psychological victory all the way to and through the summit beyond. By acknowledging it the President has scored a counter point of candor. He has also directed the attention of Americans

and the world to what should be common information but perhaps is not.

This is that spying has been carried on by both sides for years. It has been international practice for centuries. The reconnaissance airplane has merely added a new dimension.

Besides the agents who have been caught here, and the espionage-diplomats Russia has assigned to the United Nations and Washington, Soviet planes have spied over parts of the United States, and over allied air, naval, and missile bases throughout the world. One think to be regretted is that we didn't shoot any down.

Scores of Soviet "fishing" travelers have

Scores of Soviet "fishing" travelers have been fishing for information off our military posts in the Atlantic and Pacific. Recently one trawler was photographed very close to missile launching exercises of the first Polaris submarine

There is no reason to be shocked at disclosure that we have been spying too. We would be neglecting our security if we didn't. And we have a great deal more reason to do so. What is public knowledge here, such as locations of missile and strategic airplane bases, would be a treasonable revelation in Russia.

What is appalling is the inexcusably bad timing of this particular mission. Whoever ordered it did not stop to consider how fallure—which is always a risk—would damage summit preparation.

Khrushchev is a realist. It goes without saying he is aware of what is going on both sides. In fact, he conceded it a few months ago when he remarked sardonically that he reads many of the same documents that come to the desk of Allen Dulles, head of our Central Intelligence Agency.

Therefore his simulated fury over the plane incident is a political maneuver aimed at subverting our position and blackening the President's image at the summit.

We offer this recommendation: The State Department, in cooperation with Central Intelligence, should put together a documented bill of particulars of Soviet spying and be ready to slug Khrushchev with it if he continues to further use this single incident as a diplomatic hydrogen bomb.

Goals for America-Natural Resources

EXTENSION OF REMARKS

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement headed "Goals for America—Suggested Policy Statement, Democratic Midwest Conference, Detroit, Mich., March 26, 1960—Natural Resources," presented by Gene McGill, Democratic State Chairman for the State of Oklahoma.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GOALS FOR AMERICA—SUGGESTED POLICY STATEMENT, DEMOCRATIC MIDWEST CONFER-ENCE DETBOIT, MICH., MARCH 26, 1960— NATURAL RESOURCES

INTRODUCTION

Words, like people, tend to become tired with the passing years. So it is, perhaps, with the words "natural resources." To borrow a concept and expression from the television industry, perhaps they have become

overexposed in thousands upon thousands of speeches, reports, newspaper and magazine articles, legislative acts and hearings, and even in platforms of the political parties. All too often the words suggest all too little to the minds of the American people. They are inclined, we are afraid, when they consider the subject at all, to think of statistics and charts and what appears to them to be stale and musty studies suitable only for the perusal of the scholars in the various technical fields involved. If they think further than this on the subject of natural resources and conservation they are apt to remember only the last time water was rationed in their homes, or when lawns, flowers, and foliage died in the last drought. Too often they do not relate the subject even to food. They forget that life on this earth is made possible only by a few thin layers of soil which encircle their globe, and even the word soil most often is thought of as dirt rather than the living organism which it is. Imaginations are not sufficiently stirred and consequently momentous decisions and imperative actions to preserve the means of physical life for our generation and all the generations to come are tragically delayed.

This anxious condition cannot be remedied or improved under a national administration which is almost continuously apathetic on the subject, failing to give leadership and allowing the instrumentalities of government which have responsibility in the field to become paralyzed. Any objective study of the Republican administration of the past 8 years will reveal that these criticisms and indictments are well-founded in fact. Dynamic leadership has been wanting, planning has been inadequate, appropriations have been niggardly, and progress has halted. On the few occasions when the Elsenhower administration has taken any action at all in the field the action has been feeble, insufficient, and inevitably motivated by the traditional concern of the Republican Party for the big and few. We have only to recall the Hells Canyon fiasco, and the deliberate and calculated attempt to destroy the truly magnificent Tennessee Valley Authority project by the execution of the morally reprehensible Dixon-Yates contract to validate what we have said.

For a proper and responsible consideration of the subject which has been assigned to your Committee on Natural Resources, it is recommended (in the word suggested in the title of the forthcoming published work of the distinguished senior U.S. Senator from Oklahoma, the Honorable Robert S. KERR) that we substitute the words "land, woods, and water" for the words "natural resources" and add to these words the word "people," for the people now and in the future are not only the beneficiaries but they constitute the priceless human resources without which any constructive program for the development and conservation of land, woods, and water is meaningless and impossible.

Just as the approach of the Republican Party to every domestic problem through big people and big interests is traditional, so is the Democratic approach to all such problems through the people themselves traditional. The clashing philosophies of Hamilton and Jefferson still follow their historical channels in all matters of vital policy. Alexander Hamilton and the Republican Party stood and still stand on the concept of political philosophy that if Government assists the prosperous to further prosper, an economic seepage will set in which will even-tually reach the people. The Democratic Party, in keeping with the precepts of classical Democracy has always and does now look to the well-being of the individual first, with full confidence that if men, women, and little children are doing well, great interests inevitably thrive. The Democratic Party believes with Carl Sandburg, that "there is but one woman and her name is all women; that there is but one man and his name is all men; there is but one child and his name is all children." Following this dedication the Democratic administration of Roosevelt and Truman hurled social progress forward by a hundred years in the space of a few years, and their great programs and policies resting in humanity and concern for common people will strengthen and enrich our country for centuries to come.

THE COMMITTEE'S APPROACH

Up to the time of this reporting your committee has not had the advantage of carefully prepared technical studies and papers by outstanding experts in the various fields of nature's bountles, either those which are renewable or those which are exhaustible, as was true of the very fine platform adopted by the Western States Democratic Conference, but in a sense perhaps this is just as well. It is true that the resources of science and the learning and genius of scientists are indispensable to a dynamic program of conservation and development of the riches of America. We acknowledge our indebtedness to science and the scientists and to numerous distinguished and effective organizations and groups in the making of studies and recommendations in the technical areas of our concern. We would encourage even greater contributions from these sources and provide for even deeper and wider studies in the future, but after the work of the men and organizations of science give the reservoir of knowledge for judgment, then it be-comes the peculiar and inescapable function of national leaders and political organizations to establish priorities, determine when, where, and how much can and should be done in the field of action, and to declare the values and philosophies which shall direct the endeavor. For instance, science and technology must determine the appropriate site for a multipurpose dam and prepare the studies showing its potential for flood control, water conservations and the generation of power, but political leadership must then decide when the work of construction shall start, how much shall be spent, who shall maintain and operate the completed enterprise, and finally, determine the priorities of

SPECIFIC INTERESTS OF THE MIDWESTERN STATES

To say, as we have said, that this report is not grounded in technical papers and studies does not mean that your committee is not aware of and concerned with the great conservation and use projects in which the States which make up this distinguished organization have a special interest. tremendously interested in the great Missouri River Basin project, including among many other undertakings the East Bench unit and Three Forks division; the Clark Canyon Dam and the Barretts Diversion Dam in Montana; the Bostwick division; the work accomplished and to be accomplished in Harlan, Webster, and Nuckolls Counties in Nebraska, and Jewel, Republic and Cloud counties in Kansas: the Frenchman, Cambridge division in Nebraska; and the Crazy Horse unit in South Dakota. Our admiring concern extends to the North Drainage Basin undertaking in Minnesota and in South and North Dakota, including the projects on Lake Tarverse and the Bois de Sioux Rivers; Lake Ashtabula and the Baldhill Dams in Sheyenne River, N. Dak. We have some acquaintance with the projects at Elkport on the Turkey River in Iowa and the reservoirs at Coralville, Central City, Rochester, and Red Rock in that great State.

As we consider the means to effectuate

As we consider the means to effectuate them we think of Calumet Harbor and River in Illinois and Indiana, Indiana Harbor and Michigan City Harbor in Indiana; the proposed locks and dams on the Illinois River in the State of Illinois; and the great program of improvements of rivers and harbors in Michigan, including those initiated or projected on the St. Mary's River, the St. Clair River, the Detroit River, the Kalamazoo River, the Grand River Basin, and the Maumee River Basin, affecting the States of Indiana, Michigan, and Ohio. ate the value of the Conneaut Harbor on the Conneaut River as it flows easterly from Cleveland and from the south shore of Lake Erie. We think of the locks and dams on the Fox River in Wisconsin and the many needed undertakings for that great State. We have been mindful of the Muskingum River projects in Ohio, the cannelization program in the Ohio River Valley, the Minnesota River projects at Carver and Montevideo, and of course all of the great programs on the Mississippi River, including those at Brainerd and Grand Rapids in Minnesota, and share the interest of the easternmost State of our conference, West Virginia, in the projects at North Wheeling and Wheeling Island and at Elkins, W. Va. as it is concerned with the Monongahela River. We are convinced of the tremendous potential involved in the development of the Arkansas River Valley, the Washita Basin, and the bold and imaginative, though completely logical and sound, project for the Canadian River in Oklahoma.

We participate fully in the deep convictions held by the citizens of all the States represented here concerning agriculture, soil conservation, water pollution, and all of the problems which must be boldly attacked if we are to faithfully carry out our trust, not only for men, women, and children now living, but as trustees for the generations yet to come.

In the area of minerals we think of the 200 billion tons of coal reserves underlying the fertile plains of Illinois, and the substantial reserves of unmined coal in eastern Oklahoma, where it has been estimated there is enough coal to heat every home, operate every factory and run every train in America for a hundred years. Indiana also is involved in the great challenge to step up research into new and effective uses for coal. The importance of the coal industry in West Virginia is internationally recognized. North Dakota, likewise, has substantial coal reserves which must be considered in our plans as it already annually produces about 2,800,000 short tons of lignite coal. We have not overlooked the fact that South Dakota mines more gold than any State in the Union, and that a precious resources exists here which must be conserved and put to maximum use.

In the area of our study we are intensely involved in the exploration and production of oil and gas affecting almost every State which is a member of this conference. If steps are not immediately taken to strengthen the great petroleum industry now threatened by the unreasonably enlarged imports of foreign oil, the economy of the States, including that of Oklahoma, will be paralyzed and the Nation will find it is at grave disadvantage in time of national and international crisis. In recent history the international emergency grow-ing out of the Suez Canal incident emphasizes the importance of our domestic oll industry in a way that cannot be exaggerated, and if the oil industry is permitted to fall on evil times we cannot restore it overnight even though the national safety may require that it be quickly restored.

We cannot hope to call the lists of all the rich resources of the area represented here today which have already contributed so much to the economy of our Nation and to the well-being of our people, but we would be remiss not to mention the priceless deposits of iron ore in the Mesabi Range in Minnesota, and the great mineral industry

in Michigan which also produces iron, gypsum, salt, peat, and marl.

We embrace the momentous matters of conservation and use of forests, wildlife, and parks for the recreation of our citizens in a time when modern technology is giving and promises to give even more leisure to our citizens. In our thinking and dedication we contemplate the unity of nature and all of her gifts realized and yet to be realized from land, woods, and water, and above all we contemplate man in the sense of all men, women, and children deriving from these gifts life, and life abundantly, for we are considering spiritual as well as natural resources.

IMPERATIVE NEED FOR ACCELERATION

The committee feels it would be a reprehensible dereliction of its duty if it did not once again emphasize the imperative demand for acceleration of all programs of development and conservation of all resources. Our Nation, established on this rich continent, has too long inclined to feel that the specter of scarcity haunts other nations and areas of the world but not our own, but this complacency is simply no longer justified. Water consumption in the United States quadrupled between 1900 and 1950 and will double again by 1975. We add 21/2 million additional people each year and will have 300 million by the end of the cen-tury. Forty million citizens of our country are in real water trouble as we meet today because of inadequate supply or unsatisfactory quality. We are no longer self-suf-ficient in supplying the physical needs of our people, contrary to the general impression. In 1900 we produced 15 percent more raw materials than we consumed (exclusive of food). In 1950 we were consuming 10 per-cent more materials than we produced and this deficit will increase to 20 percent within the next two decades. I

This is the situation which confronts us at home and does not take into account the truly appalling picture now and in the future over the rest of our globe. While we are aware of the awakened interest of the last two decades of government, industry, and of the public generally, which has improved forest practices, advanced agricultural techniques, stimulated study of water problems, and increased recognition that wildlife and nature areas must be protected, yet the fact remains that only a start has been made and that progress has halted almost completely under the 8 years of the present Republican administration. The ancient Biblical injunction challenges us, "We have compassed this mountain long enough, move northward." We recommend:

1. We join our allies of the Western States Democratic Conference held in Albuquerque, N. Mex., last month in urging the creation of a Council of National Resources Advisers to be appointed by the President to aid him in preparing an annual report on natural resources. This report should be reviewed by a special joint congressional committee on the natural resources problem. This proposal, which follows the pattern of the Council of Economic Advisers in the Executive Office of the President, is now before Congress.

2. In the area of research and planning we urge sharply increased momentum. We feel that long-range planning and leadership should emanate from the very highest national levels of government and society. We do not underestimate the importance of cooperation with the regions, the States, the counties and the municipalities, and with the people themselves. The Nation's future timber is on millions of farms and other private holdings, for instance, 85 percent being a maximum 100 acres in extent. We appreciate and salute the significant and beneficial work done by the democratically organized soil conservation districts, but we

are speaking of a national interest which requires that the focus of our action be placed at national levels.

3. The Democratic Party has never been a frightened party, nor timid to act when the people's interests demand bold action. therefore recommend adequate financing, and that immediately, through necessary appropriations and through methods of capital budgeting for self-supporting re-sources programs, making a clear distinction between annual operating expenditures and resources activities, such as national forests which produce revenues and are of continuing value to the Nation. We would abolish the unrealistic fiscal approach now in effect, which requires that projects which will serve the people and produce revenue for decades and centuries shall be financed by congressional appropriations made during the years such projects are under construc-tion. The result of this unrealistic and arbitrary method of budgeting is that economy drives and drives for balancing the budget often halt half-accomplished projects or preclude essential scheduled starts.

4. We advocate continued and intensified research in all the areas of science which can serve our development and conservation program and recommend that all moneys be made available which can be effectively used for research. We are aware of the differences in the problem to be solved in the areas of renewable resources and those which are not renewable, such as our mineral and oil and gas resources. We believe much useful research can be done in this area of nonrenewable resources so that technology and methods will be available when needed, such as the economical extraction of iron from taconite and oil from shale.

5. We suggest that our program of development and conservation be undergirded with the principles of balance drawn from nature and nature's laws, which are: (a) Use with minimum waste; (b) use and management for productivity in services and materials of quality; (c) equitable distribution between present and future inhabitants of the earth.

In final conclusion the committee expresses its confidence in the spirit in which the Democratic Party will undertake the prosecution of the great resources program in the public interest. Some months ago it was reported that Mr. James C. Hagerty, press secretary to the President, when chided that the Republicans had embraced almost all the Democratic program conceived and enacted by Congress under the leadership of our great Presidents Franklin Roosevelt and Harry Truman, replied that this is true but that there was a difference—the Republicans did it with refuctance, the Democrats with enthusiasm. We accept the unintended compliment. The people of America know where we stand. We always act with enthusiasm in the protection of their interests.

Citizenship-Free and Responsible

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. VAN ZANDT. Mr. Speaker, the United Churchwomen of Altoona, Pa., observed May Fellowship Day on May 6, 1960, at the Westminster Presbyterian Church in that city.

With representative groups of churchwomen present it was my privilege to deliver the following address: CITIZENSHIP—FREE AND RESPONSIBLE

(Speech by Representative James E. Van Zandt, Member of Congress, 20th District of Pennsylvania, for the May Fellowship Day program, sponsored by the United Churchwomen at Westminster Presbyterian Church, Altoona, Pa., May 6, 1960)

It is a privilege to be invited to participate in the May Fellowship Day observance sponsored by the Christian social relations committee of the United Churchwomen of Altoona.

The theme "Citizenship—Free and Responsible," adopted for May Fellowship Day 1960, is timely since the joys of citizenship and freedom have been lost by over a billion of God's children now living in servitude under the banner of world communism.

We are reminded by the theme of this May Fellowship Day of the priceless possession we enjoy in being citizens of a freedom-loving nation and of the responsibility we are charged with in safeguarding our birthright of liberty and freedom.

Since 1960 is a national election year this program gives added emphasis on the necessity of taking inventory of our efforts to preserve our glorious heritage of American citizenship.

The extent of a Christian's responsibility in this day and age has not changed from the responsibility prescribed when God gave Moses the 10 Commandments as an eternal rule of love and faith.

That rule of life designed for all generations of mankind was further exemplified when our divine Lord said in defining the first commandment "and Thou shalt love the Lord thy God, with all thy heart and with all thy soul, and with all thy mind—and with all thy strength * * *."

And the second is like; namely, this, "Thou

And the second is like; namely, this, "Thou shalt love thy neighbor as thyself, there is none other commandment greater than these"—Mark 12: 30-31.

Despite this divine injunction when we discuss the responsibilities of citizenship from a Christian standpoint we find it becomes a controversial subject filled with misunderstanding and too often avoided in discussions.

I do not know all the answers, but it is my sincere hope that today we can in some measure take home a little "food for thought" from your well-planned meeting.

Someone has said that christianity does not remove a person from the world and its problems; it makes one fit to live in the world, triumphantly and usefully.

It is on that thesis that we can proceed to discuss your theme for this May fellowship day—"Citizenship—free and responsible."

To further clarify this occasion, I speak to you as a layman on the Christian's responsibility to the state.

We live in a nation where church and state are entirely separate, but this fact was never intended to mean that Christian citizens should not actively participate in politics.

Indeed, throughout our history, our political leaders and statesmen have emphasized the need for Christian citizenship in these United States

these United States.

In 1954 the words "under God" were added to the pledge of allegence to our flor

to the pledge of allegiance to our flag.

This was accomplished through passage of legislation by Congress and subsequent Presidential approval.

Presidential approval.

I recall there was some objection from some corners of our country to the addition of the words which revised the pledge to read "one Nation under God, * * *"

There was warning that by adding the words "under God" we were not keeping church and state separate, that we were acting contrary to existing principles.

It will be 4 years next June 14, Flag Day, since "under God" was added to the pledge

of allegiance, and I trust that anyone who objected has now learned that our citizenship is of no real value to us unless we can open our souls before God and before Him conscientiously say, "I am an American." Upon every coin of our Nation, down to

the last penny, we impress the words "In

God we trust."

If we remain true to this motto, we will uphold and obey our laws; strive without malice and indifference toward the things we know to be right; live and work for the American principles of freedom, justice, and equality.

Then our lives will be a vindication of our faith.

Our citizenship will be a credit to us.

Perhaps what I have just said will in some measure clarify my opinion of our theme.

There have always been people who have echoed one of the complaints which we often hear, namely, that religion and politics do not mix."

You recall that one of the charges against Jesus was that he threatened the stability of the Roman Empire and its strangle hold on downtrodden peoples like the Jews.

Whatever else his death represents and it represents a great deal more-it represents in part the attempt of the Roman Empire to get rid of someone who was fast

becoming a political nuisance.

John Calvin and John Knox-and all the reformers—got into difficulty themselves discovered that to take the when they Christian faith with full seriousness meant involvement in political life, political decisions, and political responsibility was inevitable.

In our own day, there have been ministers, for example, who have discovered that to preach Jesus Christ means preaching about the political and economic situation in which

their congregations live.

They have also discovered that the people who control the political and economic situation-whether Nazi or Communist-take a very dim view of this sort of thing, with the result that a great many ministers in Gerespecially, have had to answer their lives for speaking with such boldness.

It is apparent that one of the reasons people keep on insisting that "religion and politics do not mix" is that they are not at all sure they will like the result that emerges

from the mixing.

They have a right to be perturbed.

The times of greatest vitality and strength in the history of Christian faith have been the times when it was recognized a revolutionary faith—as a faith that made demands-that challenged the status quo-the way things were going politically.

But this kind of talk can remain very

abstract.

We want to come down to earth and talk of some of the ground rules of Christian citizenship

writer has suggested that A current Christianity gives no precise answer to any of the problems of life-certainly not the political ones.

But it provides what is more important: direction, understanding, commitment.

There is no exact Christian position in the U.S. House of Representatives, but there are better and worse positions, relatively just and relatively unjust acts.

The Christian should seek what is good and just.

A Christian citizen in the United States has the most compelling reasons to concern himself with politics.

It is a major error for any Christian citizen to look down on politics because he regards the whole political world as a bit shady.

However well or badly the political affairs of the Nation may be conducted, politics is the process by which a nation or a community makes decisions.

The decisions that are made by political means often have momentous moral signifi-

As a Member of your Congress I am singularly aware of this.

In this 20th century world, government has become more important than ever before, it touches all our lives every day.

The sort of world in which we live, the kind of jobs that are available, the education our children receive, the extent of freedom and security we enjoy, are all vitally affected by

Politics is the human activity which creates government.

We cannot escape politics.

If we try to ignore politics, it will not ignore us.

Taxes, roads, schools, housing, and atomic power are all political problems.

The question is, therefore, are you willing to sit back and let others make the basic decisions which will control your destiny.

The individual who does is both foolish and irresponsible: foolish because he lets others run his life for him; irresponsible because he refuses to accept the obligations and duties which our Republic requires of its citizens for the continued enjoyment of rights and privileges.

Political decisions may determine whether

we will have war or peace.

Political decisions may determine whether ours will be a nation in which certain factions are intimidated or a nation whose citizens preserve civil liberties and preserve a general atmosphere of freedom.

Certain political decisions profoundly affect the efforts of our country to move into

the area of lasting peace.

Christianity most certainly has a stake in such issues.

I have said there is no "Christian position" in the Congress.

I would like to amplify that observation. We can expect Christians to differ in their choices of political parties, in their choice of emphasis in regard to social goals.

This is apparent, for example, in the constant problem of aid to underprivileged na-

It is possible for two Christian personstwo members of the same denomination, in fact-to hold a difference of opinion on many issues.

William Lee Miller has written a little volume entitled "The Protestant and Politics" which is published by the Westminster

While I do not agree with all the theories set forth by Mr. Miller, I would like to quote the following:

"Morally earnest Americans often say that they are independent in politics, and not tied to any party: 'I don't vote a straight party ticket, the way a party tells me to; I vote my honest convictions.'

The implication seems to be that conscientious citizenship necessarily requires independence of political parties and that independence is morally superior to party allegiance. But it is not.

There are, of course, many different positions that Christians may, and do, take in

American politics.

"These include allegiance to one of the major parties (Republican or Democratic) independence of any party, allegiance to a minor party (Socialist or Progressive), or even good old-fashioned apathy.'

These are all possibilities.

However, I cannot believe that apathy, or the more extreme or violent political positions taken by some of the political parties cited above by Mr. Miller would coincide with the political beliefs of a Christian citizen.

Have you ever noted that on occasion some Christians are shocked to see that there is conflict even in a Christian community.

A student at a youth conference, shaken after the first day of floor debate came to the chairman to say that he had never believed Christians could fight with one another that way.

But they can as any battle-scarred veteran

of church meetings knows.

In certain contexts, they should.

It is the obligation of a Christian to defend what he sees to be true and valuable.

There is a common feeling, my friends, that political parties and the type of political life that is lived close to party ganization must always be so much involved in compromise, or so close to corruption, that a Christian citizen would do well to assume the role of the independent voter.

There is no doubt that the independent voters do have some wholesome influence on our political party system—they keep both

parties worried.

Perhaps there are people who by temperament or vocation should be independent voters.

Idealistic Christians should come to realize the enormous importance of party organizations as instruments for creating a consensus that is necessary for decision and

Also, they should see that while the independent voters do have some influence on party organizations from the outside, they are limited in their choice to candidates and programs.

Candidates and political platforms emerge from areas of controversy within the party.
Intraparty debate and struggle bring out

the best party candidates—the best party

Actually, the independent voters leave the most difficult, the most unappreciated, work to the faithful party members in local clubs and committees.

In any threat to free government in America, religious people have more to lose

than any other class.

If the basic freedoms were to go, not only would the churches be closed, but the mouths of believers as well.

If the church people will vote during the week as they vow on Sunday, representative government will gain a victory, whichever candidates win.

Many a great American out of our past has spoken in eloquent terms concerning this subject.

John Quincy Adams said:
"My own deliberate opinion is that the more of pure moral principle is carried into the policy and conduct of a government, the wiser and more profound will that policy be."

Henry Clay said:

"Government is a trust, and the officers of the Government are trustees; and both the trust and the trustees are created for the benefit of the people."

William Jennings Byran has been recorded as saying:

'The humblest citizen of all the land, when clad in the armor of a righteous cause, is stronger than all the hosts of error.

More recently Herbert Hoover stated: "A citizen has a complex duty.

"He ought to learn to express his opinions and to make up his own mind on the

principal public issues. "He ought never to miss the ballot box. "And when he casts his vote for some-

body, he should weigh that somebody in scale of morals-which includes intelluctual integrity." The Christian citizen can have no part

in a partnership which breeds bitterness and untruth; which leads politicians to raise false issues or to trifle with grave matters of policy for a political advantage.

True partisanship requires much moral patience; it must accept a strange assort-ment of bedfellows.

But it should remain self-critical and in sight of the purpose of the whole process.

It should seek to make the party a more consistent instrument of that purpose.

The belief in a judging and forgiving God-Who stands beyond all our human enterprises-should introduce a certain modesty and bring a greater immensity to Christian citizenship.

It has been suggested that evil does not have one address, like Moscow, or just one instrument, like war, communism, or corruption in a Federal office.

The evils of our time-which free and responsible citizenship should be the first to recognize—reappear in constantly changing forms.

Citizens are humans-not gods-and for this reason alone the free and responsible citizen should recognize the need to apply Christian principles to the control of our

If Christians are to hold on to free and responsible citizenship they must participate successfully in government and politics.

Further they must know what is happening around them.

The blessings of our country were gained long ago by struggle and vigilance on the part of those who have gone before us. We must safeguard our American heritage

with the same enthusiasm, with the same determination and with the same political insight.

The oft-quoted line "eternal vigilance is the price of liberty" is never out of date.

Christians can make a great contribution to a community by assisting in maintaining spiritual health, without which politics become hopelessly corrupt.

By the same token christianity will not make its best contribution to politics unless it encourages Christian citizens to associate themselves with the machinery of politics and take an active part in the political life of the community.

Free and responsible citizenship takes more than repeating the pledge of allegiance to the flag and repeating the Lord's prayer.

In these stormy times things of momentous importance to future generations are afoot.

Often the issues are not discernible amid the noise.

However, we do have the benefit of the faith and character of our forefathers at their best.

Will posterity wonder why we, who have the privilege of living now, did not better understand the spiritual, social, and ecohomic problems of our time?

These are years of tremendous change. Not long ago nations, races, and religions were fairly well capsuled by geographical isolation.

Each nation could live for itself.

But at times it seems that the peoples of the world have suddenly been poured into one container.

We can be certain of one thing.

We cannot get out of the cold war and solve our other problems in a hurry.

But the abiding factors of this last half of our 20th century are its vitalities: Our ideals, our demands for life, liberty, and the pur-suit of happiness, our endeavors to better our conditions.

Serene incidents have not been the creative epochs in human history.

Serene incidents did not bring forth the dawn of Christianity-or the birth of the Presbyterian Church.

Nor did serene incidents bring forth the birth of our own Nation.

Responsible Christian citizens cannot avoid the conflict.

They cannot avoid the throbbing issues that through satisfactory solution will culminate in continued freedom for America.

We often hear this period of our history classified as an age of abundance, in contrast with past ages of economic scarcity.

The promises of America's political future are great. But its perils are so real that we cannot evade the challenge which this new age brings to the Christian conscience.

To the shallow expression "We have never had it so good," the free and responsible Christian must reply, "We have never had such heavy demands upon the Christian conscience."

Espionage Against the United States

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. JOHNSON of Texas. Mr. President, I have enjoyed reading an excel-lent article entitled "House Unit Reveals How Fake Czech Attache Spied on United States." written by the competent and respected newspaperman, Marshall McNeil, a Scripps-Howard staff writer, and published in the Washington Daily News of today, May 10, 1960.

I ask unanimous consent that the article be printed in the Appendix of the RECORD, and I hope all Members of Congress will read it. I commend Mr. Mc-Neil for having written the article, and the Scripps-Howard newspapers for having published it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSE UNIT REVEALS HOW FAKE CZECH ATTACHÉ SPIED ON UNITED STATES

(By Marshall McNeil)

New evidence of widespread Communist spy activity in the United States as recently as 8 months ago was revealed today by the House Un-American Activities Committee.

The revelation came when it released testimony of Col. Frantisek Tisler, who was military and air attaché at the Czechoslovakian Embassy here until he defected from the Communists in July 1959.

He testified that the Embassy was a "cover" for espionage activities directed against the United States.

He said one of his jobs was to recruit American citizens to act as agents to furnish him with secret information related to U.S. military developments.

FUNDS

The Embassy, he said, provided funds for the defense of an American Communist on trial in Cleveland for alleged violation of the Smith Act.

Between August 1955 and July 1959, Colonel Tisler said, "approximately 45 percent of the personnel of the Czechoslovak Embassy in Washington and the Czechoslovak delegation to the United Nations in New York was engaged in some type of intelligence activity while in this country."

"The Tisler testimony," said Represent-ative Francis Walter, Democrat, of Penn-sylvania, chairman of the committee, "confirms and reiterates the overwhelming evidence of widespread Communist espionage on American soil, conducted under the guise of legitimate diplomatic activity.

"The recent incident in which the Communists shot down an unarmed American · · plane must not detract attention of

the world," Representative WALTER said. "from the wholesale espionage, sabotage, and propaganda operations conducted by Communists in every country of the free world."

NOTIFIES

Representative Walter, who is in Naples, notified his committee by transatlantic phone to release the testimony today. It was taken, the transcript shows, at a time and place which cannot be revealed on the

Colonel Tisler said he "broke my ties with Czechoslovakia on July 25, 1959." But it wasn't until last November 4 that newspapers carried stories that he had quit and asked U.S. asylum.

He joined the Communist Party of his country, he said, on April 2, 1946. He said he has been considered an "old ardent Communist." But disillusionment soon set in. "And," he said, "the longer I stayed in the United States the better was I able to convince myself that if an individual was interested in freedom, human dignity, and life without terror, this could only be obtained in the free world."

TRANSFERRED

The former Czech officer said funds of the Embassy here were "transferred from members of the Embassy staff to intermediaries, who subsequently saw to it that these funds were used to aid" Antonin Krchmarek of Cleveland in his defense during trial for alleged violation of the Smith Act. The amount thus spent was not revealed in the testimony.

He said the then Czech Ambassador Karel Petrzelka recommended to Prague that he be "authorized to pay Krchmarek \$3,000 for

living expenses and propaganda."

He also said that the Ambassador used Charles Musil, identified as an American citizen, who was editor of a Czech language newspaper in Chicago, as an intermediary between himself and Krchmarek. Use of intermediaries apparently was recommended by the then Soviet Ambassador Georgi N. Zarubin.

"In this connection," Col. Tisler testified, "Zarubin told Ambassador Petrzelka that the Soviets never maintained direct contact with members of the Communist Party of the United States because the Soviets wanted to avoid embarrassment."

The Un-American Activities Committee revealed that both Krchmarek and Musil are under its subpena to testify May 26.

Kennedy's Criticism of Wisconsin Press

EXTENSION OF REMARKS OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. LAIRD. Mr. Speaker, Mr. John Wyngaard, dean of the Wisconsin Capital's Press Association in Madison, Wis., wrote a very interesting article on Senator Kennedy's criticism of the Wisconsin press. Mr. Wyngaard writes for some 14 papers in Wisconsin. I ask unanimous consent to include his column of Monday, May 2, 1960, in today's Record.

The article is as follows:

KENNEDY, CRITICAL OF COVERAGE BY STATE PRESS, CAN BLAME HIMSELP

(By John Wyngaard)

Manison.-There is no greater critic of the American press than the politician who cannot handle it as he wishes.

There is no one more aware of the problems—and weaknesses—of the American press than the professional newspaperman, or more ready to acknowledge how far is the gap between the ideal and the possible under the laws of economics and others that apply to journalism as to all other human pursuits.

The most significant political campaign in recent American history was put on the front steps of the voters of Wisconsin, to so speak, when Senators Kennedy and Humphrey brought their ambitions to the Wisconsin people earlier this year for a test ballot. Now that the affair has ended, both camps

are making broad indictments of the failure of the Wisconsin press in that event, Senator

KENNEDY most particularly.

Senator Kennedy told a convention of newspaper editors a few days ago that he was disappointed at the shallowness of his press coverage in Wisconsin, bluntly indicted the newspapers for emphasizing the trivia and the frills, and subordinating or ignoring the significance in his campaign and particularly his speeches.

There are several things that ought to be

said in rebuttal.

First, KENNEDY was making the speech to

the wrong audience.

Editors didn't cover his bout with Hum-PHREY. They know no more about what happened on the campaign trail, as a group, than do the men who put the stories into type, or the circulation managers who saw

that the papers got delivered.

Reporters covered the campaign and they did a more extensive, conscientious, and ex-pensive job than in any other primary that

this State has ever seen.

Senator Kennedy grumbles that they concentrated on the sidelights, and ignored his main themes on policy and his program.

Senator Kennedy wasn't talking like that when he campaigned here and wanted the good will of reporters. Moreover, he knows very little about the function of the American press if he believes that the reporter is going to file each day the same repetitious little homilies about politics that the man from Boston was reciting, almost as if by

Every reporter who covered Kennedy had the same experience. After a day or two there was nothing new that was left to say, and the tendency was to concentrate on the incidentals. It was not their doing. It was Senator Kennedy's conception of how to run

Senator Humphrey made a greater effort to make serious addresses to the voters. But covering him quickly became monotonous too. Anybody who had heard HUMPHREY four or five times had heard virtually all that he had to say.

If these men were disappointed by the flavor of their publicity, they need not long

seek those responsible.

Who elevated the "bean feed," so-called, into a symbol of proletarian democracy?

Who made the parlor coffce party a po-

litical rite? Who imported Alan Ameche and Jackie

Robinson to lecture to the athletic-enamored voters of the State?

Who played the raucous Sinatra recording in every village square of the State for 6 weeks?

Was the drenching of the State with billboards and television spot announcements an appeal to the reasoned judgment of the Wisconsin electorate?

Who brought into this State the deceptive invitation-reception gimmick?

Who made of the fast handshake a fundamental part of the appeal for votes of candidates for the highest office in the world?

It is the function of the press to relate the nature of public life as it is, not as it ought to be. Anything that was lacking in the story of the Presidential campaign in Wisconsin as it was told for the most part can be laid to the men who controlled its character.

Montana Attorney Practices Law Over One-Half Century

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

MANSFIELD. Mr. President, Mr. Montana has a wealth of able and talented practicing attorneys but there are few whose career is so parallel to the growth of one of Montana's major cities as that of Grover C. Cisel, of Billings, Mont. Grover has been practicing law in this community for 53 years. He was one of the first lawyers to come into eastern Montana after graduating from the University of Michigan Law School. Grover Cisel has been most active in community affairs of all kinds and is one of the leaders in the Democratic The Billings Gazette recently carried a feature story quoting a number of Grover Cisel's words of wisdom. I think that his best is his advice to those entering professional fields: "Know your responsibility as a citizen and be a good one."

Mr. President, I ask unanimous consent that this feature article appearing in the May 2 issue of the Billings Gazette be printed in the Appendix of the

RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFTER TAKING A STEP, YOU WALK AHEAD (By Addison R. Bragg)

Grover C .- it stands for Cleveland-Cisel curled his hands over the arms of his office chair, swung it back with a creak and nodded

"I guess I can talk about being a lawyer," he said. "I've been one for 53 years now."

The year 1907 was significant for the Billings attorney, then a brandnew graduate of the University of Michigan Law School. He passed the Montana bar that year, opened his law practice and was married, all in the same 12 months.

"There was only one lawyer in Billings when I came here," he said, passing a fore-finger back and forth over the gold rims of his glasses, "who's still here today-Lou Chapple."

Cisel and a classmate, James Davis, now retired and living in Santa Ana, Calif., came to Billings together to enter practice. in those days, Cisel said, a young lawyer's main business was collecting debts.

NO AGENCIES

"They didn't have collection agencies then," he said. "And the older, established firms were the ones people went to for im-portant legal advice."

He inspected the stub of a cigar in a cracked

ivory holder.

"When I came here," Cisel said, "there were three lawyers-William Johnston, O. F. Goddard, and Fred Hathorn, who had all the good business and 75 percent of all the legal business in town."

The finger went back up to the glasses as Cisel recalled the first case brought to him and his partner.

"A party came in," he said, "with a bill for \$5 she hadn't been able to collect-and we collected it for her."

A DOLLAR EACH

The client got \$3, Cisel said. His partner took one and he took the other.

He swung his chair forward, pulled open & desk drawer, fished around for a moment and tossed a coin on the desktop.

It was a tarnished silver dollar bearing

the date 1884. Cisel smiled slowly.
"You know," he said, "a lot of my old friends kid me about keeping the first dollar I ever made. Until they read this they'll never know how right they were."

The dollar was minted, Cisel pointed out, the same year that he was born in Allendale, Wabash County, Ill. "They were all Demo-crats back there," he said, "except for two families-and they later went into the oil business, moved to Oklahoma-and turned into Democrats, too."

Politics, Cisel said in a more serious vein. is something that not only lawyers but everyone else should take an interest in.

IT'S FUNDAMENTAL

Political activity, he declared, is "fundamental to our type of government."

A man who practiced once what he now preaches, Cisel served as Montana State Democratic chairman from 1934 to 1938. He held elective officer as a member of the district school board and served as an appointee on the State highway commission, the park board, and the executive council of Eastern Montana College.

What advice would he give a young man contemplating a career in law today?

A hand passed through the close-cropped gray hair as Cisel considered his answer.

"My advice," he said slowly, "would be about the same to anyone planning to enter any profession: Know your responsibilities as a citizen and be a good one.

If he had it to do over again?

The chair creaked again and a hand toyed with the silver buttons bearing a thistle design on his gray sweater.

IF NOT IN LAW?

"My best grades in school," he said. "weren't in law subjects but in mathematics, chemistry, and physics. I often wonder what I could have done if * * *."

The brown eyes warmed with a slow smile as the chair came forward again.

"But after you take the step," said. Grover Cleveland Cisel, "you walk ahead."

And he rose from his desk to meet a waiting client.

A New Civil Aeronautics Board Member Looks at the Local Service Industry

EXTENSION OF REMARKS

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. MONRONEY. Mr. President, the recent quarterly regional meeting of the Association of Local Transport Airlines. held in Philadelphia, Pa., Thursday, April 28, honored the distinguished jurist and new member and Chairman of the Civil Aeronautics Board, the Honorable Whitney Gillilland.

Chairman Gillilland responded with his address, entitled, "A New CAB Member Looks at the Local Service Industry. which I believe will be welcomed by my colleagues who share my interest in the steady growth and improving efficiency of airline service to the smallest communities of this country.

Stressing today's problems of shorthaul transportation, the chairman expertly analyzed the need for and attention being given by the Civil Aeronautics Board in the areas of traffic growth potential through liberalized operating authority, the advantages of an industry class mail rate development and the opportunities for reducing subsidy that may be inherent in a proposal to restudy present techniques of apportioning the proceeds of joint fares on interline tickets. This latter proposal on joint fares is one that I have made as an interesting area of study and one that promises considerable financial improvement to the industry

Mr. President, I am informed by the Public Printer that the cost of printing the address is \$189. Notwithstanding the cost, I ask unanimous consent that it may be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A New Member Looks at the Local Service INDUSTRY

(By the Honorable Whitney Gillilland, member Civil Aeronautics Board, before the Association of Local Transport Airlines, Philadelphia, Pa., April 28, 1960)

I consider it very much an honor to have been invited by your distinguished general counsel and executive director to address the Association of Local Transport Airlines. General Adams is highly regarded by all of his former associates at the Civil Aeronautics Board, for his abilities and for his determination of purpose. He is a longtime friend of the local service industry and in opening these remarks I cannot do better than to quote from his own words while he was a member of the Civil Aeronautics Board. Dissenting in the service to Trenton case he said:

"I have on several occasions reaffirmed my belief in the ultimate success of the local air service program. I have made it plain that my interest in that program is based upon my interest in the maintenance of adequate airline service for the smaller communities in the United States."

And again he said:

"If airline service to smaller cities is to be expanded and encouraged, and if at the same time the dependency of our local carriers upon subsidy mail pay is to be reduced, this Board must be willing, as opportunity is offered, to increase the flexibility of our local service carriers operations."

It is good that your meeting is in Philadelphia, the city of brotherly love, beyond doubt a dependable omen for General Adams

and for your association.

Here, ALTA is well represented by your member, Allegheny Airlines. Allegheny serves the cities of Pennsylvania, the Ohio Valley, and along the eastern seabord, providing local air service within these regions and to the key metropolitan centers of New York, Philadelphia, Washington, Baltimore, Pittsburgh, Cleveland, Detroit, and Buffalo. From Philadelphia, Allegheny provides service to 25 cities.

During October of last year, Allegheny established an experimental "no reservation" fare between Philadelphia and Pittsburgh. The Board is much interested in the results. Due to the fact that the fare is the subject of an investigation by the Board, I am unable to comment upon the issues. However, I can state that this tariff was not suspended when filed because the Board considered that it represented a worthwhile experiment in promotional fares and lower cost service. It was, therefore, permitted to become effective pending the results of the Board's investigation into lawfulness. I have seen the preliminary data and the traffic that appears to have been generated is impressive.

During my short membership on the Board, I have experienced an increasing appreciation for the accomplishments and future prospects of the airline industry, and, despite some warning signs, I can be much more properly classed as a bull than a bear.

I am particularly impressed with the progress of the local service carriers. During the years of growth, you have had many problems and setbacks, perhaps more than your share, but you have met them with vigor, initiative, and courage. I am confident that you will continue to do so.

I would like to review some of the high spots. The local service carriers were created following World War II to pioneer scheduled service to intermediate-size and smaller cities—cities deemed sufficiently large to merit service within the stated purposes of the Civil Aeronautics Act and eventually to support that service.

As of today, the 13 domestic local service airlines carry passengers, mail, and cargo in and out of approximately 450 cities. During the past year, they operated some 286 aircraft, providing frequent daily schedules over 30,000 miles of routes blanketing the entire Nation.

In the matter of the acquisition of new aircraft the last year was especially significant. Three aircraft types, new to the local service carriers, were put in operation.

These new types were the piston-engine Convair 340 and Convair 440 and the converted turboprop Convair 540. Whereas in the previous year only two carriers had Fairchild turboprop F-27's and a total of 9 so equipped, by the end of 1959, 4 of the carriers had F-27's and a total of 26. Moreover, the first F-27 had not been put in service until September 1958. This represents the most significant equipment improvement in the history of the local service group.

As a result in 1959 the relative importance of that famous old work horse of limited usefulness, the DC-3, began to decrease, and in a period when total local service traffic was increasing by 25 percent. During 1959 the DC-3 accounted for 62 percent of the total passenger miles. This was significantly lower than the 80 percent level attained by the DC-3 during 1958. It, therefore, can be expected that during 1960 the importance of the DC-3 will take a further drop, as more turbo-prop Convairs and F-27's come into service, and possibly, for the first time, some of the larger Martin M-404's.

Next to the DC-3 the F-27 accounted for the largest proportion of total traffic, 15 percent. In 1958 it had been 1 percent. The Martins accounted for the third largest share, 10 percent, approximately the same as the previous year. Next was the Convair 240 with 7.3, also approximately the same, and the Convair 340-440 with 5 percent, and none in 1958. The single Convair 540 of Allegheny's contributed 0.4 percent.

Thus, in 1959 all aircraft types except the DC-3 either held their own or made significant increases. The newer aircraft types undoubtedly generated new traffic the DC-3's

might never have attracted.

Last year's passenger load factors for the newer aircraft types are interesting. They ranged from 43 percent for the Convair 340-440 to 57 percent for the Convair 240 and were all higher than for the DC-3's, which was 41 percent. This, of course, reflects the fact that most of them were operated on the better routes. The load factor for the F-27 was 50 percent and for the one Convair 540, 47 percent. With their greater seating capacity the new types had average passenger loads ranging from 18 to 23 persons or roughly double that of the DC-3's, 10 persons.

As would be expected the DC-3 flew the shortest average stage length, 83 miles. The others except the Convair 540 which, because it flew only selected route segments was greater, had averages ranging from 99

to 122 miles. The average for the local service carriers, as a whole, rose slightly from 84 miles the previous year to 87.

As of the close of last year the aircraft operated by the 13 domestic local service carriers may be broken down as follows: DC-3, 219; F-27, 26; M-202, 19; CV-340, 10; CV-240, 7; CV-440, 4; and CV-540, 1.

Nine of the local carriers were operating mixed fleets. Only 4 were limited to DC-3's. In that yetar the local service carriers generated over 1 billion passengermiles, an increase of 1,000 percent over 1948. The number of passengers carried increased from 400,000 to 5 million, the passenger load factor from 27 percent to 44 percent. The reason, of course, for this proud record is that local service is needed for the progress of America. It is needed all over America. It is especially needed in our splendid new States of Alaska and Hawaii where a fine record has been made which merits, although I have not given it, special detailed mention.

In making a comparison of your record during 1959 over 1958, I find that in nearly all categories there has been marked improvement. In passengers enplaned there was a 23-percent increase, in passenger-miles a 25-percent increase, in express and freight-ton miles a 31-percent increase. Although the average total operating expenses in cents per revenue ton-mile increased 4.3 cents, 5 carriers showed decreases, and while the average break-even need of all carriers increased 5.2 cents per revenue-mile 6 carriers showed decreases.

The service you provide could be characterized as a 3-in-1. First, you link the smaller communities with one another, (2) the smaller cities with their principal trading centers, and (3) provide connecting service with the long-haul domestic trunks and international airlines. Each one is a separate and necessary service and is provided by each one of the local service carriers. You have shattered the barriers of isolation of the smaller communities and opened rural America to industrial expansion.

Your industry now stands on the threshold of a revolutionary age in air transport, the jet age, and as a result of the jet age, your problems will be compounded. The trunk carriers will be operating high speed, large capacity, long-range jet aircraft almost exclusively. Therefore, the importance of efficient short-haul service will be increasingly pronounced. The jets will stimulate traffic and this means that your traffic will be increased. Your service, therefore, must be constantly improved. It will be necessary within your capabilities to improve the speed, the comfort, and the convenience of the service that you provide. The alternative, of course, is that the increased traffic will be lost to your competitor, surface transportation. Your record is no precedent for such a result. The Board will expect to provide assistance and cooperation.

In my judgment the success of local service depends in large measure upon your relations with the communities you serve. There should be close cooperation with the local governments, the chambers of commerce, and the business men. Once you have convinced the communities of the merits of your product the selling should be relatively easy. Problems involving your service to these communities should be worked out on a satisfactory basis.

It is my sincere hope that the Board will never be called upon to decide an adequacy of service case involving a local service carrier.

Now I believe I have a duty to speak directly to one of the local service industry's most vexing problems. House Committee Report, dated April 14, 1960, on the Independent Offices Appropriation bill, includes the following language:

"An appropriation of \$60 million is recommended for payment of subsidies to local air

This is an increase of \$1,500,000 carriers. over 1960 and a reduction of \$8,984,000 in the budget estimate. During the hearings the committee expressed its concern to board that it is not auditing subsidy payments on a current basis, but makes monthly payments, and audits the accounts only annually. It is also suggested that the board examine its policies to be assured that carriers receiving subsidies are not encouraged to raise borrowed instead of equity capital by receiving a subsidy on their borrowed

This is not an isolated expression of view by a committee of the Congress. It is rather a typical view. The Board has become increasingly concerned with the problem of subsidy and I know that you, for many rea-

sons, share the same concern.

Since 1950 the subsidy per revenue passenger-mile has steadily declined from 9.6 cents to 4 cents, and the subsidy per revenue passenger has decreased from \$18.75 to \$8.04. Nevertheless, total subsidy payments have risen 62 percent since 1955. The total sub-sidy for 1959 amounts to approximately \$42 million. The Board's budget estimates for future years' forecast increases in subsidy. I know of no statistics to support a predic-tion of a reversal in the subsidy trend. In my judgment the trend will not in fact be reversed except by decreases in costs coupled with increases in traffic. The achievement of such a result is very largely up to you, and I am sure you will agree that such a result is very much in your own interests.

The Board cannot put passengers on air-planes nor can we operate airplanes. The Board does stand ready to provide assistance and guidance in order to achieve the goal of a healthy and prosperous local service in-

dustry

In the past the Board has established various policies to ald local service. For example, the Board has permitted carriers to experiment freely with commercial rates and to seek an optimum fare level. However, as you know, the ability to reduce subsidy by increasing fares is restricted by the deterrent effect on short-haul traffic.

The Board has also instituted several area proceedings which have resulted in substantial expansion of the local service systems. But, although expansion is accompanied by an increase in traffic, it also frequently re-sults in an increase in subsidy. In the seven States area investigation, the resulting subsidy cost of the new services amounted to 12 percent of the total local service subsidy estimated for 1960.

The withdrawal from service of routes with low traffic potential will, without doubt, produce savings in subsidy. However, if selfsufficiency were to be sought by this remedy alone, it would result in such curtailment of local service as to render such service

little more than an empty gesture.

The basic problem of the local service industry is low traffic density and passenger load factors coupled with the high unit cost of short-haul operation. These factors do not produce high profit margins. The Board is entirely aware of this and has attempted to overcome some of the basic handicaps by route adjustments and liber-alizing operating authority.

There are definite limits to greater route flexibility in that there should be a minimum of direct competition between local service carriers and trunk carriers. Morethere should not be such degree of flexibility that the local service carriers would tend to concentrate on the terminalto-terminal nonstop service to the detriment of the intermediate points.

The Board has, nevertheless, granted liberalized skip-stop authority in many cases and continues to grant it where warranted. As a general rule the Board's policy is that carriers operating new routes should have authority, after a minimum volume of two daily round trips have been scheduled to intermediate points, to provide nonstop service between noncompetitive terminals, but to make at least one stop between competitive terminals, Skip-stop service results in increased length of haul, operational flexibility, and better service, at lower

The Board has also adopted such measures as the suspension of trunkline service at points served by local service carriers, the transfer of local service authorizations of trunklines to local service carriers, the addition of points and routes expected to strengthen the earning potential of local carriers, and the elimination from local service certificates of low volume points.

It is commonly conceded that low volume communities generally gain a superior service when the service is provided by a local

service carrier.

The Board's so-called "use-it-or-lose-it policy" announced in the Seven States Area Case was designed to help the local service industry. It is a liberalized policy of affording communities of marginal traffic potentialities a chance to demonstrate whether they can support local air service. The Board announced that it would review the traffic experience of the newly certificated points and routes at the end of 18 months and on the basis of traffic results would determine whether or not to institute formal proceedings to suspend or terminate the ervice. The decision set forth certain specific community traffic standards: Five enplaned passengers daily to be achieved by the end of 18 months.

In 1957 the Board sponsored legislation to authorize the guarantee of purchase money loans for more modern aircraft. This proposal became law and we believe its results to have been of substantial benefit.

On March 24 the Board approved the release of a letter, to the president of each local service carrier, requesting an expression of views as to the current technique of apportioning the proceeds of joint fares on interline tickets for travel over two or more domestic air carriers. The current technique is a "rate prorate" under which the revenue of two or more carriers from a joint fare is determined by the ratio of each carrier's fare over its line to the total amount of such fares. The Board did not express any view in its letter. The Board is interested in the views of the carriers and after it has an opportunity to analyze them will decide what further action, if any, is appropriate.

One of the most important steps to improve the local service program is the pro-posed revision of the method of administering subsidy. This is the project for the development of a subsidy class-rate structure. The Board was disappointed that the joint efforts of the Board's staff and the industry during the past 2 years failed to develop a reasonable and equitable class-rate structure. The efforts are being continued.

The Board has recently appointed a toplevel class-rate study group with instruc-tions to develop a workable class-rate plan. In turn, the local service industry has two separate liaison groups working with the Board's staff.

Last July the staff released a revised plan. The carriers were requested to review it and submit comments. Of the 13 reporting carriers, 2 raised serious objections to the classrate concept on the basis of legality, equity, and timeliness of any uniform class rate. third carrier questioned the legality, but indicated it did not object if modified in accordance with its recommendations. The remaining carriers, although favorably disposed toward the class-rate concept, pro-posed extensive modifications and liberalizations of the formula components.

It is the Board's current opinion that the basic advantages of a class rate are: (1) a more predictable and controllable subsidy bill, and (2) a greater incentive to managements to operate their companies more efficiently.

It appears that there are two major attributes basic to any acceptable plan: (1) Final prospective rates not subject to retroactive adjustment, and (2) subsidy rates based upon industrywide standards as to operating costs, loads, load factors, and number of schedules to be underwritten with subsidy support. In other words, subsidy rates would not be based upon the need of an individual carrier but rather upon a class of carriers.

The advantages of a class-rate, if one can be developed, are sufficient to justify the major effort involved in seeking it. One of the most desirable features would be the avoidance of retroactive or open-rate periods. With the many route modifications that have occurred in recent years, and the transition from DC-3 aircraft to more modern equipment, subsidy rates have shown an unfortunate tendency to remain on an open rate basis. Operations on open mail rates for long periods of time may result in retroactive and costly adjustments. Sustained periods of open rates for large segments of the local air carrier industry are also likely to have a damaging effect on the credit position of the carriers and an unfavorable effect on the carriers' ability to finance on reasonable terms.

In view of the Board's at least temporary lack of success in its efforts to develop satisfactory class-rate, it did recently publish scheduling standards designed to provide a more firm but not inflexible basis upon which to approach the scheduling problems in future rate conferences. I would like to emphasize, since the application of the standards has sometimes been misunderstood, that they are not to be considered as a predetermination with respect to an individual rate. The standards are not definitive but ought to be regarded merely as an aid to both the carriers and the Board in meeting the objectives of placing all carriers on final rates by the end of this

I think the relationship of the Board to the local service carriers, with partial ac-curacy, may be compared to a young father who, after a late and large evening, and faced with an early rising for an important morning, paces about hopelessly in the middle of the night with his healthy but wailing and unsympathetic son in his arms. He then looks forward longingly to that future time when he no longer will be confronted with such completely insoluble problems. But despite his pride in the subsequent achievements of his son he finds that the problems in fact increase and accelerate in complexity until the son at least reaches complete maturity.

Now I think that to the extent this comparison may have any validity and the local service carriers are to be considered the son. that then the son has just about reached maturity, and that he and the old man are going to get along all right, and that all of the problems will eventually be solved, but there remain a few mighty tough problems ahead for the last few years while the son goes to the university.

Editorials From the Audubon Magazine

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. WILEY. Mr. President, the National Audubon Society, one of our great conservation organizations, is carrying on useful constructive programs to promote conservation and a better understanding by our people of our outdoor heritage and the relationship of living things to their natural environment.

In my home State, for example, one of the society's fine camps—one of four in the Nation—is located near Sarona, Wis. The purpose of the camp is for training teachers, conservationists, youth group leaders, and other interested individuals in plant, aquatic, bird, and wildlife, and other aspects of nature. Since establishment in 1955, the total of 889 teachers and citizen conservationists attended the camp.

In an age in which our out-of-door areas are too-fast vanishing under the expansion of industrialization, urbanization, and 'other "izations" we need greater efforts to preserve—as well as expand understanding of the value of maintaining unspoiled natural heritage.

Recently, the president of the Audubon Society, Mr. Carl W. Buchliester, well known in Wisconsin and throughout the country for leadership in the nature preservation, published a series of editorials in the Audubon magazine. The editorials, reflecting the views of the society, bear also upon issues of interest to the Congress. I ask unanimous consent to have the editorials printed in the Appendix of the Record.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

Needed: A "Coordination Act" for Pesticides

To those who have followed the fire ant controversy it is now obvious that much unnecessary destruction of wildlife could have been avoided if there had been adequate study of the problems, and genuine consultation between insect-control agencies and wildlife agencies, before the massive aerial spraying program was begun.

In the first place, if the real facts about the imported fire ant had been commonly known, the public and Congress would not have been misled by the promotional campaign which erroneously pictured the fire ant as an all-consuming plague, devouring crops in the field, killing livestock, and menacing human life.

But after Congress had appropriated the money and after the spraying planes were in the air, it was difficult to bring about any reasonable second-look at the methods. It became increasingly difficult after the control agencies were put on the defensive by mounting criticism.

The fire ant flasco and other examples of the careless or mistaken use of chemical controls by public agencies have led the National Audubon Society to conclude that what is needed is a "coordination act" for pesticide Programs similar to the famous Coordination Act of 1946 (amended in 1958) that put advance planning and protection for wild-life into the Federal flood control and reclamation programs.

The principle of such a law is simple. It would require advance consultation with the U.S. Fish and Wildlife Service, and advance testing of the materials and methods proposed, before the start of any Federal program involving the widespread use of insecticides, herbicides, or other chemicals designed for mass biological controls. Through such advance consultation and testing, the probable effects upon wildlife and other resources could be studied and techniques devised to prevent or minimize losses. We recognize that in this complicated world some chemical controls will be employed, but we must insist they be used safely.

A Federal law could not regulate pesticides operations by State agencies or on private lands, of course, if Federal funds were not involved. This means supplementary State laws may also be needed.

Enthusiasm for a proposed "coordination act" spread rapidly at the recent North American Wildlife Conference in Dallas, Tex., which your President attended. We can now predict that such legislation will be introduced soon in Congress, probably before this magazine goes to press.

OIL POLLUTION TREATY GOES TO SENATE

The high seas, vast and deep as they are, cannot continue to take increasing loads of oil pollution without intolerable damage to natural resources upon which the whole world depends. The problem has already become acute. Recreational beaches are despoiled by the tarry wastes that wash ashore. The reduction of marine life needed for human food is largely unmeasured but known to be serious. Nowhere—and we repeat, nowhere-is the destruction more dramatic and shocking than in the effect upon birdlife: 250,000 birds foundered and died in oil slicks off Newfoundland during the past winter. It was the worst winter in history for bird mortality in that area, according to the Audubon Society of Canada. As only one result, the razor-billed auk, formerly present in goodly numbers, is now thought to be virtually extirpated as a breeding bird in Newfoundland. Waterfowl and sea birds continue to perish in large numbers from oil pollution along the coasts from Boston to New York, particularly in the Nantucket area.

Here is an emergency which requires international cooperation and national enforcement in territorial waters, and action more prompt than usually characterizes international negotiations. In 1954 United States representatives at a London conference helped draft a convention (treaty) for the prevention of oil pollution of the high seas, but 6 years later the United States has not yet signed it. Twelve other nations including Canada have joined, or ratified, the convention, which calls for zoning and international controls on the dumping of waste oils at sea.

The pollution usually occurs when tankers are cleaned at sea; when bilges are dumped; or when oil water is discharged in ballasting operations to maintain a vessel's balance.

In a message of February 15, 1960, to the Senate, President Eisenhower asked it to ratify this "International Convention for the Prevention of Pollution of the Seas by Oil." As of this writing, the Senate Foreign Relations Committee, to which the document was referred, had scheduled no hearing or other action upon it. We have written to Senator J. W. Fulbright, committee chairman, requesting that this urgent matter not be overlooked.

WILDERNESS BILL WILL BE HISTORIC ACHIEVEMENT

The continued postponement of action on the wilderness bill, despite the wildespread popular demand for this basic conservation measure, is a result of the delaying tactics so successfully used by the opposition. The opposition is well known: certain groups representing commercial users of the public lands who think that some day they may wish to develop the few remnants of American wilderness which the bill seeks to protect. They must be looking to the future because no individual who presently grazes lievstock, operates a mine, holds a mineral lease, or otherwise enjoys private rights or privileges on the public lands, would be ousted by the moderate bill now pending.

Conservationists can see no excuse for further delay and continued delaying tactics will be recognized and branded for what they are. On the other hand, passage now of the

wilderness bill would give Members of the 86th Congress an historic conservation achievement to which they could point with bride.

THE ARCTIC WILDLIFE RANGE

Members who attended our November 1959 convention will recall the eloquent plea by Dr. Olaus J. Murie, Audubon Medal recipient, for establishment of the proposed Arctic Wildlife Range. We now commend the House of Representatives in Washington, D.C., for its recent unanimous passage of a bill to accomplish that objective. Similar action by the Senate would assure the preservation of unique, and irreplaceable, wildlife and wilderness values in a great 9-million-acre area of northeast Alaska. We sincerely hope that Alaska's able Scnators, Mr. Barlett and Mr. Gruening, will support the bill.

Because so much of the new State of Alaska is federally owned, and because the teritory was so long governed by the distant "great white father," any kind of Federal land withdrawal or reservation is said to be unpopular with Alaskans. However, here is a conservation proposal that will benefit the whole Nation and generations yet unborn. Tourism is now one of the major industries of Alaska. Assistant Secretary of the Interior Ross Leffler has estimated, probably correctly, that within 25 years the Arctic Wildlife Range will itself attract more visitors than the present total summer influx into Alaska.

With respect to the attitude of Alaskans, it must not be overlooked that the present drive to set aside an Arctic Wildlife Range was started in Alaska by Alaskan organizations. The rest of us followed along and well we should.

The Secretary of the Interior can withdraw the Arctic Wildlife Range by Executive order, closing it to mining and mineral leasing, and conservationists are urging him to do so regardless of the possibility such action by the Secretary might become a political issue. Passage of the pending legislation would be more to Alaska's advantage, however, because it would permit mineral development under reasonable controls to protect the wildlife.

A GREAT FRIEND PASSES

Conservation lost a great and dedicated advocate with the untimely passing March 8 of Richard L. Neuberger, as he was nearing the end of his first term as U.S. Senator from Oregon. As evidence of the stature he had attained, the place he had won for himself, virtually every Senator who joined the next day in heavyhearted tribute to their departed colleague spoke of his leadership in natural resources conservation and emphasized it. As journalist, author, historian, and legislator, he used his remarkable talents to assure that future generations of Americans will know and enjoy a fertile and beautiful land.

Advertisement of Montana's Attractions

EXTENSION OF REMARKS

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10, 1960

Mr. MANSFIELD. Mr. President, on many occasions I have spoken to my colleagues here in the Senate about the many wonders and attractions that exist in Montana. On occasion I have felt that some people feel that I was exaggerating a bit but recently a situation de-

eastern part of the country had an opportunity to see firsthand what Montana did have to offer. I might say the response was overwhelming.

Several weeks ago the Fulmer-Giardello fight was held on the campus at Montana State College in Bozeman and it attracted boxing fans and sports enthusiasts from all over. These people were completely taken in by Montana's hospitality and friendliness. Many of them returned home to write about it.

The May 3, 1960, issue of the Montana Standard carried a fine editorial on this aspect of Montana's advertising campaign and, Mr. President, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

MONTANA BECOMES A FIRST PAGE STORY

Montana is getting the thing it most needed-advertising-and from an unexpected source.

A score or more eastern writers who came to Montana to cover the Fulmer-Giardello fight, wrote a lot of words about the fight, but they also have written a lot more about Montana. And they're still writing.

Nearly all of the writers are coming back to Montana. Some of them want to come here to live. This is not surprising. What is surprising about it is that the truth about Montana has been so long in coming out. But apparently the idea that Montana is a great State is taking hold nationally.

It seems to have been a well kept secret

heretofore.

Some of the visitors are even a little

jealous, we suspect.

Martin Kane of Sports Illustrated, Life, and Time remained in Bozeman after the fight to witness the 14th annual intercollegiate rodeo at Montana State College.

"This is the first rodeo I've seen, except on said Kane. "I'm so impressed with the fact that so many colleges and high schools compete in this sport out West that I'm going to ask for an assignment to come back here next year and do a story.

"We don't have anything like this in the East. I think it's wonderful to see these kids competing—the idea fascinates me." Another writer, Lester Bromberg of the New York World-Telegram and Sun, ex-

pressed similar sentiments.

The writers also were impressed by the hospitality and friendliness of Montana people. They regarded Montana fishing as fantastic. They thought the scenery was "way out."

Said Bromberg: "My stay here has been a record. I've never been so long in any town where I've been sent to cover a sporting Every day has been enjoyable and those steaks are out of this world.'

It was Bromberg who boasted that he ate a 52-ounce sirloin steak at a single setting.

That's 31/4 pounds.

Another thing that amazed the visitors was the fight crowd. Some 12,000 witnessed the championship match. Back East fight crowds are considerably smaller. Sometimes as few as 800 people turn out. The big income is from TV.

It's another reason the West may expect to witness more topflight sporting events. In the East they're tired of sports. That's why the baseball teams are moving West.

Montana is going to be a page 1 story throughout the Nation all summer with the Governors' conference in Glacier Park and with the discovery of the Treasure State by the visiting writers.

veloped whereby many folks from the Leadership of Indiana in National Rural families. These are the families that pro-Development Program

EXTENSION OF REMARKS

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. CAPEHART. Mr. President, on Sunday, May 8, 1960, the New York Times published a front-page article on the national rural development program. It shows especially how Indiana is helping give leadership in this program which is operating in 30 States and Puerto Rico.

I am told that other States have plans to get started on this program, which is helping especially the families on small low-income farms. As the very able writer William M. Blair says in this article:

Its objective is to help the country's lowincome families. These are the families that produce less than 10 percent of farm products marketed today and have largely bypassed by the benefits of price supports.

Starting in 1955, the rural development program has been solidly developed to aid the small family farmsthe farmers who most need help.

The entire article so well illustrates the program which is underway in broad areas of the lowest income farm areas of the Nation that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

RURAL HELP PLAN TESTED IN INDIANA-POOR HILL COUNTY IS FINDING NEW HUMAN RE-SOURCES WITH AID OF U.S. PROGRAM

(By William M. Blair)

CANNELTON, IND., May 7 .- Perry County, Ind., is a part of a vast rural laboratory.

What is going on in this rural hill country, in the central tip of Indiana along the Ohio River, is also going on in counties scattered throughout 30 other States and in Puerto Rico. It may chart a worldwide course for the development of human resources in agriculture.

The project has attached attention abroad. The Canadian Government has sent representatives to study it. It has been endorsed by the Organization for European Cooperation.

Farm surpluses, the abundance of American skills in science and technology, price supports and farm subsidies, and the anguished cries of farmbelt politicians on the land and in Congress have occupied the news spotlight. But here on the land, in marginal low-income areas where farming is a precarious business at best because of poor resources, natural, and otherwise, the development of human resources lags far be-

NEW OPPORTUNITIES SOUGHT

It is the development of human resources and the opening of new jobs and other opportunities off or on the farm that has turned the country into a laboratory. Officially, the program is the rural development program.

This long-debated idea was adopted by the Federal Government in 1955. Its objective is to help the country's low-income duce less than 10 percent of farm products marketed today and have largely been bypassed by the benefits of price supports.

These farm families in Perry County and throughout the country depend on small, poorly paying farms. Their off-farm job poorly paying farms. opportunities are limited. They lack adequate land, credit, capital, equipment, and, perhaps more important, adequate education and information about themselves and what they need to do.

In Perry County today a group of citizens has been organized into a long-range planning committee in a program to assess themselves and their county. They seek answers to many questions, ranging from how to make a living on the farm to health prob-

NEW INDUSTRY WANTED

From these answers, it is hoped, will come solutions and actions that will widen their horizons, fit them into the main stream of progress, and make a contribution to the community and national welfare.

They are talking of attracting more industry, recognizing their schools, finding ways to enlarge farm units and shifting to better farming methods, and to other crops. They are also talking about market opportunities, getting better roads, rebuilding the cut-over forest land, and the possibility of tourist trade in forest recreation areas.

We're long on scenery and short on soil," observed one farmer as he looked over the beautiful rolling hills greening up in spring.

Perry County's problems can be duplicated in nearly all low-income countles in the country, although individual needs may be different.

The county is near the bottom of the income ladder. It ranks 78th in net farm income among the State's 92 counties. It also ranks 78th in the value of farm products sold.

It has two substandard rural high schools with an enrollment of 194 pupils. Both schools have outside toilets. For one, water has to be hauled from Tell City.

A LONG RIDE TO SCHOOL

About 425 rural pupils ride buses, some for an hour and a half each way, to the more modern high schools in Cannelton and Tell

In all, the county has 4,100 pupils enrolled. It has two one-room schoolhouses and several two-room schools among its 17 schools.

Loren Lanham, county school superintendent, estimated that 40 percent of the 69 teachers lacked college degrees.

Now, more than a dozen Federal, State, and local agencies, spearheaded by the agricultural extension service of land-grant colleges, are engaged in a rural development ef-

Purdue University's cooperative extension service, started long-range planning in Perry County 2 years before the Federal program was adopted and allocated Indiana \$20,000 for the human-resource research.

Indiana made a natural merger into the national program, which is an educational one rather than a direct aid program. All kinds of resource, however, are available at Federal and State levels. These include loans from the Farmers Home Administration and the Small Business Administration.

"We knew we had a problem and we knew it meant more than just a county agricul-tural agent's services to rural people," said L. E. Hoffman, director of the extension service at Purdue.

"It's not our purpose to put a lot of money into building things and to force projects on folks. Our purpose is to help them help thems-lves. In that way, the building will be permanent and lasting.

SAME RESULTS SUBPRISING

This mental, do-it-yourself effort has produced some startling results. It also has disclosed some conflicts.

"We're on the threshhold of a new era," Robert Cummings, editor of the Cannelton News and a leader in the local rural development program, said the other day. He and others foresaw Perry County's participating in the industrial boom taking place in the Ohio River Valley.

"But, of course, we must know our problems before we can partake of what we hope will come." he said.

The road is slow. Some counties have

moved faster than others.

It is difficult to pinpoint actions that have produced new opportunities for higher incomes and higher standards of living for rural dwellers. However, the rural development program can say it had a hand in many direct actions that have changed attitudes, gained new industries in various places, and made other changes.

Four small businesses have located along the river in recent years, as the result of

local initiative.

Other examples of the many-sided program in other areas include the formation of farmers' marketing cooperatives in two Kentucky counties, and the organization by businessmen in Bertie County, N.C., of a produce company that built a \$70,000 market.

EDUCATION PUT FIRST

The most startling development to be found is that the people in many areas and in Perry County, in particular, have assigned first priority to one problem—education. They extend that aim to adult education, too.

"Education is oging to make it easier for us to make a living, make it easier for our children and their children," is a commonly heard opinion.

Arnold Mulzer, who has taken the lead in seeking industry as a part of the development program, expressed the viewpoint of many about approaching the problems of the underdeveloped county.

"You can't separate the problems," he said. "You can't say it's all farm problem or all lack of industry or all inadequate educa-

tion."

"It's all one ball of wax," he remarked. "It's a community problem and the whole community must put its weight behind doing what needs to be done. You can't stand still or you die."

Edgar Braun, an oil jobber in Cannelton, is chairman of the long-range planning committee. He told of some impatience among some people with the program be-"it hasn't been showing tangible results, like pouring concrete or such things."

However, he remarked, "We're dealing with a lot of intangibles, with ideas which we've got to have before we can get what we need."

Some people, he remarked, fell in with the long-range planning "because it was the thing to do" or it helped them maintain their business or social standing. But, said Mr. Braun, "we get converts every day."

He pointed to a health survey of the country, the first comprehensive study of its kind in the area. The long-range planning committee developed the idea.

In cooperation with the county health council, civic, church, and other action groups, the committee covered more than three-fourths of the county's 18,000 persons.

"That survey opened a lot of eyes," Mr. Braun said. "It also made people aware of the need for long-range planning."

As well as covering the broad health needs of the county, the survey also pinpointed the sore spots. For example, it uncovered a high incidence of cancer. Now, a subcommittee is getting ready to tackle that problem with local and State health authorities.

Hiram E. Wallace, Perry County agricultural agent who has kept the long-range planning on its course with the help of Purdue specialists, put it this way:

"These people have learned to recognize their problems according to their own values. It isn't a question of somebody telling them what their problems are, but of getting them to see them. Then they can move ahead."

William Freeman, one of the few full-time farmers in the county, heads a county committee under a State school reorganization plan for consolidating and improving schools. He put his fingers on "problem

recognition" in a different way.
"Six or seven years ago," he he said, "vou probably would have been ridden out of town on a rail if you mentioned school reorganization. Now at least you can talk about it without getting hurt."

NEW PLANTS RAISE WAGES

For many years wood products, mainly chairs, were the backbone of this forested Wages climbed as a river barge county. manufacturer came in and a vacuum tube plant was opened. The General Electric Co. employs about 2,300, mostly farm women, in its tube factory.

A small safe manufacturing company is installed in an old cotton mill along the river here. When it opened to hire about 125 persons, some 600 applicants stretched for four blocks.

An Eastern maker of fiberglass small boats was induced to locate here recently with a plant partly financed by local money.

The employment in all plants here is about 5,000 to 6,000. But the available male labor supply in this country and adjoining southern counties, facing similar problems, is many times that number.

New industry poses conflicts in such rural communities. Local leaders tend to min-imize the conflicts but they do not deny them. One is the customary opposition of small-town businessmen to higher-paying jobs in cheap labor areas. Farming people also tend to look down on labor unions, but this attitude seems to be changing.

The Federal development program is administered by a committee headed by Under Secretary of Agriculture True D. Morse. It includes Under Secretaries of the Departments of the Interior; Commerce; Labor; Health, Education, and Welfare; and Administrator of the Small Business Administration; and a member of the President's Council of Economic Advisers.

The former dean of Purdue's College of Agriculture, Harry J. Reed. is national co-ordinator of the program. Purdue's present agricultural dean, Earl Butz, helped set up the program in 1954 when he was an Assistant Secretary of Agriculture.

Despite some opposition and many doubts among some people in Perry County, the hope of many may be seen in the comment of the mother of five young children. She is Mrs. Paul Ziegelgruber, who was a member of a women's planning subcommittee.

"I have never learned so such about our situation in so short a time," she said.

The Government's Role in Baseball

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. YOUNG of North Dakota. Mr. President, an excellent article by Mr. Red Smith on the general subject of the Government's role in baseball was published in the Minot Daily News, Minot, N. Dak., on May 3, 1960. The title of the article is "Continentals Drag Feet in Purchasing Franchises."

This article expresses the views, I believe, of the great majority of baseball fans in North Dakota including myself. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

CONTINENTALS DRAG FEET IN PURCHASING FRANCHISES

(By Red Smith)

New York .- "Within 3 years," Branch Rickey said recently in a passionate interview, "I can see boys who will steal 60 bases, boys who will win 20 games, boys who will hit .400 "

He was talking about Continental League boys, but not old Continental League boys like Branch Rickey. Moving with the stately dignity of Helen Traubel running out an infield grounder, the old Continental League boys haven't got to first base.

New York City was formally committed Thursday to build a ball park for the Continentals in Flushing Meadow. This is what they've been waiting for, the Continentals say, for without a New York team in a suitable playpen their major league pretensions would collapse.

Now that they're going to get the play-ground, they need a team to garnish it. Jack Cooke, one of the founding fathers, owns the Toronto Maple Leafs, which gives him the nucleus of a Continental League team.

Backers in other cities either have an interest in the hometown team now or plan to buy the club as a starter. In New York there is no team to be bought, no place to put any players who might be signed before the proposed opening date in 1961.

York contemplates moving in in "New 1960," Bill Shea said last August when this point came up before a major league committee, "by the acquisition of a player agreement immediately with a Triple-A ball club or Double A."

In other words, the New York group would buy a minor league team and operate it outside New York until the Continental League could open. With that in view, Walter O'Malley was asked to put a price on his Montreal farm. It may astonish some of Walter's admirers in Brooklyn to learn that he opened his books to show his investment of \$200,000 in Montreal, then said: "You can have it for \$150,000."

Here was a club the New York interests could buy at an eminently fair price to operate in the International League and use as a repository for Continental League talent until moving into the city. The Continentals dragged their feet for a while, then backed off because Montreal isn't a money

For years, Atlanta was one of the country's great minor league towns but last summer attendance approached the vanishing point. The Continentals were offered the club for \$1 on condition that they operated for the time being in the Southern Association. They said no thanks because it was a loser.

These are disconcerting facts, especially to one with an almost idolatrous respect for Branch Rickey, a firm belief that major league baseball should expand, and hearty good will toward the Continental League.

There was a good deal in the papers, some of it misinformed, about the little hassle with Ford Frick over Rickey's plan for a Western Carolinas League. The Continentals planned to underwrite this league up to \$120,000, staff it with kids they would pick

up as free agents, and hold these rookies in a pool for future distribution to Conti-nental League teams.

This is clearly against the rules and the commissioner refused to sanction it, citing a string of precedents established by Judge Landis who pointed out that when one organization controls players on two or more teams in any league, "the power exists to regulate and control the competition of those clubs."

Unable to relax the rules against "syndicate baseball" for anybody, Frick outlined a plan whereby the Continentals could support the Western Carolinas League through legitimate club-to-club working agreements.

Almost immediately he got a letter from Senator Estes Kefauver compounded about equally of misinformation and a veiled threat of antitrust action. While the commissioner was straightening the Senator out, Rickey was complaining that the ruling prevented the Continentals from signing any free agents because they had no place to put 'em.

This wasn't and isn't so. The Western Carolinas League is going to operate within the rules, supported by the Continentals on the club-to-club basis Frick suggested. There was no need to run whimpering to the chairman of the Senate Antitrust and Monopoly Subcommittee.

In Bartlett's "Familiar Quotations" there a description of statuesque immobility which seems singularly apt just now. It was written by Guy Humphries McMaster when Rickey was a boy:

"In their ragged regimentals, Stood the old Continentals, Yielding not, While the grenadlers were lunging, And like hail fell the plunging Cannonshot."

Mrs. Joan Whitney Payson, the gracious lady backing the New York entry in the Continental League, said the other day that she and her friends were groping for a name for the team. Considering the pace at which the Continentals have been moving, how about New York Counts? Sure they're oysters, but they come from Long Island.

Make Our Presidents Senators

EXTENSION OF REMARKS OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES . Tuesday, May 10, 1960

Mr. CURTIS. Mr. President, one of the most rewarding talents to be encouraged in our youth is that which strives for excellence in public speaking. Of the many achievements which can be pursued in our abundant life, I am sure none will better serve a young person than experience in public address. am pleased to offer my colleagues the text of a speech delivered by Karen Kneifl, a student at Marian High School in Omaha, Nebr. This recitation, and another delivered by Karen's teammate, Marcia Brazelton, of Omaha, Nebr., won for Marian High School first place in the recently held National Forensic League speech tournament for the State of Nebraska.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

WASTE NOT-WANT NOT

At the dedication of the Truman Library in Independence, Mo., a few years ago two former Presidents of the United States met. Half ruefully, half jokingly, Harry S. Truman asked Herbert Hoover:

'Just what is the role of a former President?'

After a thoughtful pause, Mr. Hoover answered:

"The only thing for an ex-President to do is to take pills and dedicate libraries."

Have you, as a citizen, as a student, or an NFL member ever considered what happens to our Presidents once they have climbed the ladder to the top and served our country for 4 or 8 years? All of a sudden they not only are unemployed but they are divested of all authority and importance. They are pushed aside and more or less forgotten.

The most glaring of all of the wasted intellectual resources of our Nation is that of our country's best leadership, that leader-ship being within the capacities of our ex-U.S. Presidents.

Any former President, whatever his party and whatever his record as President, acquires a vast amount of information and insight that Members of Congress and the general public must not overlook. This is the priceless experience of the sages of our time that we are wasting.

A country which wastes its resources can never reach its peak. I have heard many people remark at the time of someone's death that it was too bad he could not leave his talents behind-yet we are wasting supremely invaluable wisdom and experience of our former Chief Executives who are still with us because we have not recognized this bank of knowledge and experience for what it can offer America.

The problem, then, is by what method can we utilize this wisdom of our ex-Presidents and, at the same time, add to their role the dignity and honor due them as the sages

of our era?

James A. Farley, one of America's shrewdest minds, suggests that we pass a statutory law making all former Presidents lifetime nonvoting Senators-at-large. This would give the past President the role of a "father Senator," continuing to represent all the people of our country, with all the privileges of regular Senators excepting the power to vote. Today we would like to advocate that these Presidents be lifetime Senators with the power to vote.

A former President would find the Senate an excellent forum in which to speak out on major policy questions and military affairsit is precisely these areas where retired Chief Executives would have substantial special knowledge. These father Senators would not have to worry about reelection; therefore, they could speak with exceptional force and

There have been some happy cases of an incumbent President wisely using the services of a predecessor on a special assignment.

During the Truman administration, former President Hoover directed the Hoover Commission, which helped reduce Government inefficiency. Also, back in 1902 President Theodore Roosevelt made Grover Cleveland chairman of an effective body which investigated the bitter coal strike.

But mostly, in the past years, instead of the opportunity to use their wisdom for the advancement of our country, we find these men who have held the greatest office in the world are left to feel neglected and useless. as they are retired with nothing of promise ahead of them.

Let's take a look at the wasted years of Theodore Roosevelt. This dynamic man, who was barely 50 when he finished his second term, wanted to run again, but refrained because of his 1904 pledge that he wouldn't be a candidate in 1908. So, instead, he went

big-game hunting in Africa for a year. But in 1912, when the Republicans renominated Taft. Roosevelt bolted the party to run for President again himself as a Progressive. Democrat Woodrow Wilson easily won in this three-cornered election.

During the 10 years after he left the White House, restless Teddy Roosevelt dissipated his energies in so many directions that in 1919 he died an unhappy, embittered man. What a pity that this brilliant ex-President wasn't given a dignified, constructive job in the U.S. Senate, where his versatile and inexhaustible vitality would have aided the country.

Today we may anticipate that future Presidents, including the one to be elected this year, will leave the White House with many years of service still before them. For that matter, even in the past most Presidents had many years still before them when they left the White House. You may be surprised to learn that 25 of our Presidents before Eisenhower lived an average of 11 years in retirement. That's 275 years of potentially valuable service wasted.

What are we going to do with our President Eisenhower who will finish his term this year? President Eisenhower's experience both as general and President, and his firsthand acquaintance with world leaders will make him extraordinarily valuable—provided we don't push him off into the sidelines and forget him. With his wisdom gained as world traveler, dealing with all other countries, as well as steering our affairs for 8 years, he would be invaluable in helping solve crises. Are we going to turn all of this valuable wisdom from our helm because we now have a new President? .

Ex-President Mr. Eisenhower can be of great value to our country as a Father Sena-tor. For he will not be beholden to any political party, or to any select groups, such as labor or management. For the first time he can evaluate all experience in the light of what is good for our country with no strings attached. Thus he should prove a wise counselor indeed for those Senators who may have outside pressure exerted upon them.

Back in 1889, James Bryce, the English historian, commented on our strange failure to take advantage of ex-Presidents' abilities.

In his famous book, "The American Commonwealth." he wrote: "They managed things better at Rome, gathering into their Senate all the fame and experience, all the wisdom and skill of those who had ruled and fought as consuls and praetors at home and abroad."

In 1906, Historian Charles Francis Adams also urged putting our ex-Presidents in the Senate, warning "We have lost absolutely the value of their ripe experience and great abilities—these eminent citizens were cut off from public utility at the maturity of their powers and during the best years of their lives as counselors.

In England, Winston Churchill went on erving his country after ceasing to be Prime

While in America we have accepted the attitude of "Off with the old, on with the new"—the younger generation is taught less We find and less to value grandpa's wisdom. much of the present-day attitude lends itself to invite this disregard for the experience of our elders.

However, it is necessary that we waste not for wasting the experiences and abilities of our Presidents has always been wrong. must stop treating our ex-Presidents as unemployed has-beens, when we need their wise counsel as never before.

For an interim of 70 years citizens have discussed the merits of making the ex-Presidents Members at Large of our Senate, but even though no one seems to really be against it, nothing has been done about it. Most lawmakers, like most Americans, are fust indifferent.

Can you and I do something to awaken our country to take action?

More than ever before we do need to retain the wealth of knowledge gained by our President Elsenhower—knowledge that he has gleaned as he convened at Camp David and traveled from country to country endeavoring to learn the solutions to world problems.

Our body of National Forensic League members represent the outstanding youth of America. Let us have our National NFL Congress draw up a resolution asking our Congress in Washington to take immediate action to make our ex-Presidents Members of our Senate. Besides that, at the same time, we could ask each chapter to storm Congress with letters requesting individual representative Senators to demand immediate action to provide this law before our next President takes office in January 1961.

We must stop wasting the intellect and abilities of past Presidents. For if we waste not, we will want not, but if we so carelessly regard any of our resources, the day of want will be upon us.

The Morals of Extermination

EXTENSION OF REMARKS

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the prophetic voice is more necessary than it is welcome. The events of the past few days have reminded us how close we can come to the abyss of extermination. Mr. Lewis Mumford in an essay, from the Atlantic Monthly last October, on "The Morals of Extermination" has sought to sting the soul of America with an honest facing of the human side of the issues before us.

In times of global conflict the human side of our policy tends to disappear from our calculations. Most of our writers and critics can be characterized as "the bland leading the bland." Mr. Mumford writes prophetically. His essay does not make me happy; it will not make you happy. But if humanity is to survive, then these things must be said in the simple candor Mr. Mumford adopts:

Since 1945, the American Government has devoted the better part of our national energles to preparations for wholesale human extermination. This curious enterprise has been disguished as a scientifically sound method of insuring world peace and na-tional security, but it has obviously failed at every point on both counts. Our reckless experimental explosion of nuclear weapons is only a persuasive salesman's sample of what a nuclear war would produce, but even this has already done significant damage to the human race. With poetic justice, the earliest victims of our experiments toward genocide—sharing honors with the South Pacific islanders and the Japanese fishermen-have been our own children, and even more, our children's prospective children.

Almost from the beginning, our investment in nuclear weapons has been openly directed against a single country, Soviet Russia. In our Government's concern with the self-imposed problem of containing Russia and restricting by force alone the area of Communist penetration, we have

turned our back on more vital human objectives. Today the political and military strategy our leaders framed on the supposition that our country had a permanent superiority in nuclear power is bankrupt, so completely that the business probably cannot be liquidated without serious losses.

As things stand now, we are not able to conduct even a justifiable police action, as a representative of the United Nations, with the backing of a majority of the nations, without the permission of Russia and China. When they refuse permission, as they did in Korea, the limited war our strategists fancy is still open to us turns into an unlimited humiliation, as the painful truce that continues in Korea should remind us, for every original issue remains unsettled. But if we challenge that veto, our only recourse is to our absolute weapons, now as fatal to our selves and the rest of mankind as they would be to Russia and China. The distinguished army combat generals who have publicly recognized this state of impotence have been forced out of the armed services.

This situation should give us pause. While every scientific advance in nuclear weapons intercontinental missiles only widens to planetary dimensions the catastrophe we have been preparing, our leaders still concentrate the Nation's efforts on hastening these advances. Why, then, do we still listen to those mistaken counsels that committed us to the cold war, though our own military plans have wiped out the possibility of war itself and replaced it by total annihilation as the only foreseeable terminus of the tensions we have done our full share to produce? By what standard of prudence do we trust our lives to political, military, and scientific advisers who have staked our national existence on a single set of weapons and have already lost that shortsighted gamble, even if they become desperate enough to use these weapons or remain blind enough to believe that they can conceal that loss by not using them?

What was it that set in motion the chain reaction of errors, miscalculations, delusions, and compulsions that have pushed us into the impossible situation we now occupy? Every day that we delay in facing our national mistakes adds to both the cumulative dangers that threaten us and the difficulty of undoing them.

The first step toward framing a new policy is to trace our path back to the point where we adopted our fatal commitment to weapons of mass extermination. This moral debacle, it is important to remember, was not a response to any threat by Russia or by communism; still less was it imposed by Russia's possession of similar weapons. 'Actually, the acceptance of extermination antedated the invention of the atom bomb.

The principles upon which the strategy of extermination was based were first enunciated by Fascist military theorists, notably General Douhet, who believed, like our own Major Seversky, that a small air force could take the place of a large army by confining its efforts to mass attacks on civilians and undermining the national will to resist. This reversion to the vicious Bronze Age practice of total war was a natural extension of fascism's readiness to reintroduce terrorism and torture as instruments of government. When these methods were first carried into action, by Mussolini in Abyssinia, by Hitler in Warsaw and Rotterdam, they awakened horror in our still morally sensitive breasts. The creed that could justify such actions was, we thought correctly, not merely antidemocratic but anti-

In the midst of World War II a moral reversal took place among the English-speaking allies, such a transposition as happened by accident in the final duel in "Hamlet," when Hamlet picks up the weapon Laertes had poisoned in advance in order to make sure of his enemy's death. The Fascist

powers became the victims of their own strategy, for both the United States and Britain adopted what was politely called "obliteration bombing," which had as its object the total destruction of great cities and the terrorization and massacre of their inhabitants.

By taking over this method as a cheap substitute for conventional warfare—cheap in soldiers' lives, costly in its expenditure of other human lives and in the irreplaceable historic accumulations of countless lifetimes—these democratic governments sanctioned the dehumanized techniques of fascism. This was Nazidom's firmest victory and democracy's most servile surrender. That moral reversal undermined the eventual military triumph of the democracies, and it has poisoned our political and military policies ever since.

Civilized warfare has always been an antrocity per se, even when practiced by gallant men fighting in a just cause. But in the course of 5,000 years certain inhibitions and moral safeguards had been set up. Thus, poisoning the water supply and slaying the unarmed inhabitants of a city were no longer within the modern soldier's code, however gratifying they might once have been to an Ashurbanipal or a Genghis Khan, moral monsters whose names have become infamous in history. Overnight, as it were, our own countrymen became such moral monsters. In principle, the extermination camps where the Nazis incinerated over 6 million helpless Jews were no different from the urban crematoriums our Air Force Imporvised in its attacks by napalm bombs on Tokyo. By these means, in a single night, we roasted alive more people than were killed by atom bombs in either Hiroshima or Nagasaki. Our aims were different, but our methods were those of mankind's worst enemy.

Up to this point, war had been an operation conducted by military forces against military targets. By long-established convention, a token part, the army, stood for the greater whole, the nation. Even when an army was totally defeated and wiped out, the nation it represented lived to tell the tale; neither unarmed prisoners nor civilians were killed to seal a defeat or celebrate a victory. Even our Air Force, the chief shaper of our present policy, once prided itself on its pinpoint bombing, done in daylight to insure that only military targets would be hit.

As late as the spring of 1942, as I know by personal observation, a memorandum was circulated among military advisers in Washington propounding this dilemma: If by fighting the war against Japan by orthodox methods it might require 5 or 10 years to conquer the enemy, while with incendiary air attacks on Japanese cities Japan's resistance might be broken in a year or two, would it be morally justifiable to use the second means? Now it is hard to say which is more astonishing, that the morality of total extermination was then seriously debated in military circles or that today its morality is taken for granted, as outside debate, even among a large part of the clergy.

More than any other event that has taken place in modern times this sudden radical change over from war to collective extermination reversed the whole course of human history.

Plainly, the acceptance of mass extermination as a normal outcome of war undermined all the moral inhibitions that have kept man's murderous fantasies from active expression. War, however brutal and devastating, had a formal beginning and could come to an end by some formal process of compromise or surrender. But no one has the faintest notion how nuclear extermination, once begun, could be brought to an end. Still less can anyone guess what pur-

pose would be accomplished by it, except a release by death from intolerable anxiety and fear. But this is to anticipate. What is important to bear in mind is that atomic weapons did not bring about this first decisive change; they merely gave our already demoralized strategy a more effective means of expression.

Once extermination became acceptable, the confined tumor of war, itself an atavistic pseudo-organ, turned into a cancer that would invade the bloodstream of civilization. Now the smallest sore of conflict or hostility might fatally spread through the whole organism, immune to all those protective and political restraints that a healthy body can mobilize for such occasions.

By the time the atom bomb was invented our authorities needed no special Justification for using it. The humane pleas for withholding the weapon, made by the atomic scientists, suddenly awakened to a moral crisis they had not foreseen while working on the bomb, were automatically disposed of by well-established precedent, already 3 years in operation. Still, the dramatic nature of the explosions at Hiroshima and Nagasaki threw a white light of horror and doubt over the whole process; for a moment a sense of moral guilt counteracted our exorbitant pride. This reaction proved as short lived as it was belated. Yet it prompted Henry L. Stimson, a public servant whose admirable personal conduct had never been open to question, to publish a magazine article defending the official decision to use the atom bomb.

The argument Mr. Stimson advanced in favor of atomic genocide—a name invented later but studiously reserved for the acts of our enemies—was that it shortened the war and saved perhaps more than a million precious American lives. There is no need here to debate that highly debatable point. But on those same practical, "humanitarian" grounds, systematic torture might be employed by an advancing army to deter guerrilla fighters and to blackmall the remaining population into accepting promptly the torturer's terms.

That only a handful of people ventured to make this criticism indicates the depth of moral apathy to which our countrymen had sunk in less than a dozen years. Those who used this illustration, however, were not surprised to find that the French, themselves the victims of Hitler's carefully devised plans of torture and mass extermination, would authorize the use of military torture in Algeria a decade later. Our own country had forecast that depravity by our national conduct. This conduct still remains without public examination or repentance, but, unfortunately, retribution may not lie far away. Should it come, Civil Defense estimates have established that it will at once wipe out 40 million American lives for the 1 million we once supposedly

Let us be clear about cause and effect. It was not our nuclear weapons that committed us to the strategy of extermination; it was rather our decision to concentrate on the methods of extermination that led to our one-sided, obsessive preoccupation with nuclear weapons. Even before Russia had achieved a single nuclear weapon, we had so dismantled our Military Establishment that we lacked sufficient equipment and munitions to fight successfully such a minor action as that in Korea.

The total nature of our moral breakdown, accurately predicted a half century ago—along with the atom bomb—by Henry Adams, can be gaged by a single fact: most Americans do not realize that this change has taken place or, worse, that it makes any difference. They have no consciousness of either the magnitude of their collective sin or the fact that, by their silence, they have individually condoned it. It is precisely as if the Secre-

tary of Agriculture had licensed the sale of human flesh as a wartime emergency measure and people had taken to cannibalism when the war was over as a clever dodge for lowering the cost of living—a mere extension of everyday butchery. Many of our professed religious and moral leaders have steadily shrunk from touching this subject; or, if they have done so, they have naively equated mass extermination with war and have too often given their blessing to it, for reasons just as specious as those our Government has used.

It is in relation to this gigantic moral collapse that our present devotion to nuclear weapons and their equally dchumanized bacterial and chemical counterparts must be

When we abandoned the basic moral restraints against random killing and mass extermination we enlarged the destructive capacities of our nuclear weapons. What was almost as bad, our pride in this achievement expressed itself in an inverted fashion by our identifying our safety and welfare with the one-sided expansion of our weapons system. Thus we surrendered the initiative to our instruments, confusing physical power with rational human purpose, forgetting that machines and weapons have no values and no goals, above all, no limits and no restraints except those that human beings superimpose on them.

The one thing that might have rectified our Government's premature exploitation of atomic power would have been a public assize of its manifold dangers, even for wider industrial and medical use. As early as the winter of 1945-46 the Senate Atomic Energy Committee made the first full inquiry into these matters, and the physicists who appeared before this committee gave forecasts whose accuracy was fully confirmed in the tardy hearings that have just taken place before a joint congressional committee. Almost with one voice, these scientists predicted that Soviet Russia would be able to produce a nuclear bomb within 5 years, possibly within 3. On that basis, the nations of the world had 3 safe years to create through the United Nations the necessary political and moral safeguards against the misuse of this new power.

There was no salvation, the more alert

There was no salvation, the more alert leaders of science wisely pointed out, on purely national terms. Naturally, Russia's totalitarian isolantionism and suspicion made it difficult to arrive at a basis for rational agreement, but our own sense of holding all the trump cards did not lessen this difficulty. All too quickly, after the Russian rejection of our generous but politically unsound Baruch proposal, our country used Russian hostility as an excuse for abandoning all further effort. Even before we had openly committed ourselves to the cold war itself—a now obsolete preatomic military concept—our leaders preferred to build a threatening ring of air bases around Russia rather than to pursue with patient circumspection a course directed toward securing eventual understanding and cooperation. So the difficult became the impossible.

became the impossible.

As late as 1947 this situation, though grave, was not disastrous. Our very mistakes in turning to mass extermination were capable, if openly and honestly faced, of leading both ourselves and the world back to the right path. Up to then, our totalitarian weapons system had not yet consolidated its position or threatened our free institutions; the organs of democratic society, invigorated rather than depressed by the war, had not yet been enfeebled by official secrecy, repression, suspicion, craven conformism, or the corruptions of absolute power, shielded from public criticism. Meanwhile, unfortunately, the strategy of mass extermination, which did not bear public discussion or open assessment, was rapidly taking shape.

For a brief moment, nevertheless, our leaders seized the political initiative, though they were handicapped by ambivalent intentions and contradictory goals. Our contribution to organizing the United Nations, though it had been originally proposed by the United States, was as cagey and inept as Russia's, for the frustrating Council veto was an American conception. Under a more imaginative leadership two other, admirable American proposals came forward, UNRRA and the Marshall planBoth these agencies had great potentialities, for at first we had the intelligence to offer their benefits even to Communist countries.

Had we followed these efforts through, they might have permanently increased the whole range of international cooperation. In wiser executive hands, these initiatives would not have been prematurely terminated. Rather, they would have been employed to reduce world tensions and to win general assent to a program for giving all nations the prefatory exercises in magna-nimity and understanding essential to the reestablishment of moral order and the control of our demoralizing weapons. But even in their brief, limited application these agencies did far more to fortify the assisted nations against oppressive Communist dictatorship than all the billions we poured into NATO and SEATO to build up futile armaments for wars neither we nor our allies were capable of fighting. Witness our long series of backdowns and letdowns: Czechos-lovakia, Korea, Vietnam, Poland, East Ger-

may, Hungary, Egypt.

In our commitment to the strategy of extermination, under a decision made when General Eisenhower was Chief of Staff, the United States rejected the timely warnings of the world's leading scientists and the common counsels of humanity. Instead of holding a series of world conferences in which the dangers of nuclear energy could be fully canvassed, not alone by physicists but by thinkers in every threatened field, our official agencies deliberately played down these dangers and used every available mode of censorship to restrict the circulation of the knowledge needed for such an appraisal. In this obstinate desire to exploit nuclear power solely for our national advantage, our Government relied upon insistent publicity and indoctrination to build up a false sense of security. Instead of regaining our moral position by ceasing the reckless experiments whose mounting pollution justified a worldwide apprehension, we flatly denied the need for any such cessation and allowed Russia, after it had come abreast of us, to take the moral lead here. Even at a recent U.N. conference, which clearly demonstrated the dangers, our own representatives helped vote down the Russian preamble to the conclusions of the conference, which called for & cessation of all further nuclear testing.

To explain this obstinate commitment to the infamous policy of mass extermination one must understand that its side reactions have proved as demoralizing as its central purpose. Within a bare decade, the United States has built up a huge vested interest in mass extermination—in the weapons themselves and in the highly profitable manufacture of electronic equipment, planes. and missiles designed to carry them to their destination. There are tens of thousands of individual scientists and technicians engaged in nuclear, bacteriological, and chemical research to increase the range and effectiveness of these lethal agents, we boast we already have a stockpile of nuclear weapons capable of wiping out the entire planet. There are also corporate bodies—the air force, the Atomic Energy Commission, great industrial corporations, and extravagantly endowed centers of research-whose powers and presumptions have been constantly widened along with their profit and prestige. While the show lasts, their careers depend on our accepting

the fallacious assumptions to which they have committed us.

All these agents now operate in secret totalitarian enclaves, perfecting their secret totalitarian weapons functioning outside the processes of democratic government immune to public challenge and criticism or to public correction. Whatever the scientific or technical competence of the men working in this field, their sedulous restriction of interest and the limited conditions under which they work and have contact with other human beings, do not foster wisdom in the conduct of life. By vocational commitment they live in an underdimensioned and distorted world. The sum of their combined judgments is still an unbalanced judgment, for moral criteria have, from the start, been left out of their general directives.

Is it any wonder that even in the narrow segments of science where they claim mastery our nuclear officials have made error after error? They have again and again been forced to reduce their estimate of the "permissible" limit of exposure to radiation, and on the basis of knowledge already available they will have to reduce these estimates still further. Thus, too, they made an error that startled themselves, in their undercalculating the range and the lethal fallout of the hydrogen bomb, and they sought to cover that error by concealment and calumny, at first denying the plight of the Japanese fishermen they had injured. Some have even used their authority as scientists to give pseudoscientific assurances about biological changes that no one will be able to verify until half a century has passed. Furthermore, in matters falling within their province of exact knowledge, the judgment of these authorities has repeatedly proved erroneous and mischlevous.

All this should not surprise us: neither science nor nuclear energy endows its users with superhuman powers. But what should surprise us is the fact that the American Nation has entrusted its welfare, safety, and future existence to these imprudent, fallible men and to those who have sanctioned their demoralized plans. Under the guise of a calculated risk, our nuclear strategists have prepared to bring on a calculated catastrophe. At some unpredictable moment their sick fantasies may become unspeakable realities.

Does anyone really think that, unless a miracle supervenes, there can be a more favorable outcome to the overall policy we have been pursuing? If this policy had a color of excuse before Russia had achieved her first nuclear weapon in 1949, it became thor-Oughly discredited in Korea in 1950 and became suicidal as soon as Russia's superiority in rocket missiles was established. The fact that Russia now has equal or better weapons of extermination and has joined us in these same insane preparations doubles our danger but does not halve our original guilt. Neither does it nullify our willful stupidity in now clinging to an obsolete, discredited strategy based on a negation of morality and a defiance of common sense.

The only possible justification of our continued reliance upon weapons of total extermination would be that they do no present harm and would never be used by either side under any extremity of provocation. Can any mature mind comfort itself with either hope? Even our experimental explosion of nuclear bombs, at a rate of more than two for Russia's one, has poisoned our bables' milk, upset the delicate ecological balance of nature, and, still worse, defiled our genetic heritage. As for the possibility that nuclear weapons will never be used, our children in achool know better than this every time they are put through the sadistic mummery of an air-raid drill and learn to "play disaster." Such baths of fear and hostility are gratui-

tous assaults against the young, whose psychological damage is already incalculable; their only service is to bar more tightly the exits that would permit a real escape.

There are people who would defend these plans on the grounds that it is better to die nobly, defending democracy and freedom, than to survive under Communist oppression. Such apologists perhaps exaggerate the differences that now exist between our two systems, but they err even more seriously in applying to mass extermination a moral standard that was defensible only as long as this death was a symbolic one confined to a restricted number of people on a small portion of the earth. Such a disaster, as in the bitter-end resistance of the Southern Confederacy, was still relatively minor and retrievable; if the original resolve to die were in fact an erroneous one, in a few generations It could be corrected. Nuclear damage, in contrast, is cumulative and irretrievable; it admits no belated confession of error, no repentance and absolution.

Under what canon of sanity, then, can any government, or any generation, with its limited perspectives, its fallible judgment, its obvious proneness to self-deception, delusion, and error, make a decision for all future ages about the very existence of even a single country? Still more, how can any one nation treat as a purely private right its decision, on a matter that will affect the life and health and continued existence of the rest of manking?

There are no words to describe the magnitude of such insolence in thought or the magnitude of criminality involved in carrying it out. Those who believe that any country has the right to make such a decision share the madness of Captain Ahab in "Moby For them Russia is the White Whale that must be hunted down and grappled Like Ahab in that mad pursuit, they will listen to no reminders of love, home, family obligation; in order to kill the object of their fear and hate they are ready to throw away the sextant and compass that might give them back their moral direction, and in the end they will sink their own ship and drown their crew. To such unbalanced men, to such demoralized efforts, to such dehumanized purposes, our Government has entrusted, in an easily conceivable extremity, our lives. Even an accident, these men have confessed, might produce the dire results they have planned, and more than once has almost done so. To accept their plans and ensuing decisions, we have deliberately anesthetized the normal feelings, emotions, anxieties, and hopes that could alone bring us to our senses.

No one can guess how a sufficiently wide recovery of moral responsibility and initiative might be brought about. Neither can one predict at what moment our Nation will see that there is no permissible sacrifice of life, either in experimental preparation of these vile weapons or in a final conflict whose very method would nullify every rational end. Certainly it seems doubtful that popular pressure would bring about such a change in Government policy, except under the emotion of a shattering crisis, when it might well be too late. But great leadership, exerted at the right moment, might clear the air and illuminate the territory ahead. til we actually use our weapons of extermination, there is nothing that we have yet done that cannot be undone, except for the existing pollution of our food and our genetic heritage with strontium 90 and carbon 14. But we must make a moral about-face before we can command a political forward march.

Yet if once the American Nation made such evaluation of the morality of extermination, new policies and appropriate decisions would quickly suggest themselves. This would do more to effect an immediate improvement in the relations between the

two powers now committed to preparing for mutual extermination than endless parleys between their heads of government.

A moral about-face does not demand, as those whose minds are congealed by the cold war suppose, either a surrender to Russian communism or a series of futile appeasements; neither does it mean any increase in the dangers under which we now live: just the contrary. Those who see no other alternatives are still living in the prenuclear world; they do not understand that our greatest enemy is not Russia but our treacherous weapons, and that our commitment to these weapons is what has prevented us from conceiving and proposing the necessary means for extending the area of effective freedom and, above all, for safeguarding mankind from meaningless mutilation and massacre.

No dangers we might face once we abandoned the very possibility of using mass extermination would be as great as those under which we now live; yet this is not to say that a bold change of policy would be immediately successful, or that before it had time to register its full effects in other countries it might not tempt Russia to risk measures to extend over other areas its own monolithic system of minority single-party government. But need I emphasize that these possible penalties could hardly worse than those our Government meekly accepted in Czechoslovakia, Poland, and Korea, at a time when we still hugged the illusion of wielding absolute power through our monopoly of nuclear weapons? While sober judgment need not minimize these transitional difficulties and possible losses, one must not underestimate, either, the impact of a new policy, wholly concerned to re-establish the moral controls and political cooperations necessary to enable man-kind to halt the threatening misuse of the extraordinary powers that it now commands.

Even in a purely military sense, this changed orientation might produce the greatest difficulties for those Communist governments who misunderstood its intention and sought to turn it to their private national advantage. Russia would no more be able to escape the impact of our humane plans and moralized proposals than it was able to avoid the impact and challenge of our nuclear weapons. If we railied the forces of mercy, humanheartedness, and morality with the vigor with which we have marshaled the dehumanized forces of destruction, what government could stand against us and face its own people, however strong its cynical suspicion and misgivings?

This is not the place or the moment to spell out a new policy which would start with the complete renunciation of weapons of mass extermination and go on to build constructive measures addressed to all those tasks which the cold war has caused us to leave in abeyance. Fortunately, George Kennan, the only official or ex-official who has yet had the courage to admit our earlier miscalculations, has already sketched in, with some boldness, the outlines of a better policy, and his proposals might be amplified and enlarged in many directions once we had overcome our official obsession with Eussia and our fixation on mass extermination as an ultimate resource.

But the key to all practical proposals lies in a return to human feelings and sensitivities, to moral values, and to life-regarding procedures as controlling factors in the operation of intelligence. The problems our Nation has tried to solve by mechanical weapons alone, operated by a detached and demoralized mechanical intelligence, have proved insoluble by those means. A great leader would know that the time has come to reinstate the missing human factor and bring forth generously imaginative proposals addressed to mankind's survival and working toward its further development.

Balanced Budgets

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, balanced budgets, so often a topic for discussion on the Federal level, are no problem in New Jersey. When the State constitution was rewritten in 1947, under the guidance of former Gov. Alfred Driscoll, the balanced budget was made mandatory. The following article from the May 2, 1960, edition of the Newark Evening News, by reporter Dawes Thompson, explains the workings of the New Jersey bureau of the budget. He also outlined some of the antideficit safeguards which are incorporated in the constitution:

STATE DEFICITS CAN'T HAPPEN

TRENTON.—The coming fiscal year's \$431-million State spending program, to be introduced at today's legislative session, will leave an estimated surplus of only \$471,000 at year-end. However, budget director Abram M. Vermeulen and his deputy, Walter Wechsler, say they are sure there will be no deficit when June 30, 1961, rolls around.

Even a major depression probably could not bring the fiscal dilemmas the State faced in the early 1930's. By enacting a series of safeguards which give Mr. Vermeulen's office broad powers over spending in the 14 departments of the State government, the legislature has made certain that deficits are a thing of the past.

The treasury got so low in 1931-32 that the legislature had to return to Trenton to cancel \$2,616,000 of the appropriations it had made earlier in the year. Even then there was only \$140,870 left over at year's end.

IN THE RED

That year was sandwiched between 2 years when there were deficits of \$583,385 and \$2,708,000 in the general State treasury, which in those days was one of the two independently operated big money pools in the State government. The second was the State highway fund, the discontinuance of which 13 years ago gave the budget director one of his most effective safeguards of the State's solvency.

The general fund's deficit was smaller than the road fund's leftovers in 1931, so there was a small net surplus. But the two funds went in the red in 1933 and 1935. For several years during the 1930's at least one of the pools ended up below the zero level.

Incidentally, the half-dozen capital construction jobs which were dropped by the 1932 legislature were completed eventually, some as late as the mid-1950's, and at a cost which at least tripled the \$2,616,000 slated to be paid for them in the depression.

DEFICIT FORBIDDEN

Under the 1947 State constitution, the State may not enact a budget which anticipates a year-end deficit. Lawyers say the more complicated language of the previous constitution had essentially the same meaning. Although the general fund ended up with depression deficits, the constitutional "out" was that they were not anticipated when the budgets were adopted.

A high Federal budget official once outlined in a Trenton speech a list of the best possible anti-deficit safeguards—and added that New Jersey had adopted them all.

The reforms centered around a law which combined the old budget, accounting and

comptroller's office under one director, putting preparation and execution of the budget under one authority. Not only does Mr. Vermeulen's office draft and execute the budget, but it passes on every voucher to see that the State's money is being spent as the legislature intended.

Each account in the budget is set up on a quarterly basis, but up to 10 percent of the year's allotments of many of the big ones are put aside into a fifth pile—a reserve which can be grabbed if anticipated revenues fall off.

GOVERNOR'S POWER

Other important budget reform laws have given the Governor authority to make any budget cut he sees fit when he finds evidence of extravagance or that the agency is not operating in the State's best interests.

Also, the constitution prevents borrowing more than 1 percent of the State budget without the voters' consent. Even this small amount—it would be \$4,310,000 next year—has never been tapped without a referendum.

The Federal Government may appropriate any amount without a guarantee of matching it with revenues, but what's good enough for Uncle Sam isn't necessarily good enough for New Jersey.

Mr. Vermeulen's office, under the law, makes a continuous study of departmental requirements in order to justify the appropriations it recommends for the Governor to propose to the legislature.

If all these protective devices aren't sufficient, another State law makes it a crime for an official to incur debts beyond his appropriation. This law never has put anybody in jail, but some tough-to-handle officials get reminded of it occasionally.

HIGHWAY BACKSTON

Mr. Vermeulen said the old practice of overestimating revenues at budgetmaking time in order to build a bigger surplus was dropped years ago. However, even the nearly on-target estimates of more recent years has not increased the danger of a deficit, he said.

If one of the State's two capricious or difficult-to-predict tax sources, the inheritance and corporate net profits levies, dropped sharply below anticipated revenues at the end of some fiscal year, the budget bureau could simply cancel the \$10 million or more which the highway department always has on hand, but not under contract.

This highway backstop was not available to the State house's fiscal officials in the depression days when the road department had its separate fund.

Even another sudden imposition of wartime gasoline rationing probably couldn't throw the State treasury in the red, Mr. Vermeulen says. In such an emergency nearly the whole roadbuilding program could be canceled and the funds substituted for the gas tax losses.

The Nature of Politics

EXTENSION OF REMARKS

HON. CLIFFORD G. McINTIRE

OF MATN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. McINTIRE. Mr. Speaker, the Maine Line is a publication issued and edited by employees of the Bangor & Aroostook Railroad Co., and the Marchapril issue carries a comment by W. Gordon Robertson, president of the railroad, on the nature of politics.

Because this statement serves remarkably to bring the true meaning of poli-

tics into proper perspective, I introduce it to the RECORD and commend it to the attention of my colleagues:

TALKING IT OVER

To My Fellow Employees:

I would like to discuss a subject with you that can be of critical importance to us as railroaders in this election year: politics. It has become fashionable to sneer at politics as something unclean with which nice people should not be involved. This is tragic for us as a nation and as an industry.

Politics, the technique of government in a democratic society, allows those actively interested to secure the kind of government they want. It is neither clean nor unclean in itself, but takes on the character of its practitioners. And it creates not only a franchise to vote but a responsibility also.

The disturbing aspect of American politics is the apathy toward this responsibility that each of us bears. Representative government doesn't come from shirt-sleeved men in smokey rooms or from lobbyists in the corridors of Congress or the State house. It comes from people who go to the polls on election day and who actively support some political party. Officeholders are responsible to the party that puts them in office and political parties are extremely sensitive to the wishes of voters.

This business of government is vitally important to every one of us, especially to railroad people. It affects our jobs, the cost of the food we eat, our shelter, the education of our children—almost every facet of our lives.

We are in the midst of important political change. The people we put in office during the next few years must be the best that we have. I urge you not merely to vote, but to make sure that the party of your choice offers the very best it has.

Sincerely,

W. G. ROBERTSON,
President.

Financing Our Postal Operations

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. MADDEN. Mr. Speaker, Postmaster General Summerfield has been very insistent during the last few sessions of Congress about an increase in the cost of first-class mail to the millions of postal patrons throughout the Nation. The Department having received an increase to 4 cents now is asking for a 5-cent stamp on first-class mail.

The following letter from Russell E. Wise, attorney at law, Union City, Ind., sets out some brief and timely facts regarding the financing of our postal operations:

UNION CITY, IND., May 6, 1960. Hon. RAY MADDEN,

House Office Building, Washington, D.C.

Dear Ray: The proposal of the Post Office Department for increased rates would increase the mailing cost for many small town papers as much as 300 percent to 800 percent. It would add as much as \$1.80 per subscriber to many of these papers. Many small weeklies are only charging around \$2.50 a year per subscriber. It is obvious that it would put them out of business.

It is hard for me to understand why the Post Office Department insist on subsidizing mail-order houses and jobbers by keeping the third class mail rate and loading up the Dublic with a lot of junk mail. This mail costs as much to handle as first-class mail. If they would put the third-class rate up to or higher than the second-class rate, they would not have any trouble.

I also want to point out to you that this third-class mail rate subsidizes mail order houses and jobbers in direct competition with the small town retail merchants in your congressional district. Why should you

support such a program?

With personal regards and best wishes, I remain.

Very truly yours.

RUSSELL E. WISE, Attorney at Law.

Panama Rejects Communism

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. FLOOD. Mr. Speaker, it was indeed gratifying to read a news story on how Panama is rejecting communism by Larry Sullivan, coordinator of information of the U.S. House of Representatives, which was published in the April 17, 1960, issue of the New Bedford (Mass.) Standard Times.

As one who has known the Pana-manian people over a long period of years. I believe the story reflects accurately the real feelings of the over-Whelming majority of Panamanians and commend it for reading by every Member of Congress.

The indicated news story follows:

PANAMA REJECTS COMMUNISM

(By Lawrence Sullivan, Coordinator of Information, U.S. House of Representatives)

WASHINGTON .- A 10-day look-see in Panama convinces me beyond question that Kremlin communism is hard at work in Panama City.

But the Kremlin stooges find little simpatico when the proud and industrious people of Panama finally discover that the first devil in the Communist lexicon is the United States of America.

The people of Panama do not hate the United States of America, as some hand-picked American reporters and TV editors

Would have us believe.

The distressing agitation throughout Central America against the United States represents, at best, not more than 10 percent of

the population.

And that 10 percent is inspired and directed, though not always wholly controlled, by Moscow-trained Communist leadership.

when a New York reporter goes to Panama he often digs out, and talks to, professional agitators who are never interviewed by the local press.

And when a New York camera crew goes to Panama nothing makes acceptable film footage for the TV save marching mobs, demonstrations, cat calls, hissing, and placards hurling spite and hatred at the United

Yet, the round-the-clock truth is that an overwhelming majority of the people of Panama are humble, devout, hard-working and aspiring folk, very much like most peo-ple everywhere else in the free world,

Most of them would like very much to be left slone, to pursue their own ambitions and designs for living. But communism

and designs for living. But communism will not let them alone, politically, socially, economically, or spiritually.

Communism constantly prods every social organism in Panama, seeking first the one-in-a-hundred neurotic spirit who will take up the banners of apoplectic hatred against the United States of America.

Most temporary recruits are found in the beatnik student groups. A few more are recruited in the ranks of migrant labor, and still others among the itinerant coastal fish-

Most Panamanians ignore the Communist fringe maneuvers, but visiting editors and TV sages accept them as public opinion in Panama

In many instances, our own State De-partment is not able to distinguish clearly between public opinion and Kremlin stage setting.

Meanwhile, the life and work of Panama is carried forward from day to day by the great mass of the people, most of whom do not even pause at the street corners to heed the convulsive harangues of the professional agitators.

Castro's mad anti-American invectives from Cuba have inspired new energies within the Communist ranks of Panama during the last year. By adroitly flaunting the slogans of an ancient and proud national in-stinct which dominates all the people of Panama, the Communists have attempted assiduously to make any true defense of hemispheric interests shamefully unpatri-

To circumvent this tactic, the vast majority in Panama simply seek the cover of studied silence

The Panamanian presidential elections, set for May 8, are thus germinating in a visible atmosphere of hateful incitement, not because violence truly reflects the majority public opinion of Panama, but only because all reflective opinion has been, for the moment, silenced by threats of terror.

In this sense, a vast majority of the citi-

zens of Panama are actively on the side of

law and order.

In theory, it would be possible to extract from Panama perhaps 500 professional agitators (most of them Europeans or criminal exiles from other Latin-American countries) and peace once more would flower throughout

But such repression is not in the nature of free people. Instead, the good people of Panama simply ignore their professional hell raisers. Only the visiting editors and TV camera crews from New York and Miami fail to follow the lead of the people of Panama. The U.S. editors are after the story. And the story is, as any Communist mouth-piece will tell you, "Yankee go home."

Truly, poor communication is the big problem between Panama and the United States of America. In both countries, one finds vast reservoirs of good feeling, confidence, cooperative spirit and cordial mutual interest, welling toward the other land.

It is reflected in every walk of life in Panama. It is reflected in the glowing pride of all Panamanians who work in the Canal Zone. It is witnessed night and day in the genial contacts of business, of travel, or recreation.

Panama has been developing in the tradition of Christianity for almost 500 years. Some of her churches are among the oldest and most beautiful in the world. Such institutions and such manners do not reflect a people bent upon the total destruction of their own civilization by the torch of revolu-

No one can measure precisely the deep and quiet influences of order and stability in any community. But one can feel them in a crowded elevator, in a cathedral, in a remote

and almost primitive fishing village along the majestic Pacific 75 miles down the coast from Panama City.

Surely the time will come soon again when these deeper human instincts for peace and order will find fearless expression, not only in the press of Panama, but in the press of the United States of America, and on all TV footage the world around

The hucksters who gave us "Alas, Babylon" can't remain in the saddle much longer.

One need visit Panama for only a week to be impressed deeply that practically nobody in that proud land wants any part of Castro's Cuba today.

Unquestionably, our diplomatic intercourse with Latin America has been marked in recent years by shocking equivocation or cowardice. Yet the real inspirations of American idealism have not been wholly submerged, either in Panama, Cuba, or any other nation of Central or South America.

Our mutual interests are molded in half a milennium of history, and there is no evidence anywhere that 40 years of bolshevism in Russia really has turned back the Latin-American clock to the days of witchcraft and the cavedweller.

The slower, surer forces of human advancement still are at work, and need sorely to be protected and stimulated by every re-source of good will and friendly relations between both governments and peoples.

In such a setting, the people of Panama would contribute more than their fair share to a brighter tomorrow for the entire Western Hemisphere, and thus for all the world.

Communism lives by the torch. Human destiny moves by the constructive inspirations of our Christian moral order.

Area School Offers Computer Course

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Washington Post:

AREA SCHOOL OFFERS COMPUTER COURSE

The care and feeding of an electronic brain is a new and demanding study for 20 juniors and seniors at Silver Spring's Northwood High School.

These 16- and 17-year-olds are exploring space-age math 3 hours every Saturday this term, with 8 hours of homework a week-all without school credit.

Their teacher, Marvin M. Wofsey, is Data Processing Chief at Navy's Bureau of Supplies and Accounts. With his Bureau planning to add a new computer in September, Worsey won school approval for his course last winter so he could train students to

Northwood became the country's third high school to try the program.

"I don't want to hire people away from the outside," said Wofsey. "There's already a shortage of 200,000 programers in the country.'

Three of his juniors have already won summer job in Wofsey's office—GS-2 trainee jobs that will bring them \$62 a week. Seven more jobs in other agencies are in the works, he added—summer jobs, since the future programers are expected to go on to college.

The class, with IQs of from 122 to 157, is top college material. "The weeding-out exam we gave 38 interested students in January just wouldn't weed out," Wofsey beamed. Two of his senior students have just been accepted at Massachusetts Institute of Technology.

Joan Dudik, 17, of 10917 Jarboe Avenue, confided, "My math teacher is standing over there, but this is the most interesting math course I've taken." She is one of four girls in the class.

There is even a contest going on homework, according to Paul Kleinberger, 16, of 10918 New Hampshire Avenue. "We bet a tenth of a cent for each 17-millionth of a second we can get the computer to save in a problem."

The proof of the pudding, said Wofsey, comes in June when the class gives its "recipes" to a Remington-Rand Univac at the D.C. Transit Co.

The final exam is straight from Wofsey's Navy desk. It's an already solved problem of verifying Navy's field activity reports. His summer trainees will write programs and "debug" them for the arrival of the computer.

The World Bank and the Panama Canal

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. MULTER. Mr. Speaker, too many of our colleagues are inclined to pass off the immoral conduct of the World Bank in lending Dictator Nasser and his United Arab Republic money to improve the Suez Canal as necessary appeasement to encourage Arab friendship.

Obviously they have not yet learned the lesson that immorality breeds immorality, and condoning acts of criminality invites more of the same.

When the United States acquiesced in Nasser's seizure of the Suez Canal, I said we are establishing a precedent and an invitation for the same thing to happen with the Panama Canal.

When the Bretton Woods agreement was approved by the Congress, a condition imposed on the establishment of the World Bank was that it must be operated in accordance with U.S. policy which required that loans would be made only to such countries which were cooperating in furthering world peace by engaging in free commerce and observing the freedom of the seas and international waterways and by observing international law and obligations.

The action of our American representatives on the World Bank with reference to the Suez Canal loan must be deplored. We must be certain it does not recur, otherwise that may become a precedent to repeat the offense elsewhere.

That this can happen with the Panama Canal is not fantasy. The handwriting is on the wall for all to read.

In that connection, I commend to our colleagues' attention the article by James C. Tanner, which appeared in the Wall Street Journal of May 6, 1960. It follows:

PANAMA'S BITTER ELECTION CAMPAIGN BODES
TROUBLES FOR UNITED STATES NO MAITER
WHO WINS

(By James C. Tanner)

Panama.—The Panamanian presidential election, only 48 hours away, threatens new troubles for Uncle Sam no matter who wins,

The election outcome still is in deep doubt. But the bitterness of the battle—and the battering that Uncle Sam is taking in the villain's role—is churning up an anti-American sentiment that's certain to bring fresh pressure on Washington policymakers.

So high is tension running that authorities here fear a burst of violence, possibly even a revolt. "We're sitting on a powder keg," worries one U.S. official. "and this may light the fuse." If it does, nearly everybody here agrees American interests would be the first to feel the impact.

Prime U.S. interest in this narrow isthmus Republic, of course, is the American-operated Panama Canal connecting the Pacific and the Caribbean. Once a vital U.S. military facility—and still considered a key link in American defense by many strategists—the 50-mile-long waterway today ranks most important perhaps as a commercial artery. More than 1,000 vessels a month now wend their way through the canal.

CANAL TRAFFIC RISING

Fast rising traffic through the canal is expected to push tolls in the current fiscal year ending June 30 over the \$46.5 million reported in 1958-59, says Maj. Gen. William Potter, President of the Panama Canal Company (whose sole stockholder is the U.S. Secretary of the Army) and Governor of the Canal Zone.

U.S. equity in the canal is calculated at about \$460 million, and new projects underway to ease the traffic jam promise to boost the total.

In caring for the canal and the 10-milewide U.S. zone that straddles it, the United States pumps more than \$60 million a year into Panama's economy. This includes an annual rent of \$1,930,000, wages of some 10,000 Panamanians employed in the zone, and payments to Panama concerns for supplies and services.

"No matter how the election goes," vows a ranking Panamanian official, "Panamanians will reunite to renew their campaign to correct the injustices of the United States."

Last month, President Eisenhower announced a new series of grants, including a 10-percent wage increase for Panamanians employed in the Canal Zone. The President's move is interpreted here as an attempt to ease some of the anti-U.S. feeling that boiled over into violence and a march on the Canal Zone last November.

But passions fanned by the campaign and exploited by professional agitators are prodding authorities here to take extra precautions as the election nears. National guardsmen patrol the streets and stand guard in front of hotels where Americans are staying. The government has stopped issuing tourist cards and visas until after Sunday's balloting.

Fearful of postelection outbreaks when results become known, officials have promulgated new laws designed to assure a clean election. They call for the use of transparent voting boxes at each of the country's 955 polling points to prevent ballot stuffing. Ballots also are to be counted in the boxes right after the election, rather than carted away by national guardsmen to be tallied elsewhere. The 300,000 or so voters here have been assigned certain places to cast their ballots in a move to prevent multiple voting.

AIMS OF CAMPAIGNERS

Inevitably perhaps, the United States and its hold on the Canal Zone have emerged as

the chief talking points in the campaigning. All three presidential candidates are pledged to push for greater benefits from Uncle Sam. Precisely what advantages are sought is difficult to determine; public appeals almost always revolve around a charge that Panama just isn't getting a fair shake, rather than on specific points. Generally, however, the demands seem to boil down to Panama's right to fly its flag in the Canal Zone to demonstrate its sovereignty, revised interpretations of United States-Panama treaties that give the United States supervision of the canal "in perpetuity," and a fatter chunk of canal revenues.

Most striking about the election fight from the domestic point of view is the breach it has opened publicly in the country's ruling oligarchy, a clique of 20 or so aristocratic families that control most of the land's leading industries—sugar refining, breweries, and newspapers—and which historically, with brief exceptions, has controlled the nation's politics through the doling out of political jobs. Today, this group is split into bitterly feuding factions.

Deepening the rift was the Panama administration's selection of Richardo Arias, 48, a strapping, handsome professional politician from a leading family, as the candidate to succeed President Ernesto de La Guardia, Jr. A former Ambassador to the United States who also served as Panama's temporary president for 20 months after the assassination in 1954 of President Jose Antonio Remon. Mr. Arias has one unforgivable misfortune in the eyes of some Panamanians: He was born in Washington, D.C., while his grandfather served in the legation there. Though he ranks as leading contender for the presidency, Mr. Arias still is trying to live down the derogatory charge of "gringo" hurled at him by opponents.

At least partly because of the Yankee taint on Mr. Arias, a group of opposition parties has broken from the administration and put up their own candidates. One is the National Union of Opposition, formed last January out of five dissident factions. Its nominee is Roberto Chiari, a rancher and successful businessman who appears to be the favorite of many of the 2,000 Americans living in Panama outside the Canal Zone. The third coalition group is the Popular Alliance, also formed last January. Carrying its banner is Victor Voytia, widely known liberal leader and lawyer who lost out in the 1956 presidential campaign.

Recent campaigning has taken a harsh turn. A clandestine radio broadcast in English from Colon claimed that Mr. Chlari had suffered a heart attack this week and couldn't finish the campaign. It was false. In the past week, pro-Arias and pro-Chiari papers have traded charges that each side is arming for violence. Strike plans of bus drivers have been played up heavily in newspapers opposed to the administration; the Arias group contends the strike is being pushed by the opposition to create unrest before the election.

Currently, political observers here figure Mr. Arias will garner about 40 percent of the votes cast with the other two candidates spliting the rest. This in itself is causing concern among impartial bystanders because it means the victor is likely to come out with only a minority of the votes cast.

As the campaign rushes to a showdown, there's increasing evidence that more extreme factions are preparing to take advantage of any election troubles that might develop. Ultra-nationalists, mainly composed of students at the University of Panama, have been getting more active of late, clamoring among other things for a 50 percent share of canal revenues for Panama. Communist agitators have shown up at rallies and meetings. The Cuban Embassy is attracting excellent attendance at sessions

Where it shows movies of the Cuban revolution.

While Panamian politicians find the canal a handy weapon to wield in their campaigning, the resentment against the United States generally and local Americans particularly goes beyond mere political doctrine and expediency

and expediency.

In the Canal Zone, where most Americans reside, there are tidy homes with fine lawns, and pools. In this Yank area, Americans can buy luxuries from Government-run commissaries and some seldom need to go beyond it for anything. In Panamanian eyes, the zone has become something of an antiseptic island haughtily isolated but adjacent to the huddled sium areas of Panama.

Irritating these feelings are low wages, high unemployment and a poverty-riddled existence. Of a work force of some 300,000 persons, unemployment runs around 15 percent. Some 60,000 workers covered by social security receive an average of only \$1.60 a week. Squatters have used their machetes to carve living rooms out of dense jungle patches.

Has There Been a Shocking Change in Defense Policy?

EXTENSION OF REMARKS

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. KASTENMEIER. Mr. Speaker, on Friday, May 6, the Milwaukee Journal wrote a vigorous editorial concerning the disturbing new definition of "deterrence" presented by the Appropriations Committee of the House in reporting on the Defense Department appropriations bill. On Thursday, May 5, I said on the floor that I absolutely disassociated myself from the view expressed by the committee, which was that the United States should be ready to launch an attack before the agressor has hit either us or our allies, if an attack on us seems obviously "imminent." It should therefore be clear that I fully agree with the Journal's editorial.

Since I believe the points it makes are unassailable, and since the paper has a high reputation throughout the country for intelligent news coverage and comment, I should like to bring the editorial to the attention of my colleagues, by inserting it in the body of the Record at this point:

HAS THERE BEEN A SHOCKING CHANGE IN DIFFENSE POLICY?

In a report accompanying the defense appropriations bill recently the House Appropriations Committee said: "The big issue which confronts the Nation and which the committee sought to deal with appropriately is this: What is adequate deterrence against war?"

The official position of this Government has been that deterrence meant a force so strong and diverse that even if we were attacked by an aggressor and much of our Nation destroyed, there would be enough power left to retaliate and destroy the enemy. Massive retaliation the late John Foster Dulles called it.

But the committee this time comes up with a proposed policy that is disturbing when found in an official document. The committee said this:

"In the final analysis, to effectively deter a would-be aggressor, we should maintain our Armed Forces in such a way and with such an understanding that should it ever become obvious that an attack upon us or our allies is imminent, we can launch an attack before the aggressor has hit either us or our allies. This is an element of deterrence which the United States should not deny itself. No other form of deterrence can be fully relied upon."

In other words, in the committee's view, we must be able and willing to attack first. Here is a new concept advocated as official policy. We have had, of course, military and civilian officials and some outside of government who have preached preventive war. We have even heard some wild men talk of destroying our potential enemies to end the tensions that might bring war.

But our top policymakers and our official policy have insisted over and over that we would never start a war, never be the first to attack. It has been accepted theory—and, indeed, philosophically almost gospel—that a democracy cannot start a war, would not be an aggressor. This has been our assurance to the world and to our own philosophy and heritage.

It is deeply disturbing that an official document, representing the majority views of a congressional committee, should advocate preventive war under any circumstances. There must be those in Congress who will stand up in opposition, as there must be in the military and executive leadership.

If not, something sinister and terrible has happened to our national policy.

Beyond Call of Duty

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. FLOOD. Mr. Speaker, a brave young man from my congressionad district died last week in a crash of a jet aircraft near Los Angeles. He died, Mr. Speaker, because he was unselfish and was aware that if he ejected himself from the aircraft it would have crashed into a residential area, thus causing incalcul-able destruction to life and property. Rather than risk the chance, the U.S. Marine Corps flier, Lt. Neil Dadurka, of Forty Fort, Pa., stayed with his stricken aircraft and rode it to his death when it crashed in a rural area. As the Wilkes-Barre Times Leader stated in an editorial on May 7, 1960, "this would seem like service above and beyond the call of duty, entitled him posthumously to the Medal of Honor, the country's highest decoration for members of the Armed Forces." In this judgment, I heartily concur as Neil Dadurka was indeed a brave and truly heroic young man.

A newsstory on this tragedy from the Wilkes-Barre Times-Leader of Friday, May 6, 1960, as well as an editorial from the same publication of Saturday, May 7, [From the Wilkes-Barre Times-Leader, May 6, 1960]

LIEUTENANT DADURKA DIES—JET PILOT GIVES
LIFE TO AVERT AIR TRAGEDY

Heroic and successful efforts of a Forty Fort jet pilot to avert a civilian tragedy after his plane developed mechanical trouble near Los Angeles cost the flier his life last night.

The victim, Lt. Neil Dadurka, 25, U.S. Marine Corps, died of injuries in March Air Force Base Hospital, Riverside, Calif. He suffered the injuries early Wednesday when his plane crashed 55 miles from Los Angeles as he was returning from a flight to the El Toro Marine Air Base, where he was stationed.

Had he decided to think only of himself, Lieutenant Dadurka probably could have escaped with minor injuries. For when his jet aircraft became disabled while flying over a residential area, he could have ejected himself from the craft. Had he done so, the jet may have struck one or more homes, leaving a path of destruction and fire.

CRASHED IN OUTSKIRTS

Rather than risk the chance, Lieutenant Dadurka apparently decided to fly the plane out to a lesser populated area.

In the end, Lieutenant Dadurka accom-

In the end, Lieutenant Dadurka accomplished his mission as the plane crashed at the edge of town between two farm houses and no one else was injured. He was trapped in the cockpit as the jet slammed nose downward in the earth.

He was rushed to the March Air Base Hospital, where doctors had to amputate one of his legs and attempted to treat the foot of the other leg which was badly mangled. The physicians at the hospital were amazed Lieutenant Dadurka still lived, with his body burned so bad that a tube had to be inserted into his neck so that he could breathe.

His fiance, Miss Mary Homan of New York City, a senior at Wilkes College, was at Lieutenant Dadurka's bedside when he died. She flew out to California as soon as she heard about the accident on Wednesday. She and Lieutenant Dadurka were to be married on June 12 in New York. Word of the crash was received here by

Word of the crash was received here by a phone call to Lieutenant Dadurka's brother and sister-in-law, Mr. and Mrs. Warren Dadurka of 1114 Murray Street, Forty Fort.

Lieutenant Dadurka's parents, Mr. and Mrs. Frank Dadurka of Los Angeles, formerly of Forty Fort, telephoned the news to their son here.

A graduate of Wilkes College in June 1957, Lieutenant Dadurka played varsity football and was a member of the varsity wrestling team of the college. He also played varsity football and was active in other sports at Forty Fort High School. He was cocaptain of the 1957 wrestling team at Wilkes.

He served as president of the Lettermen's

He served as president of the Lettermen's Club and the senior class as well as the Retailing Club at Wilkes.

Surviving, in addition to his parents and brother, are a sister, Judy, Los Angeles, and a number of nephews and a niece.

[From the Wilkes-Barre Times-Leader May 7, 1960]

BEYOND CALL OF DUTY

In the finest tradition of the United States Marine Corps, Lt. Neil Dadurka, a former resident of Forty Fort and graduate of Wilkes College, gave his life to save others when his jet plane developed mechanical trouble over a residential area in California where he was on duty. He might have bailed out, but he stayed with his disabled craft rather than jeopardize civilians below. In the subsequent crash, he was fatally injured.

This would seem like service above and beyond the call of duty, entitling him posthumously to the Medal of Honor, the

country's highest decoration for members of the Armed Forces.

It is distressing, to be sure, that one so young and valiant should die with so much of life ahead of him, including his marriage to a Wilkes senior a month hence. But, then, it is not how long we live that matters as how well.

In death, a salute to him from a proud, if sad, community.

If Our Uncle Sam Meant Business

EXTENSION OF REMARKS OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. MARSHALL. Mr. Speaker, the production explosion in grain crops because of increased capacity and efficiency has helped to make acreage controls as archaic as the horse and buggy. Improved management, better disease control, and increased mechanization all contribute to steadily increasing yields. Any attempt to bring production into balance through acreage control only increases the incentive to boost yields. In legislation I have introduced in the past several years, we have attempted to stress the importance of using bushels, bales, and pounds in any provisions relating to production.

Under leave to extend my remarks, I call the attention of the House to an interesting discussion of the problem by Alfred D. Stedman in the St. Paul Sun-

day Pioneer Press of May 8:

IF OUR UNCLE SAM MEANT BUSINESS (By Alfred D. Stedman)

If Uncle Sam meant business about reducing the Government's \$9 billion farm surpluses, he might (in a very nice way, of course) say to the farmer:

"Look here, Buddy, you've got to cut price-supported crops like corn and wheat a lot

more than anything talked about.

"And this means cuts in production, not just acres. It means closing up the loopholes. The 15-acre wheat exemption will be out the window. So will the no-limit rule on planting corn.

"Also, you can't go circumventing acreage controls by upping your yields with improved farm practices. You get a Government license. It lets you sell only your normal yield on your acreage allotment. Licenses of farmers caught chiseling on crop controls can be canceled."

Sure, a few years of such a plan might control surpluses. Farm prices might soar. Some farm leaders have suggested some such plan. But-this is election year.

So in Washington, farm plans stay full of loopholes. New farm bills rely mostly on cutting acreages. Ike and Congress are at odds on tightening. Farm groups are split. It is a perfect stalemate.

But out in the country, things are on the move toward practices that undermine acreage controls.

Wheat farmers are hearing they can double yields with fertilizers. For years, some corn farmers have been getting 100 bushels or more per acre that way. U.S. fertilizer output is up again. The industry is better equipped with blending plants and distribution facilities. North Dakota, having increased fertilizer use seven fold in 9 years,

looks for another big increase in 1960. But this is only one method of boosting yields per acre.

Another is the use of chemical weed killers. Sig Bierken, State weed control chief, has seen yields doubled this way. Last year, Minnesota farmers sprayed for weeds an area about as big as St. Louis, and Itasca counties. This year they'll spray close to half their grain.

Chemical war on insects and diseases will be waged harder than ever. Farmers will plant better yielding and more diseaseresistant varieties. They can sow more corn in the row and soybean rows closer together. Even in this State, says T. S. Moulton of Withrow, there is now a surprising amount of irrigation to insure yields.

Sure, the late spring has been delaying everything. But with machines that can plant up to 85 acres of corn a day and apply liquid fertilizer 10 rows at a time, farmers can really "go to town," once they

get started.

As to boosting yields per acre, farmers al-ready have gone far. In 1958, they grew double the amount of wheat on about the same acreage that had been sown in 1939. In that period they have boosted their average corn yields 75 percent in that time. They grew a fourth more cotton on a third fewer acres last year than 20 years before.

Also this process of limiting the effectiveness of acreage controls on the size of crops is only beginning. Iowa's Rosewell Garst predicted a further rise of 50 percent in average corn yields largely due to use of nitrogen. Many farmers have proved the same thing can be done with wheat.

Does somebody rise to reaffirm oldtime faith in acreage cuts alone as a basis of Government programs reducing farm production? Well, then, please note that acreages of the big surplus crops are staying

about as high as ever.

Wheat plantings will be about the same. The number of farms using the 15-acre wheat exemption will be up close to 700,000. Corn farmers with no limit are planning to plant even more than last year. Their creases will be in the Corn Belt with its big potentialities for higher yields.

So prospects of cutting surpluses with farm programs that are tied to acreage cuts

don't look bright.

J. Edgar Hoover-A Dedicated American

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. DEVINE. Mr. Speaker, today marks the 36th anniversary of John Edgar Hoover as Director of the Federal Bureau of Investigation. I feel privileged to join my colleagues in paying tribute to this truly dedicated American on this occasion.

It was my good fortune, nearly 20 years ago, to accept an appointment from Mr. Hoover as a special agent in the Federal Bureau of Investigation. The following 5 years gave me an excellent opportunity, as a member of his team, to learn firsthand that Mr. Hoover lives by the slogan he adopted for the F.B.I.—Fidelity, Bravery, and Integrity.

Often maligned by those engaged in activities inimical to the welfare and security of this country, Mr. Hoover has steadfastly maintained the Bureau on a high plane and has unswervingly carried on the fight in resisting communism wherever it may be found.

He has successfully demonstrated that a governmental agency can be efficiently operated free from political influences. Further, he selects his agents after careful investigation to determine whether they can meet his high standards, and they function on the basis of merit and ability, free from civil service restric-

Mr. Hoover is highly respected, not only in this country, but around the world. He has earned this respect by his true dedication to the highest principles of law enforcement. Cooperation with local law enforcement bodies and his resistance to a national police force have added to his fine reputation.

The men of the FBI have great admiration for their Director because he never requests any agent to perform any function that he himself has not or will

The members of Congress should be proud to single out J. Edgar Hoover as the perfect example of a successful dedicated American who has devoted his life to useful service to his country.

The Adjutants General of the United States Choose a New Jersevan as President

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, I take pleasure in submitting for the Record today an editorial of congratulations on the election as President of the Adjutants General of the United States of Maj. Gen. James F. Cantwell. General Cantwell's success is most gratifying to all of us in Trenton and throughout the State of New Jersey who are numbered among his friends. As New Jersey's chief of staff, the general's performance has been particularly pleasing to me, since we have been friends for many years. I am delighted that this additional honor has been bestowed upon him.

Entitled "'President' Cantwell", the editorial appearing in the Trentonian of May 9, follows:

[From the Trentonian, May 9, 1960] "PRESIDENT" CANTWELL

In electing New Jersey's Maj. Gen. James F. Cantwell their president, the Adjutants General of the United States gained a leader who not only is outstandingly capable but who also owns a place in the front rank of any popularity contest.

His competence is attested to by the fine job he has done as Governor Meyner's chief of staff of the New Jersey Department of De-fense, and by his selection by Secretary of the Army Brucker to be chairman of the the Army Brucker to be chairman of general staff committee on National Guard and Army reserve affairs.

As for his popularity, there are thousands of people in New Jersey who will unhesitatingly tell you that "Jim" Cantwell is a nice guy and a splendid officer.

Declassification of Commodity Credit Corporation Records

EXTENSION OF REMARKS

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. MOSS. Mr. Speaker, the Agriculture Department has issued new regulations removing the "Administratively Confidential" stamp from the records of the Commodity Credit Corporation—the agency which handles the farm price

support program.

Under the new regulations the documents on which farm price support decisions are based—called CCC dockets— Will be classed as public records as soon as the information can no longer be used by speculators. Now the farmers, the merchants, and the consumers affected by farm price supports—as well as the other taxpayers who finance the program-can learn the basis for the im-Portant policy decisions. The new system established by the Agriculture Department also permits careful protection of information which must be held confidential, by law, to prevent speculators from gaining a commercial advantage. The regulations require those documents Which need protection to be stored in safes with combination locks.

The Agriculture Department reports that only 19 CCC dockets which are in current use still will be restricted by the "administratively confidential" stamp. Even these dockets are to become public records as soon as the need to prevent unfair speculation no longer exists. Compared to the 19 dockets still restricted, the Department estimates thousands of dockets will become public records under the new system. These are the CCC policy dockets which have been developed since the agency became a part of the Department of Agriculture in 1939.

The new break in the administrative secrecy barrier was not easy to accomblish. In a report presented to the House Agriculture Committee in January 1959, the Agriculture Department Outlined the then-current system for restricting public access to all CCC policy documents. In October 1959 the House Government Information Subcommittee asked the Department a series of questions on the secrecy policy and discovered that the legal authority relied on Was 5 U.S.C. 22—the Government's 180year-old housekeeping law to which a freedom-of-information amendment was added in 1958.

When the subcommittee pointed out the absurdity of basing secrecy regulations on a freedom-of-information law, the Agriculture Department fell back on the claim that authority for secrecy surrounding CCC policy documents "is

based on the inherent power in the executive branch"—nothing more than the claim of an executive privilege above the law.

After this claim was questioned, the CCC Board of Directors adopted the new policy which classes all but 19 of the thousands of CCC policy documents as public records. Following is the general order putting the new policy into effect:

Notice Gen-580, U.S. Department of Agriculture, Commodity Stabilization Service, Washington, D.C., Terminating the Administratively Confidential Nature of

1. Background: Docket CZ 157, Revision 2, "Policy and Procedure Governing the Submission of Dockets to the Board of Directors of Commodity Credit Corporation and the Handling of Dockets considered by the Board", was approved by the Board March 22, 1960.

DOCKETS

- 2. Policy for establishing termination date: This revision provides that for all future dockets the B.ard will establish a time after which the docket shall no longer be classified administratively confidential. The establishment of a termination time is based on a determination for each docket that after such time the information contained therein could no longer provide special advantage to persons having access to the docket. The Board established the following criteria to be applied in pursuance of this general policy:
- (a) A price support docket will remain administratively confidential until public announcement of the program.
- (b) A supply docket will remain administratively confidential for the period during which purchases are made.
- (e) A policy docket will remain administratively confidential until the Secretary of Agriculture has approved the docket.

Exceptions may be made to these criteria as the Board may determine necessary in the case of any individual docket.

- 3. Review of prior dockets: The revision also provides that the Executive Vice President shall cause all prior dockets classified as administratively confidential to be reviewed and made a matter of public record except those which upon such review it is determined should remain administratively confidential for a continuing period of time.
- 4. List of prior dockets to remain administratively confidential: Will you carefully review all past dockets for which your division or office has responsibility, or joint responsibility, and inform me not later than April 8, 1960, the title of all dockets which you recommend remain administratively confidential. Will you also recommend a time when each such docket can be made a matter of public record. Such recommendations should be based on the criteria set forth above with such exceptions for individual dockets as may be desirable.

National Milk Sanitation Bill

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. WIDNALL. Mr. Speaker, dairy farming is one of the principal segments of the highly diversified economy of the Seventh New Jersey District. The welfare and stability of the dairy business in my district is a matter of great concern to me. In this connection, under leave to extend my remarks, I insert in the Appendix of the Congressional Recond the text of a statement made recently by Phillip Alampi, secretary of agriculture of the State of New Jersey, before the Subcommittee on Health and Safety of the House Interstate and Foreign Commerce Committee. Mr. Alampi is president of the Northeastern Association of State Departments of Agriculture, on behalf of which he testified before the subcommittee.

STATEMENT OF PHILIP ALAMPI, ON BEHALF OF NORTHEASTERN ASSOCIATION OF STATE DE-PARTMENTS OF AGRICULTURE, AT THE HEARING ON THE NATIONAL MILK SANITATION BILL

My name is Phillip Alampi, and I am secretary of agriculture of the State of New Jersey. My address is I West State Street, Trenton, N.J. I am appearing here today as president of the Northeastern Association of State Departments of Agriculture. The States represented in this organization are Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Pennsylvania, and Maryland.

The dairy division of this organization has studied in detail H.R. 3840, known as the National Milk Sanitation Act. We have contacted the States in this region and have obtained their opinions as to the need for and the effect of the proposed legislation.

In the interest of agriculture in the Northeastern States, as well as the general public, and more specifically the Northeastern dairymen, this organization is opposed to the enactment of H.R. 3840. This position represents the thinking of all of the above-mentioned States. In opposing this legislation, we are supporting the position of the vast majority of milk producer organizations in the Northeast.

REASONS

1. The milk markets in the Northeast already have very adequate milk sanitation regulations. These markets can most effectively determine what health standards best serve the interests of the people of their area. The consumers look to their local authorities for the protection of their milk supply.

milk supply.

2. H.R. 3840 completely nullifies any State or local milk sanitation program that is not based on the recommended ordinance and code of the U.S. Public Health Service. The bill provides that the only means of certifying the milk supply which is shipped in interstate commerce are those criteria established by the Surgeon General. This means that the milk ordinances or codes of an individual State or local municipality would become ineffective as far as they relate to the interstate supply of milk. In many instances this would tend to lower the quality of milk shipped into the various receiving States.

The proposed act does not require any State or municipality to adopt the U.S. milk code, nor is there anything to prevent milk shipped in interstate commerce from such State having to meet higher requirements than those of the proposed code. Nevertheless, the States cannot set up standards higher than those of the proposed act without discriminating against their own plants. Therefore, the proposed legislation would inevitably downgrade the quality of milk for fluid use in all of the major Northeastern

3. H.R. 3840 is entitled "A bill to amend the Public Health Service Act to protect the public from unsanitary milk and milk products shipped in interstate commerce without unduly burdening State commerce." As far as the Northeast States are concerned, this bill does not carry out the mandate of its title.

It has been shown that the standards of quality would be lowered. Therefore, the bill becomes an economic measure rather than a quality measure. Furthermore, lowering the quality standards is detrimental to the promotion and expansion of market outlets for milk and milk products which is not in the interest of the entire dairy in-

4. The intent of the proposed legislation will fall short of its major goal. The basic purpose of H.R. 3840, as we see it in the Northeast, is for one purpose only: namely, to permit the shipment of milk for fluid use from States of surplus production into distant markets where it may be sold at a higher price than that currently received by the producers of such milk. Proponents of the bill assume that prices for fluid milk particularly here in the East-are established at a level which would permit the movement of milk from midwestern areas to the East at a price somewhat lower than the prices prevailing here now, but still higher than the return midwestern producers would realize on such milk if it were used for manufacturing. It is our considered opinion that the proponents of H.R. 3840 are doomed to disappointment because this legislation cannot possibly achieve this major purpose in the long run. The price differential between surplus milk producing States, such as Wisconsin and Minnesota, and the Northeast importing States, is not sufficient to induce the movement of a permanent supply of milk from the surplus producing areas.

Consumers in the Northeast will not benefit as has been suggested by the proponents of this act and actually they could receive

lower quality milk.

5. No appropriation should be made from the General Treasury for the administration of H.R. 3840. Section 814 provides for a direct appropriation of \$1,500,000 per annum to the Public Health Service of the Department of Health, Education, and Welfare to administer the act. Inasmuch as H.R. 3840 is designed to benefit a small segment of the U.S. population, it seems rather inequitable that a direct appropriation should be made from the General Treasury to administer such a bill. Moreover, there is nothing in the bill which would benefit consumers in the Northeast. Hence, if Congress deems it advisable to enact such legislation, then the individuals who are the chief beneficiaries should bear the cost of administering the entire program.

We, from the Northeastern States, have pointed out in the above five reasons why we believe that this proposed legislation is unnecessary and detrimental to the dairy industry and the consuming public.

However, if in the wisdom of Congress this bill should be enacted into law, we strongly recommend that the following principles be incorporated into the act:

1. The receiving State should be permitted and authorized to make inspection of the milk being shipped in interstate commerce to the market.

The shipping plant desiring to ship the milk should pay the cost of inspection of the producers and the plant.

2. All milk and milk products for all pur-poses should be included in the proposed

3. The administration of the law should vested in the Department of Agriculture rather than in the Department of Health, Education, and Welfare. The purpose for this recommendation is that the Department of Agriculture is more keenly aware of milk production and marketing problems.

On behalf of the Northeastern Association of State Departments of Agriculture, I wish to take this opportunity to thank the members of this Committee for permitting us to give you our views on the legislation now under consideration.

United States Blunders

EXTENSION OF REMARKS

HON. CHARLES A. VANIK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. VANIK. Mr. Speaker, I am not among those Members of this body who feel inclined to congratulate those persons in the administration who are chargeable with responsibility for the unfortunate flight of American aircraft over the territory of Soviet Russia on a mission of espionage on the eve of the summit conference.

Whoever is responsible for this untimely blunder must assume responsibility for tampering with the already slight hopes for some success at the summit and the hopes for world peace.

The following editorial in the Cleveland Plain Dealer of May 9, 1960, is a commendable summary of the incident:

UNITED STATES BLUNDERS

Let's face it: The U.S. Government committed a colossal blunder in the way it

handled the spy plane incident.

Above all there was the initial stupidity of sending an airplane out on such a dangerous and sensitive reconnaissance flight at this particular time, virtually on the eve of the summit conference. Then, having been caught and exposed, responsible U.S. military and diplomatic agencies tried to present an alibi through false information, which gave Nikita Khrushchev a gala propaganda field day. Finally, we were forced to make a frank admission that the captured pilot had been on a spying mission.

American prestige would have been strengthened had Washington taken the initiative in the beginning. By holding back, the United States permitted Khrushchev to dramatize the incident far beyond its worth.

And he is still exploiting it.

It is a matter of common knowledge that nations engage in espionage and collection of information, politely termed the gathering of intelligence. Since the Soviet has been as blatant as any in these operations, Khrushchev's gloating comes with poor grace when the record is examined.

Soviet planes are known to have been over U.S. bases abroad; Soviet submarines and fishing boats have been sighted in and near American waters. Just 2 weeks ago a fishing trawler, equipped with espionage apparatus, was photographed observing tests of an atomic submarine off Long Island.

Also to be recalled were the Alger Hiss and Rosenberg cases, among others, and the arrest and conviction in 1957 of Col. Rudolph Ivanovich Abel, who for 9 years lived in and around Brooklyn posing as a photographer while acting as a Russian spy. He is now serving a 30-year sentence, which was up-held last March 28 in a 5-to-4 ruling by the Supreme Court.

So the Russians have been caught spying, too, but that does not excuse the United States for playing it dumb in this case of the downed pilot,

Khrushchev is acting badly, but this is his hour of triumph and he is having a particularly hilarious time making us squirm. However, he may be overplaying his hand, for President Eisenhower is not one to take such insults and reproaches to the Nation gracefully. He has a temper and it could explode should Khrushchev go too far with his taunts.

At this moment, it is safe to say that thoughtless and irresponsible action by some U.S. intelligence agency in ordering the es-

pionage flight and the hateful reaction displayed by Khrushchev have combined to throw new shadows over the summit conference, if, indeed, it is not called off.

About all that is left is the prospect that the heads of government probably will go through the motions of meeting next week and speaking words, but nothing much will happen. This is not surprising. We didn't expect much anyway.

Panamanian Spanish-Language Press Reveals Long-Range Objectives

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. FLOOD. Mr. Speaker, in the course of numerous addresses to the House on the question of sovereignty and jurisdiction over the Canal Zone and the Panama Canal, I have repeatedly emphasized the long-range Panamanian objectives of gaining sovereign control over the Canal Zone and eventually of nationalizing the canal.

In arriving at my conclusions, I have had the advantage of many well-informed sources of information, among them the Spanish-language press of Panama as well as its English press.

The emphasis in the news stories of these two differ, the English-language press being designed mainly for Canal Zone readers and the Spanish-language for Panamanian readers. The latter is obviously aimed at securing political action with respect to the one great enterprise on the isthmus and Panama's largest source of income—the Panama Canal enterprise.

In order that the Congress may know the nature of the Panamanian political program and some of the tactics used in fostering it, I quote the following excerpts translated from the Spanish-language press of Panama. From these, it is clear that any formal display of the Panamanian flag in the Canal Zone would be a diplomatic blunder of the first magnitude.

The excerpts follow:

La Nacion, April 19: "Mr. Floop again and the 'daughters of Potter,' La Nacion says in a headline, containing an obscene pun, over a Prensa Latina dispatch reporting Representative FLoop's address to the DAR that the time has come to end the U.S. policy of appeasement toward Panama.

La Estrella, April 20: "Presidential candidate Arias' statement that the new concessions means Panama is advancing and will continue to advance is given an eightcolumn lead play by La Estrella. The ninetop-of-the-page story."

El Dia, April 20: "El Dia editorially com"

ments that President Eisenhower's announcement of a nine-point plan which will benefit Panamanian employees of U.S. Gov-ernment agencies in the zone is a laudable effort to improve relations between the United States and Panama.

"The plan will improve relations but still does not fully satisfy the desires of Pana-manians particularly in two points—equal pay for equal work and the recognition of Panama's visible sovereignty over the Canal Zone, which was not mentioned in the Presidential release.

"Jorge Turner continues his campaign for the recognition of Panama's sovereignty over the Canal Zone and is presently planning a tour of newspapermen to South America.

Speaking Softly reports:
"Regarding the Washington announcement on the nine-point plan Aquilino Boyd is quoted as saying that the concessions announced by Washington were mere trifles compared to what Panama is actually en-

"Boyd also stated that it was rather surprising that the President made no men-tion of the moral obligation he has to raise the Panamanian flag in the Canal Zone as

Symbol of Panama's sovereignty." Critica, April 20: "The Foreign Office will not cease its battle to have the flag fly in the zone,' are Critica's headlines over a back page report quoting official sources of Panama's Foreign Office that although they are Pleased with President Eisenhower's plan toward improving United States-Panamanian relations, action will continue until the Panamanian flag flies beside the U.S. flag in the Canal Zone.

"Not one of the nine points in the plan ap-Proved by President Eisenhower even men-tions this aim for which the Panamanians are fighting, the item says."

Tree Farm Program

EXTENSION OF REMARKS OF I

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, on March 9, 1960, in the town of Mansfield, La., there took place a dedication of the 1,000th certified tree farm in the State of Louisiana. This program has an especial interest to all of us who are concerned with forestry and all the many industries growing out of the lumber industry. I commend for your reading the remarks of Mr. John H. Hinman, President, American Forest Products Industries, on the occasion of this dedication:

REMARKS OF JOHN H. HINMAN, PRESIDENT, AMERICAN FOREST PRODUCTS INDUSTRIES 1000TH TREE FARM DEDICATION, MANSFIELD, LA., MARCH 9, 1960

Ladies and gentlemen, the dedication of the 1,000th certified tree farm in the State of Louisiana is an occasion of considerable importance to us all. Tree farms mean different things to different people. They mean cash crops of lumber and pulpwood to the landowner; to someone like myself, in a pulp and paper company, they mean an assured supply of raw material for the future; to many of you, they mean jobs; to many others, they offer opportunities for hunting, fishing, and other outdoor recreation; and to all of us, they mean taxes for schools, roads, and other essential services.

I am delighted that my duties as president of the American Forest Products Industries Association have brought me here to Louisiana today for this observance and to honor this new member of the American Tree Farm movement, Norman Gallaspy.

The practice of sound forest management holds particular meaning for me and for my company, International Paper. My company and I have many roots in your State.

It was the purchase of the former Bastrop Pulp and Paper Co., back in 1925 that first brought International Paper into the South. Today, 3 of our 10 southern papermills are in Louisiana, 2 in Bastrop and 1 in Springhill; and 2 of our divisions operating former Long-Bell Lumber Co. facilities are located in DeRidder. So this is familiar and friendly territory for me.

The forests have played an important role in the life of Louisiana ever since the first settlers came here. But forestry, as you know it today and as we recognize it at this dedication, is relatively new. Many of you will remember Henry T. Hardtner of Urania He helped start good forest practices in Louisiana back in 1904. There have been many others since then and today your State is fortunate in having such men as Leon Walker, president of Louisiana Forestry Association, and Jim Mixson, your State forester, who are providing exemplary leader-ship. No less a debt is owed to the many Federal, State, and private foresters whose dedication to good forestry has helped retrieve Louisiana from the brink of forest poverty on which it was balanced just 20 years ago

The American Tree Farm System, one of the American Forest Products Industries' many successful projects, has played a large part in encouraging the reforestation of this State, the South, and the Nation. At a time when so many organizations depend upon government leadership, this program stands as a symbol of what can be done by private industry and determined individuals.

In its 19-year history, the tree farm program has brought millions of acres of merly unproductive or idle land into potentially full and sustained production. matter of fact, the 50 millionth acre of certified tree farm will be dedicated near Brewton, Ala., soon.

During this same period, the South has come to be regarded as the leader in American forestry. There are many reasons why this is true: Today, in the 12-State area stretching from Virginia south and west into Texas and Oklahoma, there are 193 million acres of commercial forest, 40 percent of all the forest land of the Nation. No other single region approaches this in forest resources. Fifty-five percent of all the tree farms in the Nation are in the South, and these represent 66 percent of the Nation's tree farm acreage. About two-thirds of the wood to feed the Nation's gigantic appetite for paper is supplied by the South.

The South not only leads in forest pro-duction today, it also leads in forest research for tomorrow. The paper industry has been experimenting in cooperation with several universities and Federal and State agencies in the development of a race of fast-growing supertrees. They are studying not only how to speed up growth, but how the individual fibers are formed and how, through genetic research, we can improve the fiber characteristics for papermaking of various species of trees. We are also investigating the factors that influence the superior resistance of some trees to the attacks of insects and disease and give some the ability to withstand long periods of drought. Other studies concern the effect of site and soil conditions on tree growth. We hope eventually to be able to identify the specific type of tree best suited to grow the maximum of wood cellulose fiber for paper or lumber on any given location anywhere in the South.

One field of study that needs special attention is forest fire control. Recently the Georgia Research Council dedicated a new Forest Fire Research Laboratory in Macon, Ga., where Federal, State, and industrial agencies can work together on this problem.

Actually, fire is a problem for all of us, not only business and these agencies. We must all work together to prevent both the fires

that start accidentally and those that are set deliberately, which every year endanger the economy of so many southern communities.

According to an interim report by the U.S. Forest Service, fires claimed some 120,000 acres in Louisiana last year. I am glad to learn that the losses in your own parish were low, only 218 acres. This loss to fire is a tragic waste that none of us can afford. We need strong leadership at the community level to end this wasteful loss.

The people of Louisiana have a tremendous asset in their forests. More than half your land is covered with forests, totaling some 16 million acres and averaging about 51/3 acres for each man, woman, and child in the State. There is more forest land in Louisiana than there is farmland—about 5 million acres more. About 2.5 percent of the total forest area of the United States is here.

This valuable resource is the base of industries that are a major part of Louisiana's economy. The forest industries—those that make lumber and wood products of all kinds, as well as pulp, paper, and paper products-are directly dependent on forests for raw material.

These industries mean jobs in Louisianafull-time jobs for about 44,000 people, and part-time jobs for thousands of others in woods and mills.

The payrolls of industries in Louisiana that convert trees into some of 5,000 wood articles we use every day amount to about \$11 million a year. One in every \$5 paid out to Louisiana industrial workers comes from the forest-dependent industries.

Aided and encouraged by progressive forest industries, your citizens are improving the protection of their forests from fire, animals, insects, and disease. They are rapidly learning to manage their woodlots for maximum production of quality timber, and to grow trees as a regular crop. By planting new trees, they are turning idle or lazy acres into busy acres and thereby adding to their potential forest wealth. And each year they are enrolling more acres of well-managed woodlots as certified tree farms on taxpaying

One of the special values that many of you enjoy as a direct result of the increase in the number of tree farms is a much wider opportunity for outdoor recreation. The multiple use of forests to include many forms of outdoor recreation is a basic philosophy in tree farming.

Managed tree farms provide a first-rate habitat for game of all kinds. One of the requirements for certifying a tree farm such as this is fire protection. This alone elimas this is fire protection. This alone eliminates one of the greatest hazards to wildlife. I know that almost all of the industrial companies that own timberlands, mine included, welcome public use of their lands for recreational purposes-subject, of course, to occasional restrictions when fire hazards are high, or when operations in a particular area might create a safety hazard.

More and more people have the leisure time for outdoor sports these days, and I am convinced that well-managed private timberlands, operated to provide full use-timber, water, wildlife, and recreation-are going to make a tremendous contribution in this field in the years ahead.

The fact that all this is being done by individuals working with the wood-using industries of their State is certainly exemplified by your own DeSoto Parish. I am told that of the total 360,000 acres of forest land in this parish, almost one-third is in certified tree farms. It is not difficult to see why the growing and harvesting of trees contributed more than \$1 million to the income of DeSoto Parish in 1959.

Not long ago I had the pleasure of reading a folder published by L. C. Ewing, a progressive pulpwood dealer in Jonesboro. In this very excellent mailing piece, entitled "What Forest Industry Means to Your Community," Mr. Ewing quoted some in-teresting facts from the U.S. Forest Service.

This is what happens, he says, when 10,000 acres of idle land are brought into full forest production:

1. Banks will show \$337,500 more bank deposits.

2. At least 370 more jobs available for local residents.

3. At least 140 new homes will be built.

4. People in the parish will receive \$737,500

more personal income. 5. Auto dealers will sell more than 134 ad-

ditional new cars

6. Five more retail establishments will be needed.

7. Local stores' sales will jump more than \$450,000 each year.

Mr. Ewing makes another interesting ob-rvation. "The forest economy is here to servation. stay," he says, "providing it has a good business climate in which to survive." I heartily agree that each of us—no matter where his interests lie-must be on guard to protect this important industry from any condition such as unduly burdensome tax measures that might discourage its growth.

This is particularly important in terms of tree farming. We feel that each timber-growing State should subscribe to the policy that sustained-yield forest management is in the public interest. Further, tax policies should not add to existing pressures for clear-cutting of timber or discourage expenditures for forest management such as planting, thinning, fire prevention, and road construction and maintenance.

The forest crop holds tremendous economic potential for the rural South. Landowners should be encouraged in every way

to develop this potential.

Another factor that must be considered in our efforts to expand our forest economy is the importance of knowing at all times how much timber we are producing and how much is being used. These figures are kept on a current basis by the Forest Service. Obviously, if an area or a State attracts too many industries dependent upon a regular supply of wood, an otherwise stable forest economy could be completely thrown off balance. We should aim for full utilization of our forests without an undue concentration of these industries.

Now, I would like to depart from any further discussion of tree growing and woodusing industries, and take this opportunity to congratulate our host, the owner of this 1,000th Louisiana tree farm.

It is with a great deal of pride that I bring Mr. Gallaspy the congratulations of the American Forest Products Industries and the thousands of men and women who look to the continued growth of forestry in the South as the key to a prosperous future.

I think we could do nothing better than to dedicate this 1,000th Louisiana tree farm to that mutual hope.

Thank you.

Law Day, U.S.A.

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. SCHWENGEL. Mr. Speaker, Sunday, May 1, was observed throughout the Nation as Law Day. Of all of the statements written and delivered in observance of this occasion, I was particularly impressed with a guest editorial which appeared in the Times-Democrat of Davenport, Iowa, on April 30, 1960. This editorial was written by Attorney Clemens Werner, chairman of the Law Day U.S.A. Committee of the Scott County (Iowa) Bar Association.

Under leave to extend my remarks, I am glad to call this editorial to the attention of my colleagues. The editorial follows:

LAW DAY, U.S.A.

The purposes of Law Day, U.S.A. are educational and patriotic. The event is not a "lawyers' day," but a day for honoring the place of law in American life and the contribution which law has made and must continue to make in our Nation's growth, as well as its great potential as an instrument of world peace.

Law is the foundation for civilization. If we are to live together in liberty and security, we must recognize and appreciate that it is only possible under a system of

law.

Generations before us have provided in our Constitution for the separation of governmental powers and the limitation of Government power over our person and property. They provided for the rule of law. Without laws and their observance, no person or property would be secure. There would be no freedom of the individual to worship, speak, write, assemble, or right to live, acquire property, buy and sell goods, choose employment, marry, and educate children. Only one generation ago we witnessed

what happened in Nazi Germany and Fascist Italy. The rule of law was stripped from the people in those countries by their leaders. They lost their freedom, rights and property; they were easy prey of the secret police because there was no law to protect their

Today, we are witnessing the breakdown of law and order in Cuba. Freedom of the press and speech is gone; opposition to the present Government is being stamped out, and private property is being confiscated without regard to its fair value. The rule of law is lost in Cuba.

We, the people, elect representatives who enact and enforce our laws. Our legal framework is entirely in the hands of the people. Through our representatives we can change an unreasonable law or eliminate it through peaceful procedure. Our failure to observe certain laws leads toward further breakdown in law and order.

Without law and order to protect our freedoms, rights, and property, we are the easy victims of leaders who would rule by any type of violence. And they would con-tinue to so rule until some other group overthrows them by force. After all, there cannot be a peaceful change in Government without law and order.

Thus, if we are to maintain our form of government, we must voluntarily accept and abide by the laws enacted by a majority of the people for the greatest good of our citizens on a local, State and National level.

Not just on Law Day but on every day let us strive for the two basic objectives of the observance:

1. To foster an abiding respect for law, enabling our Nation to grow in moral strength as it grows in leadership.

2. To keep freedom for the individual under just laws administered by independent courts, and in so doing to demonstrate before the world the contrast between the rule of law in the United States and the rule of force and fear under communism or a dictatorship.

Such individual responsibility is an obligation of good citizenship under the American way of life. Once we clearly understand such responsibility, we then will ap-preciate the wonderful privileges we enjoy as citizens of this country. Let us do the daily work before us, ever mindful of our obligation under and made possible only by law and order

The great challenge before mankind is the acceptance of law and order by nations on an international or world level. Speaking on this subject, President Eisenhower, at Delhi University, in New Delhi, India, on December 11, 1959, stated:

The time has come for mankind to make the role of law in international affairs as normal as it is now in domestic affairs. course the structure of such law must be patiently built, stone by stone * * a reliable framework of law grounded in the general principles recognized by civilized nations is of crucial importance in all plans for rapid economic development around the earth. Economic progress has always been accompanied by a reliable legal framework
* * the principle that men must keep bargains is a fundamental of every great system the world has ever known. Whenever it has broken down, commerce, invention, investment and economic progress have also broken down. * * * If an international controversy leads to armed conflict, everyone loses; if armed conflict is avoided, everyone wins. It is better to lose a point now and then in an international tribunal and gain a world in which everyone lives at peace under the rule of law

Whether the people of the world will ever manage to extend law from the national level to the world level, history will recordam happy to report that the American Bar Association, through its special committee on world peace through law, is engaged

in serious study of the problem.

In its report of August 24, 1959 to the House of Delegates at the 82d annual meeting of the American Bar Association, the committee stated: "Our task in the months and years ahead must be to encourage increased cooperation among the lawyers of all nations in research, education, exchanges of information and experience, and above all. leadership in directing the ever-rising tide of interest in the rule of law internationally toward proper and meaningful goals. Years and decades of hard work will be required to achieve tangible progress in this complicated area of expanded international use of the rule of law. But with the knowledge that increased use of the rule of law internationally can only lead toward a peaceful world, no effort should be spared to further interest in, and work upon, every possible subject, procedure or avenue encompassed in this program. No effort by our associ-ation can be more meaningful or more important to mankind."

Indeed, such a vigorous effort must be made by the people in all countries toward enforceable world law and order if world peace is to be secured. Only then will peace mean more than just an absence of war. Then we will have taken the most important step for world order since Moses brought the word down from the mountain's crest. We will then appreciate the meaning of. "Blessed are the peacemakers for they shall

be called the sons of God."

The Wall Street Journal Opens New Printing Plant in Chicopee, Falls, Mass.

> EXTENSION OF REMARKS OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. BOLAND. Mr. Speaker, the nationally respected business daily newspaper, the Wall Street Journal, achieved a new milestone in its history Sunday When its seventh printing plant began operations in Chicopee Falls, Mass.

Thus, the eastern edition's printings of this great newspaper now speed to subscribers along the east coast from three different cities, New York, Washington, D.C., and Chicopee Falls, to keep pace with the ever-increasing demand for the Wall Street Journal.

The highly automated facility in Chicopee Falls is a near-duplicate of the Journal's new plant in Cleveland, Ohio, Where publication began 5 weeks ago. Operations at Chicopee Falls will be coordinated completely with all other

editions of the Journal.

The central control over editing, layout, and other news and advertising functions will be maintained by the Wall Street Journal in New York, but once these tasks have been accomplished, the Chicopee Falls plant is fully equipped to produce a complete newspaper to serve subscribers in New England, upper New York, and eastern Canada.

Mr. Speaker, I wish to take this op-Portunity to welcome the Wall Street Journal and its plant manager, Assistant Managing Editor Larry Farrell to our community and the Second Congres-Sional District of Massachusetts.

Remarks by Fred C. Scribner, Jr., at the Annual Lobster Dinner of the Maine State Society, Department of Interior Auditorium, Washington, D.C., Friday, May 6, 1960

EXTENSION OF REMARKS

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. McINTIRE. Mr. Speaker, I include for insertion into the RECORD the following remarks of the Honorable Fred C. Scribner, Jr., Under Secretary of the Department of the Treasury:

This assignment presents an opportunity not only to report to you on the splendid contributions made to the Government of the United States by our career civil servants, but also to comment on the impact of the people, the products, and the principles of Maine on the Treasury Department.

Let's begin with the main Treasury Building, situated just east of the White House. The present site was also the site of the Nation's first Treasury Building, the construction of which was undertaken around 1798. The first building was made of brick. It was 2 stories in height and contained 30 rooms. Since the total number of Treasury employees in 1800 was about 69, space Was also provided in the building for the 7 employees of the State Department, and for employees of the Navy Department. This building was destroyed by the British when they occupied Washington in 1814. Following withdrawal of the British forces, a new Treasury Building was promptly authorized, but the second structure and most of its contents were destroyed by fire on the early morning of March 30, 1833. President Andrew Jackson directed that a de-

tailed and searching investigation be made as to the cause of the fire. The investiga-tion was carried out by the Attorney General, with the assistance of other members of the Cabinet and with the chief justice of the Circuit Court of the District of Columbia presiding. This investigation, as has been the case in so many others which followed, was most inconclusive.

Some time later two brothers were ar-rested, charged with setting fire to the building for the purpose of destroying cer-tain papers on file in the Treasury which would go to prove fraudulent conduct on the part of persons engaged as Treasury agents. One brother was tried four timesfinally acquitted because of the statute of limitations. The other brother was convicted and sentenced to 10 years in prison.

The present Treasury Building, which covers two city blocks at 15th Street and Pennsylvania Avenue, was authorized on July 4, 1836, and begun that year. The location of the building has always raised much question. It has never seemed to be in keeping with the original scheme, which was leave an unobstructed view from the White House to the Capitol. Washington lore has it that President Jackson, impatient at the delay of the architect and the supervising committee in selecting the site, walked over the ground one morning, stuck his cane in the extreme northeast corner of the land, and said, "Here, right here, I want the cornerstone laid."

Colorful as this story is, popularly accepted as it may be, the first architect to work on the Treasury Building, Robert C. Mills, designed only the central or eastern portion of the building, which is the section which now fronts on 15th Street. Mills did not draw the plans for the south wing of the Treasury Department, which is the portion which obscures the White House from the Capitol. This south section was designed by Thomas Hugh Walter and was not completed until 16 years after President Jackson's death, or in 1861. Another difficulty with the story of the original location of the building is the fact that the State Department Building was situated on the spot at which Jackson is reputed to have planted his cane.

The cornerstone of the present structure was laid in 1834 by Levi Woodbury, then Secretary of the Treasury. The style of the building follows that of the temple Pallas Athena at Athens. The original section had a frontage of 340 feet on 15th Street with a depth of 170 feet. As stated, the south wing was completed in 1861, the west wing was completed in 1864, and the north wing received its final work in 1869.

On March 4th of that year, Grant's inaugural ball was held in the north wing's marbled "cash room," the walls, floors, window frames, and doors of which are of solid marble.

The present Treasury Bullding with its modified Grecian architecture and Ionic columns appeals to all lovers of art and is thought by most to be second only to the Capitol in its beauty.

Of particular interest to this society is the fact that the granite used in the south, west, and north wings, and the solid granite monolithic columns on these three wings, were quarried on Dix Island, near Rockland, Maine, and brought to Washington in sailing ves-Each of the 38 columns is 36 feet in height and weighs approximately 30 tons. As I have said, these solid granite columns are monolithic. I urge your careful inspection, not only of our beautiful Treasury Building but of these Maine columns. I know that your mind will go back many times, as mine has, to the ingenuity of the Maine people who, with the tools and transportation available in the 1860's, quarried these columns, sailed them to Washington, transported them from the river to the building site, and put them in place.

Thus, there is much of Maine physically present in the Treasury Department at the Nation's Capital.

Of even more impressive consequence is the contribution which Maine people over the years have made to Treasury operations. The Pine Tree State can quite properly lay claim to three Secretaries of the Treasury.

The first Maine man to hold the office of Secretary was William Pitt Fessenden of Portland. While Fessenden was born in New Hampshire, he was educated at Bowdoin, practiced law at Bridgeton, Bangor, and Portland, and died at the latter city on September 8. 1869.

Fessenden had been elected to the U.S. Senate as a Whig in 1854 and reelected 6 years later. While in the Senate he served as chairman of the Finance Committee. was said of him by Sumner that he was "in the financial field all that our best generals were in arms."

Senator Fessenden was asked to take over the Treasury Department in 1864 at a time when the Nation was losing confidence in Treasury policies and when the country's finances were indeed imperiled. On July 5. 1864. Fessenden took office and served until the end of Lincoln's first term. The country's capacity to raise funds for the purchase of Government securities seemed to be exhausted. Secretary Chase had found it necessary to withdraw an offering of securities for want of acceptable bids. We were truly in a time of inflation. Gold was at 280.

Immediately upon accepting office, Fesenden indicated that his first step to curb the inflationary pressures would be to cease the printing and issuance of additional paper money. Appealing directly to the people, he offered a loan in the form of bonds bearing interest at the rate of 7.3 percent. These were issued in denomina-tions as low as \$50 and people of the most limited means could purchase them. senden then undertook vigorous steps to extend the Nation's debt and to consolidate it. Under his strong, soundly-based leadership, the country's financial situation did improve. Resigning in 1865, Fessenden was returned to the Senate by Maine and was serving as a Senator at the time of his death.

Maine's first Secretary of the Treasury was followed in office by another Maine man, Hugh McCullough of Kennebunk. While McCullough is usually attributed to the State of Indiana, he was born in Kenne-bunk on December 7, 1808, he attended Bowdoin College, and then studied law in his hometown. After practicing law for a short time in Boston, he went West to Fort Wayne, Ind., where he became one of the State's leading bankers, McCullough had come to Washington in 1863 to serve under Secretary Chase as the Nation's first Comptroller of the Currency. This service is of interest because McCullough had been one of the most vigorous opponents of a national banking system. He changed his views when he saw how necessary such a system was to enable the Government to secure funds with which to prosecute the

Secretary McCullough is best remembered in the Treasury Department because of his leadership in organizing the U.S. Secret Service. On April 14, 1865, the morning of the day on which Lincoln was shot, Mc-Cullough attended a Cabinet meeting at the White House, and there called attention to a growing counterfeit menace. upon the President the organization of an aggressive, permanent, enforcement organization managed by a directing head. Permission to organize a special bureau in the Treasury Department was granted, and the

first Chief of the U.S. Secret Service took office in July.

Almost immediately after the close of the Civil War, McCullough advocated the grad-ual withdrawal of the legal tender notes,

commonly called "greenbacks."

Secretary McCullough has the distinction of being the only man to be Secretary of the Treasury on two different occasions and to serve under four Presidents. In his first term his Chiefs were Lincoln and Johnson. In the fall of 1884, President Arthur induced McCullough to again come to Washington and to take office as Secretary of the Treasury. Although McCullough was then 78 years of age he responded to this call and served for the remainder of President Arthur's term and for a few days under President Cleveland.

Lott M. Morrill of the Imperial Kennebec was the third Maine man to head the Treasury Department. His term was brief, be-ginning on July 7, 1876, and ending on March 9 of the next year. Morrill was born in Belgrade, Maine, on May 3, 1818. He was educated at Waterville College, now Colby, and was elected Governor of Maine in 1857. He was twice elected to the U.S. Senate, resigning near the end of his second term to serve in Grant's Cabinet. Morrill, like his predecessors, gave his leadership and his influence to the strengthening of the Federal currency and to the maintenance of sound fiscal policies on the national level. In his annual report in 1876, Morrill urged immediate although gradual contraction of the currency and declared that specie payments could be resumed in 1879.

During the 19th century, there were many other prominent Maine citizens who made major contributions while serving in im-portant positions in the Treasury Department. There is time to speak in detail of only one other, John F. Hartley, of Saco and Portland. Hartley's career is particularly intriguing, and it is my hope that some day I will have the opportunity to learn much more about this man, particularly concern-

ing his early days in Maine.

The records of the Treasury Department contain a letter sent on December 3, 1838, by John Fairfield of Saco, then a Member of Congress from Maine, recommending to the Secretary of the Treasury, John Fairfield Hartley, of Portland, Maine, for a clerkship in the Treasury Department. At about this time, a number of distinguished Maine residents, including William Pitt Preble, Nathan Clifford, and Asa Clapp, forwarded a petition to the President of the United States, Martin Van Buren, urging Hartley's favorable consideration. These recommen-dations were effective and Hartley was sworn in as a clerk in the Treasury Department on December 22, 1838. His starting salary was \$1,400. In 1861, Hartley became Acting Chief Clerk and took over as Chief Clerk in 1863. We can be sure that he was a source of great strength to his Maine brethren, Secretarics Fessenden and McCullough, and on July 11, 1865, culminating 27 years of service in major posts of responsibility in the Treasury, Hartley was appointed by McCullough as Assistant Secretary of the Treasury. He was the first Maine man to serve in this office and served for nearly 10 years until May 4, 1875. He has the record of serving longer as an Assistant Secretary than anyone else in the country's history.

I have reported to you on some of Maine's distinguished sons who added much to the Treasury in the 1800's. It is with very real satisfaction that I now record some of the career officials in the Treasury Department who claim residence and training in the

Pine Tree State.

The first of these, in point of service, is Edwin L. Kilby, who has nearly 43 years of Government service. Mr. Kilby came from Dennysville, Maine, was educated in Bangor, and is now the Commissioner of Public Debt. He has held this responsible position since 1946. His is the responsibility for the preparation of all documents incident to public debt offerings as well as supervising the public debt transactions of fiscal agents and agencies issuing and paying savings bonds. With refunding and new issues totaling about \$80 billion a year during each of the last several years, you have some appreciation of the heavy responsibilities which Mr. Kilby carries. He was recently honored as one of ten career Government employees receiving national recognition from the National Civil Service League.

In 1953 Commissioner Kilby was joined at the Treasury by Nils Lennartson. While I regret to report that Nils was born in Massachusetts, he is a graduate of Bates College and was employed for several years by the Gannett newspapers in Portland. He was an employee of the Public Relations Staff of the Maine Central Railroad and, most important of all, married a Skowhegan girl, Emily Weston. He received the Air Force's Exceptional Civilian Service Award for his work as Deputy Director of Public Relations in the Air Force. Thereafter, he served as Public Relations Director at the Commerce Department and the Treasury has been fortunate to have had his services since 1953. He is now Assistant to the Secretary of Treasury. His excellent judgment and his detailed understanding of Treasury policles and practices are of invaluable assistance to all of us at Treasury.

A third Maine resident carrying major responsibilities at the Treasury is your last year's president, Artemus E. Weatherbee of Bangor. Secretary Weatherbee graduated from the University of Maine in 1939 and was nominated by his university for a Rhodes Scholarship. Following college he undertook an internship under the National Institute of Public Affairs. After service with the Navy during the war he served for years in the State Department, finishing his service there as Acting Director and Deputy Director of Personnel. For 5 years he was with the Post Office Department, completing his service there as Deputy Assistant Postmaster General, Since Sentember 1959 he has been Administrative Assistant Secretary of the Treasury, bringing to this new task a wealth of experience and an invaluable understanding of personnel problems. We are fortunate in this new association. He, too, married a Maine girlthe former Pauline Jellison of Bangor.

There are many other Maine people in im-

portant Treasury positions. They include, among others, Harold Master, Director of Planning for our U.S. Savings Bond program; the Chief of Staff of the 13th Coast Guard District at Seattle, Capt. Arthur Hesford; and Head of Entry and Value Section, Bureau of Customs, Paul McCarthy: officer-in-charge of Marine Inspection, Coast Guard, Comdr. Emmett Corrigan, at Portland, and Comdr. Lewis Baker at Cairo, Ill., and Chief Personnel, Northeast Service Center, Internal Revenue Service, William New-

As I began to put this speech together I thought that I could tell you that there were more Maine people in major positions in the Treasury Department than in any other department of the Federal Government. The facts, however, did not bear out this conclusion. The State Department appears to head the list. Of particular significance is the fact that at this ttime, among the State Department's career ambassadors, are five men from our State: Ellis Eriggs in Greece, Tyler Thompson in Iceland, Francis Russell in New Zealand, William Snow in Burma and Karl Rankin in Yugoslavia.

Proud as I am of the record of service in the Federal Government now being written on all levels by our friends and relatives from Maine, I have an equal pride in our career civil service and all that it means. As you know, for some 10 years I was an official of a company employing some five to six thousand men and women. I have had an opportunity to know firsthand the performance records of those who serve in private industry and those who serve the Federal Government. We have in the Federal Government at the present time a career service composed of outstanding men and women-interested in their assignments. considerate of their associates and of the public, knowledgeable and enthusiastic. Contrary to statement which may from time to time be made by those who are not in Government, I have found a most genuine interest in tasks and responsibilities assigned. Exceptional, indeed, is the Federal employee who is interested only in putting in his time. The Federal standard is an employee who wants to understand the job which he has and who is ready to try and reach the objectives which his job was . established to achieve.

We take particular pride in the Treasury Department in the fact that on January of this year we had 13,000 fewer civilian employees than were with the Treasury on January 1, 1953. This substantial reduction in our civilian work force has been achieved in spite of the fact that most of the workloads of our bureaus have increased in & very substantial manner. Many more people are filing tax returns. Many more forms and blanks must now be processed. Millions of additional people go through customs each year. The number of check and counterfeiting cases to be followed by the Secret Service has more than doubled, and so it

We have achieved success in the reduction of the number of employees on our rolls in large part due to the sincere cooperation of the men and women who hold civil service positions. They have responded.

Most of the suggestions for work-saving steps have come from them. Since 1954, some 38,000 suggestions have been received, resulting in annual savings of approximately \$41/2 million. Under our incentive awards program about \$250,000 has been paid to Treasury employees for these suggestions.

When new procedures have been put into operation we have received most excellent

cooperation.

I do want to comment on one major responsibility of the civil service personnel within the Federal Government which I am sure is many times overlooked. This is the responsibility for long-range, or long-term planning, if you will, and the carrying out of major new programs which can only be brought to fruition over a period of several years. Many students of government wonder how continuity within Government in major fields can be provided when so many top Federal officials serving in appointed positions held office for only a very few months or a few years. This is a wellmerited query.

We do have within the Federal Government a very happy melding at the present time of career people and political appointees. Each group provides an important point of view and performs an important function. I believe that each group is essential to making our Federal institution responsive to the will of the people and effective in carrying through their delegated chores. Nevertheless, it is thanks to the people who are spending their lives in Federal service that some of the long-range problems are spotted well in advance of the time that emergencies may arise and that necessary programs, essential equipment, and changes in personnel training are undertaken and achieved.

Let me give you a single example. If, in the years ahead, the Internal Revenue Service is to cope with the expanding population of this country and the increasingly complicated industrial and business establishments of the free enterprise system, it must use to the fullest extent possible new machines and new methods. We must adopt the latest type of automatic data processing. It has now been determined that it will be possible to create a master file of all Federal taxpayers. Plans are underway for the development of such a system and preliminary blds for some of the first steps in the system have been requested. This system, however, can only be developed, conducted, and projected over a period of many years-perhaps as much as a decade. Complicated as it is, the system cannot be handled piecemeal with each new Treasury official or Director of Internal Revenue making new decisions or adopting new programs not meshed into the long-range programs carefully worked out by experts charged with the responsibility.

Here is the perfect example of a system which will only reach effectiveness if we have within government people who will start with a system, take a personal responsibility for it and stay with it through its many years of development. We do have such people in the Revenue Service. This system will make a major contribution to the tax collecting process of this country. I am sufe that it will be successful, and its success will be a real tribute to our career

Our Federal public servants have earned and deserved the appreciation of the American people. They deserve more than mere words of appreciation. They are entitled to adequate and attractive conditions at places of of employment, and adequate tools and equipment with which to work. Federal employees deserve rewarding and stimulating. ing conditions of employment. I believe that during the last several years greater progress has been made in this area than in any similar period of our history.
In addition to the substantial salary in-

creases that have been granted, recognition of the principle that Federal career salary rates should be generally comparable with private enterprise pay levels, and substan-tial expenditures for improvement of buildings, equipment, lighting, air-conditioning, etc., a number of very significant fringe benefits have been granted, including the follows:

following:

1. Low cost group life insurance.

2. Group health insurance starting this July with major medical as well as basic

3. Unemployment compensation.

4. Free fidelity bonds.

Tax-free uniform allowances. 6. Greatly liberalized retirement and sur-Vivorship benefits.

7. Additional holiday and travel allowance benefits.

8. Social Security coverage for temporary

employees.

9. Special benefits for specific groups such as postal workers who obtained a modern pay system, longevity pay and military leave for substitutes, increased equipment allowances. ances, and other special benefits.

10. Incentive awards program under which Pederal employees may receive up to \$25,000 for outstanding contributions.

11. Extension of career competitive service

12. Outside training authority.
13. Reemployment rights for oversea em-

These benefits are, of course, in addition to the liberal annual sick and military leave provisions and other benefits previously in

Now, for a moment I turn back to Maine and Maine people.

I have told you of the record of service made by John F. Hartley in the Treasury and I commented on a petition submitted in his behalf to President Van Buren. I want to reacher to read a portion of this petition:

"The undersigned citizens of Maine most respectfully call your attention to the unequal selections hitherto made from the several States to fill the subordinate offices in the departments at Washington, whereby the citizens of some of the States have been nearly all excluded from any participation In the honor or profit of such appointments

"Believing that changes will be made, and knowing that Maine has nothing like her fair proportion of clerks at Washington, We cordially unite in recommending John F. Hartley, Esquire, of the city of Portland, for a clerkship in one of these departments."

With a change in date and a change in names, a similar petition would have been in order at any time during the last decade. I do not believe that we have enough Maine people within the Federal establishment. All us from Maine can fairly and properly repeat the urgings and the comments which were sent out on behalf of John F. Hartley,

Much of the greatness of the United States has come from those who spent the early years of their lives in our small communities, and from those who have lived close to nature and to the land. The self-reliance and commonsense of these people has been demonstrated time after time. They have lived in areas where, of necessity, they were required to depend on their own planning and own judgments and own ability to meet and cope with the challenges of nature and of the elements. With these people sturdy independence, thrift, integrity and fairmindedness are essential virtues taken for granted and assumed to be possessed by all.

It is my belief that we do not now have enough of these people moving into places

of responsibility in public life.

I do not in any sense place the major re-sponsibility for this failure on the Federal Government's lack of cooperation in finding places of challenging responsibility for those who have moved to Washington. I know from personal experience how difficult it is to translate from northern New England to the Nation's Capitol. I know from the number of refusals I have received how many of the young men and women in our section of the country are uninterested in leaving New England for other sections. I am certain, however, that all of us here can do much in searching out places and positions which would be of interest to the young people of the north country, and then aiding them in determining the value of these positions and in making the difficult choice of undertaking new responsibilities in unfamiliar areas.

We need more people from northern New England in the Federal Government. Their presence here will add, in a very real sense, strength and character to Federal operations. Their presence here will be of benefit to northern New England. Their presence here will set a challenging example which others will follow-to their benefit and to the benefit of the public service.

Free Enterprise on a New Frontier

EXTENSION OF REMARKS OF

HON, HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, speaking last week in Los Angeles, Ralph J. Cordiner, chairman of the Board of Gen-

eral Electric Corp., urged that private industry be allotted the major role in the exploration and economic development of outer space. Otherwise, he warned, when the "space frontier" is ready for economic development we might find the area preempted by the Government, with room for only a "nationalized industry" in outer space.

Not so long ago, I heard someone coinpare man's feeble and wondering fingertip touch of the nearer fringes of the vast universe in recent years to the sensations enjoyed by a potato bug in a potato in a sack of potatoes in the hold of a great ship full of potato sacks wondering what made the ship's engines go. Well, be that as it may, it seems quite clear that man is going somewhere beyond the confines of this old earth, though his destination is still unknown.

In our natural desire to be there first we must, I think, be careful lest, in Mr. Cordiner's words:

The United States may find itself be-coming the very kind of society it is struggling against-a regimented society whose people and institutions are dominated by a central government.

He then urged Congress to publicly state its intention that "competitive private enterprise" will be used to the maximum in space project management and to encourage private investment in space commerce, so that this new frontier would be successfully opened up as was the trade route to India and the settling of the American West.

Although we have plenty of troubles and of things to worry about here at "home," what Mr. Cordiner said should be food for thought, and to add a little more fuel to the fire I include an editorial from the Wall Street Journal of

May 9, 1960:

MONOPOLY OF SPACE

Among the fantasies of the space age, it' may seem weird indeed to talk of the role of private business in space development. The retort is likely to be, What conceivable business?

Yet, as these columns have suggested, it may be none too soon to discuss the question, at the rate technology is rushing. And now Chairman Cordiner of General Electric, whose head presumably is not stuck in the clouds of science fiction, argues that space can open a vast field of opportunity for private enterprise—If it is permitted the opportunity.

It should be noted at once that industry is very much in space as it is, but so far the activities are all Government controlled, the firms under Government contract whether civilian or military. What we are talking about is private firms getting into space work on their own.

Already, Mr. Cordiner notes, space projects are speeding progress in electronics, communications, power resources, high strength materials, medical and biological research. As he sees the early stages, pri-vate firms might work in global communications by satellite, private weather forecasting and rocket transportation. Looking further into the future, he can envision the mining of new or rare materials on other planets for refining on this one.

The question, then, is whether all these enormous undertakings are to be, now and for all time, a Government preserve. If the question is not even asked, says Mr. Cordiner, then when the space frontier is ready for economic development, "we might well find the area preempted by Government. This would leave the Nation almost no choice except to settle for nationalized industry in space." He adds that because of the vastness of such industry, "the United States may find itself becoming the very kind of society it is struggling against—a regimented society whose people and institutions are dominated by a central government."

Some people in America today would not blanch at that prospect. But let us leave aside the ideological implications for the moment. The case for permitting private enterprise a major role in space can be made

on purely practical grounds.

First, the incredible industrial development of this country is the work of individual initiative. That is not a slogan but a fact. Totalitarian countries have only been able to copy, and are still doing so. And it is a fact highly relevant to the struggle with the Communists, viewed either in economic or military terms or both. It could be said that World War II was won on Henry Ford's primitive assembly lines. No sane person could contend that we would have our present economic or military strength if the Government had monopolized the auto industry in its infancy and hung on all these years.

We have, furthermore, recent and present evidence of what Federal monopoly of a great innovation, really a turning point, means. The Government monopolized the atomic energy field for nearly 10 years after World War II and precious little progress was made in its peaceful applications. Today, the Government still has much too tight a grip on the atom for the development of its

potentials.

The practical matter, from the standpoint of the welfare of this country, is that large-scale private participation can greatly accelerate the race for space that we hear so much about. The competition, the numbers of minds, the interaction of those minds that come from business enterprise can never be duplicated in a Government monopoly. Let Russia have its regimentation; the secret of this Nation's success is the reverse.

Congress, so conscious of its guardianship of the national welfare, should get some discussions going. Businessmen should start considering Mr. Cordiner's remarks if they do not want to see the space race lost by default to bureaucracy. For what is certain is that nothing can change if nobody even

talks about it.

Happy Birthday, REA

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, on May 11, the rural electrification program will have reached the quarter-century mark. In the 25 years since President Franklin D. Roosevelt signed the Executive order that created the Rural Electrification Administration, this program has revolutionized the way of living down on the farm.

My home State of Wisconsin was one of the trailblazers in the rural electrification movement and has a sizable number of REA "firsts" to its credit. They are summarized in an article by Loren H. Osman, which appeared in the May 8, 1960, issue of the Milwaukee Journal,

Milwaukee, Wis. Under leave to extend my remarks, I include that article in the

REA WILL CELEBRATE ITS 25TH ANNIVERSARY— AGENCY HAS BROUGHT ADVANTAGES OF ELEC-TRICITY TO THOUSANDS OF WISCONSIN FARMS

(By Loren H. Osman)

Madison, Wis.—A birthday anniversary is approaching—one in which an electric light bulb would be more appropriate than candles on the cake.

The Rural Electrification Administration (REA), the agency that brough farms out of darkness in Wisconsin and throughout the country, will be 25 years old Wednesday.

Although the celebration will be in Washington, D.C., the occasion is not going unnoticed at the modern offices of the Wisconsin Electric Cooperative (WEC) here. The WEC is the service and engineering organization for the 30 rural power cooperatives in the State. Its officials look back with satisfaction on a number of REA "firsts" in the State.

STATE WAS LEADER

Wisconsin was the first State where REA cooperatives generated their own power, a project that grew into the giant Dairyland Power Cooperative. It was the first to have a manufacturing function for electrical supplies.

WEC claims also to be the first such statewide group formed by cooperatives, although there had been some activity by the farm bureau in Indiana in negotiating power contracts. More noteworthy, perhaps, is that WEC was set up at a time when the REA officially frowned on such statewide organiza-

WEC also had the first publication for REA users. It was a mimeographed leaflet called "Contact," predecessor of the present REA news. Yellowed early issues hold stories of the economic impact and human conflicts that attended rural electrification.

BRIGHT LIGHTS BROUGHT JOY

In the record, too, is the account of the great joy that came with the bright lights. Only a person who has groped his way from barn to house with a kerosene lantern can fully appreciate how farm life was changed.

In those days, 2 Wisconsin farmers in 10 had electricity from a central source. This was twice the proportion nationally. Now nearly all Wisconsin farms have been electrified with the exception of a few "pockets" where power is coming. More than a third are served by REA. The proportion of rural electrification is nearly as high nationally. REA serves about half of the farmers in the United States.

Former Gov. Philip La Foilette created the rural electric coordination agency in Wisconsin in October 1935. The late Orland S. Loomis, of Mauston, its first head, took his job so seriously that he came personally to plead the cause of rural power to local meetings.

FIRMS REDUCED RATES

The first organizations, in Jefferson, Lincoln, and Walworth Counties, came to naught when private companies eliminated former charges of customer contributions for line construction and reduced farmer rates. Still the effort was not lost, REA points out, for this was estimated to have saved the farmers of those areas a million dollars.

The James Hanold farm near Richland Center was the first in the State to get REA "juice," as part of the energizing of 267 miles of lines in the Richland Cooperative Electric Association. Turning on the power on May 7, 1937, climaxed a contractors' race in which the Columbus Rural Electric Cooperative came in just a day behind.

As in other States, Wisconsin farm electrification had been preceded by tussles with

private power interests, organizational problems, and even suspicion and misunderstanding by the farmers themselves. Depression ridden for years, they were wary of everyone. The few dollars it cost to join looked large indeed

President Franklin D. Roosevelt, who signed the Executive order operating REA May 11, 1935, had done so under the Emergency Relief Appropriation Act. The aims were to provide employment and get REA funds flowing into commerce as soon as possible. Morris L. Cooke, the first Administrator, quickly saw that the skilled labor needed for line building would not be found on the relief rolls.

After the legal aspects were cleared, REA was established as a lending agency, with authority for a program on an interest-bearing, self-liquidating loan basis.

CONSUMPTION INCREASES

The Richland Cooperative has grown to 2,200 members on 740 miles of lines, according to C. F. Baldwin, its present manager. It represents only one of the success stories of the REA in the State. Only 1 of the 31 borrowers for electrical purposes is not a cooperative. REA telephone loans also have been made for about the last 20 years, but only 9 of the 43 borrowers in the State are cooperatives.

From 1940 to 1960, the miles of REA-energized lines tripled, to 31,700, and the number of consumers rose from 23,323 to 95,000. But of great importance to officials, with an eye on costs, was the jump in power consumption per user. This went from 830 kilowatt-hours in 1941 to 5,460 in 1958. The total rose from 21,900,000 in 1941 to 464 million in 1959.

Because of the greater availability of private power in the eastern half of Wisconsin. REA has evolved largely into an operation west of the Wisconsin River. An official estimated that only 2 to 3 percent of the power consumption in the State was REA.

Starvation Amid Plenty

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

CURTIS of Missouri. Mr. Speaker, the subject of good nutrition is one which should be of major concern to every American family as it affects every member of the family. Mrs. Vera Glaser, a distinguished national newswriter, and the North American Newspaper Alliance deserve our commendation for a report entitled "Starvation Amid Plenty—American Youth Warned on Poor Eating Habits." This thought ful and constructive article was printed by many newspapers around the country which use the worthwhile news features issued by the North American Newspaper Alliance. These papers include the New York Times, Washington Star, San Diego Union, Des Moines Register, Chicago's American Dhiladel Register, Chicago's American, Philadelphia Bulletin, Miami News, and St. Louis Globe-Democrat.

Mrs. Glaser was formerly on the staff of the Washington bureau of the New York Herald Tribune and prior to that was on the staff of Congressional Quarterly News Features. Her work on

"Eisenhower—The Inside Story," a bestseller by Robert J. Donovan, Washington Bureau Chief of the New York Herald Tribune, was praised for its thoroughness and accuracy. Her writing experience also includes work for the National Aeronautics magazine and the former Washington Times-Herald. She has also been active in the field of radio broadcasting.

In a time when there is a tendency for quick, sloppy reporting, it is indeed a welcome pleasure to be able to commend Mrs. Glaser for a sound, scholarly research and writing job which makes clear to our young people the importance of proper diet. NANA also deserves our thanks for presenting worthwhile think pleces which help the reader with the broblems confronting our Nation and individual families. All too often the heavy pressure of daily news crowds out discussion of important topics which are not solved or understood in one quick reading. The following article is one Which undoubtedly has been discussed in many American homes and so has contributed to the greater strength of Our family life and our country.

I quote from Mrs. Glaser's article which was printed in the New York Times, Sunday, March 27, 1960, and was written for the North American Newspaper Alliance:

STARVATION AMID PLENTY

"While Mom and Dad are setting the world's best table and running up a \$78 billion annual food bill, 6 out of every 10 of America's teen-age daughters suffer Berious diet deficiencies. In fact, most of our future wives and mothers are so poorly fed that scientists tag them 'malnourished.'

Teenage boys are runners-up in the starvation sweepstakes, but nutritionists worry most about 9 million girls between the ages of 13 and 19 who will bear tomorrow's bables. More than 5 million of them exist mainly on snacks, soft drinks, french fries, pizza, candy, hamburgers, and

"True, Americans are taller, live longer and eat 15 percent more than they did half a century ago. But unless the younger gentration gets 'hep' to nutrition and fills dan-Berous diet gaps with milk, meat, fruits, and vegetables, the pendulum could swing back-

BENSON CITES NEED

Never have young people been more in heed of wise advice and guidance on food. Agriculture Secretary Ezra Taft Benson told he. Replacing their present faulty food habits with good ones will take the full co-operation of parents, teachers, and teenagers themselves.

"Schoolwork and alertness suffer when the teenage body is short-changed on vital food elements. It shows up in bad temper, acras acne, or loss of stamina. Too often teenage pimples are borne patiently as 'part of growing up' when they are a sign of poor diet.

A teenage girl, obsessed by beauty, may slash
her interher intake so drastically that her authentic

long-range glamor is undercut.

"In her concern for a slim figure," said
one in the concern for a slim figure, said one her concern for a sinh inguity, the nutritionist, 'A girl may gamble with her hardings, 'A girl may gamble with her health by making total war on calories. She plunges into a hippo-to-slimo routine, inventional and the control of the cont inventing her own reducing diet. Too often she skips valuable potatoes, bread, and milk, bypassing entire meals, then cancels it out with gooey sweets. A low-calorie diet, if properly planued, can include every nutrient.

If it doesn't, it's dangerous.'

"The long-term results: impaired health, future generations weakened. Mainutrition is sometimes connected with juvenile delinguency."

CRITICAL YEARS

"At about 11, a girl's growth spurts and for the next 9 years her body burns a lifetime high in food energy. By 16 she should reach her maximum height. By 18 her weight probably will level off as nature turns to firming muscle, bones and tissues-in short, building an adult body. The food she eats must fuel this growth, at the same time providing teenage go-power for jitterbugging, softball, hockey, and a hectic school calendar.

"But at the very time her body demands a peak intake of calories, vitamins and minerals. Miss Tenn's parents relax discipline over her food habits. Even if they didn't, the young lady, proudly wearing her first pair of 2-inch heels, undoubtedly would issue her own declaration of diet independence. 'No time.' She shouts, sprinting past the breakfast table. Or, 'not hungry.'

"The starving teenagers come from rich, poor and middle class homes. At one junior high school here, morning hunger headaches are common and valuable class time is lost when youngsters are sent to the nurse. a senior high school here, when breakfastless boys fainted at early-morning cadet drill, school authorities launched a 'better breakfast' campaign.

"The food habits of these youngsters mirror a nationwide teenage famine amidst plenty. For lunch Miss Teen selects a luscious looking wedge of pie from the cafe-teria line. Watching the trays go by, dieti-cians who plan well-balanced hot meals see many nutritious, energy-packed dishes ignored. 'They'd eat three desserts if we didn't have a rule against it,' one commented. Sandwiches brought from home often are tossed in the ash can or left to draw ants on locker shelves."

AFTER SCHOOL SNACK

"'How about stopping at the shake shop?" is the afterschool rallying cry and Miss Teen usually does, ordering a hot dog or milkshake. By the time she reaches home, dinner is only an hour off. She barely nibbles on the roast beef, baked potato and salad dished up by mother. Hunger pangs will disappear later as she snacks on pretzels over a book or television.

"If this young lady is the Census Bureau 'average' she will be married by the time she is 20 years old. Doctors point to malnutrition as a key factor in miscarriages and unhealthy babies. Years of poor diet, they warn, cannot be corrected in a few weeks.

"In State after State, danger signs have been popping up for the blue jean set:

- "1. Only 19 out of 2,500 Pennsylvania teenages examined had perfect teeth. More than half of them were chronically tired. Two-thirds of the girls showed low hemoglobin, a warning of diet-connected anemia.
- "2. In New Jersey 9,000 10th and 11th graders from city and farm districts were questioned. Diets were short of green and yellow vegetables needed for vitamin A; also citrus fruits, tomatoes, and raw cabbage; sources of vitamin C.
- "3. A Nebraska study showed greatest need of improving intakes for mothers and teenage girls. (Oddly enough, men and boys with poor food habits do not show up as badly. Generally they eat 50 percent more than women and the heavier load supplies extra nutrients.)
- "4. Of every 10 girls in Montana, only two were rated adequately fed. Half of them were short on iron and vitamin C, needed for healthy gums and teeth.
- "5. Among Iowa children teenage girls were conspicuous for poor diets."

CROSS-COUNTRY SURVEY

"But the blockbuster exploded late in 1959 when the University of California released the most ambitious study to date. Eleven years of research on 4,000 adolescents in 39 States showed: 'The average intakes of the girls was seriously low-as for calcium, iron, thiamine, and ascorbic acid-or borderline low, as for calories and proteins. The diets of teenage girls presented the least favorable picture of all examined.'

"Every teenager's diet was measured against the nutrient minimums recom-mended by the National Research Council. Less than two-thirds of the NRC minimum was marked inadequate. Blood composition, height and weight measurements confirmed

these findings.

"What does this boil down to in everyday terms? Is it really something for Miss Teen to worry about? A calcium shortage may develop brittle bones, bad teeth, or rickets. Lack of iron leads to nutritional anemia, listlessness, gastric upsets, dizziness. Insufficient thiamine brings on nervousness, poor digestion, abnormal fatigue-even beriberi. Lack of ascorbic acid causes deformed bones, bleeding, scurvy. Poor protein intake results in stunted growth, premature aging, low resistance to disease.

Teenagers' worst food errors, according to the American Dietetic Association, are skipping breakfast, overloading on sugary snacks, fad diets, combining crazy foods for weight control, low intake, a 'who cares' attitude toward nutrition. Arresting this trendwhich is rooted in ignorance, indifference, or poverty-will take a real shift in food habits. In the average home a nutritious diet may be had for much less than the family spends, but it takes know-how.

HOPEFUL FACTORS

"The national school lunch program, which makes available at least one nutritious meal a day, is now operating in about one-third of U.S. schools. Teachers claim it has ad-vanced the study of nutrition and certainly it has been a forward step in the quality of food eaten by teenagers.

The Agriculture Department sets nutrition standards for the lunch, at the same time distributing a wealth of information on proper eating through its various publi-

cations.

"Every 10 years the Nation takes a long look at the problems of its young people. The 1960 White House Conference on Children and Youth has recognized the importance of food for youth by the appointment of two outstanding nutritionists: Dr. Helen R. Le Baron of Iowa State College and Prof. Vera L. Newburn of Colorado State College.

"In the long run, better food habits must be achieved by the teenagers themselves. They have inquiring minds, self-reliance, tremendous drive, and capacity to learn. Getting off their massive snack binge will take intelligence and resolution, but they can do it if they make up their minds."

Wyoming Valley Veterans Recall V-E Day 15 Years Ago Yesterday

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article, written by Mr. Lou Rauscher, which appeared in the Wilkes-Barre Sunday Independent on May 8, 1960, the 15th anniversary of V-E Day, Victory in Europe:

VALLEY VETS RECALL V-E DAY 15 YEARS AGO TODAY

(By Lou Rauscher)

Fifteen years ago today, Wyoming Valley rejoiced with the rest of the Nation at the announcement of V-E (Victory in Europe) Day. It marked the close of one of the bloodlest sagas ever recorded on the European Continent and one which involved countless thousands of area men.

The German surrender marked the end of World War II in the European theater of operations. German armies began capitulating on May 4, 1945, and unconditional surrender was signed in Rheims Headquarters May 7 at 2:41 a.m. Cessation of operations took place on May 8, 5:01 a.m.

A cross section of Wyoming Valley veterans, asked for their recollections of that fateful event, 15 years ago today, had this to say:

Charles Rouse, 37 Second Avenue, Kingston; service officer for Disabled American Vets-served with the 2d Army Division in Europe-was wounded in invasion action in France:

"I was already discharged by that time. I got out in March of that year after spending 9 months in the hospital.

"I still remember spending the day contacting Red Cross officials in the hope of

finding my kid brother who was a prisoner.
"Things didn't look too good at that time—but we've since found my brother and he's doing fine."

Joseph Cepin, Harwood Mines, Hazleton; engraver—served with 794th Antiaircraft Battalion—logged total of 1½ years overseas-participated in the Battle of the Bulge:

"I don't recall exactly where I was on that day. It was somewhere in Germany close to the Rhine River.

'Our unit was getting ready for redeploy ment to the Pacific-I still remember that. We knew that surrender was imminent.

"All of the boys experienced a genuine

relief when they heard the news."

William Langan, 177 McLean Street, city; postal clerk-served with the 157th Army Combat Engineers in Germany-was among group that blitzed through the famed Dachau concentration camp:

"We were close to Lintz, Austria, at the time and if I remember correctly I was assigned to guard an outpost.

"Most of us knew the war would be ending any day but it still came as a real relief to find it out definitely.

"However, V-E Day just meant that we

faced redeployment to the Pacific."

Bernie Rogan, 48 Dillon Street, city; electrician-served with the 449th Automatic Weapon Battalion; spent 35 months in Europe; participated in Normandy invasion; recipient of five battle stars:

"I was stationed in the Bavarian Alps when news of the German surrender came.

"I was on guard duty and remember that the sky was suddenly full of German airplanes on their way to points of capture (which we found out about 3 hours later when word came through on the company

"Everybody was thrilled, to put it mildly." Charles Murray, 12 North Welles St., city: dispatcher with local brewery-served with the 2d Infantry "Indianhead" Divisionwounded in action in Germany:

"I was in a hospital in Swindon, England, when the news hit. We first heard it from a nurse who told all the ambulatory patients that they had passes waiting for them.

"We had been anticipating the surrender. Those of us who were bedridden had to be satisfied with knowing it was all over-no celebrations for us.'

William Agurkis, 221 Brown St., city: masonry contractor-served with the 834th Aviation Engineers:

'I remember being on the outskirts of Pilsen, Czechoslovakia, when it seemed all the German officers in the area took part in a mass surrender.

"We were working on an airfield at the time and all of us were expecting the surrender any day. There was brass all over the place. We weren't allowed to go into town to celebrate—all of us were restricted to the airfield."

John Howanitz, 25 Willow St., Hanover Green; upholsterer—served with the 99th Infantry Division in Europe-wounded in the Rhineland campaign-spent about 20 months overseas:

"I was convalescing in a hospital in England at the time when it was announced over the public address system. All the guys let out with one heck of a roar.

"I was scheduled for KP that day and I recall that all of us took off once we heard of the news. They soon got us back to work for dinner but no one was worrying about supper.

"Everyone got a pass." Ed Umphred, 364 Warren Avenue, Kingston; printer-served with the 411th Antiaircraft Artillery of the 3d Army—par-ticipated in landing at Normandy and 3rd's march across Germany:

"All that day the sky was full of German aircraft. We were ordered to shoot down as many as possible even though there was a rumor floating around that Germany had surrendered.

"I still remember our outfit downing an ME-410 and a Gotha 145. I think they were the last enemy planes shot down in the ETO.

"We knew the end was coming but still couldn't believe it when we did finally get the official word."

Bill McGinnis, Andover Street, city; truckdriver-served with the 10th Infantry Division in Europe:

"I was in Czechoslovakia that day and I remember it well. We were holed up in a town about 25 miles from Munich and there was still considerable bombarding going on when all of a sudden we noted a lull.

"Then we got the word. We all felt re-

John Gill, 1 Spencer Street, Wilkes-Barre township; elevator operator-served with the 438th Antiaircraft Battalion-spent 2 years overseas-participated in the Normandy invasion:

"I remember that we were getting our equipment straightened out after a skirmish near Leipzig. I forget the name of the little

'We were in this wooded area when word was released through battalion headquarters that the war with Germany was over. We all started rejoicing."

John Kalinowski, 4 Spencer Street, Wilkes-Barre Township; American Legion post stew-ard—served with the 61st Engineering Battallon in Germany-spent total of 44 months in service:

To tell you the truth, I don't remember just where I was or what I was doing that day.

"We were moving so continuously around that time that for all I know we were on the go somewhere. No kidding, I don't recall where I was.'

Peter Yenchis, 38 Railroad Street, Wilkes-Barre Township; unemployed—served with the Army Signal Corps—spent 4½ years of his 51/2 years of service time in the Pacificwas stationed at Pearl Harbor when the Japs attacked:

"It seems odd, with all the time I spent in the service, that I was on furlough at the

"I'll never forget the day. I was in town and soon as I heard the good news I went to St. Mary's Church on South Washington

Street to offer a prayer of thanks."

Robert Zagorsky, 15 West Main Street,
Plymouth; construction engineer—served 3 years with the 8th Air Force in Europe as a gunner on a B-24:

'I was sitting in my barracks at North Pickenham, England, when word came.

"Actually, for us the war was over 2 days prior thereto. There was a 48-hour lull and on May 6 we were flying an observation mission over the Rhine. The river was loaded with wrecked ships and bridges.

"When the official notice came, we were half happy and half sad-happy that it was over, sad over what it cost in lives."

Anthony Drobish, 56 North Walnut Street, Wilkes-Barre township, shipper at the Tobyhanna Signal Corps Depot-served with the 111th Infantry in the Pacific, logged 41/2 years in the Army:

"I was home on furlough getting prepared to marry. I remember being in township that day when news came of V-E Day. I was glad because it meant we could concentrate all our efforts on the Pacific.

'I never enjoyed a furlough so much." Michael C. Hemene, 63 Courtright Avenue, city; county director of veterans' affairs, served aboard the aircraft carrief Croatan, was in Navy almost 3 years:

'We were somewhere off the coast of England when we got the word. Our mission was to accompany the German submarines which had surrendered into a port.

"Naturally, all the guys on our ship were happy to hear of the end."

Ray R. Ritz, 43 Hillside Avenue, Edwards ville; service officer for the VFW, served with the 90th Infantry Division of the 3d Army. participated in D-day and Patton's march across Germany:

When V-E Day was announced I was at Marywaneci, a little town in Czechoslovakia, still fighting the war.

"It was a town about the size of Pringle. There were men killed for several days after V-E Day.

"The German SS troops were still maraud" ing around in wolf gangs in the town at night and it was our job to clean them

"It took 3 days and nights and I never will quit feeling sorry for our needless casualties after the war was over.'

James Price, 4 West Kirmar Avenue, Alden; official of Property Owners Association served with the 26th Infantry Regiment of 1st Division in Europe—awarded the bronze star-was later sergeant major at war crimes trials in Nuremberg:

"Yes, I still remember the day. We had orders to move out at 5 a.m. but just as we were ready to take off we were recalled.

The most touching thing I can recollect about learning it was the end of our war with Germany was the fact that, instead of a lot of dancing in the streets, just about every American soldier jammed into a small church in the little Czechoslovakian town where we were grouped.

"Many of the townpeople were there, too I couldn't go because I was on duty, but I'll never forget the reaction."

Libero Passeri, 351 Scott Street, city; gro--served as an infantryman with the 28th Division in Europe-wounded in action in Germany:

"I remember the day very well. I was in a rehabilitation center in Texas at the time.

"When the news came, there wasn't any special fuss made. All the guys were happy to see that it was over but we were still worried about Japan and the guys over there."

Ed Barvinski, 24 Oaklawn Avenue, Park; butcher-served with the 449th Antiaircraft Battalion in Europe-logged total of 21/2 years overseas:

"I don't recall that well any more. I know that the surrender was expected and that all of us were waiting for the official word. "It seems that we were finishing a push or something because I don't recall being in

action at the time.

"You can bet we were happy."

Henry Levandoski, 313 Bennett Street, Duryea; bookkeeper—served as a flight engiheer on a B-17 which was shot down during a raid on Berlin—was a prisoner of the Germans for 1½ years:
"I was still in German hands when news

came that the war in Europe was over.

"I still remember how our captors began marching us toward the American lines, and let me tell you it felt pretty good.

"I can't remember too much else about the

day_I've been trying to forget."

Earl Detweiler, 219 Penn Avenue, Dupont; Service officer for the Amvets-served with the 3d Armored Division in Europe—was Wounded in action east of the Rhine-lost his leg on Palm Sunday of 1945:

"I was lying in a hospital bed in McGuire General Hospital, Richmond, Va., when news

of V-E Day came.

"I had a good feeling, I guess

"Most everybody was jubilant." Luther Hall, 302 James Street, Kingston; American Legion service officer—was field artillery observer with the 10th Mountain Division in Europe-received the Bronze Star-Air Medal with Clusters-also served again later in Korea with the 10th Field Artillery: "For us, V-E Day was anticlimactic. I was

in the Italian campaign and V-E Day in Italy came May 2.

"On May 8 we were in the process of collecting prisoners around the southwestern tip of Lake Garda in northern Italy.

Two RAF pilots came in to tell us it was all over."

Washington Report

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following newsletter of May 7, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, May 7, 1960)

The Department of Defense Appropriation, 1961, was the focal point of a full legislative week which showed an increased tempo in House activity. The appropriation bill, of approximately \$39.3 billion (\$39,300 million) is our largest annual spending bill, equaling half the total na-tional budget. Personnel, pay and allowances, get \$11.8 billion, split among Army 870,000 Active, 700,000 National Guard and Reserve; Navy, 794,000 Active and 174,000 Re-Serve; Air Force, 825,000 Active and 134,000 Guard and Reserve. Operation and maintenance take \$10.3 billion. Procurement (of Research and development, testing and evaluation get \$4.2 billion. These funds allocated are the state of the located by service branch are as follows:
Army \$9.4 billion, Navy \$11.9 billion, Air
Force \$16.8 billion, and Office of Secretary of Defense \$1.2 billion.

Our military objective is to maintain "adequate deterrent forces" so adequate or strong that no nation or combination of nations will dare attack, thus risking their almost certain destruction by our forces. So it is

that we must maintain a mixed attack force so that our forces at no time could be wiped out no matter of what nature the surprise attack. Our Strategic Air Command bombers (airborne missile launching platforms), our unmanned bombers, the missiles of all types (short, intermediate, and long range), our nuclear submarine forces are some of these mixed attack forces, so maneuverable and flexible they could not be simultaneously destroyed, but would in combination retaliate to destroy the attacker. All of this retaliation rests on our warning systems so we continue to improve these systems to give us time between attack origination and hitting us. Research, of course, underlies all these efforts. Here the factor of "time lag" enters, the time between discovery of a practical new weapons, or warning, system and the time of readiness for use. Here, too, is a large part of the cost through obsolescence and surplus.

Our military preparations are basically wasteful, since we must always be in readiness and then discard the weapons and ammunition never used, and be glad. missile gap (if there is one will be closed by 1963) the airborne alert, the airlift, the sealift, all were part of the debate and re-

ceived careful attention.

Yet valid criticisms remain involving unnecessary waste and duplication by the military, including unbusinesslike supply management, wasteful handling of surplus goods, uneconomic ownership and operation of real estate and other business properties, excessive travel and living allowances, and others. All excessive spending should be trimmed and the military leaders be held accountable to the taxpayers.

Most important of all, as I see it, is the need to remember that a strong military position rests on a strong economy and our economy rests on free enterprise and private initiative, not federally planned bureaucratic regimentation of our lives. we fail to eliminate nonessential, nonmili-

tary expenses (as well as military waste), and our taxpayers end up under Federal domination-in or out of war emergencywe have already lost the fight for freedom.

The Area Redevelopment Act was the prima donna bill of the week. In the effort to delay or kill it on Calendar Wednesday, 14 separate rollcalls were demanded, 11 of them being votes, 3 attendance quorums. The House did not adjourn until 9:40 p.m. The bill passed 201 to 184. It would authorize a new Administrator to designate "depressed areas," industrial or rural, and Federal funds would be provided with almost no limitation, as to who gets it, except the amount of money on hand. At this time the amount asked was \$251 million. There would be Federal help for hardship resulting from technology change (so we'd have sub-sidized buggy makers when autos came in), migration of industry to other areas, shifts in demand, and depletion of resources. Under this act, employees in summer resort areas could be subsidized the rest of the year. Beyond the obvious fallacy of this not being the role of Federal Government, there were many others. The same criticism condemns equally an administration effort (although only one-fifth as much in cost as the Democrats' bill) to provide a palatable solution.

The administration medicare program of help for the aged is a new development in the health field, in which the AFL-CIO is trying to brew up a political storm and an election issue by backing the Forand bill. The Forand bill would impose a special payroll tax on the first \$4,800 of everyone's pay to provide Federal health care for those over 65 and covered by social security. The medicare program will permit those over 65, who do not pay income tax (i.e. whose income is less than \$2,500 or \$3,800 per couple) to pay \$24 enrollment fee and then

be eligible for extensive insurance coverage providing they pay the first \$250 per person (\$400 per couple) and 20 percent of the entire cost. This rather ingenious system is quite a different approach and deserves careful study. Enclosed is a statement I put out earlier in the week when the plan was first proposed.

STATEMENT OF BRUCE ALGER, FIFTH DISTRICT OF TEXAS, MAY 4, 1960, RE ADMINISTRATION MEDICARE PLAN FOR THE AGED

For my part, I am not categorically for or against this new suggestion since there are Federal and State problems—medical and insurance viewpoints—and taxpayers to take into account before evolving final legislation.

I do not agree with Secretary (Flemming) statement that "Executive branch of Government fully recognizes and accepts the fact that the Federal Government should act in this field. A careful consideration of facts such as the following can lead to no other conclusion." The hearings on the Forand bill did not establish an area of need. As a matter of fact, the medically indigent and needy are already taken care of by government under Federal-State public assistance under social security. To that extent the Government is indeed in the field already and is meeting the need aided by the most important contribution of local efforts, community chest, churches, charities and free medical care for anyone who cannot af-

ford to pay.

I am interested in this proposition because it avoids many of the basic flaws of the Forand bill which would not help those who need the help. I am interested because this could be a more businesslike approach to public assistance and not a further pyramiding of Federal programs, rather a replacement or shift of cost currently paid by Fed-

eral tax money.

The only Federal program even needed is one that better does the job. Can this one do a better job that needs to be done by Federal Government? Is this a better way to care for the medically indigent? If it is and the cost is shifted in public assistance rather than generate new spending programs the budget may not be jeopardized.

The answer to these questions and others can come only from study of the facts, judiciously without political expediency. facts can come from hearings where all interested parties can be heard. The Ways and Means Committee has a responsibility to Congress and our people to do this job and do it well. This administration proach deserves our full study and consideration. No final answer is possible until the Secretary provides us more information. This includes at the least his analysis of State share of costs, State by State, the Federal-State equalization formula, further data on administration costs, including personnel, information on present State programs of public assistance and more detailed information on total cost.

Lincoln, the Man

EXTENSION OF REMARKS

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. CURTIN. Mr. Speaker, this year the Lehigh County Republican Committee in my district sponsored two essay contests on the subject of Abraham Lincoln as a part of the Lincoln Day celebrations; one being for senior high school students, and the other for junior high school students. I am very proud of these fine students and the essays they write for this contest. This year, the contest for the junior high school students, in which several hundred students competed, was won by Ruth Weinstock, who is a freshman at the South Mountain Junior High School in Allentown, Pa.

Under leave to extend my remarks, I would like to include the winning essay of this young lady, entitled "Lincoln, the Man":

LINCOLN, THE MAN

I might speak of Lincoln as a great orator, a great writer, or a great statesman, for all of these things he was, but I rather choose to speak of him as a man, the quintessence of greatness.

But what is greatness, and how is it to be measured? It is more than being able to use fine words and preach fancy speeches, as did so many of Lincoln's time; it is more an intrinsic quality, originating in the heart, a spirit, a purpose. It is not only living and working for the present but sacrificing for future generations, for all eternity.

Lincoln was a man of the people. He could understand them, because, after all, "look where he came from." He was one of

them, yet different, very different.

Much as we, today, see his greatness, it is more for our descendants to realize. This greatness, like wine, mellows, ripens with the passing of years. It is like standing on top of a mountain, looking down on the lesser peaks, then, upon descending, seeing its true majesty, its real height.

On his death, his enemies wept.

Lincoln believed so very strongly in equality. The war being fought was not just to free the slaves, not just to save the Union, but to settle a question for time immortal: whether people should live as freemen or remain half slave, half free.

He did not attempt to say which side was right or wrong. He respected the Confederacy, for he knew that they believed that what they were dong was right. I suppose he felt that no man has the right to judge others unless he himself is free of all the world's guilt, a state bordering on perfection.

Lincoln was a modest and simple man, not claiming to know the hearts of people. His thoughts were deep, most likely too deep even to put into words his full meaning. His speeches were simple and direct. Take, for example, his Gettysburg Address.

Lincoln believed this to be a failure. Asked to make a few appropriate remarks, he followed Everett's 2-hour oration with a dissertation lasting but a few minutes. The people were disappointed. Why, this was the President of the United States. How could the President make such a simple speech? What they didn't realize is that quality is more important than quantity. Rather than going into a long, philosophic or political discussion, Lincoln chose a few fitting words that completely summed up the situation. Every word meant something and was vital to the context. He wasn't speaking directly to the audience but beyond them to all the world. Short, it may have been, but a failure, no. Today we realize the true meaning of the Gettysburg Address.

He is not to be compared with any other man. Great men are not to be measured against others but rather, each deserves his own niche in the path of history. Lincoln was a very individual man. He was a study of human nature, an expression of the people: their good and bad. By no means was he an extremist.

He possessed a kind of mystic loneliness, a steadfast purpose and idea of democracy, added to a great character and modesty. Of his autobiography he wrote, "There is not much of it, for the reason, I suppose, that there is not much of me." He claimed to be nothing other than himself.

Lincoln was taken by the people as a luminary, a new figure of hope. He had been raised in an environment similar to their own. A symbol of decency, honesty, direct talk, and justice, he stood, holding up a nation. His shoulders weighed down with burdens, he nevertheless found time to laugh.

Lincoln loved to laugh. He used humor to soothe his nerves and often, in speeches, to get across a point. This humor made him the butt of many a joke, this combined with his gawkiness, but Lincoln was not one to hold much faith in others' criticism; as long as he was sure, himself, that his purpose was true.

"Let us have faith that right makes might and in that faith, let us to the end dare to do our duty as we understand it," he said in his Cooper Union speech. How true to his character. How vast were the thoughts of the man.

And again, he stated, "In times like the present men should utter nothing for which they would not willingly be responsible through time and in eternity. How well this illustrates his directness. His purpose was in everything, his goal in helping everyone. He realized, I'm sure, that what he was doing then would make its mark on the world for time to come.

"I shall do nothing through malice; what I deal with is too vast for malice." Yes, he says it himself. A great man realizes that he cannot live only for himself, that he must set an example, be just and allowing for human nature, for human nature is a mysterious force which is indomitable. So Lincoln was forgiving, for perfection is mortally impossible to attain.

I feel, however, that he reached his zenith in his second inaugural address. "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphans, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Now, amidst the furor of war, amidst the turbulence of the times, a man could emerge so unselfish, so unprejudiced, so adamant in his desire for peace and unity, with such faith in God.

For Lincoln had great faith in God. He believed in "a providence that guided the world and whose purpose, far outstripping human wisdom, would ultimately work in all things for good."

Perhaps it was this faith which made him what he was, a man so great he is acclaimed by all the world a hero. As he strove for peace he set an example for all the world. The Civil War was not without purpose. In spite of the many lives lost, the great suffering, it proved the value of democracy and freedom, or if it has not yet satiated this cause, sometime in the future, as Lincoln almost prophetically foresaw, I feel certain it will.

As the Bishop Matthew Simpson said after Lincoln's death, "There are moments which involve in themselves eternities. There are instants which seem to contain germs which shall develop and bloom forever. Such a moment came in the tide of time to our land, when a question must be settled, affecting all the powers of the earth. The contest was for human freedom, not for this Republic merely, not for the Union simply, but to decide whether the people, in their entire majesty, were destined to be the government or whether they were to be sub-

jects to tyrants or aristocrats, or a class rule of any kind

of any kind.

"This is the great question for which we have been fighting, and its decision is at hand, and the result of this contest will affect the ages to come. If successful, republics will spread, in spite of monarchs, all over the earth."

The issue was decided. The result was successful, largely because of Abraham Lincoln.

He said said of those who feign the love of liberty, "Our progress in degeneracy appears to me to be pretty rapid. As a Nation we began by declaring that 'all men are created equal.' We now practically read it 'all men are created equal except Negroes. When the know-nothings get control, it will read 'all men are created equal except Negroes, and foreigners, and Catholics.' When it comes to this I should prefer emigrating to some country where they make no pretense of living liberty." Lincoln was one of the true lovers of liberty.

He will live forever. He will live in the

He will live forever. He will live in the ideal that "government of the people, by the people, for the people, shall not perish from the earth." He will live in the hearts of men and women who understand that "wherever there is freedom there have been those who fought, toiled, and sacrificed for it." He will live in the hearts of all generations for eternity, not as "Lincoln, the statesman," but as "Lincoln, the man."

"Now he belongs to the ages."

North Dakota's Huge Garrison Dam Completed After 13 Years' Construction

EXTENSION OF REMARKS

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. SHORT. Mr. Speaker, the other day there was an announcement to the effect that the huge Garrison Dam in North Dakota has been completed after 13 years of construction. The dam is truly a magnificent project. It has backed up a lake of water behind it that is 200 miles long. But that is not the whole story, Mr. Speaker. North Dakota, to supply this dam and the benefits it provides to the Missouri River Basin, gave up nearly 400,000 acres of lush, productive river bottom land, some of the best in the entire State. In return we were promised the Garrison diversion project which, as a partial compensation for this sacrifice, was to provide irrigation through diversion of some of the impounded waters to some of the more arid areas of the State.

North Dakota fulfilled its promise, Mr. Speaker. The former towns, ranches, and farms now under water can testify to that. But we are still in the position of having to try to collect on the promise that was made when these thousands of acres were taken.

Under unanimous consent I include at this point an excellent editorial on the subject from the May 7, 1960, issue of the Minot (N. Dak.) Daily News:

A GREAT DAM IS FINISHED

Just for the record, if for no other reason, it should be noted that the great Garrison Dam is now a finished project.

Announcement was made Wednesday that the fifth and presumably final generating unit had been put on the line. That increased the power potential to 400,000 kilowatts, and made the dam the largest power producer now operating in the Missouri Val-

Since the first of the year there have been repeated announcements of transfers of Corps of Engineers personnel from Riverdale to other assignments. The establishment at Riverdale has been reduced from a district

office of the corps to a field office.

So we come to the end of a 13-year period of history in which the dam as a great construction project loomed large in our eyes and captured lots of headlines. It was, certainly, the most spectacular feat of engineering that we have witnessed in our part of the World. Harnessing the mighty Missouri was a job which brought before the eyes of our readers a variety of astronomical statistics. For instance we were told that in 1953, the year of the closure, a total of 12 million cubic yards of earth had been moved. We learned, too, how to speak of millions of acre-feet of Water impounded behind the dam, most of It supposed to be for multiple use, as the phrase goes.

The project put a great rip-rapped, steelribbed rolled-earth wall across the wide valley. The great earth fill was shaped, seeded to grass, and had a road built on top of it. It was equipped with a vast concrete-lined spillway. Tunnels were put through it to deliver water to the hydroelectric turbines and to the down-face tail race. The dam backed up a lake of blue water 200 miles long that was big enough and deep enough to make some of the country's large bodies of water look like the excavation of an old

tile factory.

Now that the dam is finished, and has ceased to be the mammoth anthill of construction activity which it was for some Years, it is still a marvel to look at. The lake it created is still filling, slowly. We begin to see the dam and the lake as something of a tourist attraction, fit for the eye of

all-comers. Yet we remember that close to 400,000 acres of land were acquired to provide space for this huge reservoir, and that thousands of People had to give up their homes and their land bases to make it possible. And we are reminded that the multiple use of the water, through diversion of part of it into channels across the State, where it would do us untold good, is still to be realized. The diversion project, itself a marvel of planning, is all blue-printed and the statistics of costs and benefits analyzed, and the report has been delivered to Congress.

The Garrison Dam is finished. But for North Dakotans the task of realizing substantial benefits from it in the form of water for irrigation and for municipal and industrial use, has barely begun. We have a lot of human engineering ahead of us—most of it to be accomplished in Congress—before the blue waters of Lake Garrison mean something more to us than a surface to go boat-

Mr. Speaker, with the fifth and presumably final generating unit now installed at the Garrison Dam, the total generating capacity will be 240,000 kilo-

Of this generation within our State, based on the latest information available from the Reclamation Bureau, North Dakota's allocation for preferred customers amount to only 161,665 kilowatts. Of this amount 8,000 kilowatts of power is being held in abeyance for the Grand Forks, N. Dak., Airbase, and 6,000 is being held for the Minot, N. Dak., Airbase.

Power from the Garrison Dam under presently policy is integrated to meet area requirements along with the power units at Fort Peck-excluding one unit-Oahe, Fort Randall, and Gavins Point. Among States benefiting or to benefit from the integrated power are Montana, North Dakota, South Dakota, Minnesota, Iowa, and Nebraska-west of the 101st meridian.

The Enizmas in the Pilot Powers Case

EXTENSION OF REMARKS OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. DOOLEY. Mr. Speaker, under unanimous consent, I include in the REC-ORD a statement by Arthur Krock in the New York Times of May 10, 1960, which appears to be an excellent analysis of the international incident in which Pilot Francis Gary Powers was shot down over Russian soil.

Mr. Krock points the finger of criticism at the Government agency responsible for the timing of the espionage activity, coming as it did just before the summit conference. He rightly says that the timing either implies incompetence or irresponsibility in the use of discretionary authority which the agency has been given by the President, or it implies an assumption of authority which merits severe criticism. Such an assumption, in the eyes of Mr. Krock, violates the laws of the land and the Constitution, for it places the decision of peace or war in subordinate Government hands.

The article follows:

IN THE NATION-THE ENIGMAS IN THE PILOT POWERS CASE

(By Arthur Krock)

WASHINGTON, May 9 .- Until and unless the pilot of the U.S. U-2 plane can give specific and credible answers to certain fundamental questions which were raised by his spying mission over Soviet Russia and its debacles a final overall judgment will not be reached by fair and sensible people, including critics at home and abroad who merit the description. There are too many unsolved mysteries remaining in the case to justify more than these corollary conclusions:

1. Whichever Government agency was responsible for the timing of this espionage activity, just before the summit conference, should be exposed and punished. The timing either implies incompetence and/or irresponsibility in the use of the discretionary authority which the agency has been given by the President. Or it implies an assumption of authority that merits severe punishment. For such an assumption not only would violate the laws and the Constitution. It also would in effect lodge the decision of peace or war in subordinate Government hands.

2. The United States, which in this instance was represented to the world by the Department of State, compounded the error of the timing of the U-2's flight by a combination of mistakes on which questions of its competence are fairly founded. These mistakes were: (a) to be trapped by Premier Khrushchev into making a false statement

of the U-2 mission on the amateur conclusion that his first account was complete becaus: he didn't say it wasn't; and (b) to dilute its belated and enforced admission of espionage with this sentence:

"It has been established that, insofar as the authorities are concerned, there was no authorization for any such flight as described

by Mr. Khrushchev.

The words "as described by Mr. Khrushchev" interposed a quibble into a text designed to demonstrate that the United States was making a clean breast of an espionage activity which had been detected by the Soviet Union. It was a quibble because it diverted the reader from the admission that the Premier's principal accusation was true by setting up and knocking down his sideline propaganda that the U-2's purpose was "aggressive provocation aimed at wrecking the summit conference." And this was absurd and untrue on its face.

4. The final corollary conclusions suffi-ciently supported by this record are that coordination of policy and act has not yet been attained by the National Security Council and the Operations Coordinating Board, even in connection with procedures involving the peril of initiating nuclear war; and that there are vital missing links between the President and his authorized agents.

UNSOLVED MYSTERIES

These are sound foundations for criticism of the administration by the people, and it is proper also for the Democrats to urge the transfer of executive power to that party in 1960. But before an overall judgment of the U-2 incident can intelligently be made, the following enigmas must be solved to which Premier Khrushchev has made no substantial contributions:

- 1. Did Pilot Powers descend to a level within the target range of the Russians as previously pretty well established? If so, was oxygen failure responsible? Or have the Russians acquired a higher altitude in their antiaircraft gunnery?
- 2. Why didn't the pilot use his ejector seat to descend, in which case the plane's mechanism for self-destruction would have operated? How could the Russians have pictures of almost unwrecked sections of the plane, lying close together, unless the pilot before parachuting rode it down to an altitude which makes this photography even faintly conceivable? And, if he did that, was survival his only inducement?
- 3. Was the territory of Pakistan used for takeoff without authorization, and the territory of Norway similarly marked for landing? If so, what the U.S. source of this order, as well as of the mission and its timing?

Maybe there never will be satisfactory answers to these questions, or at least none available to this generation.

The Nature of Waste

EXTENSION OF REMARKS

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. JOHNSON of Colorado, Mr. Speaker, many Americans believe they can avoid waste simply by not spending money. Unhappily economics teaches us that waste takes many forms-sometimes failure to spend money wisely leads to a tremendous waste of resources.

appeared in the Washington Post on Monday, May 2, in a column by Philip Stoddard Brown, which I commend to the attention of my colleagues:

OUR CHANGING ECONOMY-WASTE ENCOURAGES ECONOMIC SECTS (By Philip Stoddard Brown)

A friend tells me that once at a cocktail party he overheard a serious young lady "I know it's true because I've said it before."

In the past week, this young lady's remark has come to mind, for I have been reading a lot of management and trade union publications written by barrister-type economists. I've been struck by how much all this special pleading resembles a certain type of religious tract. Both accept as "fact" any useful oft-asserted belief or tired-out conclusion.

Economics, like religion, has many sects. Each has its own set of beliefs; each claims the truth. The adherents of some are ingenuous and establish their "truths" simply by asservation, or-like the young lady my friend tells about—by quoting them-selves. Others are sophisticated; they es-tablish "truth" by citing authorities—that is, other persons' assertions—and they know that the longer ago an assertion or conjecture was made the more authoritative it is.

Just as spiritual lords throughout the ages wanted theologies to justify their powersand temporal lords, political theories to validate their powers—so business and labor want to rationalize their rights. Actually, it's not just business and labor, but farmers and city dwellers, lenders, and borrowers, the regulators and the regulated, importers, and exporters. These and dozens of other conflicting groups want to rationalize the rights they claim. Consequently economics has become tainted, messy, and tedious.

WASTE TOO PREVALENT

There is another reason, too, why this Nation has become a hotbed of economic sects. That is the prevalence of waste in the land today. Let me explain.

There were 4.2 million persons unemployed in March and countless others who, though not actively seeking work, would have applied if there had been a better chance of getting work. (It's worth noting that the Government's labor force figure, which includes the employed and unemployed, was the same as that for March 1959, after allowing for the inclusion of Alaska and Hawaii. Yet, in the past year, the number of adults not in school and not too old to work increased by about 1 million.)

Of those who had jobs, 25 percent worked less than 35 hours a week in March-many involuntarily. Underemployment also results when trained and talented Negroes are excluded from whole sectors of the economy-in Washington, for example, from all but the lowest-rung jobs in banks, savings and loan associations, insurance companies, brokerage houses and real estate firms.

Manpower is also wasted when a million or so workers living on subsistence-type farms are surplus and when tens of thousands of miners eke out a living in halfdeserted communities because they can't find work elsewhere.

Waste takes many forms. It results not only from enforced idleness but from misdirection of effort and from a faulty order of priorities. As an example of the latter, there is a 3-mile segment of a new highway in Nevada, along which three elaborate interchanges have been built at a cost of \$384,000; these interchanges together handle 89 vehicles a day-serving some old mines, a power line, four or five small ranches, and a house of ill repute, according to a report of the General Accounting Office. At the same

An excellent statement on this issue time, on the fringe of most cities, there are traffic bottlenecks that individually cause the daily loss of thousands of hours of motorists' time and a great waste of fuel.

RESOURCES ARE WASTED

Resources are wasted when the Potomac and other rivers are polluted and when, for lack of planning, slum areas are created, as they are today, in many of the suburbs of Washington.

This is a period of budget-obsessed leadership, slackening attention to public interests, and growth of vested interests. But we have come about as far as we can with old plans, by amending and extending them. It's going to take some new plans to train and employ some 20 million young people who will enter the labor force in the 1960's.

Economists, I hope, will be drawn once again into cooperation with artists and architects, educators and engineers, medical leaders and social workers in formulating projects of grand design to beautify the public domain, improve education, advance the arts, and help the great masses of people in South America, Africa, and Asia.

No longer should we tolerate "sound policies" that involve the future loss of billions of dollars of goods and services: By not retraining and relocating idle workers, not improving teacher training, not giving more scholarship aid, not providing more help for seriously disturbed children, and not planning in Government as we do in business.

My principal criticism of the present Federal administration (and of Congress) is that it has been so extravagant. The govern-ments of Maryland and Virginia, too, have been extravagant beyond the bounds of future tolerance.

Extravagance is to waste people, their time and talents. This type of waste is never re-couped. Money, on the other hand, though it may be passed around foolishly, is never

Oppose Giveaway

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to call my colleagues' attention to the following excellent editorial from the Baker, Oreg., Record Courier of April 28, 1960. It is a brief but hard-hitting analysis of the proposed "upstream benefits" bill—a bill that is well named since all the benefits will certainly accrue to the upstream power companies:

[From the Baker (Oreg.) Record Courier, Apr. 28, 1960]

OPPOSE GIVEAWAY

In Congress currently there is a very innocent-sounding measure going through the mill under the title of "Coordinated Operation of the Waterpower Resource.'

Actually the measure has nothing to do with the comprehensive and coordinated operation of the waterpower sites, but is a financial scheme of the private utilities to obtain a subsidy from the public for the public's own water.

The bill, in brief, would authorize payment by downstream power projects for water released through upstream plants such as Brownlee and Oxbow.

If, indeed, the private utilities could get away with this, it is a morally wrong public policy. We are glad to see Congressman AL ULLMAN fighting the bill.

The private utilities under Federal law are required by license to coordinate their projects. It is a condition under which they seek and accept their licenses, even though unfortunately the coordination is not being done. In many instances-and this was certainly the case at Hells Canyon—the private utility campaigned the length and breadth of the land promising a coordinated project in its successful fight to kill the high dam which by its very nature was coordinated with downstream plants. Now that it has the license it is morally wrong to claim compensation in order to do that which it gave a solemn pledge that it would do.

Nor is a damsite a right under present law. It is a privilege. Any measure that makes compensation a paramount principle between the public and the licensee converts the privilege on the rivers to a right which is completely contrary to the intent of the commerce and welfare clause of the Constitution and is extremely prejudicial to the very serious problem of the loss local interests and States have suffered in the field of water rights.

The purpose of the bill to coordinate is indeed a fraud, since the very licenses command coordination and the Federal Power Act itself contains the mandate of Congress that FPC cannot license but for maximum development and coordination of water uses. To institute the principle of giving private utilities, who already have squatted upon valuable public waterways, keys to the Federal Treasury would only step up the political drive by which they could further usurp other sites on other rivers against the public welfare. The principle of the public paying the criminal for wrecking comprehensive development programs would be ridiculous. How the legislation ever got started, got the support of the reactionaries and the administration is beyond comprehension.

Partywise it might be a good thing to get this bill out and defeat it with a record vote. But the bill is too dangerous to even let out of committee. It should be summarily purged in committee and its backers again chastised for again coming up with a giveaway and a resource pirating scheme.

Jersey City Celebrates Tercentenary Anniversary

EXTENSION OF REMARKS OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. GALLAGHER. Mr. Speaker, Jersey City, N.J., is celebrating its tercentenary anniversary and it started officially last Sunday when the largest parade ever witnessed took place in that

It was a tremendous event and Jersey City has certainly contributed a great deal of history in her 300 years.

I would like to include as part of my remarks the attached articles, one from the Jersey Journal of May 3, 1960, and the other from the New York Times of May 8, 1960:

[From the Jersey Journal, May 3, 1960] PARADES? NEXT SUNDAY'S IN JERSEY CITY WILL TOP 'EM ALL

Jersey City has had a great many parades in its 300 years but none was ever like that scheduled for Sunday-the one that will launch a calendar of activities in celebration of the city's tercentenary reaching way into next October.

It's going to be a parade which will stop talk about all the big parades in the last 300 years hereabouts. Everyone in town is likely to be in the parade or watching it, and there are going to be plenty of "visiting firemen" too with every community in the county pledged to come along and help.

The parade will start from Pershing Field at 1:30 p.m. and will go on and on for so many hours that the committee will thank its lucky stars for daylight saving time.

An exaggeration? Now here this: In the matter of floats alone, the very meat of any parade, there will be at least 40. These don't step along at a gingerly 120 steps a minute like the military, and not many can fit into a block's space. So you see we are getting along into the afternoon.

The Bayonne Naval Supply Center will have a float with a very realistic mockup of a destroyer which is bound to be of interest to both dad and junior. It will have a complement of smartly dressed gobs on duty to add to the thrill and realism.

The 102d Artillery Regiment of the 50th Armored Division, National Guard, from East Orange will be in line with halftracks and howitzers as well as combat wreckers which will lend plenty to the military aspect

of the parade. On the picturesque side will be a dozen uniformed Cossack riders, the contribution

of the Ukrainian Center.

All departments of the city will have rolling stock in the parade. Equipment of the police and fire departments that can be spared also will be in line.

Industry will vie with labor in the originality of their floats. Business houses will "spick" up their best rolling stock to show

off. The USO will have a float with an accordion band. And speaking of bands, they will be from all over and in numbers so great they'll likely be interfering with each

other's efforts. Organizations large and small with any claim to neighborhood, ward or city fame will have a contingent of marchers.

In short, it's going to be a big parade, and those who don't postpone that ballgame or trip to the shore to see it will be kicking themselves for the remainder of their lives.

The parade will march west on Manhattan Avenue to the Boulevard, then south on the Boulevard through Journal Square and into Bergen Avenue and through Bergen Square, where all this started 300 years ago. There the reviewing stand will be located.

The parade will then go down Bergen Avenue to Montgomery Street and thence to the Boulevard again by way of Mont-gomery Street, then south on the Boulevard to Lincoln Park.

[From the New York Times, May 8, 1960]

JERSEY CITY SET FOR ANNIVERSARY-PARADE TODAY STARTS FETES FOR 300TH YEAR-EARLIER CELEBRATION EXPLAINED

(By Joseph O. Haff)

JERSEY CITY, May 7 .- This city's official celebration of its 300th anniversary will get started to the sound of martial music tomorrow as an expected line of 50,000 persons takes part in a six-division parade.

The 6-month celebration of the birthday is being financed by a \$50,000 contribution by the city administration and the proceeds of a number of major projects planned by the tercentenary celebration committee.

These include a trade fair at the National Guard Armory from May 15 to May 20; an anniversary ball at the armory on June 18 at which Guy Lombardo will direct the music and a sports program throughout the summer. This will include track meets and swimming and diving championship exhibitions.

Lest there be confusion in the minds of students of New Jersey history who recall another Jersey City tercentenary celebration in 1930, Bertrum R. Hulmes, the curator of the Jersey City Museum and executive director of the tercentenary celebration committee, has explained that this year's celebration marks the 300th anniversary of the founding of the town of Bergen.

The earlier celebration, Mr. Hulmes said, was based on the historical fact that a deed was granted in 1630 to a group of New Amsterdam burghers for a piece of land on the Jersey City shore, opposite what is now Liberty Street, Manhattan, for a place called Paulus Hook.

HISTORY OF CITY RECALLED

"History tells us," Mr. Hulmes said, "that the first house was not built on Paulus Hook until 1635 and later was wiped out by marauding Indians. The town of Bergen, located several blocks from what is now Bergen Square in present-day Jersey City, was the first community in New Jersey to have an administration, a magistrate, a school, and a church. In celebrating the 300th anniversary of the founding of Bergen, Jersey Cityites are indeed marking the tercentenary of our city."

The reviewing stand for tomorrow's parade will be at Bergen Square, not far from the site of the original Dutch settlement. Mr. Hulmes has arranged a historical exhibit at Bergen Square, showing relics of the early Dutch homes here and a selection of paint ings showing scenes of Jersey City as it appeared nearly a century ago.

The celebration will close with an exhibi-tion of paintings at the Jersey City Public Library on October 17. The paintings will Library on October 17. The paintings will be the product of a "paint-the-town" contest open to all artists whose canvases

show Jersey City scenes.

Mayor Charles S. Witkowski, as general chairman of the tercentenary committee, will lead tomorrow's parade.

Formal Presentation of Official Flags of the U.S. Navy and Marine Corps to the Committee on Science and Astronautics

> EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, on April 29 it was my great pleasure and honor as chairman of the Committee on Science and Astronautics to accept on its behalf the formal presentation of the official flags of the U.S. Navy and the Marine Corps.

These flags have now taken their place on the rostrum of the committee, alongside the American flag and the official emblems of the Army and the Air Force, which were previously presented to the committee.

The flags of the Navy and Marine Corps were presented to the committee by the Honorable William B. Franke, Secretary of the Navy.

Under leave to extend my remarks, I wish to place in the RECORD the statements made on this occasion by the Secretary and myself.

Secretary Franke. Mr. Chairman, bers of the committee, on April 24, 1959, the President signed an Executive order which gave the Navy its first official flag in its 184year history. Prior to that time the U.S. Navy infantry flag was the one used during ceremonial parade and display occasions. In contrast, the Marine Corps has for many years had its own distinctive banner, its familiar red and gold flag, which has inspired men and thrilled the hearts of onlookers on many occasions.

It is an honor and a privilege for me to present to this committee these flags. One very new, one hallowed by years of tradition; flags that are truly representative of the

Navy and the Marine Corps.

When we re flags such as these, not only the bunting, and the distinctive insignia, but we also see and are reminded of the organizations they represent, the U.S. Navy and the U.S. Marine Corps.

I see in these flags almost two centuries of sacrifice made by men and women in the naval service in defense of this great Nation of ours.

I am reminded of the sincere dedication of spirit and effort of these people, not only for our own freedom, but for the entire free world.

These flags remind me of naval and marine units deployed to the far corners of the earth at this very moment. The men of these farflung units are going about the world taking care of the day-to-day tasks of our country in readiness for defense, and in the serious business of being good will ambassadors.

I think it is fitting therefore that these flags be placed in this committee room, beside our national flag and the flags of our sister services.

It is a fitting place for our Navy and Ma-rine flags because this committee and this room are symbolic of man's desire for knowledge and freedom.

It is fitting because this committee has such an important part and responsibility in

reviewing and passing upon the scientific programs of our country.

I ask you to accept these flags as a token of the Department of the Navy's solemn pledge to continue to extend the maximum effort in concert with our sister services and all of the agencies of our Government in the extension of knowledge and in the defense of our country and the free world.

The CHAIRMAN. Thank you, Mr. Secretary. This is indeed a beautiful and a historic moment, when you formally, accompanied by representatives from the services of the Navy and Marine Corps, appear before this committee to present us two flags, one from the Navy and one from the Marine Corps. It is true, as you say, that one flag is entirely new and one is hallowed by years of tradition and service.

On the other hand, to my mind, and I am sure to the minds of the members of this committee, both flags are hallowed by the service, traditions, personnel, and the exploits of the men of the Navy and the Marine Corps. This committee itself, it is true, Mr. Secretary, has an obligation to advance new ideas, new inventions, new developments, new devices that will assist this Nation in its defense. In performing these duties we work with pleasure with men of the Navy and of the Marine Corps to the unified effort that we give proper defense to the United States of America.

Your service, Mr. Secretary, as represented by the Navy and the Marine Corps, has al-ready done a magnificent job in research and development.

You, for instance, represent that Naval Research Laboratory that had the responsibility during the first International Geophysical Year over the Nation's first satellite program, the Vanguard. You placed into

orbit Vanguard No. I, which will circle the

earth for hundreds of years.

At this very moment Navy Vanguard I is sending back to earth its signals that already have changed fundamental scientific concepts regarding the nature of the earth. It is also the Navy that has developed in research and development the Polaris, which is not only a missile, but is a new concept of warfare. Your service has pioneered and developed a new means of defense for our country.

The Marine Corps, through its precept and example, has given all America a firmer feeling of devotion for the principles of freedom which we share with the Western World.

So, on behalf of the committee, I take

So, on behalf of the committee, I take much pleasure in accepting these flags, the one from the Navy and the one from the Marine Corps. They will join the flags of their sister services on the rostrum of this committee.

This is merely a temporary committee room, Mr. Secretary, but as time moves on we will have a new building across the way. We have splendid quarters set aside for this committee in the new building to the west of us. We already have selected a place in the permanent rooms of the committee for these flags which are symbolic of the cherished devotions to freedom which guide the United States.

Thank you very much.

Supremacy of the Nuclear Submarine

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. CANNON. Mr. Speaker, tomorrow the Navy's largest nuclear-powered submarine, the U.S.S. Triton returns to her home port at New London, Conn., having completed history's first submerged circumnavigation of the world. Retracing the route of Magellan, the Triton made a nonstop submerged voyage that covered a distance of 41,517 miles in 84 days at an average speed of about 18 knots. The purpose of this voyage was to gather geophysical and other scientific information regarding the subsurface regions of the oceans. On behalf of the House Appropriations Committee I wish to extend congratulations to Captain Beach and the fine crew of Triton for their historic accomplishment.

The magnificent performance of the Triton's nuclear propulsion plant is a great tribute to the significant technical accomplishments of Admiral Rickover and his staff. The voyage of the Triton is indicative of the lead which we now have in the field of nuclear-powered submarines. It further emphasizes the vital importance that the executive branch of the Government must give to steps which will free our technical leaders of the administrative harassments which prevent these leaders from attaining even greater technical accomplishments-accomplishments which are necessary if this country is to achieve better than second place in competition with the Soviets. This committee has, and will, continue to give its full support to Admiral Rickover and the expansion of our nuclear-powered Navy.

The Way of the Self-Righteous

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I take this opportunity to call to the attention of those who may not have seen it, an editorial which appeared in this morning's Wall Street Journal. This respected periodical points up one of the most important of the after-effects of the recent plane incident which has been and is a matter of such concern to all of us.

[From the Wall Street Journal, May 10, 1960]

THE WAY OF THE SELF-RIGHTEOUS

Up until now it has been possible to say to the world that what came out of the Kremlin was deceifful and untrustworthy but that people could depend on what they were told by the Government of the United States.

Now the world may not be so sure that this country is any different from any other in righteousness. And that, we fear may turn out to be the saddest injury we have suffered from the incident of the American reconnaissance plane brought down over Russian territory. Like the clergyman caught in nocturnal activities, we will no longer be able to be so self-righteous.

It is true enough that intelligence work—or spying, if you prefer that word—is an accepted business among nations. And we doubt if the world will be shocked, or even surprised, to find that the United States tries to find out as much as it can about the capabilities and intentions of Soviet Russia. Indeed, if the circumstances of our intelligence probing were somewhat different, both the American people and our friends abroad might be reassured to know that intelligence work is no monopoly of the Russians.

But this particular incident is doubly unfortunate. In the first place it is going to be very hard to persuade people that sending a Government plane deep into the territory of another country to photograph its terrain is not what the diplomats would call "provocative." We need only imagine what the reaction of Americans would be if we caught a Russian airplane over Chicago or a Russian submarine in New York harbor.

In the second place it is going to be hard to convince people hereafter that explanations from Washington can be taken at their face value.

For the first reaction of Washington to Mr. Khrushchev's announcement about the U-2 was to dismiss it as presummit ranting. Then we were told that there was after all a "weather plane" that had been missing for several days near the Turkish border, and that maybe the trigger-happy Russians had shot down this innocent pilot. Only when it became impossible to maintain this cockand-bull story was it admitted that "someone" had deliberately sent a plane into Russia on an intelligence mission.

So we have been caught not only in a rather provocative act but also in dissembling. The one can be explained as a piece of bad judgment. The explanation for the other will come harder.

No one will argue, we suppose, that this country has done anything different from what the Russians do all the time. Bring provocative is habitual with them; decelt is part of their normal way. Therefore the argument that we have done no more than what others do all the time is quite accurate.

The difficulty is that we have told others and ourselves we are different. The image we have created before the world is that "we don't do what the Russians do." We don't engage in international provocation. We do tell honestly what is going on.

And now the sad part is that this image, which has been one of the strengths of America, is now sullied by our own self-righteous zeal that led us to believe that, because we are opposed to wrong, anything we choose to do is right.

The Federal Debt

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. WIDNALL. Mr. Speaker, financing of the Federal debt is one of the major problems to which Congress this session must face up. I refer specifically to President Eisenhower's appeal to Congress to lift the interest-rate ceiling on new Government bonds.

In a thoughtful presentation, Harold B. Dorsey, a recognized authority in this field, says of arguments opposing the President's stand that they are "of such a nature that suggests that they—legislators advancing these opposing views—do not have time enough to analyze the facts of the matter, or to appreciate the significance in respect to the Nation's economic welfare."

Mr. Dorsey's timely observations are contained in an article entitled "Economic View—Legislators Misunderstand the Money Market," which appeared in the May 9 Washington Post. In the hope that it will help to clarify the issue for those of my colleagues in the House and Senate who favor maintaining the 4½-percent ceiling, I insert Mr. Dorsey's message in the Record:

[From the Washington Post, May 9, 1960]
ECONOMIC VIEW—LEGISLATORS MISUNDERSTAND
THE MONEY MARKET

(By Harold B. Dorsey)

It is seldom that business analysts feel that it is necessary to have a practical interest in the welfare of Congressmen, but evidence is accumulating to indicate quite strongly that such is the case at this juncture.

Naturally, the business analyst must take into his calculations the outlook for credit availability and interest rates, because the condition of credit markets does tend to have an influence on business activity and employment. These particular conditions in the second half of the current year are very likely to be adversely affected if the financing of Federal debt continues to be restricted to short-term and intermediate-term credit markets by the 4½-percent ceiling on new Government bond issues.

The arguments presented by those who are opposed to lifting the interest rate celling on new Government bonds are of a nature that suggests that they do not have time enough to analyze the facts of the matter, or to appreciate the significance in respect to the

Nation's economic welfare.

Their lack of understanding of financing problems has been proven in recent months by events that followed the publicly expressed convictions of numerous Congressmen who are opposing the legislation on the interest rate ceiling. They stated with the greatest emphasis in March that the fact that the interest yields on outstanding Government bonds was below the 41%-percent ceiling demonstrated that the Treasury Department could offer a long-term bond issue at or below the ceiling interest rate.

Practically everybody familiar with investment markets knows that such is not the case. A new security offering must necessarily be priced so that it is more attractive than outstanding issues, or buyers will not

bid for the new issue.

Of major importance in judging the re-liability of these personal opinions is the actual experience of the Treasury's recent effort to test out the market with a 41/4 percent bond issue. In the terminology of

the financial markets, it was a flop.

But then there were some rather ugly protestations that the Treasury and financial leaders conspired to prevent the recent bond issue from being a success. Subsequent events have proven that those accusations also were born of an ignorance of financial markets. It was contended that insufficient time was allowed to permit trustees of pen-sion funds and other institutional savers to make up their minds to subscribe to the new issue. Since the offering date of the 414-percent issue, there has been plenty of time for these funds to make up their minds, but they have not seen fit to do so to a degree that would prevent the price from falling below the offering price.

If space would permit it, it could be demonstrated that this particular group of Congressmen and their supporters have at one time stated with characteristic emphasis that the Treasury should only undertake its long-term financing during periods when interest rates are low. At other times, they have contended that the long-term financing should not be undertaken during periods of recession, because that would stifle recovery forces. But interest rates are characteristically low during periods of recession When the overall demand for credit is low. Consequently, one might conclude that they are advocating that the Government should never finance with long-term bonds. But other things they have said indicate that this is not their desire either.

The business analyst finds all of this a matter of serious concern. Congressmen whose sincere interest in the broad economic welfare cannot be questioned evidently do not have time enough to gain an understanding of these matters pertaining to financing and credit policies.

Mr. Speaker, I recommend to my colleagues also that they read a letter by Charles T. Stewart, Jr., which appeared in the Washington Post of May 4 and which accurately redefines the periods and effects of "tight" and "loose" money. [From the Washington Post, May 4, 1960]

ERROR ON GROWTH

Seymour Harris' letter of April 21 contains a simple error which completely changes the conclusions which he and the reader, may reach. He contrasts the effects of "tight" money and "loose" money on the rate of economic growth, concluding that tight money has slowed down the economy.

Unfortunately his tight money period is 1953-59, and his loose money period is 1947-52. This is a mistake. The accord between the Treasury and the Federal Reserve which initiated a tight money policy was reached in early 1951. I know this is awkward, because President Truman still had nearly 2 years to go in the White House, and because Senator Douglas was instrumental in bringing about the accord. But facts are facts.

The tight money period, therefore, should be 1951-59. The economic growth rate for this period was 2.8 percent. The loose money period should be 1945-50. The growth rate during this period was 0.3 percent. But what are the results of this correction? Practically no growth during the loose money period (and actual decline in income per capita); substantial growth thereafter.

Why does Professor Harris pick on 1947 as the initial year? It is not the first year of the Truman administration, nor of a loose money policy, nor of peace. In all these regards 1945 is a better choice.

This abuse of innocents at home wins no laurels for the economics profession.

CHARLES T. STEWART, Jr.

Hospital-Medical Aid for the Aged Is a Growing Local and National Problem

EXTENSION OF REMARKS OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. KASTENMEIER. Mr. Speaker. under leave to extend my remarks in the RECORD. I would like to place before you a feature article prepared by Ivan Kaste, a reporter for the Waukesha (Wis.) Daily Freeman on May 5, in which he has interviewed a number of local residents concerning their views toward hospital and medical insurance for the aged. The Daily Freeman has taken a firm editorial position in opposition to the Forand bill, and the objective reporting job which Reporter Kaste has done in preparing this job reflects much credit the editorial integrity of the Waukesha Daily Freeman. The article follows:

[From the Waukesha (Wis.) Daily Freeman, May 5, 1960]

Proposals to provide hospital and medical insurance for the aged are certain to become major political issues during the 1960 presi-

dential campaign.

The lines have been drawn. Joining the Eisenhower administration in opposing any program of compulsory health insurance are the American Medical Association, the American Hospital Association, and the U.S. Chamber of Commerce.

The current ruckus started a year ago when Representative AIME FORAND, Democrat, of Rhode Island, brought the Forand bill before the House of Representatives.

The measure would provide insurance covering hospital, nursing home and surgical care for persons on social security. It would pay the full cost of 60-day hospital care per year or for care in a nursing home up to 120 days annually.

Cost of the additional social security coverage would be financed by an additional quarter percent on employes' wages and em-ployers' contributions. The worker would pay a maximum of \$12 per year. has been estimated at anywhere from \$1 billion to \$4 billion annually.

But the squabble in Washington does not stand apart as an abstract battle over the theories of how far Government should go in caring for its citizens. It has its roots in Waukesha and thousands of similar communities throughout the Nation.

The Waukesha County Medical Association has followed the AMA in objecting to Federal intervention. A spokesman has maintained that private insurance plans could

care for the elderly..

Taking the opposite viewpoint is the Waukesha Labor Council which has adopted a resolution favoring Federal aid for persons over 65 receiving social security.
Waukesha County has its share of persons

over 65 and the number is increasing each

An informal poll, taken among members of the Waukesha Golden Age Club, indicated overwhelming support for legislation which would provide financial aid in times of illness or hospitalization. Here are typical comments from the golden agers: Chris Anderson, 73, of 930 Perkins Avenue:

"I would like to see the Forand bill go through. We got so many people that need it. I have Blue Cross-Blue Shield insurance. It costs me \$54.40 every 3 months. I am able to take care of myself but I am concerned about the other people who can't take care of their needs."

Mrs. Ollie White, 70, of 230 South Hart-well Avenue, domestic housekeeper: "My social security, \$33 a month, wouldn't cover hospital bills. I'd hate to depend on it—it doesn't go far. It (the Forand bill) would be a big boost to the majority of us old neighbors because there are very few of us who can stand a good hospital bill."

Achilles Calabrese, 64, of 152 Tenny Avenue: "I would be in favor of it. The people who reach 65, most of them don't have enough to live on, say nothing about paying

medical bills."

Emery O. Snyder, 79, of 704 American Avenue: "I think it would be wonderful. I get only \$38 a month. I pay \$7.25 three times a year on a \$2,000 health policy. Lots of ladies here (at the golden age club) can't even afford the 25-cent luncheon charge or to go on trips'

Mrs. Anna Wolfgram, 76, of 117 Cook Street: "I get \$58 a month; I have life insurance but no hospital insurance. I had a fall recently and had to pay the medical ex-penses out of my savings. I'm trying to take care of myself as long as I can. Thank goodness I have a roof over my head and \$58 social security."

Figures supplied by James J. Roepke, Wau-kesha County public welfare director, con-firms the trend of rising costs for medical

and hospital care.

His department administers the old age assistance program which takes care of indigent persons 65 years or over. The OASI program is not to be confused with the So-The OASI cial security program, administered by a Federal agency only.

In 1951, Waukesha County had 749 old age assistance cases. That year the department spent \$383,468 for cash awards to recipients and \$71,494 for medical expenses.

Last year the county's caseload was down to 420 old age assistance cases. But the department spent \$219,364 for medical bills compared to \$165,627 for monetary awards to recipients.

In other words, roughly 60 percent of the old age assistance dollar now goes for medical care.

Covered by the term "medical" care are payments for care in hospital, nursing payments for care in nospital, nursing homes, physicians' services, prescribed medications, specialized services like physical therapy and X-ray therapy, eyeglass prescriptions and dental care.

"The main reason for the higher costs." Roepke explained, "is the larger number of hospital and nursing home cases. With advances in medical care techniques and with a higher percentage of aged persons in the total population, these two factors have combined to increase the medical care caseload."

Two cases illustrate the high cost of hospitalization. Roepke's department recently paid \$1,302 to a hospital for providing 53 days care to a woman made helpless by a stroke.

The bill for another patient, representing 70 days hospital care, came to \$1,835. That figure didn't include physicians' fees.

The high percentage that medical costs contribute to the general relief bill is further indicated in figures supplied by Mrs. Rose Birch, director of the Waukesha County Group Welfare Department.

Thirteen cases involving persons between 60 and 65 years accounted for \$1,960 in medical expenses last February. The medical bills for all 63 relief cases handled by the agency totaled \$2,365, while the overall relief bill was \$8,412.

According to Robert M. Jones, Waukesha Memorial Hospital administrator, the biggest thing affecting hospital costs has been the tremendous advances in medicine and increased hospital employee salaries.

Last year the cost per patient day at the Waukesha Hospital rose to \$29.19, of which \$18.20 went for the professional care of patients.

Let Us Remember Our Unknown Soldiers

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on May 30, many of our citizens will pay homage to their war dead in Memorial Day services.

Originally conceived soon after the Civil War as an occasion on which graves of the fallen would be visited and decorated with flowers by citizens of a grateful nation, Memorial Day takes on a special significance here in the Nation's Capital because of the special tribute paid to America's three unknown soldiers in the simple but impressively beautiful Amphitheater of Arlington National Cemetery.

Although Memorial Day is not universally celebrated on May 30, mostly for historical reasons, these small differences detract nothing from the great fact that we as a nation have a single purpose as we recall the supreme sacrifices of all American wars. This purpose is symbolized by the several patriotic private organizations which have undertaken to insure that our honored dead in 96 cemeteries in the United States and 14 oversea memorials receive at least a token of remembrance on this special day.

But I sometimes wonder if we do not have far more unknown soldiers than we would care to admit. We sometimes seem to forget how much we owe to our soldiers—many of them literally unknown—who lie silently in our national shrings.

In Arlington National Cemetery, by far the best known of our national cemeteries, more than 103,000 of the Nation's honored dead lie buried. Yet I am informed that on Memorial Day last year, no more than one-third, or about 35,000 of these soldiers of democracy and their immediate family members, were fittingly remembered with floral tributes.

I hope that this fact is not typical of our national, and even more international, observance of Memorial Day. I do not know, Arlington is one of our oldest national cemeteries, having been established in 1864. In some cases, family lines may have died out. But I find it hard to believe that sufficient reason exists for our failure to remember more than 65,000 of our dead. With our modern means of communication, which has made possible the sending of flowers by telegraph and other convenient means, it would seem that a great gap exists between what we intend and what we do.

To me it is more important than ever before that we keep fresh in our minds why these men and women died. Events since 1945 have demonstrated how perilcusly close we are to still another great war, one in which all of us would stand in the front lines so gallantly filled in the past by those at Arlington and elsewhere who sacrificed everything for us.

It may be that we have not done enough to enshrine in the hearts and minds of our people what our brave sons did for us. Yet renewed remembrance must spring from the people themselves if it is to have lasting value, particularly the strengthening of America for whatever uncertain future lies ahead.

With this thought in mind, I urge all citizens of this Nation, wherever they may be, to mark Memorial Day 1960 as a day or reaffirmation; a day on which to renew our pledge to Americans who have gone before, and who have made it possible for us to hand to the world a torch blazing with the fire of freedom.

At Arlington on May 30, we can speak with a single national voice to the world, in terms which will be an unmistakable sign that the spirit of our gallant dead lives on.

Area Redevelopment-Proper and Timely

SPEECH

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (8, 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. RABAUT. Mr. Chairman, the passage of the Area Redevelopment Act by this House and the subsequent endorsement, without change, of that legislation by the other body has gratified me immensely. The struggle to pass this bill—even to get action on it—has been a long and continuing one. Many, many Members of this House, myself among them, were engaged in this struggle for a number of years. It is always gratify-

ing to have one's efforts on behalf of needed legislation culminate in successful passage. But this type of gratification goes far, far beyond mere personal satisfaction. For it reaches to the fundamental realization that in passing this bill we have extended the hand of assistance to millions of our fellow citizens so direly in need of help. This is the American way. We have always helped the fellow who is down. And at a time when we are doing so much to help such people in all parts of the world, there is certainly no reason why we should not help our own fellow citizens in this their time of great need. This is the gratification of which I speak: the gratification that the American way has prevailed: that we have refused to turn our backs on the plight of our own countrymen: that we have decided to continue our great tradition of helping the "down guy," instead of putting dollars above human values.

Mr. Chairman, there are aspects of the passage of the Area Redevelopment Act that are worthy of note. Not the least of these, Mr. Chairman, is that the Congress has spoken once again and has once again made clear its feeling and intent on this question. You will recall that an area redevelopment bill was passed by Congress in 1958 only to be thwarted by Presidential veto. If I may inject a personal note, this veto came at a time when the unemployment in my home city of Detroit had reached 18 percent of the work force. Think of it-18 per cent. Again last year-1959-the will of Congress was voiced when the Senate passed S. 722 in its original form. Now this year, the House was finally given the opportunity to consider the bill, the favorable House action has reechoed the sentiments of Congress on this matter for all the Nation or, for that matter, the whole world to hear. The speedy Senate endorsement of this House action is a further reiteration of these sentiments that makes them all the more resounding. Considering that Congress expresses the will of the pcople of these United States, I ask you how, in good conscience, can the leaders of this Nation ignore or reject this will when it has been so clearly expressed and so consistently rejected?

We did, of course, hear various arguments raised against the bill during the debate on S. 722. However, I believe each and every one of these was quite effectively dispelled and cast by the wayside. The assertion that the bill is expensive or a giveaway did not hold water in the face of the facts that of the total \$251 million provided, \$200 million is to take the form of loans to be repaid to the Treasury with interest. This interest will be equal to the average rate the Treasury itself pays on what it borrows plus one-half of 1 percent. We heard the charge that the bill infringes on States rights. This point could not be reconciled with the provision in the bill that only applicants approved by a State agency or political subdivision in which the project is to be located may receive aid. These and many equally unrealistic and invalid arguments were raised against the bill. All were discarded

when confronted with the true facts, With logic and with just plain commonsense. The only conclusion to be drawn from this is the old adage: "The truth

will out." And it has.

The Area Redevelopment Act is good legislation that answers a crying need in a sensible and realistic fashion. The Congress, in its time-tested wisdom, has recognized this fact. It is only to be hoped-and ardently-that those now responsible for the enactment into law of this measure can come to this same realistic realization.

Medical Aid for Elderly?

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of my colleagues an editorial Which appeared in the St. Louis Globe-Democrat of May 4, 1960, on the subject of medical aid for the elderly, as follows:

WE ALREADY HAVE IT-MEDICAL AID FOR ELDERITY?

Congressman Thomas B. Curtis, Jr., Re-Publican, from the Second Missouri District, has made the most devastating attack launched yet on the scheme for compulsory Federal health insurance.

Congress never dreamed, when it went to Work this January, that a plan for compulsory health insurance would be seriously considered. But a highly organized lobby has whipped up strong pressure for compulsory Pederal health insurance for oldsters over-

The biggest, most expensive—and thus most sought after—scheme is the Forand bill. This would provide up to 120 days full care a year in hospitals and nursing homes to everyone who draws old-age or survivors

social security benefits.

It would also pay drug and surgery bills for all elderly people, rich or poor, who get social security checks. The Forand scheme would cost the taxpayers at least \$1 billion a year to start it off. Some insurance actuaries say \$2 billion.

Congressman Curus points out that this program has some bad flaws in it. It does

not, for example, apply to all old people.
"Millions of persons over 65 who never were covered by OASI (old-age and survivors insurance) because of the program's limited coverage in its beginning will not receive

It does not provide medical or hospital benefits that the indigent can't get now.

Local, State, and Federal Governments, plus churches, health agencies, fraternal and benevolent organizations and private groups all help take care of those—young and old—who need medical or hospital care, but can't afford to pay.

"The statement has been made publicly many times that today there are no indigent persons in the United States who do not re-Ceive health care upon application. These statements remain unchallenged," Mr. Curris told the House.

What Congress is proposing is a mass Federal health insurance program, to which all Working Americans must belong and pay their premiums by taxes withheld from their paychecks.

This is a big leap into the dark. If it is taken, it will be only because of a barrage of mail, not because careful study shows this new \$2 billion scheme is needed.

Next year, a national conference will be held in Washington on problems of the elderly citizen. It could well consider health needs of the aged and how to solve them. Congress has already appropriated \$2 million to finance this conference.

But Capitol Hill, in this election year, is not interested in awaiting the outcome of objective studies. It's interested in schemes

that will bring in votes.

Nor is the administration completely blameless, Congressman Curtis charges. He says the volume of mail for the Forand bill dropped off sharply after the House Ways and Means Committee rejected it, 2 to 1, on March 31. Tom Curtis is the senior GOP member of the committee.

However, the bill's chances of passage were revived by the congressional testimony of Health, Education, and Welfare Secretary Flemming, Cuarus said. Flemming's remarks aroused the Democrats' suspicion.

They got the impression from Flemming that the administration might sponsor a takeoff on the Forand bill, "so the Republicans could claim to be the friends of the old people instead of the Democrats."

After much backstage maneuvering, Flemming is expected to give the White House's thinking on this subject, in detail, this week.

The Globe-Democrat hopes that a majority of Congressmen will display the courage that Curris has shown in resisting this highpressure lobby. Only in that way can the true medical needs of elderly Americans be determined above the shameful hurly-burly of irresponsible politics.

Slack Water Navigation on the Missouri River

EXTENSION OF REMARKS

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. McGOVERN. Mr. Speaker, one of the best qualified authorities on the subject of river development and electric power, is Mr. Virgil Hanlon, manager of the East River Electric Power Cooperative, Madison, S. Dak. Mr. Hanlon has written an interesting article on the proposed slack water navigation development on the Missouri River which I include at this point in the RECORD;

WATT'S WHAT ON EAST RIVER

(By V. T. Hanlon)

Slack water navigation hearings have made a great deal of news in South Dakota the past few weeks; South Dakotans by the score have been testifying before Gen. Keith Barney of the Corps of Army Engineers that they want a slack water navigation study completed as soon as possible.

At the hearings downstream we found the people had a different story. Here is approximately the statement of a good share of the witnesses, "I don't understand slack water navigation and I don't know what it means, but I am against the spending of money for such a study." This might sound ridiculous, but the testimony of many of the witnesses was practically carrying that same theme. It would seem to me this would be

a reason why the study should be made. Before we can complain that land is to be flooded and bridges to be inundated, let's find out what a study would prove.

Actually the story of slack water naviga-tion is very simple. Either we are going to have slack water navigation on the Missouri River or we will have no navigation whatsoever. There is no question that there is not enough water for all of the multipurposes to be satisfied and according to the O'Mahoney-Millikin amendment of the Flood Control Act of 1944, navigation is at the bottom of the list of priorities in uses of

The people interested in navigation should hope that a study for slack water navigation be completed as soon as possible and that it shows that such is feasible if they want water transportation.

National Science Foundation Rededicates Itself to Basic Scientific Research

EXTENSION OF REMARKS OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. OLIVER. Mr. Speaker, in these days of fast-moving events and ever-increasing national and international demands of every description, it is most refreshing, encouraging and inspiring to know that we have at the helm of one of America's most important institutions for the development of basic scientific research, the National Science Foundation, a skipper of the caliber and personality of Dr. Alan T. Waterman.

In this connection, the news article written by William Hines, science director for the Washington Star, has been of special interest to me. If our people, Mr. Speaker, had more bureaucrats of the stature of Dr. Waterman leading our Nation in these days of critical crises. I am certain that we would be more confident of our future.

The article is as follows:

FOUNDATION REDEDICATES ITSELF TO BASIC SCIENTIFIC RESEARCH

(By William Hines)

Alan Tower Waterman, Ph.D., the first (and to date only) Director of the National Science Foundation, sees his principal task as that of hampering the operation of a sort

of scientific Gresham's law.

The original Gresham's law, applicable to economics, held that "bad money drives out good."

Dr. Waterman observes that the scientific version—originally propounded by Vannevar Bush—holds that "applied re-search drives out basic." It is Dr. Water-man's view of his own, and his Foundation's, job to protect the interests of basic research.

Basic research goes to the heart of na-ture's mysteries, while applied research seeks methods for making nature work for mankind. Examples would be the asking of two questions: First, why does the uranium atom act as it does? Second, what can we do with this peculiar atom? The first question is typical of the basic researcher; the second, of the seeker after applications.

The Foundation celebrates the 10th anni-

versary of its founding Tuesday. President Truman signed its enabling act on May 10, 1950, some 6 years after the proposal for a National Research Foundation was put before President Roosevelt during World War II. NSF today is the nearest thing to a successor to Dr. Bush's Office of Scientific Research and Development.

But it is much more than just a latterday OSRD. Operating with amazingly little overhead and red tape, NSF has disbursed almost half a billion dollars in aid of science and scientists.

REQUEST FOR \$191 MILLION

NSF has come a long way since fiscal 1952, when the White House asked for \$14 million. The House cut the request to \$300,000, the Senate boosted it to \$6 million and a conference agreed on \$3.5 million. The difference today is in degree rather than in kind: The figures are bigger but the fight still goes on. This year's request was a record \$191.6 million, slashed at this point to \$160 million.

What does the Foundation do with its money? Principally, two things: (1) Grants in support of basic research and (2) grants designed to improve the qualifications of science teachers. A third major project is about to get under way, if the money is forthcoming—grants to enable worthy colleges to refurbish their obsolete research laboratories.

Dr. Waterman has resisted quite effectively the tendency of another law—Parkinson's—to operate in his section of the Government. This law holds that bureaus expand at a constant rate regardless of the work to be done. NSF manages to handle its work with a payroll of only about 480 persons at an administrative overhead cost of approximately 4 percent of the budget. Many agencies with less impact on the economy have larger and costiler mimeograph battalions.

NO EMPIRE BUILDER

For a bureaucrat—as Dr. Waterman must be classified by virtue of his years at the heim of a major Government office—the NSF director is singularly unbureaucratic in his outlook. He shuns the idea of empire building and rejects the idea that NSF might become the nucleus of a "Department of Science." Such a department is a pet project of Dr. Wallace Brode, science adviser to the Secretary of State. (By coincidence, Dr. Brode's identical twin brother, Robert, is associate director of NSF.)

Explaining his opposition to an all-embracing science department, Dr. Waterman says development work must be the responsibility of the agency that is going to use the end product. "You can't have some overall department telling them what to do." he adds.

Dr. Waterman points out that one major research agency—the National Bureau of Standards—is under the Department of Commerce because 75 percent of the Bureau's work is a service function to industry and the rest is research and development to go with the main work. If the Standards Bureau were to become a part of a science department, the service side of its work would suffer, Dr. Waterman asserts. Hardly a branch of science has been un-

Hardly a branch of science has been untouched by the influence of NSF in its brief decade of existence. An outstanding contribution of the foundation was in connection with the International Geophysical Year; another in the space-satellite instrumentation field; still another in Antarctic exploration.

MEETING COMPETITION

Dr. Waterman sees the Foundation—and the country—faced with the big future scientific challenge of meeting the competition of other nations. "I'm not just talking about Russia in science," Dr. Waterman elaborates. "I'm thinking of China, too—the threat there is much worse; China is bigger, its scientists are very good, and its science is coming along."

Not only the eastern Big Two are rising to challenge the United States, the NSF director

points out. "Look at the Germans and Japanese: Great organizers, very industrious, love to work.

"Work—we don't seem to love it the way they do. And somehow we don't believe very strongly in pure science."

Another challenge lies in improving the quality of secondary schoolteaching in the sciences, Dr. Waterman believes. Through summer institutes at colleges—supported but not dictated to by NSF—about 25,000 teachers a year are brushing up on this vital group of subjects.

"This is essential," Dr. Waterman says.
"Bring a bright boy or girl up against a science teacher without an aptitude for teaching, and you've lost a student. He or she goes somewhere else."

THE FOUNDATION SETUP

Dr. Waterman's Foundation is supervised by a 24-member national science board to which he belongs ex officio and whose chairman is National Academy of Sciences President Detiev W. Bronk. The Academy and the Foundation are close physically as well as intellectually. The Foundation is in the 1900 bock of Constitution Avenue NW. (in the old Atomic Energy Commission) building) and the Academy is in the 2100 block.

Dr. Waterman is a gentle, white-haired man of slightly less than average height. At 67 he has the air and quiet wit of a college teacher, as he was for many years.

A native of Cornwall on Hudson, N.Y., Dr. Waterman took his Ph. D. in physics at Princeton and taught that subject at Yale. In point of his divided Ivy League loyalties, Dr. Waterman once told the story of a classified ad in a newspaper offering a job opportunity and specifying that the applicant must be "Yale graduate or equivalent."

One applicant, according to Dr. Waterman, wrote in to ask what "equivalent" meant—"two Harvard men, or a Princeton man part-time?"

"The Federal Government and Higher Education"—Address by Senator Joseph S. Clark, of Pennsylvania, at the 17th American Assembly, May 7, 1960

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. BRADEMAS. Mr. Speaker, it was my great privilege last week to take part in the 17th American Assembly which was held at Arden House, Harriman, N.Y., to discuss the subject of "The Federal Government and Higher Education."

A cross section of educators, businessmen, labor leaders and public officials listened to an excellent address on the subject of the conference delivered by the distinguished senior Senator from Pennsylvania, the Honorable JOSEPH S. CLARK

Senator Clark's keen analytical mind and his appreciation of the profound importance to American society of higher education makes his address one of the most valuable discussions of this problem I have ever heard. As Senator Clark said at Arden House, "The purpose of higher education is the staffing of freedom."

I commend to Members of Congress the reading of Senator Clark's remarks:

THE FEDERAL GOVERNMENT AND HIGHER EDUCATION

Reasonable men cannot study American higher education in any depth without concluding that drastic steps must immediately be taken to equip our colleges and universities to turn out more and better educated students in the years ahead.

Reasonable men who study higher education must also agree that such steps must

facilitate:

1. A much larger, much better trained and much better paid corps of university and college professors and instructors.

 A very large expansion of academic facilities—libraries, laboratories, and classrooms.

3. The admission into college, and the maintenance through graduate school, of all high school graduates who have the capacity and character necessary to assimilate college and graduate work.

Since you are all reasonable men and since you have been considering American higher education for the last 2 days at Arden House, I will assume that you have reached these conclusions. I shall accordingly not reiterate the obvious but devote the time we have together to discussing how we can do what needs to be done about higher education in America.

WHERE ARE WE GOING TO GET THE MONEY?

It is obvious that while money alone will not solve the problems of our colleges and universities, these problems are not going to be solved without a lot more money than is now available. Some years ago there was a Congressman from the central part of Pennsylvania who used to enter every debate on the floor of the House which involved the expenditure of Federal funds with the inquiry: "Where are you going to get the money?" So perhaps we should start our discussion with the same question: Where are we going to get the money?-you and I and the millions of other Americans who understand that in the immortal if tautological words of one of my congressional colleagues: "This is no ordinary crisis which confronts us."

I would answer that we are going to have to get the money we need from wherever we can lay our hands on it. For, in all likelihood, the total amount we can raise from all sources, at least in the next decade, is not going to be enough.

In our democracy there is always in peacetime, and sometimes even in war, an inordinate lag between challenge and responsebetween the acknowledgment of a need in the minds of the well-informed and a meeting of that need by the considered action of our free society.

WE CANNOT AFFORD TO WAIT A GENERATION

As I had occasion to remark some years ago: "The philosophy of the reformers in the universities becomes the action platform of the liberal politicians of the next generation." The trouble is, we cannot afford to wait a generation to do what so many of you know must be done in the field of higher education.

The need in dollars has been well established, nowhere more clearly than by Messrs. John A. Perkins and Daniel W. Wood in their penetrating study "Issues in Federal Aid to Higher Education" which all of us have recently read. Let us accept their figures and assume we will need to triple the annual level of expenditures for operations during the next decade—rising to a level \$6 to \$9 billion higher than the present \$3.5 billionadd another \$15 to \$33 billion for capital growth over that period to provide America with a first-class system of higher education by 1970. I repeat the question: Where are we going to get the money?

I reply: Some of it will come from the annual gifts of the graduates and friends of our colleges and universities. But most of this kind of money will help the richer institutions to do better the good job they are already doing. It is not a source which will spread the wealth where it is most needed.

Some of it will come from bequests from the wealthy. This will be largely, though not entirely, for facilities rather than operations. And, again, it will tend to go to richer institutions which are already doing a first-class job in terms of quality, and whose capacity and desire to handle increased enrollment are limited.

Some of it will come from tuition and other payments by more students. Some may come from increases in these charges, but there is not much liquid in the bottom of this barrel and there are strong reasons of sound national policy for making higher education cheaper, rather than more expensive, as Messrs. Perkins and Wood have well pointed out.

CORPORATE GIVING FOR EDUCATION A LIMITED SOURCE

Some of it will come from corporate giving-in fact, quite a lot of it. I would hope that educational administrators and fund raisers would intensify their efforts to obtain money from this source-thereby, because of our Federal tax exemptions, making Uncle Sam a silent partner to the extent of more than one-half of each gift. Again, we must note the limitations of this source of funds: the gifts will tend to fluctuate substantially in amount with the ebb and flow of our economy. And they will tend to enrich schools of business and the natural sciences at the expense of the humanities and the social sciences. Thus it will cover only a part of a part of the need.

Some of it will come from private founda-tions and, on balance, this kind of money comes closest to being spent where the need is greatest. But no one will contend that the private foundations can do the whole

Some of it will come from State taxation. The States are not presently doing enough. They will have to do more. But most of them are incapable, as a practical matter of doing much more quickly. The reasons are obvious—regressive tax systems frozen by outmoded constitutions which are well nigh impossible to change; domination of State legislatures by conservative elements who have little understanding of the need; a heavy demand for other State services which are not being adequately provided, among them the requirements for aid to local school districts; and, finally, the ordinary selfish motivation of ordinary decent citizens who hate taxes and don't understand the problem.

Not much of it will come from local taxation, although here and there a community college will be helped. The resources of many a school district are already spent or pledged, or both, to the limit. The others will have a hard enough time keeping up with primary and secondary education requirements. And, by and large, their tax systems are even more regressive than those of the States.

THE NATIONAL GOVERNMENT USED BY A FREE PEOPLE TO SOLVE NATIONAL PROBLEMS

So what have we left? Only the Federal Government. Government is the agency Which, you will recall, Lincoln referred to as existing to do for people that which they cannot do or do as well for themselves. The National Government is the usual means by which a free people tackles a problem public in its character and national in its scope.

We use our Federal Government to wage war, to conduct diplomacy, to guide the national economy in a score of areas. We use It to operate a nationwide system of social

security, to construct great public works, and to support our industry and commerce in many different fields. It operates our post offices and our national parks. It helps build houses and clear slums. It helps build hospitals and engages in extensive welfare operations. Without it, most of the progress we have made in this country during the 20th century would have been quite impossible.

Yet, whenever the suggestion arises that we use our Federal Government to tackle a new problem-any new problem-a cry of horror arises. When Federal action is proposed to help solve the crisis in higher education, the outcry comes from many sides, including such strange allies as the United State Chamber of Commerce and certain of the more lush groves of academe.

This stereotyped reaction deserves some basic attention. Why are we Americans, perhaps alone among the civilized peoples of the earth, so reluctant to use this great instrumentality which we control and which lies

at our disposal?

Surely democratic government is a tool to be used by the people to solve their collective problems and to improve their collective lot. Yet a multitude of influential Americans regard their National Government with that same measure of suspicion and hostility with which the ancient Aztecs greeted Cortez and his Spanish army in the mountains of Mexico. One would think, to hear the talk, that to turn to Washington in a time of need would be more like surrendering to a foreign power than utilizing one's own resources. The conventional wisdom in America still agrees with Jefferson that "that government is best which governs least." If chaos results and problems are swept under the rug, never mind, we are the same free people who drove the minions of George III into the Atlantic. DISTRUST OF GOVERNMENT CAN BE DANGEROUS IN 20TH CENTURY

This inbred and deep-seated distrust of government may have had sound historical roots in the 18th century, but it is dan-gerous indeed in the 20th. For it is only our National Government that can mobilize and direct the resources of our society when they must be mobilized. And we should all ponder whether the United States as an unmobilized society can long compete with the determined, mobilized, aggressive society that confronts us today from the other side of the Iron Curtain.

This district of government has always been present in American thought, going back, as noted, to our unfortunate experiences with King George III, heightened by the excesses of the French Revolution and of Bonaparte, and strengthened by the physical distance between the frontier and Washington, D.C. But the distrust did not break out into open warfare until the days of Franklin Roosevelt, when—from the stand-point of many powerful persons in our sothe worst suspicions anyone had held about the evil nature of the National Government were confirmed. Mr. Roosevelt set out, through the Government, to regulate the stock exchange, to impose a death sentence on utility holding companies, to use the taxing power as a means of coercion and regulation, to engage in direct competition with the electric power and the lending industries, and, most important, to proclaim what called a Magna Carta for labor's right to organize. Being unable to prevent or repeal these specific invasions of government into the domain of the plutocracy, powerful opponents of the New Deal set out to discredit government itself.

Thus, in the publications which they controlled—and these were legion—the fine old term "public servant" disappeared from the lexicon and the derogatory word "bureau-crat" took its place, "Citizens" became "taxpayers"—usually depicted by cartoon-ists as clad only in a barrel. The word "taxes" was rarely seen without the prefixed adjective "confiscatory" or "crippling" or the synonym "burden." Public spending was referred to always as a "cost," never as a benefit, and normally with the prefix "wasteful." Government activities of all kinds were freely termed "socialism," with dark allu-sions that beyond the so-called "socialism" of the New Deal lay communism. Ulti-mately, you will recall, the groundwork was so well laid that when the McCarthy witch hunt was on and public servants were burned alive at the stake of publicity, a large portion of the American public celebrated as though we had just defeated the Communists on the battlefield.

LIPPMANN, STEVENSON, FULBRIGHT CRITICAL OF STARVATION OF PUBLIC SERVICES

We have recovered a bit from the worst of the anti-Government crusade. There are now thoughtful and sensitive men, like Waiter Lippman, and Adlai Stevenson, and Senator FULBRIGHT, suggesting that the fiscal starvation of public services like education is a matter for national shame rather than national pride. Yet the conventional wisdom has not been greatly modified. I speak with assurance, because the conventional propaganda output flows across a Senator's desk by the ream.

To support the conventional thesis that the Federal Government is essentially evil and should be dismantled, a whole school of

economics has grown up.

We are told that the oppressive weight of Federal taxation is destroying enterprise and stifling investment-even though the Federal Reserve Board believes it necessary to pursue a stringent tight money policy to curtail investment and restrain enterprise.

THE ANTI-GOVERNMENT CRUSADE

We are told that Federal debt is climbing out of control and threatening the soundness of the dollar—even though our debt burden, in relation to our income, has steadily declined and is now but half the percentage of our gross national product that it was a little more than a decade ago.

We are told that Federal spending is dangerously inflationary, even when the budget is balanced. And this comes from the same people who are constantly encouraging private citizens through every medium of communication to go into debt spending money they don't have for things they don't need and didn't know they wanted until the "hidden persuaders" went to work on them.

We are told that the Federal Government is costly and inefficient and therefore the States should do the job-when every objective test shows that Federal employees are better selected, better trained, and better supervised on the average than State employees, and that the Federal tax system is more equitable and more efficient than State tax systems.

Thus the case is put together against action by the Federal Government at any time for any purpose.

THE NEW ANARCHY

I have called this anti-Government fixation "the new anarchy." And if anyone present doesn't believe these neoanarchists exist, just let this assembly go on record tomorrow in favor of comprehensive Federal aid for higher education. Then you will hear from them. I can tell you in advance that nearly every major business organiza-tion in the country will oppose you. So will the journals of plutocratic opinion which guide and reflect the conventional wisdom of the business community.

I assume that in this conference we are prepared to brave the wrath of the neoanarchists. I assume also that we are prepared to follow where the facts of the crisis, rather than our prejudices, lead us. If the projections of needs and resources told us that Federal aid is not required, no one

would have been happier than I. But despite the labored statistics of the Council for Financial Aid to Education, Inc, and the wishful thinking of the Committee for Economic Development, they don't. Since the facts lead us toward the Federal Government, let us be calm. Let us keep our heads and repeat together:

"The Federal Government is not our enemy, it is our friend. It is not an allen power, it is the creature of the American people. It will do what they want it to. It is not a monster which can ignore their

I will not dwell at length with the objection that Federal aid will lead to Federal control, as so often asserted by those who lear change. I am sure you have analyzed this argument fully in the last 2 days. I will only say that, in my opinion, it is a myth that Federal aid means Federal control. Truly we are wise enough to legislate and to administer so as to prevent an end result we don't desire. I will only say to those who oppose Federal assistance: What is your alternative, and is it not clear that the only real alternative is a second-class educational system?

HOW CAN FEDERAL AID TO EDUCATION BE PROVIDED?

Let us turn, then, to how Federal aid to higher education can best be provided.

You will be disappointed, perhaps, when I start by saying that finding the answer to this question is more your job than mine. Government programs do not ordinarily spring full-grown to life from the brows of Senators. A public need must be established. So must public awareness of that need and public support for its satisfactiom.

Leadership must come from people who

are determined and informed.

We got a Federal aid for public schools bill through the Senate this winter because the National Education Association knew what it wanted and lobbied its program across.

Something like the Forand bill, providing health insurance for the elderly will, in all likelihood, pass the Congress largely because the AFL-CIO knows what it wants

and is working hard to get it.

The Hill-Burton hospital construction plan sails through Congress with new appropriations each year because the organized hospital administrators and their trustees worked out a sound plan and lobbied to get it passed.

get it passed.

We have a college housing program because the colleges and universities are

united in support of it.

CITIZENS INTERESTED IN HIGHER EDUCATION MUST ACT

Unfortunately, citizens interested in higher education do not yet seem to know what else they want. And this includes trustees as well as college presidents and their faculties.

Let me give you an example of what I have in mind. Three years ago the President's Committee on Education Beyond the High School, chaired by my good friend, Devereux Josephs, presented a series of recommendations. Included was a proposal for Federal grants for higher educational facilities on the pattern of the Hill-Burton Act.

Now, Hill-Burton Act grants for hospitals are made pursuant to a carefully worked out plan to meet hospital needs prepared with the cooperation of the American Hospital Association and other hospital groups. It cannot be transposed to the higher educational field without careful rethinking which must be participated in by the universities themselves.

Yet that rethinking has never been done. The idea put forward by the Josephs Committee 3 years ago died as completely as if it had never been born. Why did higher education drop it? Wasn't there anybody in the field with interest or initiative enough to pick up the thought, refine it, agitate for it, and eventually get it seriously considered by both the President and the Congress? Apparently not.

I don't know myself whether the suggestion of the Josephs Commission is feasible, but the higher educational community should know and, if it does not, it ought to

find out.

Politicians should be out in front of the people, I agree. We have a duty of leader-ship. But we cannot afford to get too far ahead of the people we lead. For if we do, there is a great risk we will be shot down from behind on election day.

CAN EXISTING EDUCATIONAL ORGANIZATIONS DO THE JOB?

I wonder whether existing organizations in the field of higher education are set up to do the needed job of working out a proper plan for Federal aid and then lobbying vigorously for it? I suspect that, to some extent, they are immobilized by internal divisions on the basic questions, first, of whether Federal ald in any form is desirable and, second, if so, who should get it? The American Council on Education, the American Association of Land Grant Colleges and State Universities, the Council for Financial Aid to Education, Inc., the Association of American Colleges, the Association of American Universities, the Council for the Advancement of Small Colleges, the Association for Higher Education the National Education Association, and the American Association of Junior Colleges are a rather heterogeneous group to unite on a legislative program. Would it not be desirable to organize an ad hoc committee of leading educators and other citizens who are convinced of the need for Federal aid so that, when they meet, they need not argue whether, but only how?

Let us remember that educators are not monks who take a vow of poverty, both for themselves and for the institutions they serve. They, too, are American citizens with the right, indeed the duty, to petitlon for redress of grievances and to indicate to their elected representatives how they would like those grievances redressed.

SOME TIMID SUGGESTIONS FOR A CITIZENS ORGANIZATION FOR PEDERAL AID TO EDUCATION

Were such a citizens organization for Federal aid to higher education to be organized, I should like to sit down with it and be presumptuous enough to offer a few timid suggestions:

First. The "educational foundation" approach suggested by Messrs. Perkins and Wood deserves careful and detailed exploration. So does their view that allocations by such a foundation should include both operating and facilities moneys paid directly to recipient institutions. Faculty salaries should, in my judgment, have the highest priority; academic facilities the next. When these problems are reasonably well solved, it will be time to turn our attention to further scholarships and loans to students. isn't much to be gained in substituting a slightly brighter boy or girl for one who now wins admission to college if, when our bright student arrives on the campus, there is no place for him to sit or lie down, no books or laboratories available and not enough professors really qualified to teach him what he needs to know.

PENNSYLVANIA SITUATION CITED

Second. The hardest thinking must be done in the field of who gets how much aid. The situation in Pennsylvania is a good illustration of the difficulty.

My State has 109 different institutions of higher education. But those 109 include no public community college, no public liberal arts college, and only one State university. Less than 2 percent of our college students are in junior colleges, none of which is public.

State aid goes principally to four large universities? Penn State (which is also a land-grant college receiving Federal aid); the University of Pennsylvania, a reasonably well-endowed Ivy League institution, with Federal Government research contracts in substantial amount; Temple University, founded since the turn of the century as a community college, which has grown into a full-blown university; and the University of Pittsburgh, with its support from the Mellons and its Cathedral of Learning.

However, 14 teachers' colleges are supported entirely by the State and located principally in rural areas. Tuitions and faculty salaries are low, curriculum necessarily limited. Between these extremes are 91 private institutions which, by and large, defy classification. Some are rich; most poor. Some are widely renowned; others so small that they cannot support a strong faculty or a broad curriculum. They are Baptist, Methodist, Lutheran, Catholic, Quaker, and nonsectarian.

If someone in the audience will tell me how public aid should be distributed among such a complex variety of institutions, I would be happy to report it to Governor Lawrence's committee on education, which is presently wrestling with just this subject. Frankly, I haven't the faintest idea.

All I know is that if Pennsylvania does not substantially increase its State aid to higher education and get substantial additional help from the Federal Government, we are headed straight for trouble. To reiterate, this is no ordinary crisis which confronts us.

Third. Federal aid should not be limited to special projects, or research, or science, or defense-related subjects. It should be across the board. It should go to the heart of the university, not just to its periphery. In the civilization of the future, the natural sciences may well predominate pragmatically, as C. P. Snow has recently suggested in his stimulating Rede lecture on the Two Cultures, but the social sciences and the humanities are of equal importance, remote though the latter are sometimes thought to be from practical application to the modern world. Assuredly, man does not live by bread alone.

THE PURPOSE OF HIGHER EDUCATION IS THE STAFFING OF FREEDOM

I suspect you will agree that in these 3 days at Arden House we will not have solved the problem of the Federal Government and higher education. But I hope we have crossed one bridge over which we will not return. The river of doubt over which that bridge was built asked the question as it flowed under us: Is Federal aid to higher education necessary? I hope that bridge will be burnt here tomorrow so that none of us can return.

There are other rivers of doubt ahead. They ask the questions of how much, how to whom and what for. I am confident that bridges can be built also across these rivers, fabricated from sound answers to these puzzling questions.

In fact, we have to build these bridges and cross them. For the purpose of higher education in America is the staffing of freedom. If we cannot staff freedom adequately, history will again take note before the end of this century, as it has before, that an unmobilized society cannot compete successfully with one that is fully mobilized.

This is a conclusion to which no free American living in the richest country the world has ever known, in a society founded on the Magna Charta, the Declaration of Independence and the Constitution of the United States can willingly accept.

Views on the Summit Conference

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I wish to bring to the attention of my colleagues two editorials which present divergent views on the impending summit conference. The first is from the St. Louis Post-Dispatch of April 29, 1960. The other appeared in the Valley Times, published in North Hollywood, Calif., on May 3. It is too bad the wells of the House and Senate are not used for debating important divergent views like these.

The editorials referred to follow: [From the St. Louis Post-Dispatch, Apr. 29, 1960]

CLUMSY SUMMIT POLITICS

President Eisenhower used a heavy hand when he announced that Vice President Nixon might become his stand-in at the summit conference if it goes on too long. Almost anybody could see partisan politics sticking out of this gesture at 500 paces. The President will be wise if he quietly shelves the idea.

Ostensibly the announcement was a veiled warning to Premier Khrushchev to be ready for business the first week of the talks, scheduled to open May 16. The President has agreed to visit Portugal May 23 and 24. If the summit talks are still going on then, he said he would either return to Paris or, if "domestic requirements" necessitate a return to Washington, will send Mr. Nixon in his place.

As 55 Democratic Congressmen almost instantly made clear with a loud cry of pain, this did not fool anybody. If the President was warning Khrushchev, he was clearly also revealing an intention to help Mr. Nixon's buildup as his successor by identifying him

with the summit negotiations.

From a political standpoint such tactics are to be expected, and the Democrats might as well get accustomed to them. Every sitting President naturally makes use of the advantages of his position in behalf of himself or his party in the election. But wise Presidents recognize a limit, and Mr. Eisenhower should know that the limit lies somewhere this side of the summit conference. For the national welfare, these talks should be kept well clear of partisan politics.

The Vice President has no constitutional function whatever to perform at a summit conference. He has no authority and no responsibility that would make him anything more than an errand boy. The Secretary of State, as foreign policy adviser to the President, does have constitutional authority. If any stand-in were needed, Secretary Herter, who is intimately familiar with the negotiations, ought to fill the role.

But why a stand-in at all? The summit talks are important enough to warrant Mr. Eisenhower's sustained attention. They are important enough not to be hobbled with arbitrary closing dates. They are even important enough to justify the President in postponing a purely ceremonial Portugal visit if need be. Should the talks be making important progress at the end of a week, the President would be betraying his highest responsibilities if he allowed anything whatever to interfere with continuing them.

[From the Valley Times, May 3, 1960] YALTA RECALLED IN SUMMIT PLAN

(By George Todt)

"I hope you have not been leading a double life, pretending to be wicked and being really good all the time. That would be "hypocrisy."—Wilde, "Importance of Being Earnest."

The present rhubarb being raised by certain members of the Democratic Party and New Dealish elements of the press concerning the attendance of the Vice President at the forthcoming summit meeting is not only in bad taste, but it is illogical.

To make the astonishing claim that the only reason President Eisenhower has invited Mr. Nixon to attend the high altitude session in Parls is because it might aid him later to obtain the Presidency is churlish in the extreme. Worse than that, it is playing politics of the most suspicious kind with our national security.

are the heralds of the Americans for Democratic Action (ADA), the Democratic advisory council headed by Paul Butler and Mrs. Eleanor Roosevelt, and other New Dealfair Deal enthusiasts so lacking in elementary modern history that they are willing to embrace Scylla in order to avoid Charybdis?

Let these aspiring critics of the President and Mr. Nixon betake themselves back no further than the unhappy days of Yalta, toward the end of World War II. At that unfortunate (for us) summit meeting, former President Franklin Delano Roosevelt forgot to take along a Vice President named Harry S. Truman.

Our later history proved that this was a disastrous oversight. Roosevelt died suddenly, and Truman was not sufficiently oriented concerning the events to tell the difference between Alger Hiss, who was there at Yalta and whom Truman subsequently labeled a "red herring," and "Good old Joe" Stalin.

The plain facts of the matter are that Truman long used the excuse that he had not been present at Yalta as a coverup to save face for what later happened in mainland China—another disaster.

Truman has always complained about the fact that the Chief Executive who preceded him did not permit him, as Vice President, to share in the big decisions which had so much to do with the present sorry state of world affairs. In this, he was undoubtedly right. He was unoriented and ignorant of many facts he needed when he went into office—but it was not his fault. Roosevelt simply did not give Truman the needed information before he died.

It was not that F.D.R. did not have the time to do it—simply that he did not think enough of his Vice President to take him into his confidence. The same went for Henry Wallace and John N. Garner before Truman. In this connection, we must recall that Truman was only a last-minute compromise choice by F.D.R. to avoid the albatross of Wallace in the 1944 general elections.

So I think that before certain Democrats, such as the DAG, ADA, and others, go overboard in their little vendetta against Nixon on the summit score, they ought to do a competent bit of research.

I propose that these august gentlemen and their cronies in the press should presently advance upon Truman, only living Democrat who has been President of the United States, and ask him to put himself now in Mr. Nixon's shoes. Let them ask him whether he thinks it is only "bad politics" to insist that a man who is the Vice President today—who might become President next year—should not attend the Paris meeting?

Those now railing against Eisenhower and Nixon for what appears to this writer to be a logical—even necessary—decision in the light of the uncalled-for embarrassment of Truman 15 years ago, should now assure us that they have first gotten the ex-President's point of view on this important matter.

Actually, I think Ike should make Dick Nixon his stand-in at the summit meeting and orient him on every vital aspect of the conference as it moves along day by day. Security, not politics is the reason.

Friendship With Costa Rica

EXTENSION OF REMARKS

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks, I have recently had a most interesting and enlightening visit from the very able Ambassador of the Republic of Costa Rica to the United States, Manuel Escalante, upon his return to Washington from San Jose.

He presented to me a copy of their newspaper, La Nacion, that carried on its front page the translation of my remarks about Costa Rica. This survey of Costa Rica has made the people of all Central America feel that the Members of the Congress of the United States are interested in them and their problems. The Ambassador informs me that there has been tremendous interest generated in all Latin America by the trip to Costa Rica by myself and four of our Members which has produced a definite desire on our parts to know them better.

My predictions concerning the necessity to assist this stable and serious democracy with no army, has evidently been shared by three stalwart banks. They have found an economic way to partially accomplish what is needed with loans through the Chase Manhattan Bank, the Export-Import Bank, and the World Bank. The fact of these three institutions, a private bank should make a loan of a substantial amount, shows very clearly that after extensive investigation and detailed economic studies, the potential of Costa Rica has only been sleeping and this initial help will begin the progress of raising their standard of living to keep pace with their educational progress.

This financial help had been applied for many months before our trip, and despite the fact that we are pleased with this step, I have to say that it is not enough and shows only purpose and intention to continue to help this very good friend of ours in a substantial way. The sugar industry of Costa Rica is asking for an official increase of their quota to the United States of 55,000 tons, and they say it is a basic necessity for them, not only for the needed injection of dollars into their economy, but also to allow them to expand and cultivate the agricultural economy of their country.

I have to thank Ambassador Escalante for his detailed explanation of these economic facts and he has convinced me that it is no privilege but the definite program of his country to go ahead and meet their obligations with hard work. He has asked me to express to the other Members of the House and his friends who have visited Costa Rica, the sincere friendship of the Costa Rica, the sincere friendship of the Costa Rican people for the United States. On my behalf, I would like to congratulate the people of Costa Rica in their choice of a hardworking Ambassador who understands both our countries.

I believe the matter of revising our estimate under our sugar program is long overdue and without fail this Congress should do something about it at this time. We can take the easy way out by just extending the present law, however, if we want to really do something that will dispel some of the doubt of our sincerity in this hemisphere by acting now.

Our Latin American neighbors are not all sure that we have a proper evaluation of their friendship and the interdependence of our country with our neighbors to the south. We can do worse than concentrate on building our friendship where they count the most and I can think of no better place to start than in Costa Rica and no better proof of our appreciation than to do the things that count most both for ourselves as well as their peoples.

I believe that the majority of the Congress knows the importance of revaluation and reshuffling of our own sugar program.

This Congress will be remiss in its duties if it fails to act.

Rumanian Independence Day

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the 10th of May marks, for free Rumanians all over the world, the date when Rumania finally shook off the shackles of Turkish domination and became a free kingdom in 1877. Its observance provides an occasion for recalling the country's historical steps toward independence, steps which have been nullified by the virtual colonization of the country today by Soviet Russia.

Observance of the 10th of May as Rumanian Independence Day gives us an opportunity to draw world attention to the present enslavement of the Rumanians, and to note that its people continue to struggle for the restoration of true freedom. The Soviets who now dominate Rumania hope to dim the significance of this day by substituting another day as the important national holiday and thereby erase this symbol of freedom.

The Rumanians, however, join other captive peoples in refusing to accept communism and in clinging to their hope for freedom. In the free world

there are organizations such as the Rumanian National Committee which are dedicated to keeping this hope alive. It is nourished by the knowledge that the American people will never be satisfied with a world order that leaves the peoples of Eastern Europe under the domination of a foreign power and an alien way of life.

Tribute to Poland

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. WIDNALL. Mr. Speaker, the world looks upon the United States and others of the free nations as champions of the cause of liberty for peoples everywhere—and rightly so. America has fashioned down through the years a glorious record of both symbolizing freedom and fighting to preserve it.

But it occurs to me that a nation does not necessarily have to enjoy political, social, religious, and economic freedom in order to make a major and continuing contribution to the achievement of this goal

A notable case in point is Poland. The courageous people of that country, despite enslavement behind the Iron Curtain by ruthless communism, never have yielded their hearts and minds to their godless captors. At gunpoint they have existed in unwilling submission to the material might of the materialistic Soviet hierarchy. They never have abandoned their concept of and dedication to liberty, nor accepted as their way of life the Communist ideology. It is this fearless adherence to principle that serves as inspiration to those on both sides of the Iron Curtain in their quest for universal freedom.

For the past 20 years Congress has taken time out annually to recognize the anniversary of the May 3 Polish Constitution of 1791. I heartily join with my colleagues in paying tribute to the people of this great country. The celebration in 1960 of this anniversary is particularly significant. It follows by one day House approval of a concurrent resolution espousing the fundamental freedoms and human rights of the people of the captive nations. This resolution was passed by the House of Representatives without a single dissenting vote, which reflects the profund understanding of the Congress of the tragic situation into which Poland and its sister nations have been forced, and a firm resolve to speed the day when freedom will be restored. Further, the resolu-tion reaffirms the belief of Congress in the inalienable right of the people of the captive nations to live under governments of their own chosing, and urges the President to pursue energetically at the forthcoming summit conference the restoration of the fundamental freedoms and basic human rights of the people of all captive nations.

The 1960 observance is significant also because this year marks the 100th anniversary of the birth of one of the world's greatest musicians, Ignace Jan Paderewski, beloved in America and Poland as a great patriot, statesman, and humanitarian as well as artist. And 150 years ago Frederic Chopin was born in Poland, and the world will never cease to be grateful for the glorious music of that gifted composer.

There is unfinished business in Poland, and it will remain unfinished until liberty returns. In this business, all free peoples are joined with their Polish friends in a partnership that will not

fail.

South Dakota Reporter Reviews Missouri River Slack Water Navigation Proposal

EXTENSION OF REMARKS

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. McGOVERN, Mr. Speaker, as the sponsor of a resolution approved by the Public Works Committee which instructs the Army Engineers to carry out a survey of slack water navigation on the Missouri River, I have read with great interest a series of articles on this proposal by James C. Webster, United Press International reporter of Sioux Falls, S. Dak. Mr. Webster is an able newsman whose articles will, I believe, be of interest to the Members of Congress. I include them at this point in the Record:

(By James C. Webster)

(This is the first of three dispatches outlining basic differences between States in the use of Missouri River water. This piece discusses the latest proposal—slack water navigation—while the next two deal with the feelings of upper and lower basin States.)

SIOUX FALLS, S. DAK., April 5.—One of the leaders of the fight by the upstream States to keep Missouri River water was talking turkey with a leader of a wildlife group.

turkey with a leader of a wildlife group. "Yes, sir," he said, "this slack water navigation looks like the answer to our problems. Can we have your support on it?"

"On a cold day in the desert you can," he retorted angrily. "We're not about to support navigation when it's taking away our

This feeling is not rare among residents of upper basin States where the feeling against free flowing navigation is running high. The failure of many is to differentiate between slack water and free flowing navigation.

The basic difference between interests in the upper half of the Missouri Basin and those in the lower States from Nebraska to Missouri is over the use of the river's water. Upper basin States want their water for power and irrigation. Lower States want enough water to provide navigation.

The solution offered by many: slack water

navigation.

Congress has authorized a study by the U.S. Army Corps of Engineers to see whether it would be feasible, and the hearings opening a week from today will stir up some of the blood and thunder that was evident in the earlier days of the Pick-Sloan plan.

"OK, if this slack water thing is so great," says the wildlifer, calmed down a bit,

'let's hear how it works."

Simply stated, it is a series of locks and low-head dams up and down the river causing pools or lakes behind each dam. Navigation would be on the stilled pools rather than on a rapidly flowing river.

It is compared, loosely, with the Panama

As the ship or boat approaches each dam, the lock opens and the ship courses through, Water being released only into the next pool.

When the engineers hear testimony-some of it will stir some shouting, no doubt-in five hearings it will be the start of the first

study since the early 1930's.

Then, the proposal was junked because the "cost-benefit ratio" proved it economi-cally unjustified. The formula is used by many Government agencies who compare the cost of the project with its benefit to determine its worth.

The corps submitted its "308 Report" to Congress in 1932, estimating it would cost \$343 million to build the necessary 112 locks and dams between Yankton, S. Dak., and St. Louis, where the Missouri joins the Mississippi,

But things have changed.

Maj. Gen. Keith R. Barney, boss of the Engineers in the 10-State basin, said that even with a ratio of 31/2 to 1 of today's construction costs over 1932, he would "not Want to hazard a guess as to what the current costs of such a project might be."

Second, add slack water, Sloux Falls

might be.

Barney sald there were other factors, most notable of which will be land condemna-tion because the backup from the dams would cause inundation of some farmland.

The study will, for instance, consider the Possibility of generating power from the slack water dams. This was not considered

in the 308 report.

Barney feels that the tremendous upswing in waterborne commerce in the basin would add considerably to the benefits which could be attributed to such a system, although those from a free-flowing channel would be as high.

Extensive study of the sediment behind the dams will be required, Barney said, because of the cost of removal. Drainage in adjacent lands will be considered because a higher level pool raises the ground water

nearby.

Barney, in a talk at Douglas, Wyo., last Year, said it would have to be determined whether a slack water system would make it possible for more winter power at the South Dakota dams because higher winter releases Would tend to cause ice problems.

The effect on stream sanitation and pub-He health will be considered, Barney said, and the advantages for wildlife and fish in

a system of slack pools.

In other words, the advantages—power, wildlife, and related things—would be Weighed against the disadvantages-cost, drainage and such-to find the answer Which only Congress can determine.

The study is estimated to take 3 years at a cost of some \$300,000 of which \$10,000 has been appropriated. Six basin Congressmen have asked for \$65,000 more this fiscal year.

(By James C. Webster)

(A Congressman has predicted a serious Political struggle unless a system of slack water navigation is set up on the Missouri River. This dispatch, the second of three, discusses the feelings of politicians and others in the upper part of the basin.)

Sloux Falls, S. Dak., April 6 .- The Mis-Souri River flows generally south, with a few sharp turns to the east.

One of those turns, from Fort Randall Dam, S. Dak., east to Sioux City, Iowa, forms a general boundary in a fight between water users in the upper and lower parts of the

South of the line, navigation is seen as a boon to economy, but to the north power and irrigation are paramount. There simply is not enough water in the river to satisfy all demands.

The fight will intensify unless, as Representative George McGovern, Democrat, of South Dakota, proposes, a system for slack

water navigation is built.

Such a system, as explained by Ken Holum of Aberdeen, involves replacing a fast-flow-ing channel with a still river backed up by a series of small dams. It is met with opposition from downriver.

Those in Montana and the Dakotas, and even some Iowa and Nebraska interests, are prepared to fight stubbornly to achieve the use of the water they feel is rightly theirs. rather than see it flow to the ocean for the benefit of downstream navigators.

"We have given up our land; we will not give up our water," as is put by Gov. Ralph

Herseth.

The Governor, in a statement opposing free-flowing navigation, referred to the thousands of acres of land inundated by the Missouri River reservoirs to provide water storage to protect against floods and to-generally regulate the river.

Now the downstream States are reluctant to give up land, which they would if slack water dams were built to back up large pools.

Holum, executive director for the Mid-West Electric Consumers Association, was in Washington last week with McGovern supporting the proposal before Congress. He and others will present vigorous support for it before Corps of Engineer hearings beginning Tuesday at Jefferson City, Mo.

Other testimony will come from farm groups such as the Farmers Union and Farm Bureau: power interests such as the South Dakota Rural Electric Association and East River Electric Power Cooperative; chambers of commerce from Yankton, Vermillion, and Sioux Falls; the Greater South Dakota Association, a State chamber of commerce; and the State Izaak Walton League.

Most of the interests in these parts feel the problem could be solved merely by irrigating in summer and releasing water in winter for needed power generation. But the control of the water is vested in the reservoir control committee, a group of State and Pederal officers.

And the committee, which meets twice yearly behind closed doors, has interpreted the law to mean that navigation shall have preference over power and irrigation and release water from the dams accordingly to maintain a high channel during the spring and summer.

Downstreamers are pressuring harder for a higher channel to allow more shipping while upstreamers point to increasing power needs, and this division is showing itself even in the ranks of South Dakotans.

Chambers of commerce at Yankton and Vermillion, for instance, are eager to learn whether slack water navigation is feasible. They may support it should it be a probable thing but they would surely oppose it if it were found that slack water would hinder the efficiency of shipping on the Missouri.

The southeastern tip would benefit from navigation, which would extend from the mouth either to Sioux City or Yankton,

The Corps of Engineers estimate it will take more than 3 years to wind up the study, for which there is \$10,000 now available. The Missouri River States Committee and several basin Congressmen are pushing for more

Gov. Herschel Loveless, of Iowa, who revived the slack water idea last year after a 25-year dormancy, sees navigation as the key to future economy of western Iowa. "But we must understand the problems upstream and of our neighbors to the south.'

(By James C. Webster)

(Civic boosters and political leaders in the lower Missouri Basin States are waging a battle to get a dependable navigation on the Missouri. This last of three dispatches reviews their feelings and how they clash with those of upper basin States.)

SIOUX FALLS, S. DAK., April 7 .- Many of those in the lower reaches of the Missouri River Basin oppose a system of slack water navigation as violently as they oppose the use of the river's precious water for power and irrigation in other States.

Yet there are those who would be willing to live with the proposal should it be proven

feasible.

Today in the 10-State basin a controversy is raging over the use of the water in the once-muddy, now blue and once-fierce, now tamed river. Upstream States seek it for winter power generation and irrigation in the summer.

Slack water navigation, a system which would halt the flow of the river by a series of dams but permit navigation through locks, is seen by upper basin boosters as a compro-

But there is increasing fear down river that the system might not be efficient and even detrimental to water commerce.

One big bone of contention is the amount of land which would be submerged by the pools backed up by the low-head dams which would be built from Sioux City to St. Louis.

Another is the fact that navigation would be slowed by the use of locks, whereas it could move along at a faster rate on a freeflowing, 9-foot channel. The channel now is about 5 feet deep but more improvements now underway should deepen it.

Rumors were widely published in the navigation areas that the channel stabilization and improvement project would be held up pending the Corps of Engineers study of slack water feasibility, but it was denied categorically by engineers at Omaha. They said it was being carried on as fast as possible.

One segment of the Mississippi Valley Association's Missouri River Division, last month called for an added \$2 million this year to complete the bank and channel fixation project by 1965.

That same group, at a Sioux City meeting. listed four demands which It wanted incorporated in any slackwater system. They were the minimum of locks, minimum flooding of land, no lessening of flood protection, and continued work on channel improvements.

The Council Bluffs Chamber of Commerce, which would benefit from lower rates on grain hauling, listed 10 guideposts for the study and concluded an efficient slack water system could not be established within them.

That led the chamber's waterways committee to direct its chairman, Ed Spetman, Sr., to oppose the study when the engineers hold public hearings next Friday at Sioux Opposition can also be expected from Sioux City Chamber of Commerce and other northwestern Iowa interests.

"It appears funds even for the survey cannot be justified," says the Council Bluffs group. "It would be far better to continue studies of the completion of the entire Pick-Sloan plan."

There is similar opposition from agricultural circles and business interests in and around Falls City and Nebraska City, Nebr.

The chamber of commerce at St. Joseph, Mo., where the corps winds up its hearings April 28, has adopted an agriculture committee policy statement opposing the study, which was authorized by Congress and funded at \$10,000. Efforts are being made to raise the appropriation.

The St. Joseph group said it could see "no benefits and much detriment to agricul-ture in the Missouri Valley from possible installation of a system of slack water navigation." It opposed the plan and "any delay in the levee phase of the present Pick-Sloan plan."

James R. Smith, vice president of the MVA, has urged watchful waiting and a cautious

view of the proposal.

Omahan Smith accused "regional, economic, and public power interests" of "bickering on minor points." He said the best minds in the basin must get together on a program which would benefit the basin as a whole.

Americanism-A Way of Life

EXTENSION OF REMARKS

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. MOORE. Mr Speaker, as has been my practice in the past, I respectfully insert in the Congressional Record the essay which won first prize in the annual American Legion Auxiliary, Department of West Virginia, contest.

This year, Miss Joan Hammons, a student at Greenbrier High School, Ronceverte, W. Va., authored the paper which was considered best by the judges of this contest. Upon reading Miss Hammons' essay, I marveled at her choice of words describing our way of life which is second to none in our time. I consider this "must" reading in this day of rockets, missiles, and the forbodeing predictions of what we must expect of another world war.

I feel my colleagues will want to share my pleasure in reading this essay which follows:

AMERICANISM-A WAY OF LIFE

From the beginning America was a haven, a refuge, a land of the second chance. All those who were discontented for one reason or another came to it.

We of the free world are so used to our freedoms that we take them for granted. It is a high privilege to be a citizen of the United States. Men and women around the world would gladly give all they possess for the mere chance to come here to live. Men have fought and labored through long and tortuous years that the rights which we enjoy might be ours. The progress was not always peacefully attained. There were wars and revolutions, sufferings and bloodshed. But the goal—human freedom—seemed well worth the price.

The people in America are boasting the best diet in the world. Here we can eat strawberries in January. Our homes are heated automatically; mechanical devices and modern technology let us remain in a warm bed until seven. We are pampered and amused; we are overwhelmed with our gadgets for our convenience. But with all our ease can we match our struggling forefathers in our appreciation of liberty?

Only as we restore the bond with those who formulated the democratic ideals can we find something to contribute to the lives of our fellow men the world over. When we stop prating about our smartness with gadgets and start crusading in principles, then will we be talking a universal language. We must reach back to the freshness of early American thought, borrow on its inspiration, if we would reach out across the oceans with something more than a package of chewing gum and a jukebox to symbolize America.

But no one can disagree that America is not great. America is great because of the ideals which the pioneers established for its homes, for its schools, and for its democratic community life. It has chosen to take the higher path—to reach up and out and forward.

What we mean by Americanism is individual liberty founded on individual responsibility, equality before the law, and a system of private enterprise that aims to reward according to merit.

Ours is a country of free men and women, where personal liberty is cherished as a fundamental right. But the price of its continued possession is untiring alertness. Liberty is easily lost.

Our world leadership rests on the worth of our individual citizens. It rests on how well each of us carries on his job of being an American citizen—the most responsible and rewarding job in the country. To be a good American is the most important job that will ever confront us.

To be a good American—worthy of the heritage that is yours, eager to pass it on enhanced and enriched—is a lifetime career, stimulating, sometimes exhausting, always satisfying to those who do their best.

May 3-Polish Constitution Day

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, throughout the world people of Polish descent celebrate May 3 with a spirit that shows their true feelings for freedom and democracy, for May 3 is Polish Constitution Day. On that day in 1791 a Polish Constitution was promulgated, enunciating the principles of human liberty as the governing law of the country.

The Constitution of the 3d of May summed up a complete scheme of reformed social, political, and administrative structure for the country. In its political and administrative provisions it accomplished a true, peaceful revolution. The organization of the Polish Government was based on the principle, included in the U.S. Constitution which had been written but 4 years previously, of the separation of the executive, legislative, and judicial powers of the Government.

That old Polish Constitution was a truly heroic effort of national will to reach full political health. But because the Constitution proved Poland's capacity for vitality, it aroused the antagonism of Russia whose interest, then as now, lay in perpetuating Poland's weakness. The Constitution of the 3d of May, expressing Polish dreams of liberty and democracy, fell as Russian troops entered Poland to begin the second partition of Poland.

But the love of the Polish people for democracy did not die with the fall of this Constitution. Such spirit dies hard in these people—people like Pulaski and Kosciusko who fought side by side with our American revolutionaries—and neither the ravages of Nazi occupation nor the oppressive yoke of communism can still it.

This Polish spirit lives in this country among the 9 million persons of Polish descent who live among us. It lives also in the hearts of 20 million Poles left behind under Communist domination in the mother country. It is up to us to do our best to see that this spirit, this drive for democratic self-determination, is eventually realized.

Just How Pious Can the "Feds" Get

EXTENSION OF REMARKS

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. WRIGHT. Mr. Speaker, last week the Special Select Subcommittee To Investigate the Federal-Aid Highway Program held open hearings from Monday through Friday on the irregularities involved in the construction of a 13-mile stretch of circumferential highway in metropolitan Tulsa known as the Skelly Bypass.

A firm of consulting engineers and an independent testing laboratory employed by Tulsa County to appraise and audit the job, reported to the committee a total deficiency in quantity and quality of materials delivered by the contractor which they estimated at \$524,689.15.

In light of allegations and leads coming to the committee from sources in various parts of the country charging that similar situations exist elsewhere, the question immediately arises as to where and how often and to what extent other costly irregularities may have occurred. The committee intends as best it can to find out.

More to the point, the committee will undertake to determine what improved inspection methods or additional control devices may be needed to prevent such costly errors in the future. It was evident from the hearings that the Bureau of Public Roads has not perfected adequate machinery for detecting such glaring irregularities in the vast Federal aid highway program which has cost American taxpayers more than \$15 billion in the past 4 years.

In developing the investigation of the Skelly Bypass fraud the subcommittee and its investigators had the complete cooperation of the State of Oklahoma and all of its responsible officials including the Governor of that State and the head of the highway department.

Now, however, one minority member of the committee appears intent on demanding immediate financial restitution, not from the firms and individuals guilty of the fraudulent practices, but from the State of Oklahoma. A press release issued yesterday by this member appeared to make such a demand.

Restitution of some sort there should be. Of this there would appear little room for doubt. This sort of thing must not be tolerated. Five hundred twentyfour thousand dollars is a considerable sum, particularly when it represents a purported amount of underperformance by a contractor on one contract amounting to \$3,308,222.

But far more important than how soon We get back this particular \$524,000 is the enormous job of getting to the bottom of all the charges and reports of Waste, inefficiency, extravagance and Outright fraud which have been stacking up in the subcommittee's files.

Far more important than the \$524,000 is the \$15 billion this total program has cost the Federal Government during the past 4 years. Far more important than this particular \$524,000 is the broader Question of why the total program is costing the taxpayers almost twice what it Was originally anticipated to cost only 4 years ago.

Trying to place the entire blame upon the State of Oklahoma and demanding immediate payment to the Federal Treasury of such a sum by the State could have the extremely harmful effect of discouraging the future cooperation of other State highway departments in exposing frauds and weaknesses in our Federal highway program.

Both the committee staff and the able chairman of the committee, Mr. BLAT-NIR, have stated forcefully that it would not have been possible to expose the weak spots and frauds in the highway inspection procedures present in the construction of the Skelly Bypass without the full cooperation and assistance of responsible State officials in Oklahoma, including the highway department.

Now one or two minority members of the committee by their insistence upon the immediate delivery by the State of more than \$500,000 to the Federal Government apparently would have the public believe that all of the fault in the Dicture belongs with the State, and none of it with the Federal Government.

We think the public judgment is more likely that expressed in an editorial in the Tulsa World dated Saturday, May 7. 1960, in which the editor persuasively Points out that the Federal Government must also share some of the blame for what happened. Since the facts were uncovered by State officials, it seems only reasonable that the Federal Government would join the State in a cooperative effort to recoup the public moneys lost rather than dump the full responsibility in this area upon the State.

The key question immediately arises: How many States are going to cooperate in exposing frauds and shortcomings such as these in the future, if the immediate reply of the Federal Government is going to be "All right, this is going to cost you heavily, here and DOM "?

No policy could be better designed to assure silence or even coverup by the State in the future.

I would not charge that this is the conscious objective of those minority members who are now calling much more loudly for a pound of flesh in Oklahoma, than they are calling for improved procedures and safeguards in our Federal road program to prevent future

abuses. But it seems clear that this vided our retired citizens whose income could be the effect of such a policy.

The full text of the Tulsa World editorial follows:

JUST HOW PIOUS CAN THE "FED" GET?

Bertram D. Tallamy, Federal Highway Administrator, has hinted that Oklahoma may owe several millions in funds to the Federal Bureau of Public Roads if it is established that Federal funds were improperly expended on the U.S. 66 bypass project in

Tallamy, in a letter to Highway Director Lee B. Washbourne, advised the State official it already had been determined that some money must be refunded the Federal Government and that the sum may run as high as the \$6 million share of costs the BPR has put into the interstate project.

Certainly it is the responsibility of local. State, and Federal officialdom to get to the bottom of what has been going on in road building in Oklahoma, as well as elsewhere in the Nation. But for Mr. Tallamy to piously seek to acquit the Federal Bureau of Roads by placing blanket responsibility for Federal fund expenditures upon the State of Oklahoma is a horse of another color.

Just when, we might ask Mr. Tallamy, has it been established that the Federal Bureau of Roads is without blame or responsibility for the manner in which Federal funds are spent? On portions of the U.S. 66 bypass construction costs were borne 90 percent by the Federal Government. Surely Mr. Tallamy is not attempting to hide behind Oklahoma's skirts or duck the responsibility of his own bureau failing to check on how its funds are being spent?

Testimony has been submitted before the Blatnik committee in Congress that Federal officials in Oklahoma, and out of Fort Worth, had checked the local project but had gone no further than asking State sources how and in what manner the project was proceeding. Isn't it Federal inspectors who have been accused of riding over the project in automobiles without once setting foot on ground to do some inspecting?

We can't escape the impression that if the State of Oklahoma is guilty of negligence or worse in the construction of the Tulsa route, the Federal Bureau of Roads must share that guilt. It is well within the authority of the Federal Bureau of Roads-or Mr. Tallamy's office-to fix the blame on Oklahoma and ask for the refund.

We seriously doubt, however, that Oklahoma really owes the Federal Bureau a red penny. Rather, the Bureau owes itself a search of its own conscience and policies. There should be no plous shunting of the blame to the State when the Federal Bureau fixes the rules on road building and is vested with the responsibility for seeing that they are carried out.

Better Health Care for Aged

EXTENSION OF REMARKS OF

HON, HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. ADDONIZIO. Mr. Speaker, the major human problem of obtaining better health care for the aged has been allowed to drift along without solution for too long. It is past time that "insurance against misery," as Congressman Forand has so aptly put it, be pro-

generally is lowest when their medical needs are highest. I am pleased to call to the attention of the Congress the following communication with respect to the views of the Municipal Council of the City of Newark, N.J., on this important issue:

NEWARK, N.J., May 6, 1960.

Hon. Hugh J. Addonizio,
Congressman from New Jersey,
House Office Building, Washington, D.C.
DEAR CONGRESSMAN ADDONIZIO: The Mu-

nicipal Council of the City of Newark, at their regular meeting May 4, 1960, adopted a motion "Memorializing the Members of the U.S. House of Representatives from the State of New Jersey to actively support the Forand bill."

The governing body of the city of Newark urge your consideration and full support to the end that favorable consideration be se-

On their behalf I extend sincere thanks. Very truly yours,

HARRY S. REICHENSTEIN, City Clerk.

A Bill of Rights for Children the World Over

EXTENSION OF REMARKS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. GIAIMO. Mr. Speaker, in the mind's eye of every living being there is a view of what life is meant to be. Throughout history, man has striven to identify and defend the basic freedoms which would enable him to secure that life. The founders of our great Republic penned the first 10 amendments to our Constitution so as to define the freedoms our Government guarantees. During a dark period of turmoil and bloodshed, the entire world embraced four fundamental freedoms as defined by one of our greatest Presidents.

These pronouncements, and others, have given clarity to the vision of the heart. They determine goals in terms of high purpose and, as such, serve as guideposts for men who know the nobility of man. But none, gentlemen, can perceive the world of our dreams with a sharper eye than that of a child.

Know you what it is to be a child?--

Asked Francis Thompson, And he gave this answer:

It is to be something very different from the man of today. It is to have a spirit yet streaming from the waters of baptism; it is to believe in love, to believe in loveliness, to believe in belief; it is * * * to turn lowness into loftiness, and nothing into every-

Gentlemen, I call the attention of this House to a manuscript that defines fundamental human rights in a world conceived by children. It is my pleasure to insert into the RECORD a bill of rights for children which was written by children in my district who believe in love, believe in loveliness, and believe in belief.

The reasons for the children's statement and the background of its preparation are best described by the child who sent me their document. Therefore, at this point, I ask that a letter by Robert L. Kaplan, age 11, be printed:

APRIL 20, 1960.

DEAR MR. GIAIMO: Our class, grade 6, room 10, Roger Sherman School, would like to present you with our Bill of Rights for Chil-Until there are dren the World Over. human rights for all children there will not be world peace.

We gathered information from newspapers, books, United Nations publications, and we listened to news programs. This has been a year-long project. We have done this be-

cause we care. Our bill of rights is addressed to lawmakers the world over. We deeply hope you will consider our bill of rights for children. Thank you.

Sincerely yours,

ROBERT L. KAPLAN, Acting Secretary, Age 11.

A BILL OF RIGHTS FOR CHILDREN THE WORLD OVER

I. LOVE

Every child needs love. Without love, children would suffer despair. Their health would also suffer. Love gives children a feel-

ing of wanting to do things better.

1. Therefore, every child should be loved regardless of creed, color, sex, nationality, or

occupation of parents.

- 2. Every responsible adult should be concerned about all children, Every child should have some adult with whom he may discuss his problems.
- Children who are orphaned should be protected and cared for by adults who would treat them kindly.
- 4. Adults should treat children fairly if they want children to respect them.
- 5. Some parents like one child better than the others. If so, they should treat all the other children in the family the same.
- 6. If parents show love for their children. children should return this love with gratitude. Children should help in every possible way voluntarily and when asked.
- 7. Teachers must respect children, understand them, and let the children know that they are loved. Children should respect their teachers. They should feel that teachers are their friends. Children should cooperate so that there will be a happy atmosphere in the classroom. Children and teachers will be able to work together better.
- 8. Every child should be given something to love and care for so that he can assume responsibility.
- 9. Every child should have the joy of planting and watching live things grow.

II. HEALTH

Every child is entitled to the kinds of living conditions that will produce good health. Six hundred million of the world's 900 million children are unhealthy because of lack of proper food, clothing, shelter, and medical help. Asia with more than one-half of the world's population has less than onefifth of the world's food. Western Europe, North America, and the U.S.S.R. compose one-third of the world's population, but they consume three-fourths of the world's food. The "have" nations should share more generously their blessings with the "have not" nations. In the world today there is not enough of tillable land to feed, clothe, and shelter all the people in the world. The U.S. Department of Agriculture says that each person requires 2½ acres of good land to provide for his physical needs. Today there are only 1% acres of tillable land for each person, but this land is not evenly distributed. Almost 1½ billion acres of new

land could be brought into use. Scientists should explore the vegetation and fish of the seas to increase food supplies. In another 25 years the world's population will be almost doubled. Animals for food will be more scarce. We will have to turn to the sea for most of our food.

1. Every child should have enough to eat. 2. He should have proper clothing accord-

ing to climate and weather.

3. Everyone should have adequate shelter. Slums should be redeveloped into properly equipped houses with play areas on green

4. Medicine should be distributed by governments where needed. If governments cannot afford to do this, the United Nations should do so. People who can afford to pay for themselves should do so.

5. Countries who have an excess of doctors should let volunteers go to countries in need of doctors. These doctors should receive an extra degree from the U.N. cation for doctors and nurses should be free in every country so that there will be enough doctors. There are 900,000 doctors in the world, but we need twice as many. We need more nurses and trained helpers.

6. Children and adults should be taught

to practice cleanliness.

7. Children and adults should be taught how to control pollution of water.

8. They should be taught that various insects carry various diseases, and learn how to protect themselves by spraying with proper insecticides. The "have" governments should give insecticides to the "have not" people, because they do not have the factories and the materials to produce these chemicals. The United Nations should send experts who know how to speak the local language out into the villages to instruct the people in the use of these medicines.

9. There should be hospital facilities for all people who need them. Some of these

could be traveling hospitals.

III. EDUCATION

More than one-half of the world's population of 21/2 billion don't know how to read or write. If all people knew how to read and write, they would be more prosperous. They could read and write directions proper tools they would be able to work better and make more products. The would learn how to practice good health habits. They would know about other people. Perhaps people would understand each other better. Other countries could not take advantage of them. They would know how to defend themselves. They would get more enjoyment out of life by knowing how to read and write. People need an education to run their own government well. We are living in an atomic age. People need to know much more about science. As the population of the world multiplies it will be much harder to earn a living. We will have to discover new ways of saving and using our natural resources. For this we will need people who have an education and scientific imagination. To survive, people will have to learn about the well-being of others. That is why we are concerned with children the world over, not just ourselves.

1. Therefore every child should be taught

to read and write.

2. No child should be denied the chance to receive an education.

- 3. Every child should be given the chance to develop all of his abilities.
- 4. Every child should be taught about the world and its peoples, and their problems.
- 5. Every child should be taught how to work with his hands as well as his mind. 6. Every child should be taught not only
- facts, but also how to think for himself and express his opinion.
- 7. Every child should have the right to play for physical development and for pure pleasure.

8. Children should not be overworked to

help support a family.

9. No one should be permitted to take advantage of children.

10. No one should interfere with the child's time for learning.

11. Each country should provide many kinds of education according to its ways of life. Their standards of education should be developed according to the progress of the world.

12. Every child should have the opportunity of a free education through college,

if he qualifies,

13. All people should be permitted to worship as they please without interference. In school every child should be taught to respect each other's beliefs.

14. All people should be taught about other religious beliefs in the world so that people may understand different ways of thinking, different customs, and many kinds of wisdom.

15. Everyone should have equal rights because no one race is superior to any other-Everyone should have equal rights to a full education, according to his abilities. With proper education harmful prejudices could be abolished.

16. No child should be permitted to call any other child insulting names. Ridicule should not be permitted in any classroom. This should be a standard of citizenship for

adults too.

CONCLUSION

In our classroom we are a class family-Three religions and three races are represented. All the children work together, play together and visit each other's homes.

We help each other.

This is the way we would like life to be we In our classroom this is our daily life. wish that the outside world would enjoy

our freedom.

You, the adults of the world and heads of governments, are responsible for our safeour lives. Children never started wars. Adults did, but children suffer the most from them.

If our Declaration is to reach all the children of the world there must be global

Mr. Speaker, this bill of rights is divided into three parts: Love, health, and education. Cognizant of the old and wise saying, "From the mouths of babes often come words of wisdom. ask that the words of these children be carefully considered, and that we of the adult world dedicate ourselves to granting youth its heritage.

Ship Wheat to India in U.S.-Made Cotton Bags

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and enclosed telegrams from the Association of Cotton Textile Merchants of New York:

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK New York, N.Y., May 6, 1960.

Hon. THOMAS LANE,

House Office Building, Washington, D.C. DEAR CONGRESSMAN LANE: Enclosed you will find copies of wires to the Secretaries of Agriculture and Commerce which are self-explanatory.

It seems to us that the United States in the generous terms of its conveyance to India of 17 million tons of wheat should have every right as to its packaging.

It is both logical and practical that packing be in U.S. cotton textile fabrics. A cal-culation is that these shipments if 100pound bags were used would require 340 million bags using 394 million yards of cotton cloth and increasing U.S. mill consumption by 325,000 bales of raw cotton.

Rather than conflicting with foreign-trade programs, it would be consistent with the

desire to increase our exports. If this appeals to your sense of the goals of our national interest, any assistance you might give to the effort would be greatly

admired. Sincerely,

JOHN L. SEVERANCE.

Secretary.

Hon. EZRA TAFT BENSON, Secretary of Agriculture, Washington, D.C.:

Respecting agreement signed yesterday to ship 17 million tons U.S. surplus wheat to India over 4-year period, we respectfully urge wheat be packed and shipped in cotton bags. Cotton as well as wheat is in surplus. Cotton bag fabric industry has suffered depression in recent years. Adoption of our proposal would increase U.S. raw cotton consumption, improve employment in U.S. mills making cotton bag fabrics, and also bag manufacturers, and contribute to Nation's export Here is exceptional opportunity to relieve two surplus situations simultaneously.

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK, W. RAY BELL, President.

Hon, Frederick H. Mueller, Secretary of Commerce, Washington, D.C.:

Referring agreement signed yesterday to ship 17 million tons surplus U.S. wheat to India over 4-year period, and in support of Commerce Department's program for in-creasing U.S. exports, we respectfully urge Wheat be shipped in cotton bags. This will be of substantial help to mills and employees of depressed textile area of cotton bag fabrics, also to U.S. bag manufacturing plants. While relieving wheat surplus it will likewise aid U.S. cotton consumption, cotton also being in surplus.

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK, W. RAY BELL, President.

The Redefinition of Peace

EXTENSION OF REMARKS OF

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DERWINSKI. Mr. Speaker, the American University, an outstanding American institution, and the American Peace Society, an organization with a long history of devotion to the principles of a world free from strife are cosponsoring a panel discussion tomorrow evening, which I feel would be of intense interest to Members of Congress and all people genuinely interested in the problem to be discussed.

"The Redefinition of Peace" will be the theme of a panel discussion to be held in the School of International Service lounge on the American University campus, Massachusetts and Nebraska Avenues NW., on Wednesday, May 11, at

Sponsored by the American Peace Society and the American University, the forum will cover the nature of peace in the coming years. Dr. Stefan Possony, professor of government at Georgetown University in Washington, D.C., will discuss "The Communist Requirements for Peace." Prof. William Yandell Elliot, a member of the Harvard University faculty since 1925, will cover "Our National Peace Policy," and Dr. Bonaro Overstreet, who has just returned from a trip to Russia, will discuss "New Ways to an American Contribution to Peace." Moderator of the forum will be Judge Homer Ferguson of the U.S. Court of Military Appeals.

Admission to this presummit conference on peace is free and the public is invited.

West Is Fearful Prestige of Ike Fell With Flier

EXTENSION OF REMARKS OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. QUIGLEY. Mr. Speaker, like most Members of Congress and most Americans, the U-2 sanfu has left me both confused and concerned.

Under the circumstances I believe prudence dictates that I make no further public comment at this time. However, Mr. Speaker, I would like to share with my colleagues the reaction of one American abroad to the events of the last few

Edwin F. Russell is the publisher of the Harrisburg Patriot-News. He is a prominent Republican and in both 1952 and 1956 served as chairman of the Citizens for Eisenhower Committee in Pennsylvania. However, as the article, from the Harrisburg Evening News of May 9, which follows indicates, Mr. Russell is a newspaperman first, and as a good reporter he calls them as he sees them:

WEST IS FEARFUL PRESTIGE OF IKE FELL WITH FLIER-CONFIDENCE SHAKEN

(Edwin F. Russell, publisher of the Evening News, is in London en route to the summit conference in Paris. Here he tells of the reaction to our agonizing confession that the American plane shot down 1,400 miles inside Russia probably was on a spying mission, and what that admission has done to our prestige.)

(By Edwin F. Russell)

LONDON.—The parachute that carried young Francis G. Powers to the ground carried President Eisenhower's international prestige right along with it.

This, seen from here, is the most serious effect of the incident that has chilled Londoners out of the afterglow of Princess Margaret's wedding.

The President's prestige was at an all-time high after his South American and Far East-

ern tours. The Eisenhower stature was Premier Khrushchev's greatest problem for the summit.

Now, when it is most needed, confidence in American leadership is at a low point. Khrushchev readily acknowledged that the President did not know of the flight and implied that Mr. Eisenhower is a nice guy, a man of peace, but he can't control American militarists and, in fact, doesn't know what's going on.

Some European writers go a step further, implying that Ike is a great has-been.

Here the greatest concern is over the un-

fortunate timing. Europe and Britain want peace at almost any price. They had hoped for great things from the summit. never was much chance for it to produce anything, but now the blame for its failure will be placed on the United States, not only by the Russian politicians but by millions of

the Russian politicians but by minions of bitterly disappointed ordinary people. One conservative British paper editorial-ized: "Thank heaven for one mercy. Mr. K. stuck to diplomacy." It described Americans "writhing in a tangle of evasion and

contradiction.

Generally editorial comment has been calm, but the headlines and special correspondents' articles speak of "Washington stunned," "America dismayed," "Caught with pants down." The Bowles, Symington and Mansfield criticisms have received wide play and, of course, Harold Stassen's headline grabbing has been disastrously successful.

There are other, startling implications in

Sverdlovsk is as deep in the U.S.S.R. as it is possible to get. It is behind the Urals in the remote vastness of Siberia, a vast industrial town, proudly displayed to Nixon. It is 1,300 miles from any frontier and twice as secure as Moscow. If Powers' plane had carried the atom bomb, shooting him down wouldn't matter. If he could parachute safely, the A- or H-bomb could have done its deadly work in spite of Russian rockets.

Doesn't this answer Khrushchev's rocket rattling and, incidentally Senator Symington

and other missile gap specialists?

It's a delicate matter, diplomatically, but we are beyond that. If Eisenhower does not accept responsibility for the United States action and policy, he better not go to the

This is bigtime competition. If we are to play with the pros we had better act like pros ourselves.

Rumanian Independence Day

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DERWINSKI. Mr. Speaker, Rumania has always been the breadbasket of southeastern Europe, and its rugged peasants among the hardiest and most productive workers in all Europe. It is one of the larger countries in the Balkan peninsula, and some 17 million Rumanians constitute one of the largest of all ethnic groups in that region. Geography has placed them at the crossroads of Europe and Asia, and Asiatic invaders of Europe have found it convenient to enter Europe via Rumania. Thus Rumanians were fated to defend themselves and their freedom against hordes from the East. Since the beginning of modern times they had faced some formidable and fearless adversaries. Centuries ago the country was overrun and conquered by the Ottoman Turks, and Rumanians were subjected to the conqueror's unrelenting harsh rule. They endured the oppressive rule for hundreds of years, but they never lost sight of their goal—national freedom and independence.

In the course of the last century they staged several revolts with that end in view, but each time they fell short of their goal; and they were ruthlessly punished for their daring attempts. But in the middle of the century the Crimean War provided an opportunity. In 1856, at the conclusion of that war, European powers agreed to restrain the rule of the Ottoman Sultan over Rumania, and two autonomous principalities were created. Later these two principalities were united under the rule of a prince. In the Russo-Turkish War of 1877-78, Rumanians had their golden opportunity and they took full advantage of that. On May 10, 1877, when there was little fear of the Turks, they proclaimed their independence, which in a few years, in 1880, led to the founding of the Rumanian Kingdom. Thus the event of 83 years ago today was of such significance to Rumanians that they have always observed its anniversary as their national holiday.

Since those happy days Rumanians have had their ups and downs. Their country grew prosperous at times and they lived in peace and happiness, but at other times it was robbed of its wealth by foreigners and the people were penurious and poverty stricken, as has been their lot particularly since the end of the last war. Unhappy Rumanians endured hardships and suffered during that war, hoping that in the end they would have their reward, but like so many other nations in the region, they were sadly and grievously disappointed. The result has been their enslavement under Communist totalitarianism, which in 1947 forced the abdication of the King and deprived the people of their last traces of free government. Certainly in Rumania we see the stark difference between the soundness of a good constitutional monarchy in comparison with the misrule under the Communist philosophy of government.

Mr. Speaker, it is fitting and proper that we, Members of the Congress of the United States take this opportunity to encourage the brave and rugged Rumanian people to maintain their hope for freedom by clinging to the spirit of May 10, 1877, their true Independence Day.

The Better Approach

EXTENSION OF REMARKS

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. LEVERING. Mr. Speaker, I must say that I am more and more concerned

as to whether the foreign aid program as currently operated is really achieving the desired objective of mutual security. It is disconcerting indeed to hear members of the Foreign Affairs Committee say that the program is wasteful, badly planned, and plagued by politicians abroad and bureaucrats at home. I am disturbed by that portion of the report made by the study commission com-prised of members of the Foreign Affairs Committee after completing a 40,000mile tour of the world which indicates that in more than one instance, as suggested by the Comptroller General in 1959, the weakness of the program is too much money, not too little.

As the gentleman from Louisiana [Mr. Passman] has pointed out, not all foreign aid money is carried in the mutual security bill; that aid costs, including interest on what we have borrowed, now exceeds \$10 billion a year. Mr. Speaker, I believe we would gain infinitely greater respect from those we try to help by enlarging the technical, self-help projects and by putting the program on a substitute for the giveaway provision. Unfortunately, too much emphasis on money has caused "dollar diplomacy" to interfere with our traditional diplomatic relations with recipient and other countries.

Mr. Speaker, I think the time has come when we must reexamine and overhaul the whole concept of foreign aid. As one who has traveled in the Orient, I am convinced that how much we help is not as important as how we help. Because feeding their people is a major problem in the Far East, money is not as important as knowledge—the key to how they can develop their agricultural economy.

Mr. Speaker, under leave to extend my remarks in the Record, I include an appropriate editorial by Bruce Biossat from the May 8 edition of the Coshocton Tribune, a fine daily newspaper in my district

THE BETTER APPROACH (By Bruce Biossat)

The \$4,125,600,000 the Senate authorized for foreign aid does not, of course, tell the full story on the 1960 aid program.

First of all, the Senate version must be reconciled with the House bill which calls for \$87 million less. Much more important, the real chopping is done in the two appropriations committees. They threaten to hack around \$1 billion from the authorized figure.

Anticipating the usual attempt at heavy slashing, President Eisenhower already has gone to the American public with a plea for the full amount requested. His argument, also usual, is that part of the Nation's defense would be jeopardized if the voted sum is too small.

The trouble with this argument is that it has been made too many times. Lawmakers and their constituents are tired of it. On top of this, they have a strong notion that much foreign aid money is wasted.

top of this, they have a strong notion that much foreign aid money is wasted.

Actually, the emphasis today should be not on military assistance so much as upon economic.

In the broad sense, naturally, anything which helps to shore up the economies of free nations adds to our defense. But we hardly need to invoke that magic word to justify such help.

We are interested in the preservation and

reinforcement of freedom anywhere that it exists. The greatest dangers to it are found in the underdeveloped countries, where the race between population and food supply is critical.

If that race goes against the struggling free governments, they could be engulfed by communism. Especially in Asia and Africa, they are ever mindful of the competing example of Red China.

These peoples are not part of any tightly drawn defense arc, though some are members of the Southeast Asia Treaty Organization. We would seem to have most to gain not by assisting them to field armies of some size and quantity, but by aiding them to live better in freedom.

If the Eisenhower administration were to develop a solid understandable economic aid program, with the idea both of buttressing liberty and in time creating good new markets for American goods, Congress and the whole citizenry might adopt a far more responsive attitude toward this effort than it shows now.

Governors Against the Death Penalty

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news story by Robert J. Donovan as it appeared in the New York Herald Tribune of April 24, 1960. Mr. Donovan lists the results of a poll of Governors conducted by the Tribune on the subject of abolition of capital punishment.

The article follows:

GOVERNORS AGAINST DEATH PENALTY—OPPOSE IT 17-8 IN POLL; OTHERS ARE NONCOMMIT-TAL

(By Robert J. Donovan)

Washington, April 23.—A New York Herald Tribune poll of the Nation's Governors, completed today, indicates that Governors of States outside the South are personally opposed to capital punishment by a ratio of nearly 6 to 1.

The opinion of Governors on this subject, which is growing more controversial as the time for Caryl Chessman's execution in a California gas chamber on May 2 approaches, is pertinent because they are the officials responsible for the preservation of law and order in their respective States.

NOT A DETERRENT

The viewpoint of the majority of those who were willing to express an opinion in the survey was epitomized by Gov. Herschel C. Loveless, a Democrat, of Iowa, and Robert E. Smylie, a Republican, of Idaho. Both States impose the death penalty.

Governor Loveless said: "I am convinced that capital punishment has failed to provide the deterrent to major crime that is its only possible justification."

Governor Smylle said: "Personally, I do not think the death penalty is a deterrent to crimes of violence."

The minority point of view in the survey was expressed most succinctly by Gov. Orval C. Faubus, of Arkansas. He said: "I wish it were possible to do away with capital punishment, but I doubt that such a move is feasible or would be in the best interests of society at the present time."

While this may be the minority vicw among the 50 Governors, it is the majority view in the South. Of the southern Governors replying in the poll, only Gov. LeRoy Collins, of Florida, opposed capital punishment.

The death penalty is seldom imposed in the United States now except for murder and for rape committed by a Negro in the South. Recent statistics in Time magazine showed that of the 97 men put to death in the United States in 1958-59 under State laws, 81 were executed for murder, 15 for rape (of these 14 were Negroes and one was White man in the South), and one, a Negro, for armed robbery in Texas.

Governor Rockefeller of New York declined to express an opinion in the survey. So did Gov. Robert B. Meyner of New Jersey. Whose official residence has been picketed recently by persons protesting the death sentence imposed on three Negroes convicted of a murder in Camden.

RIBICOFF SILENT

Gov. Abraham A. Ribicoff, of Connecticut,

made no reply of any kind.

Six States have entirely abolished capital Dunishment. They are Wisconsin, Maine, Minnesota, Delaware, Hawaii, and Alaska. Three others-Michigan, Rhode Island and North Dakota-have practically abolished it.

The question which the Herald Tribune asked the Governors was this:

"Entirely apart from any pending case and entirely independent of whatever sworn duties you may have to uphold the law as it how stands in your State, do you personally favor capital punishment?"

Of the 50 Governors 353 replied, personally

or through their staffs.

Seventeen opposed capital punishment

personally.

Eight favored it, but of these five were from the South. Thus outside the South only 3 were in favor of capital punishment as compared with the 17 who were opposed.

Eight refused to express an opinion.

Two said they had no personal opinion on the subject.

The respective position of the Governors is as follows:

OPPOSED TO CAPITAL PUNISHMENT

James T. Blair, Jr., Missouri; J. Caleb Boggs, Delaware; Edmund G. (Pat) Brown, California; LeRoy Collins, Florida; Christopher Del Sesto, Rhode Island; Michael V. Di Salle, Ohio; Orville L. Freeman, Minnesota; Mark O. Hatfield, Oregon; David L. Lawrence, Pennsylvania; Herschel C. Loveless, Iowa; Gaylord A. Nelson, Wisconsin; William F. Quinn, Hawaii; John H. Reed, Maine; Robert E. Smylle, Idaho; Robert T. Stafford, Vermont; Cecil H. Underwood, West Virginia; G. Manuelle, Manuell G. Mennen Williams, Michigan.

IN FAVOR OF CAPITAL PUNISHMENT (AT LEAST AS PROVIDED BY THE LAWS OF THEIR RESPEC-TIVE STATES

Ralph G. Brooks, Nebraska; George D. Clyde, Utah; Price Daniel, Texas; John E. Davis, North Dakota; Buford Ellington, Tennessee; Orval E. Faubus, Arkansas; Luther R. Hodges, North Carolina; Ernest F. Hollings, South Carolina.

WON'T SAY

Bert T. Combs, Kentucky; Foster Furcolo, Bert T. Combs, Kentucky; Foster Furcoio, Massachusetts; Robert B. Meyner, New Jersey, J. J. Hickey, Wyoming; Wesley Powell, New Hampshire; Nelson A. Rockefeller, New York; Albert D. Rosellini, Washington; J. Millard Tawes, Maryland.

NO PERSONAL OPINION

William A. Eagan, Alaska; Harold W. Handley, Indiana.

Replying to the poll on behalf of Governor Rockefeller, Robert L. McManus, his press secret secretary, said: "Because of the Governor's obligation to uphold the statutes of New York State, which provide for capital punishment, he deems it inadvisable to comment.

Although Governor Furcolo did not take a stand in the poll, his research director, Martin Lichterman, replying for him, noted that "as Governor, Foster Furcolo has commuted every sentence of those sentenced to death," In 1959 and again this year the Governor proposed to the Massachusetts Legislature a referendum on abolishing capital punishment.

Here are some of the comments of Governors who opposed capital punishment:

Governor Hatfield: "I personally oppose capital punishment. I base this on apparent inequity of application of the death sentence.'

(Governor Hatfield did not enlarge upon this, but presumably he was referring to the situation, which was described in a Herald Tribune editorial on March 27 as follows: "Those actually put to death are most frequently the poor and friendless. Of the 49 persons executed in the United States year, 33 were Negroes.")

"I do not believe that Governor Nelson: (capital punishment) is an effective deterrent to crime, and I fear the possibility of execution of an innocent man. Capital punishment was abolished in 1853 in Wisconsin. Our major crime rate compares favorably with any State which retains capital punishment.

Among those favoring capital punishment, Governor Daniel said: "I do favor retaining jury right to assess the death penalty for certain major crimes such as sale of heroin to minors, murder, and rape. Even if it is rarely used, it should be in the statutes for its deterrent value."

Governor Davis: "I do not favor capital punishment except under conditions as provided by North Dakota law, which has an exception for treason and anyone convicted of first-degree murder who commits a similar crime while serving a sentence."

Mr. Speaker, on the same subject, the following editorial appeared in the New York Herald Tribune of April 25, 1960.

GOVERNORS AGAINST THE DEATH PENALTY

Caryl Chessman enters his ninth "last eek" today, while the debate on capital punishment, so largely fueled by his case, goes on.

A new light on that debate was shed by the Herald Tribune's poll of State Governors, published yesterday. Each was asked: "Entirely apart from any pending case and entirely independent of whatever sworn duties you may have to uphold the law as it now stands in your State, do you personally favor capital punishment?" Thirty-five replied, of whom 25 were willing to commit themselves. Of these, 17 opposed the death penalty while only 8 favored it; outside the South only Governors supported the penalty, for a ratio of nearly 6 to 1 in favor of abolition.

Advocates of capital punishment, as any one learns who reads through the letters that cross an editor's desk, frequently attack abolitionists as softheaded, as apologists for murderers, as hopeless sentimentalists. State Governors as a group are not notably either softheaded, sentimental or inclined to apologize for criminals. They do have to face the capital punishment question squarely, holding both the power of clemency and the prime responsibility in their States for upholding the laws. Their indictment of the death penalty should carry weight.

The Chessman case has been debated at length, and the questions which still sur-round it—especially the doubtful applicability of the law under which he was sentenced to the crimes of which he was convictedwould alone cause a bad odor about his scheduled execution next Monday. But beyond this he has become a symbol, however unattractive, of the drive to establish the sanctity of life even in courts of law.

Chessman's avenues of appeal have narrowed, and his ninth life may well prove his last. If so, his personal drama will have ended, and the advocates of the death penalty will have claimed another victim. But the fight to put an end to this brutalization of justice will go on, and the poll of Governors indicates that it will go on with substantial support.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Daily Digest

HIGHLIGHTS

Senate cleared for President AEC authorization bill. House debated Agriculture Department appropriations.

Senate

Chamber Action

Routine Proceedings, pages 9099-9124

Bills Introduced: 11 bills were introduced, as follows: S. 3513-3523.

Poge 9105

Fishing Vessels: House returned to Senate in accordance with motion entered on May 5 by Senator Lausche H.R. 5421, to provide a program of assistance in the construction of fishing vessels (with accompanying papers). Senator Lausche's motion had been that Senate reconsider its action of May 3 in adopting conference report on this bill, and that House return the bill and papers to Senate.

AEC Authorization: Senate took from calendar, passed without amendment, and cleared for President H.R. 11713, fiscal 1961 appropriations authorization for the Atomic Energy Commission, after rejecting Hicken-looper amendment to increase by \$104,200,000 authorized funds for project 61-f-7, linear electron accelerator. Motion to reconsider action in passing of bill was tabled. S. 3387, companion bill, was indefinitely postponed.

Pages 9124, 9129-9140

Legislative Program: Majority leader announced there is a possibility Senate may act Wednesday on conference report on H.R. 11510, Mutual Security Act of 1960, dependent on House approval thereof earlier in the day. In addition, it is expected that Senate will consider S. 910, payments to local governments of sums in lieu of taxes with respect to certain Federal realty. S. 2653, community antenna systems, will be considered early next week. S. 2168, amend Navy ration statute for serving of oleo, will be considered sometime this week or early next week. Majority leader gave notice that H.R. 4601, to limit to national security cases prohibition of payment of annuities to retired Federal personnel, may be considered. He expects H.R. 10777, military construction authorizations, to be considered Friday if reported this week. S. 3044, forest use, may be considered next week. No appropriation bills are expected to be reported this week, but probably the next ones to be reported are H.R. 12117, agriculture appropriations,

H.R. 11390, Labor-HEW appropriations, and H.R. 11389, general government matters appropriations. Conference report on H.R. 10569, Treasury-Post Office appropriations, may be reported this week, and is a privileged matter.

Pages 9142-9143

Naval Vessels: H.R. 10474, authorizing construction of naval vessels, was displaced when Senate proceeded to consideration of other business but later was again laid down, and at adjournment remained Senate's unfinished business.

Pages 9128, 9143

Senator O'Mahoney: Senators spoke in tribute to Senator O'Mahoney who has announced he will not be a candidate for reelection to Senate. Pages 9128, 9143-9144

Nominations: Senate received four nominations to be judges of the Tax Court of the U.S., as follows: Arnold Raum, of Massachusetts; Allin H. Pierce, of Illinois; Graydon G. Withey, of Michigan; and Irene F. Scott, of Alabama.

Page 9144

Program for Wednesday: Senate met at noon and adjourned at 4:38 p.m. until noon Wednesday, May 11, when its unfinished business will be H.R. 10474, construction of naval vessels. Senate will consider conference report on H.R. 11510, Mutual Security Act of 1960, if House adopts it earlier in day. Senate may also consider S. 910, payment to local governments of sums in lieu of taxes, and H.R. 4601, to limit to national security cases the prohibition on payment of annuities to retired Federal personnel.

Committee Meetings

(Committees not listed did not meet)

AGRICULTURAL LOANS

Committee on Agriculture and Forestry: Subcommittee on Agricultural Credit and Rural Electrification held and concluded hearings on S. 2144, to improve the authority of the Secretary of Agriculture with respect to loans to farmers and ranchers, and S. 2891, authorizing financial assistance to persons holding leasehold interests in lands in the State of Hawaii. Testimony was re-

Appendix

Address by Mrs. Mary Dublin Keyserling Before Tennessee Federation of Democratic Women

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

IN THE SENATE OF THE UNITED STATES Tuesday, May 10, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very excellent and informative speech delivered by Mrs. Mary Dublin Keyserling before the Tennessee Federation of Democratic Women in Knoxville, Tenn., on Saturday, April 30, 1960.

I am informed by the Public Printer that the manuscript is estimated to make approximately 2% pages of the Congres-

SIONAL RECORD at a cost of \$216.

I ask unanimous consent that the address be printed in the Appendix of the RECORD notwithstanding this cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEOPLE AND PROGRESS-THE BIG GOALS AHEAD (Address by Mary Dublin Keyserling, to the Tennessee Federation of Democratic Women, Knoxville, Tenn., Saturday, April 30,

Being with you this evening is a very great pleasure to which I have looked forward eagerly. I have not been in Tennessee before, but I have long wanted to come and meet the extraordinary women in this State Who search out and find such remarkable men as you have sent to the Senate-Estes REFAUVER and ALBERT GORE.

We Democrats have so much to take pride in. We have a record, as a party, of extraordinary accomplishment, of unique con-tribution to the progress of people in our Nation and throughout the world. And we can take pride not only in the accomplishments of the past, but in the vigorous response of our party today to the new challenges which now confront us.

Our Democratic Party knows how to meet the problems of our times and shows the kind of leadership and responsibility which Will surely be so convincing to the people of the United States in the months ahead, that there can be no doubt as to the outcome of the election in November. All of our presidential candidates are men of vision, great ability, unquestioned integrity and dedication. With Democrats once again at the helm, our Nation will shake itself free of the inaction, defeatism, and complacency which have characterized the last 7 years; it will once again take its place as the great leader among nations; it will once again move ahead to solve the problems of

There is no need to review before this group the transformation effected in our national life during the years of the New Deal and the Fair Deal. Our economy was made safe against depression, our whole system of private enterprise was strengthened and, under progressive government, humanity was written on the statute books.

Because we were meeting the needs of our people at home, we became a symbol to the whole world. This image was strengthened in the years after World War II when we did so much to help the war ravaged countries of the world reconstruct their economies. It was reinforced when we stood firm against the threat of Communist aggression first in Greece and Turkey and then against

actual aggression in Korea.

And, in these years under the Fair Deal, we continued to forge ahead on the domestic scene. Our economy was dynamic and expanding. It was growing at the average rate of 4.7 percent a year. Rapidly growing and healthy economies don't just happen. They are the product of sound policies. in this connection, I think we should single out for special tribute one particular domestic measure—the Full Employment Actwhich was a declaration of national purpose so to use our skills and resources as to assure maximum production, employment and purchasing power.

Today, as in the past, we Democrats continue to express faith and confidence in the American people and in the American economy. Our leading Democratic presidential candidates and our other leaders speaking today, through our party platform, through the 1960 campaign policy statement of the Democratic Advisory Council, through the majority reports of the Joint Congressional Committee on the Economic Report, all concur: We can afford to meet the essential needs of the American people in the years ahead and still avoid inflation; we can meet our needs and still balance the budget without increasing tax rates; we can, by meeting our needs, strengthen our position at home and abroad.

We are on record for improved social security benefits and more adequate unemployment compensation. We are pledged to legislation to meet our shockingly neglected housing needs. We support Federal aid to the States in order to alleviate the acute classroom shortage which plagues our schools, and to lift the salaries of our badly paid schoolteachers. We advocate important programs for the improvement of the Nation's health. We advocate higher minimum wage levels, both Federal and State, and the extension of this protection to the many millions of wage earners not now covered by it. We have watched American farmers take a terrible beating these past 7 years and we want this situation rectified.

On the international front, there is an ever-growing consensus of experts that we are sadly vulnerable. Our defense needs are not adequately being met. We Democrats are not willing to play ostrich and tailor our outlays for this vital purpose to false concepts of economy. We say we can and must meet our defense requirements.

To speed the economic progress of the less developed countries of the world, our party supports a more substantial foreign ald program. Our stake in this progress is immense.

When we Democrats say we are for these things, we base this on the knowledge and conviction that we can afford them. We say investment in these gains yields a return no less rewarding to America than invest-ment in plants and facilities. We say that if we fail to meet these needs, we undermine our very strength.

What a contrast to this philosophy and approach the Republican record of the past 7 years presents. I ask you to search your minds and name, if you can, a single important domestic accomplishment with respect to any major need of our people, brought into being under Republican sponsorship.

During the past 7 years, progress in lift-ing living standards of those who still know hardship and deprivation has practically come to a halt. One out of four of our families still has less than is required to purchase minimum standards of health and decency.

For the farmer, this period has been virtually devastating. Net farm income has fallen 30 percent and is expected to fall another billion dollars this year.

We have 22 million slum dwellers. quarter of our homes have become substandard. Blight has been spreading in our cities because our Federal housing programs have been drastically curtailed. "Let the States do it," we are told.

Our schools face a major crisis. Tens of thousands of our children are packed into overcrowded classrooms, attend schools in double shifts, lack adequate facilities. This mounting problem has been disregarded by a complacent Republican administration. The responsibility of our Government is denied. All we hear is, "Let the States do it"; or "We can't afford it"; or "Federal expenditure is extravagant."

Last week, representatives of 20 leading social welfare and medical service organiza tions, and I was among them, met to talk with top administration leadership about the need for the protection of the health of our senior citizens. Two-thirds of those over 65 have incomes under \$1,000 a year; four-fifths have less than \$2,000. The cost of purchasing hospital and major medical care has become a problem of the greatest urgency to this large segment of our people. urged that through the social security system, the American people be permitted to save a few pennies a week during their working years in order that they might have hospital and surgical insurance benefits if and when they need them after they reach the age of 65. Such a program is supported by our Democartic leadership. But, "No," says the administration. "Let the States do it." The social welfare representatives at the meeting last week pointed out that a State system would be vastly more expensive and administratively cumbersome; that it would take many, many years before 50 States could pass 50 separate laws. We asked, "How can the States which take in only 15 cents out of every tax dollar, which are already financially hard hit and which have huge debts, continue to meet all their current burdens, cope with the school crisis, meet their hous-ing problems, and respond to this need too?" Of course, we got no explicit answer. But the implicit answer seemed to us to be: "People just don't matter enough to warrant facing up to the big issues."

More adequate social security benefits? Adequate resource development? A program to meet the problems of the depressed areas of the country? All these needs may be very urgent, indeed, but the Republicans insist we can't afford to meet them. We are told we can't afford the defense our best informed experts tell us we must provide for. What strikes us Democrats as so disturbing is that this Republican pennypinching approach is pennywise and pound foolish. What good will the dollars saved through defense cutbacks do, if inadequate national security weakens our position in negotiating with the the Soviets at the summit? Why can't Republicans see that meeting the housing problem pays off in terms of less juvenile delinquency, less ill health, fewer fires? The community saves money when a fair minimum wage keeps a family off the relief roles. Investing in our educational system makes good economic sense. Our people are our biggest asset.

Furthermore, by cutting back on the public programs we so urgently need and, at the same time, by pursuing tight-money policies which curtail private spending as well, the Republicans have repressed our national economic growth. Our economy has grown at the average annual rate of only 2.3 percent a year from 1953 to 1959, or less than half the 4.7 percent rate averaged in the preceding

7 years.

When the administration says, "What's so bad about an overall rate of growth averaging 2.3 percent a year? Doesn't it make us bigger than ever before?" This is like the mother whose baby should have gained 10 pounds in weight and only gained five, saying "Why should I worry? Johnny is bigger than ever before, isn't he?" But, if Johnny doesn't measure up to standard, that is a sign of trouble. Like Johnny, our economy hasn't been measuring up to standard. Our economy should have grown by close to 5 percent a year, and not 2.3 percent.

It's not hard to understand why. This is so important a question we ought to take a few moments to analyze it. First, our population is rising; there are more of us each year; there are more people in the labor force each year. Now, if our economy is healthy and puts these additional people, who need and want jobs, to work, the new workers add about 1 percent to the amount of goods produced. In other words, this factor alone would mean a 1-percent growth in our economy each year.

In addition, there is a second important factor to remember. Each year, each of us on the job becomes about 3 to 4 percent more efficient as machines and technology improve. Due to this technological advance, our economy must expand 3 to 4 percent a year to avoid more and more unemployment.

Put these two factors together and you can see that our economy, if it is at a healthy level of employment, is able to produce 4 to 5 percent more a year than it did the year before. This, then, is the growth we are not only capable of; it is the growth we have to achieve if we are to prevent unemployment from rising. For, if we produce only 3 percent more this year than last, a lot of people will not be on the job. If we produce only 2 percent more, still more people will be out of work.

This is something we Democrats understand. We reject the tight-money policies which repress economic growth. We know that we have been paying a frightful price for the excessively slow rate of growth they have caused. The price is to be measured not only in terms of unnecessarily high levels of unemployment, but also in dollars-and-cents terms.

Suppose that between 1953 and 1959 we had grown not at 2.3 percent a year, but at the same 4.7 percent rate we did between 1947 and 1953. What would the difference have been?

A little arithmetic shows that at the higher rate of growth our total output over the period would have been about \$200 billion more than we actually produced under the lower growth rate. In other words, because we idled along, instead of growing as we should have, we threw away \$200 billion

worth of goods and services we all might have enjoyed.

have enjoyed.

We talk too much about our affluence. Our higher income families do enjoy ample living standards. But there are about 12 millions of our multiple-person families, or more than a quarter of all such families, which have total incomes of under \$4,000. (And this includes a cash allowance for the value of food and fuel produced by farm families.) Nearly 10 percent of our multipleperson families have incomes of less than \$2,000—a very low level indeed. And remember that the studies of the Department of Labor, brought up to date for rises in living costs which have occurred since the studies were made, indicate that a family of four needs at least \$4,700 for a minimum standard of health and decency. And, if we talk about the 10 million individuals who live alone, more than two-fifths have incomes under \$2,000, the least which might be said to be needed for health and decency.

How can we say to these families and individuals who can't make ends meet, that we just tossed out the window \$200 billion in goods and services which could have gone far toward lifting their inadequate levels of living to levels more nearly consistent with our concepts of the American way of life? Complacency is not in good grace when so much still remains to be done on our own doorstep.

Higher family incomes would have meant higher profits to the Nation's businesses. They would also have meant such higher revenues for our Federal, State and local governments. It may seem almost incredible to you, but over the past 7 years alone, had our economy grown at the higher rather than at the lower rate of growth, Government income, at all levels, would have been \$65 billion higher, and without higher tax

Think of what we could have done with this amount of money. Had we spent 20 percent of it for defense, we would all feel considerably more secure today with respect to the arms and space challenge of the Soviets. Suppose we had spent another 20 percent, or \$13 billion, for education, This would have allowed us to remove most of the classroom shortage which has mounted every year, and we could have paid our hard pressed school teachers \$1,000 more a We could, in addition, have replaced year. 11/2 million slum houses with good housing. could have built more than 350,-000 hospital beds, and our experts tell us we have a shortage of over 850,000 beds, so we need them badly. We could have increased substantially our entirely inade-quate social security and public assistance payments. And even after all these outlays had been made, believe it or not, we still would have had sizable amounts of money left. We could have increased what we spent for foreign aid by 50 percent. And we would still, after all these outlays, have been able to balance the budget every year. Think, in contrast of the \$121/2 billion deficit the Republican administration had 2 years ago-the highest deficit in peacetime.

That's the difference between having a low rate of economic growth and achieving the growth which follows when you make use of improving technology and maintain relatively high levels of employment.

Now, how can the Republicans try to justify the low rate of economic growth they have given us? They give as one of their main reasons for repressing growth, and for refusing to accept responsibility for meeting urgent national needs, their desire to avert inflation. Let's examine their claim and see if it is valid or whether this isn't an indefensible excuse for "donothingism" and Government by veto.

Traditionally, inflation has been conceived of, very simply, as a situation where too

much money is chasing too few goods. This is typical of wartime when production facilities are converted to military production and the production of consumer goods is sharply curtailed.

Because people are paid for the work they do, whether it be in the production of military or consumer goods, they have purchasing power, but in wartime there is relatively little available for them to buy. Consumers compete for what is available in the market and prices zoom unless there is rationing and price control, unless the supply of money is curtailed by tight money policies and spendable incomes are reduced by much higher taxes, or unless other means are used to restrict buying.

It is true that if you have an actual inflationary situation, then cutting down the excess money chasing the inadequate supply of goods does reduce the pressure on prices.

Arguing that we have had an inflationary situation in recent years, the Republicans have said that the thing to do is to cut down the amount of money available and thus reduce spending. To do this they have raised interest rates. This makes it harder for people to borrow and this cuts spending. They have adopted what we call tight money policies. And, as we know they have drastically curtailed the Federal budget on the theory that this too slows down the chase of money after goods.

But the first and most obvious question to ask is: "Have we in fact had the traditional kind of inflation? Have goods been scarce?" And the answer is: Quite to the contrary. We have had huge piles of goods We have had huge piles of goods on the shelves-inventories of unsold cars. radios, washing machines, and other prod-We have vast amounts of unused plant capacity and enormous surpluses, particularly of farm commodities. Over these last 7 years, we have had, on the whole, excessive unemployment. In other words, we haven't had scarcities at all. We haven't really had the disease the Republican remedy was used to cure. And what has been the effect of the wrong medicine?

This particular medicine has been just fine for the banks and other financial institutions. But it has been mighty bad for the economy and the people. During the past 7 years, because of Republican tight money policies, the American people have had to pay out well over \$25 billion more than if interest rates had been held at the 1952 level.

Not only has this medicine been incredibly costly; it has actually produced a worse condition than the ailment we didn't have and which it was wrongly aimed to cure. Raising interest rates did cut down on our purchases of homes and other goods, and budget slashing also cut down on consumption. Because sales were reduced, men and women who produced goods lost their jobs. Then they had very little with which to buy goods. This cut down still further on sales and the employment of others. This creates the roller coaster cycle of recurrent recessions. If it hadn't been for the safeguards such as unemployment insurance and old age pensions built into our economic system by our Democratic Party, safeguards which helped to sustain consumer buying. safeguards which the Republicans fought bitterly every step of the way, the two serious economic tallspins the Republicans have given us would have been far worse.

Another consequence of the tight money medicine is that instead of preventing price rises, it has had the very opposite effect. As we all know, the cost of living has gone up more than 10 percent in the past 7 years. But this has not been due to inflation in its traditional sense—too much money chasing too few goods. One of the big factors in the peculiar kind of price rise we have had, has been growing monopolistic practices which Republican policies have fostered. The

prices of more and more products have be-come less and less competitive as industries have increasingly tended to fix their prices by mutual consent. These are the administered prices you have been hearing so much about, You have been reading about the fantastic price of drugs as revealed by Senator Kefauven's Antitrust Subcommittee, as a telling illustration of this type of price trend. Instances are reported of drugs sold at 7,000 and even 10,000 percent markups.

Restricting the money supply doesn't bring down these prices. All it does is to slow down economic growth and this, instead of solving the problem, actually intensifies it because some industries raise their prices even more in order to make up for deficient vol-

ume of activity.

What should our answer be? First, we must repudiate the policies of the Republican administration which has adopted restrictive policies which have repressed growth. We must tell the people what sound economic policies could accomplish—the sound economic policies of the Democratic Party—and we must elect a Democratic President next November.

And what could we do with sound economic policies? The progress that is beg-ging to be achieved is staggering in its

magnitude.

Suppose that for the 5 years 1960-64 in-Clusive, we were to grow at 5 percent a year instead of the 2.3 percent we have averaged during the past 7 years. Where could we be by the end of 1964? It helps if we look at these issues in specific terms.

It's hard to believe that the difference in the two rates of growth could be so enormous in so short a period of time. The fact is that the difference in total national production would be about \$350 billion over

the period.

If we achieve the higher rate of growth and realize this enormous gain, we could cut the number of families living in relative poverty-or under \$4,000 a year-by twothirds and at the same time all other income groups could make important gains. The average family would enjoy more than \$5,000 in added income over the period.

Over the 5-year period, 1960-64, the huge growth rate would provide, in contrast with the lower growth rate, about \$100 billion more in public revenues at the Federal, State, and local levels—without higher tax rates. With these revenues we could balance the budget, make some payments on the national debt and increase our investments in education, national defense, and all the

other essential public programs.

This is the crux of one of our major differences with the Republicans. The Republicans just haven't grasped the significance of economic growth. They claim our for-Ward-looking Democratic programs would rob Peter to pay Paul. They haven't learned that our Democratic approach doesn't rob Peter at all. Our approach would make the pie bigger. Then both Peter and Paul could both both get larger slices. Republican policies shrink the pie or keep it smaller than it should be. Because the ple is small today, we can't do the very things we have to do if we are to survive.

Why can't the Republicans see the terrible Price we are paying for their bad economics? It isn't just what it is costing us at home. This isn't the whole story. While we in the United States have been inching along at an average growth rate of 2.3 percent a year, Soviet industry has been rising at an average 8 to 9 percent a year, according to Allen W. Dulles, Director of the Central Intelligence Agency. This is frightening in the kind of world in which we live today, we not only in terms of the race between our economy and the Soviet's. It has vital significance especially for our relationship with the underdeveloped countries of the world.

A billion people in these less advanced Countries, most of them uncommitted, are Watching this economic race closely. If our

economy falters and puts on a poor economic demonstration, what will these nations do? Follow our pattern? Continue to aline themselves with us? Will the desperate millions among them succumb to the easy promises of the totalitarians, or can we demonstrate that, under democracy, we can make the rapid gains we must make if we are to

We in the United States must answer this question with deeds. We must demonstrate that our system can work well, as we know it can. It is not enough to say. "Look at our living standards. They are the highest in the world. Isn't that proof of our superiority?" Others feel that an economy is tested not only by what it is doing in absolute terms, but relative to what it can do, by where it is going, and how fast it is going relative to others.

This should give us pause. demonstrate the excellence of our system around the world. And we can do this only as we fulfill the promise of America.

This means that we must set goals for full economic growth instead of being satisfied with less. It means repudiating Republican taxation, monetary, credit, and other economic policies, so as to be able to balance consumption and production at advancing

We must have leadership in this country that cares deeply about the needs of our people-cares more about people than about the few who benefit from higher interest rates. We must have leadership that knows that, as our capacity to produce advances, purchasing power must be able to keep pace. This is the key to economic progress. It must be a leadership, therefore, which deeply appreciates the need for adequate wage levels, for minimum wage legislation which covers those who need its protection and sets adequate minimum wage floors. It must be a leadership which doesn't try to meet the farm problem by pulling out farm price props and letting the resulting decline in farm income drive the farmers off the farm and into city joblessness. It must be a leadership concerned with the interests of small businessmen, a leadership which would not see them pushed to the wall as they have been in recent years. It must be a leadership proud to champion the social gains we can and must assure, a leadership not afraid of the future.

We must have a leadership which recognizes that our destiny from now on out is inextricably linked with the destiny of others in the free world, that knows that the people of the free world must go forward together or meet disaster.

The Democratic Party represents just such leadership as this. It is committed to the philosophy of full employment and full production through which we can achieve economic plenty for all and the levels of na-tional security and essential services we can afford and must have. The Democratic Party is deeply aware of the big economic issues of our time, is courageous enough and wise enough and responsible enough to meet them. Aren't these the best of all possible reasons why we must elect a Democratic President next November?

Area Redevelopment-Proper and Timely

SPEECH OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 722) to establish an

effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. RABAUT. Mr. Chairman, the passage of the Area Redevelopment Act by this House and the subsequent endorsement, without change, of that legislation by the other body has gratified me immensely. The struggle to pass this bill-even to get action on it-has been a long and continuing one. Many, many Members of this House, myself among them, were engaged in this struggle for a number of years. It is always gratifying to have one's efforts on behalf of needed legislation culminate in successful passage. But this type of gratification goes far, far beyond mere personal satisfaction. For it reaches to the fundamental realization that in passing this bill we have extended the hand of assistance to millions of our fellow citizens so direly in need of help. This is the American way. We have always helped the fellow who is down. And at a time when we are doing so much to help such people in all parts of the world, there is certainly no reason why we should not help our own fellow citizens in this their time of great need. This is the gratification of which I speak: the gratification that the American way has prevailed; that we have decided to continue our great tradition of helping the "down guy," instead of putting dollars above human values.

Mr. Chairman, there are aspects of the passage of the Area Redevelopment Act that are worthy of note. Not the least of these, Mr. Chairman, is that the Congress has spoken once again and has once again made clear its feeling and intent on this question. You will recall that an area redevelopment bill was passed by Congress in 1958 only to be thwarted by Presidential veto. If I may inject a personal note, this veto came at a time when the unemployment in my home city of Detroit had reached 18 percent of the work force. Think of it-18 percent. Again last year-1959-the will of Congress was voiced when the Senate passed S. 722 in its original form. Now this year, when the House was finally given the opportunity to consider the bill, the favorable House action has reechoed the sentiments of Congress on this matter for all the Nation or, for that matter, the whole world to hear. The speedy Senate endorsement of this House action is a further reiteration of these sentiments that makes them all the more resounding. Considering that Congress expresses the will of the people of these United States, I ask you how, in good conscience, can the leaders of this Nation ignore or reject this will when it has been so clearly expressed and so consistently repeated?

We did, of course, hear various arguments raised against the bill during the debate on S. 722. However, I believe each and every one of these was quite effectively dispelled and cast by the wayside. The assertion that the bill is expensive or a giveaway did not hold water in the face of the facts that of the total \$251 million provided, \$200 million is to take the form of loans to be repaid to the Treasury with interest. This interest will be equal to the average rate the

Treasury itself pays on what it borrows plus one-half of 1 percent. We heard the charge that the bill infringes on States rights. This point could not be reconciled with the provision in the bill that only applicants approved by a State agency or political subdivision in which the project is to be located may receive aid. These and many equally unrealistic and invalid arguments were raised against the bill. All were discarded when confronted with the true facts, with logic and with just plain commonsense. The only conclusion to be drawn from this is the old adage: "The truth will out." And it has.

The Area Redevelopment Act is good legislation that answers a crying need in a sensible and realistic fashion. The Congress, in its time-tested wisdom, has recognized this fact. It is only to be hoped-and ardently-that those now responsible for the enactment into law of this measure can come to this same realistic realization.

Mrs. Myrtle Murdock, District of Columbia "Mother of the Year"

EXTENSION OF REMARKS

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. GOLDWATER. Mr. President, recently it was my pleasure to attend a breakfast honoring Mrs. Myrtle Murdock as the District of Columbia "Mother of the Year." I can think of no one who is more deserving of this recognition; and it gave me special pride, for she and her husband, John R. Murdock, who is a former Congressman from Arizona, have been my life long friends. The devotion which these two have shown to their family, their State, and their country is worthy of the highest praise, and the honor bestowed upon Mrs. Murdock reflects the high quality of both herself and her husband.

In order that others may know of this fine lady's accomplishments, I ask unanimous consent, Mr. President, that there be printed in the Appendix of the Record an article about Mrs. Murdock which appeared in the newspaper Roll Call.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

NAME CAPITOL EXPERT MOTHER OF THE YEAR

Dr. Myrtle Cheney Murdock, the noted author on the city of Washington and the U.S. Capitol, has been selected by the District of Columbia Committee of the American Mother's Committee as the District of Columbia "Mother of the Year."

Dr. Murdock will meet in New York City with "Mothers of the Year" from the 50 States May 3-7. One of the group will be chosen "The Mother of the Year.

She is the wife of former Representative, John R. Murdock of Arizona. The Murdocks are well known here, having lived in the Nation's Capitol since 1937, when Mr. Murdock began his 16 years as Arizona's Representative in Congress.

Mrs. Murdock has earned her own place in the Capitol city by her 23 years of service in a wide range of activity. She is a member of many clubs and organizations; an author of distinction on the District of Columbia and the Capitol Building; a much sought-after lecturer on historical topics; and her legion of friends are from every walk of

The Murdocks' daughter, Mrs. Rachael Murdock Ellis, lives in Scottsdale, Ariz., where she teaches school and is the mother of three children.

Their son, John Benjamin Murdock is the father of three children and lives in Lansdowne, Pa., where he operates his own busi-

David Murdock was killed in action in Sicily, August 11, 1943.

On April 28 Mrs. Murdock will receive the citation at a luncheon given at the Cosmos Club by the District of Columbia American Mothers' Committee.

Mrs. Murdock's life in Washington has followed her earlier pattern of service and education. For a period of years she wrote a weekly column for the Arizona papers covering congressional news plus special information on some national shrine of great significance here. Research for these columns sparked Dr. Murdock's great intrest in the historical background of the Nation's Capital and the Capitol Building.

The Italian Republic in 1951 conferred upon Dr. Murdock the Star of Italian Solidarity for her efforts in the cause of cultural relations between the two countries in researching and writing "Constantine Brumidi, Michangelo of the U.S. Capitol" (1950).

Because of her research and her grand biography of Brumidi, a Brumidi memorial program was held by Congress in the rotunda of the Capitol in 1951, Congress officially marked Brumidi's long lost grave in 1952, and Brumidi's unfinished frieze in the Capitol rotunda was completed in 1953, and dedicated by President Eisenhower in 1954.

Five books have been authored by Mrs. Murdock in the last 12 years on the city of Washington and the Capitol Building. The two memorial booklets, "Dear Mom" and "Remembering David Murdock," first printed in 1944, were reproduced as a 1959 pre-Christmas thought. The books besides Brumidi are, "Your Uncle Sam in Washington"; "Your Memorials in Washington" (1952); "National Statuary Hall in the Nation's Capitol" (1955); and "The American's Creed and William Tyler Page" (1958).

As a lecturer Dr. Murdock is well known here. During the last 12 years she has spoken before more than 250 organizations.

When Mr. Murdock retired from Congress in 1953, Mrs. Murdock became an official guide in the Capitol Building, a position she still fills with ability, dignity, and enthuslasm.

Twenty-five Years of Rural Electrification

EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. ASPINALL. Mr. Speaker, May 11, 1960, marks a quarter century of progress in bringing the benefits of electric power to rural consumers throughout the Nation. Since the signing of the Rural Electrification Administration Act on May 11, 1935, farmers all across the United States have helped to make the rural electrification program an outstanding success.

My own State of Colorado provides an excellent example of the achievements of the REA program, which got underway in Colorado in June of 1936, when the first REA loan was approved. The first REA-financed line was placed in operation on September 17, 1937, by the Grand Valley Power Line of Grand Junction, in my congressional district.

When the REA was created in 1935. only 7,145 farms in Colorado-just 11.2 percent, were receiving central station electric service. Current REA estimates show that 36,550 farms in the State, or 89.7 percent of all farms recorded in the 1954 census, were being served as of June 30, 1959. REA borrowers serve about 60.2 percent of these electrified farms in Colorado.

Up to January 1, 1960, REA had approved a total of \$121,167,157 in loans to 25 electric borrowers in Colorado, all of which are cooperatives. The loans were made to enable the borrowers to construct 34,495 miles of line and other electric facilities to serve 86,677 consumers.

REA electric borrowers in Colorado have repaid \$12,405,643 on the principal of their Government loans. In addition, they have paid \$8,244,778 in interest and \$4,749,698 ahead of schedule. As of January 1, 1960, no borrowers in the State of Colorado were overdue in their loan payments.

Mr. Speaker, it is also significant to note that Colorado's electric co-ops are among the largest property taxpayers in the 61 counties in which they operate in the State of Colorado. In 12 counties, electric cooperatives are the only electric taxpayers. In 1958, more than \$600,000 was paid in property taxes alone by Colorado rural electrics.

Mr. Speaker, I should like to include in my remarks the following statistics relative to the first 25 years of the REA program in Colorado:

DATA OF THE FIRST 25 YEARS OF THE REA RURAL ELECTRIFICATION PROGRAM IN COLORADO

Percent of farms electrified by all suppliers

Jan. 1, 1935	11.2
Jan. 1, 1940	28.8 48.6
Jan. 1, 1950	72.0
Jan. 1, 1955	89.7

Note.—About 60.2 percent served by REA borrowers.

League of Wemen Voters Convention in consists of educational discussions of such topics as "State Financing and the Tax System" "Human Rights" "Public

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1960

Mr. WILEY. Mr. President, as our Nation undergoes far-reaching social, spiritual, economic, technological, and scientific revolutions, women—once erroneously called the weaker sex—play an increasingly significant role.

Historically confined largely to the fireside or domestic tasks, women today are making a commendable contribution to progress in almost all walks of life.

Significantly, the wife and mother, as well as the career woman, is extending herself more and more beyond the confines of the home, or profession, to perform cutstanding work in community life.

As individuals and members of organizations, they are thus making increasingly outstanding contributions to progress, locally, statewide, and nationally.

The League of Women Voters—a national organization with branches in almost all States, is a splendid example of the kind of organization carrying forward constructive work in the public interest.

The Wisconsin league, for example, is holding its convention on May 17 and 18. The agenda for the conference is most challenging.

Ranging far beyond what was once considered woman's work, the program

consists of educational discussions of such topics as "State Financing and the Tax System," "Human Rights," "Public Welfare," "Elementary and Secondary School Education Problems," "Improvements in Our Judicial System," and a variety of other topics of local, State, and National interest.

Since it was organized in 1920, the Wisconsin League of Women Voters has written a splendid, constructive, creative record in accomplishments.

Recently the Milwaukee Journal published an informative article on the work of the league in Wisconsin, as well as further details of the public-interest programs scheduled for the upcoming conference.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, May 8, 1960] STATE LEAGUE PLANS PARLEY—LAKE DELTON IS SITE OF CONVENTION FOR WOMEN VOTERS ON MAY 17 AND 18

The League of Women Voters of Wisconsin will hold its 32d convention May 17 and 18 at Lake Delton. About 200 delegates, alternates and observers from 33 local leagues are expected to the 2-day event, which will mark the 40th birthday of the State league.

On a business level the 2-day event will include election of officers and directors for 2 years, adoption of a budget, workshops on both the State current agenda items—State finance and county government and a review of items of "continuing responsibilities." Mrs. Ralph Wenberg, North 50th Street, Milwaukee, State president, will preside. Mrs. Alfred Wilds, Madison, is convention chairman.

The convention will open officially at 10 a.m., May 17 and will be devoted to business.

At the dinner-meeting that evening, commemorating the 40th anniversary, the speaker will be Mrs. Walter H. C. Laves, Bioomington, Ind., member of the national league board. The topic will be "World Economic Development: A Problem in Working Together." Mrs. Laves is the wife of the chairman of the department of government at Indiana University and deputy director general of UNESCO from 1946 to 1950 and has a wide background of study and travel.

MRS. HOOPER, ORGANIZER

The State league was organized in 1920 by the late Mrs. Ben Hooper of Oshkosh, suffrage worker and civic leader, who also became its first president. In observance of the 40th anniversary at the dinner May 17, past State presidents have been invited to relate the most interesting event of their respective terms. Those planning to attend are Mrs. Henry G. Meigs, West Allis, 1939-41; Miss Caryl Regan, Madison, 1950-52; Mrs. Alf Gundersen, La Crosse, 1952-54, and Mrs. Marshall Beaugrand, Racine, 1954-58.

Mrs. L. M. Warfield, Milwaukee, daughter of Mrs. Hooper, will relate some of her mother's suffrage experiences in working with Mrs. Catt.

League program items will have attention the afternoon of May 17 and the morning of May 18. Mrs. F. A. Mote, Madison, chairman of "State continuing responsibilities," will preside over the "program panorama," May 17, when items reviewed are: Reapportionment, State financing and tax system, human rights, veterans' bonus, public welfare, elementary and secondary school appropriations, integration of school districts, improvement in judicial system, higher education, and water policy. The current agenda items to receive attention at the workshops May 18 and their leaders will be, State finances, Mrs. C. W. Threinen, Madison, and county government under Wisconsin's constitutional and statutory provisions, Miss Clara Penniman, Madison.

SERVICE AWARDS

The general session speaker the morning of May 18 will be William L. Nelson, Milwaukee, a public management consultant, who will discuss "Community Renaissance—the Nation's New Challenge." Presiding will be Mrs. Willard Hurst, Madison, second vice president.

A feature of the luncheon May 18 will be the presentation of the community service awards to leagues whose local activities the last term best served their communities. Mrs. Smiley Boyd, Two Rivers, first vice president, will preside. Other awards will be given for the best convention display and the highest percentage of membership growth in the year.

Nominees for State board positions are: Mrs. Spencer Munson, Madison, president; Mrs. C. J. Debbink, Oconomowoc, first vice president; Mrs. L. L. Freeman, Racine, second vice president; Mrs. Hugh J. McLane, Fond du Lac, secretary; Mrs. Martha Hollenbeck, Green Bay, treasurer, and six directors, Mrs. Donald Clusen, Green Bay; Mrs. M. F. Crowley, Menasha; Mrs. Grover Grady, Beaver Dam; Mrs. Donald Putz, Middleton; Mrs. Harry J. Rose, West Allis, and Mrs. M. M. Sealts, Jr., Appleton.

Presidents of leagues in the Milwaukee area who will head their delegations are; Mrs. William Granert, Milwaukee; Mrs. Edward Wisnewsky, Wauwatoso; Mrs. Donald Krause, West Allis; Mrs. Emerson J. Van Patten, Whitefish Bay; Mrs. William Broderson, Elm Grove; Mrs. George G. Watts, Ozaukee County, and Mrs. Richard Witte of the provisional league of New Berlin.

Newly organized leagues, during their provisional period, do not send voting delegates but are entitled to participate in other convention activities.

Mail Service

EXTENSION OF REMARKS

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert a letter from the mayor of one of the more progressive towns in my district.

This letter concerns itself with the current chaotic state of the mail service in this vicinity due to the discontinuance of two mail carrying passenger trains which operated between Chicago, Ill., and Omaha, Nebr. I requested that the Interstate Commerce Commission hold a hearing on the discontinuance of these trains in the town of Carroll. At this hearing the people of the area protested the ending of this train service and expressed fear and concern over the impact this would have on their mail service. The testimony given at that time by representatives of the Railway Express Agency and the Post Office Department, which is referred to in the mayor's letter, led everyone to believe that the mail service would be as good or better than it was in the past.

I want my colleagues to read the examples of the present mail delivery service set out in the following letter and ask themselves if their businessmen and constituents would put up with such delays in the delivery of the business and personal mail? I think they would not.

This is only one of many, many examples of general hardship and inconvenience caused the public which I am sure could be cited as a direct result of the discontinuance of passenger train service throughout this country.

The letter follows:

CITY OF CARROLL, Carroll, Iowa, April 25, 1960.

Hon. MERWIN COAD, Member of Congress, Sixth District, House of Representatives, Washington, D.C.

DEAR REPRESENTATIVE COAD: In December of 1959, prior to Christmas, we had a hearing before the Interstate Commerce Commission relative to the discontinuance of trains Nos. 5 and 6 on the Chicago Northwestern Railroad Co. Mr. Wheeler, attorney for the Interstate Commerce Commission, was in charge of the defense, and the Northwestern Railroad was represented by their Chicago attorney and Mr. Davis, of Des Moines.

We were lead to believe by the testimony of Martin I. Sweeney, Railway Express Agency, superintendent of transportation; and Donald P. Haddock, of St. Louis, Mo., of the Post Office Department, connected with transportation planning and procuring office for the St. Louis region, that the service of both these agencies would be equal or better than had been given us while the trains were in

For your information, the service is not equal or better. It is my understanding that the Sunday papers arrive here about 10 in the morning and come by bus from Omaha. We have a great many complaints relative

to the Wall Street Journal in getting it a day late. The Chicago Tribune comes through and on an average of from one to two times a week it is somewhere from 1 to 2 days We are enclosing a copy from the transcript of the testimony of Mr. Sweeney and Mr. Haddock for your information, and after studying this copy it is my impression that you will know why we are complaining. At the present time, I presume that we are getting mail from Fort Dodge, from Perty, and by the postal road service. There is no mail being received by Carroll on Sunday from the east.

Many businessmen and professional men in Carroll have boxes at the post office in order to secure their mail. Consequently, we are at a disadvantage in the type of service we are receiving.

The local chamber of commerce has previously objected or raised a question as to the service that we are receiving and naturally in my opinion, the hearing before the Interstate Commerce Commission was more or less a farce and there is a question in my mind as to how much attention was paid to the testimony of witnesses from Boone, Jefferson, and Carroll.

In a hearing of this kind, there should have been at least three or four hearings along the railroad line in order to give the various communities an opportunity tend the meeting. The general attitude of the community that I contacted was in effect that the cards were stacked and it was useless to waste the time and energy of even attending the meeting. Evidence was brought out as to the type of service that had been given to the people of this community, condition of the coaches, the attitude of the employer and employees, the lack of facilities, and in spite of this, the railroad was permitted to discontinue the train. There was also testimony relative to railroad express cars, mail cars, dead storage mail cars, and other items, and in spite of all of this evidence, the representative of the Postal Department and of the Rallway Express seemed to lean toward favoring the attitude of the railroad and gave the indication that the service would be either equal or better.

The passenger service on the Northwestern Railroad was such as to discourage people from using their trains. This type of evidence was brought out in the hearing. It was shown that the general attitude and condition of the coaches was bad, the lack of water, lack of heat in the winter and lack of air conditioning in the summer, and I have never been able to understand how the railroad could state that they were losing money in the operation of a train which according to various checks made by me in the past, would carry from 15 to 22 cars, and of this number there never was more than 2 passenger coaches. The rest was mail, express, and baggage.

My reason for writing you at this time is for the purpose of calling your attention to the fact that the Interstate Commerce Commission should begin to take into consideration the welfare of the public at large, and insist that these railroads give a service to the public because many of these railroads originated by land grants from the Federal Government and the cities and towns along the Northwestern Railroad were mostly built by the same man that built the railroad. I presume that there is not a great deal that we can do but nevertheless, I am making this complaint on behalf of the people of Carroll and I feel that we are entitled to some consideration and action to improve the service which was implied by the Railway Express and Postal Department.

Very truly yours,

A. N. NEU, Mayor.

One-Millionth Migrant From Europe Comes to America

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. WILEY. Mr. President, at 10 o'clock this morning, the 1,000,000th migrant from Europe to a new home overseas was scheduled to arrive at Idlewild International Airport in New York. This is a significant event in our history.

Historically, the search of men and women for a new land, for freedom of speech, religion, press, association, and conscience-in essence, for a new lifebrought the Pilgrims and migrants and many others to the shores of America.

Inscribed upon the Statue of Liberty at New York Harbor are the words of Emma Lazarus which reflect-more, perhaps, than any formal laws-the welcoming spirit of the new land to migrants from the old world:

Give me your tired, your poor, your huddled masses, yearning to breathe free-The wretched refuse of your teeming shore; Send these, the homeless, tempest-tossed, to me.

I lift my lamp beside the golden door.

We recognize, of course, that as our population has increased it has been necessary to redefine immigration policies, not only to serve the original objective of providing new homes for people from other lands seeking a new life, but also to consider the impact which the influx of persons would have upon our own population, employment, our economy, and the Nation generally.

To those who forget that almost all of us are descendents of immigrants from other lands, however, we need to stress that the inflow of persons from abroad represents not merely "another mouth to feed" greater competition for jobs, a new social and economic burden; rather, these people of other lands historically have brought with them a wide variety of ingenious skills, new and old ideas, different cultures, often a greater respect for freedom than can be found here at home, and a wide variety of "positive factors" which have enriched our way of

The event of the arrival of the 1,000,000th migrant-Andrejs Surtis, a 10-year-old Latvian refugee boy-should, I believe, cause America to stop and think, to remember the enrichment which immigration has brought to this country, and to have a new awareness of the need for adopting a realistic immigration policy to meet the needs of mod-

ern times.

Recently, I was pleased to receive from John W. Hanes, Jr., a letter pertaining to the significance of this event. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
ADMINISTRATOR, BUREAU OF SECURITY
AND CONSULAR AFFAIRS,
Washington, April 29, 1960.

Hon. ALEXANDER WILEY, U.S. Senate.

Dear Senator Whey: I am pleased to inform you that on May 11 of this year—World Refugee Year—the Intergovernmental Committee for European Migration will transport its one-millionth migrant from Europe to a new home overseas. Andrejs Suritis, a 10-year-old Latvian refugee boy, the millionth migrant to be moved by ICEM, will arrive at Idlewild International Airport, New York, at 10 a.m. on May 11, 1980. Andrejs and his father will be en route to Kalamazoo, Mich., to join his mother and two younger brothers, who arrived in this country last year.

The Intergovernmental Committee (also known as ICEM) was founded at the initiative of the United States about 10 years ago. Since that time, the United States has strongly supported and participated in its operation.

ICEM and its 29 member governments can take pride in its accomplishments. It has moved I million migrants and refugees from Europe to find new lives in other parts of the free world. It has materially helped solve the problem of homeless refugees and surplus populations in Europe; and, in doing so, it has strengthened those free countries which have received its migrants.

Sincerely yours,

JOHN W. HANES, Jr.

Address by Hon. Basil L. Whitener Before Gaston County Democratic Convention, Gastonia, N.C., May 7, 1960

EXTENSION OF REMARKS

HON. ALTON LENNON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. LENNON. Mr. Speaker, on Saturday, May 7, 1960, our colleague, Hon. BASIL L. WHITENER, Representative from the 11th Congressional District of North Carolina, delivered the keynote address at the Gaston County Democratic convention held in Gastonia, N.C.

As one who has had the privilege on numerous occasions to visit Gaston County, one of North Carolina's banner Democratic counties, I can say that my only regret is that I was not able to be present with my many friends there at their convention. I know it must have been an outstanding affair, and I compliment our colleague upon the address which he made.

Since I feel that many of the facts contained in Congressman WHITENER'S speech will be of interest to Members of the House, I request unanimous consent that it be printed in the Appendix of today's Congressional Record:

Address by Basil L. Whitener, Member of Congress, 11th Congressional District, North Carolina

Mr. Chairman, fellow Democrats, and ladies and gentlemen, I consider it a high honor and a distinct pleasure to have the privilege to address this convention.

As a Gaston County Democrat, I know of no greater honor that could come to me than to have the opportunity to discuss our great party with you.

My friends, I share your great pride in being a Democrat. For being a Democrat is more than being a member of a political party. We Democrats share a unity of desire, a common purpose, and a zeal for a better America to which no other political party can lay claim.

We are truly the party of the great idealistic and humanitarian Jefferson. We are also of the party of that fighting American who spent his life in the service of the common, everyday American—our own indomitable North Carolinian, the great Andrew Jackson.

As believers in the ideals and principles of the party of Jefferson and Jackson, we have roots in the common heritage of our Nation that stretch back into history much further than any other political party existing today.

It is no accident of history that North Carolina Democrats have, since the very beginning of the United States, adhered to the philosophy and ideals of government exemplified by Jefferson and Jackson. In their desire to be of service to all of the people of our country these two great Americans were immune to the prejudices of sectionalism and the bitterness of class hatred.

Now, my friends, the Republican Party cannot lay claim to the type of heritage enjoyed by us. It came into being as a sectional party, a party born out of the strife and bitterness of a great internal conflict in American history. It has always been a sectional party, and the evidence of the past few years serves only too well to dramatize this fact in our minds.

My Democratic friends, there may be some in this audience who remember all to vividly what Republican sectional rule did to North Carolina and the South during the last century. Republicanism in North Carolina is a legend of misrule and outside intervention that must never again be repeated in the history of our proud State.

Now I want to talk a few minutes about the Republican Party and its lackluster record of service to the American people. History offers very little encouragement for those who search for a dynamic, progressive national administration within the Republican Party. The reason is very simple.

The Republican Party historically has been a party of complacency. The carefree administration of Tatt, the corrupt regime of Harding, the do-as-you-please administration of Coolidge, and the "who cares for the common man" philosophy of Herbert Hoover's ill-fated term as President are historical facts.

Complacency has always been the policy of the Republican Party when it has been in control of the destiny of our Nation. It was true in 1906, 1925, and it is true today.

I was amazed last year when I read in the February 14 edition of the New York Mirror a statement by Republican Senator AKEN of Vermont. He seemed to express the general feeling of disenchantment shared today by many Republicans within their party.

Senator Aiken said: "Unless the Republican Party demonstrates greater faith in the future of America than it has been doing recently, we cannot expect the voters to have faith in the Republican Party, and we cannot expect to win elections."

My friends, I think Senator Alken very ably summed up the basic weakness of the Republican Party in his statement. We don't have to be a U.S. Senator to know that the Republican Party has no faith in the future of America. This wait and see—this policy of drift and wish for a miracle in Government—of the present administration, has cost the American people billions of dollars during the past 8 years and has

seriously impaired the security of our country. The Republican Party has consistently said that we are the party of the do-gooders, the party of the spenders, and the party of fiscal irresponsibility. On the other hand, the Republicans have never lost an opportunity to proclaim that they are the businessman's party and the party of financial integrity and economy in Government operations.

Well, as Al Smith used to say, "Let's look at the record." Let us take a look at what our Republican financial wizards have done to our country.

From 1789 through 1952—a period of 163 years—the cost of operating our Government, including all of our great wars and our bitter depression, amounted to \$808,517,385,381. From 1953 through 1959, however, the present administration spent the staggering sum of \$495,222,848,970. Thus, the last 6 years of national Republican rule has cost this Nation more than half the amount of money it took to operate our Government for the first 163 years of our history.

Can you call that fiscal responsibility? Is that an example of a businessman's government?

Let us examine the record again. The cost of carrying the national debt is the second highest expenditure of the Federal Government, exceeded only by our expenditures for national defense. You will be amazed to know that the interest charges on the national debt have increased from \$6,240 million under Mr. Truman in 1952 to \$8,456 million under the present Republican administration in 1959. This is an increase of 36 percent in 7 years.

At the same time, there has been a steady increase in our national debt. In 1952 our national debt was \$267,400 million. In December 1959 the gross public debt of the United States stood at \$290,900 million.

We hear our Republican friends talk about a balanced budget, and well they might talk about such a budget. The fact is that a balanced budget is something unknown to the present Republican administration. It has set an alltime high of budget deficits in peacetime. In 1959 the deficit was \$12,500 million. By contrast, President Truman achieved a net surplus of over \$4 billion during 4 peacetime years of his administration.

The truth about the matter is that although the Republican Party has proclaimed to the world that it is the party of fiscal stability, it is actually the party of bankruptcies and business failures.

Let us look at the record again. The 70,049 bankruptcies under Mr. Hoover in 1932 made a 56-year record. This record was not broken until 1957 when 73,761 bankruptcies occurred. Bankruptcies in the fiscal year which ended June 30, 1959, totaled 100,672. This is the record for all time. The previous alltime high came in 1958 when there were 91,663 bankruptcies.

Our Nation has been allowed to drift dangerously near the brink of economic disaster under the present national administration. With business failures and Federal taxes at an alltime high, we are witnessing a steady increase in inflationary pressures. As the value of the dollar decreases, the cost of living continues to rise.

Since 1952 the cost of living has increased 10 percent. Consumer debt in our Nation is up 83 percent. Installment debt is up 100 percent, and personal loans have increased by an alarming 136 percent.

To the American farmer, Republican control of the National Government has meant economic hardship. Farm income is down 25 percent since 1952. The purchasing power of the farmer is at its lowest point since the 1930's.

The rural depression of the 1950's has spread to many small businessmen, professional people, and workers in service trades and industries whose economic base is agricultural income. Six Republican vetoes of Democratic farm bills have thrown the American farmer and his family into deep eco-

nomic distress.

In just 6 years Agriculture Secretary Benson has spent more than \$31 billion. You will be astounded to learn that in this short period of time he has spent more than all of his predecessors in that office have spent since the Department of Agriculture was created 97 years ago. The size of surplus commodities in Government hands has been multiplied over seven times to almost \$8 billion. And, in passing, I might add that the payroll of his Department has been increased from 65,000 employees in 1952 to over 85,000

The American farmer deserves a better deal than that which he has secured under the present national administration. Unless there is a radical change in our farm policles the future is indeed gloomy for this great segment of our population.

The domestic economic picture is certainly not a pleasant one under this Republican

administration.

There is another area wherein this administration has failed to keep faith with the American people. I refer to our foreign policy and our efforts to have a strong national defense against foreign aggression.

When Mr. Truman left the White House, the United States was the strongest nation in the world. Our military power was not questioned. During the past 8 years, however, we have drifted dangerously close to the point where our national security is

threatened. Gen. Thomas D. White, Chief of Staff of the U.S. Air Force, says: "The United States is behind the Russians in developing intercontinental missiles." And Dr. Von Braun, Chief of the Army Ballistic Missile Agency's Development Operations, has stated, in speaking of the Russians: "The frightening thing is their rate of progress. It will take 5 years to catch the Russians." I give you these statements, not to alarm you, but because I feel you should know what these great leaders have said about the state of our national defense.

Mr. T. G. Lanphier, Jr., who was Special Assistant to the Secretary of the Air Force from 1949 to 1950 and Special Assistant the Chairman of the National Security Resources Board from 1950 to 1951, made a speech on March 29, 1960, to the National Press Club in Washington, D.C., in which he

made this significant statement:

"We are not sufficiently armed in any one of these categories: an invulnerable deterrent; a limited war deterrent; or a Home Guard-let alone all three. The fault for this lies basically with all of us. Yet the person who represents us, and who is responsible to us for our defense, is the President. Over the past years, with the best intentions in the world, he has led us to a point where we are in jeopardy of our national life."

Mr. Lanphier's statement takes on added significance when we consider a recent statement by Khrushchev. The Soviet leader said: "The people of the United States have The Soviet leader never fought in their own territory. must understand that the next war will not be fought in Africa, or Europe, or Asia, but from the very outset it will be fought on United States soil."

This statement by Khrushchev carries a threat that can only be met by a strong and well-armed America. If for no other reason than to protect our very security, the American people should overwhelmingly support a change in our present national administration.

The foreign policy of the United States has also followed a complacent "wait and see" course. We have attempted to buy friends overseas through billions of dollars in foreign aid. During the present administration over \$41 billion of the American taxpayers' money has been spent overseas in connection with various foreign aid programs.

This has proven to be an unwise and un-realistic policy. We have only to look at what has happened recently in Korea and Turkey to realize the truth of this statement.

We need a strong firm hand at the helm of our State Department. Unless the American people bring about a change at the next general election in the national administration, I can only see a continuation of our present rapidly deteriorating influence in world affairs.

Vice President Nixon indicated recently that he differs with the administration's policies on some national issues, but he says that he will not spell out the differences until he has been named the Republican candidate for President. "Only when I become the nominee can I appropriately express individual views that I might have," said Mr. NIXON.

I might add that Mr. Nixon's position is shared by many prominent officials in the national Republican administration. know that the course of their administration is not in keeping with the best interest of the American people. Through lack of leadership at the highest level, however, these Republicans are powerless to reverse the trend of events.

We Democrats, however, have it within our power to reverse the present unhappy course of events in our Nation's history. a party we can go to the polls this November and elect a national administration that will express the will of all of our people. We can, by our efforts, place in power an administration that will again make the United States the strongest and richest Nation on earth.

The time is growing short. Unless the present course of events is altered I fear that in the near future we will find ourselves in the position of a second-rate power among the nations of the world. If that unhappy event should ever occur, our security and our liberty will be at an end.

We can secure a great victory this fall. We must secure a great victory for the preservation of our American way of life. Let us all exert our maximum effort toward success in November.

I thank you.

Milk and Honey-Mud and Mire

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. KEFAUVER. Mr. President, the Elizabethton Star, a daily newspaper in my State of Tennessee, in its May 3, 1960, issue, commented editorially on an attack against the Tennessee Valley Authority delivered recently by a Member of the other body. I think this edi-torial cuts through a lot of deliberate fables about what TVA was aimed at doing, and what it did. It also hints at the reason behind much TVA criticism. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COME ON DOWN

That Ohio Congressman-what's his name?—doesn't know much about Tennessee or about the Tennessee Valley Authority. But he certainly is acquainted with industrial economics.

He knows full well that many industries in the North, which includes Ohio, we believe, have looked and are looking to the South as they contemplate new plants-or outright moves.

He knows, too, that we in the South have much to offer-good climate, good industrial land, good labor. Industry wants to take advantage of these benefits, and industry is coming South to do just that.

This, of course, is what rankles that Congressman from Ohio. So, since he can't admit this, he takes a different approach. He attacks TVA on grounds that the agency has failed to create a "land of milk and honey" in the region it serves and that this failure has resulted in the need for Federal assistance in bring new industry into the area to reduce unemployment.

For the Congressman's information, TVA was not designed to create a "land of milk It was designed to prevent the and honey." region from becoming a "land of mud and mire," wasting away under the rolling waters

of recurrent floods.

TVA has accomplished this task admirably. At the same time, we have enjoyed benefits from the power-producing facilities of TVAand we are perfectly happy to have others enjoy them, too. All that's necessary is to come to Tennessee and, in the case of the Ohio Congressman, at least, bring your industries with you.

Col. Albert E. Herrmann

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. DAGUE. Mr. Speaker, it is an honor and a privilege for me to take this occasion to pay tribute to an outstanding citizen and veteran leader of my home State of Pennsylvania—a stanch American who has given much of his energies and devoted service to the betterment of our Nation and its veterans.

This distinguished citizen is Col. Albert E. Herrmann of Philadelphia, Pa., and it seems particularly appropriate to recognize his outstanding contributions to the general welfare on this occasion since tomorrow is his natal day when he will celebrate the 61st anniversary of his birth.

Pennsylvanians are indeed proud of Al Herrmann's record of service in veteran circles. Starting with yeoman service as post commander of the George H. Imhof Post No. 153, the American Legion, of Philadelphia, in 1921 and again in 1926, he has steadily broadened his sphere to include service in Philadelphia County Committee of the Legion—on which he has served as a delegate for 40 years-in the capacity of county adjutant, county treasurer, and culminating in county commander in 1945-46. For the past several years he has been chairman of the county committee's rehabilitation and hospital visitation committees and in addition has

found time to serve as executive secretary of the Post County Commanders Association of the Legion in Philadel-

In 1930–31 Colonel Herrmann served as national commander of the U.S. Army Ambulance Service Association and at present is serving as national service and hospital welfare officer of the U.S.A.A.C.'s. In World War I he served with section 567 and Headquarters Company 650 of the U.S. Army Ambulance Service with the Medical Corps, in which he was wounded, and because of those wounds is today listed as a totally disabled veteran. During World War II he served with Draft Board No. 27 in Philadelphia. He has been active in the DAV of World War I, the Military Order of the Purple Heart, and the Philadelphia Municipal Employees War Veterans Association.

In the Historical Old Guard, city of Philadelphia, he served as colonel commanding from 1938 to March 1955, and since then he has served as executive officer of that organization. As a member of the Centennial Legion of Historic Military Commands of the Thirteen Original States, he has served as the delegate to this historic military organization, and in 1956 was elected national director of the C.L.H.M.C. and has been reelected each year by the centennial legion.

Colonel Herrmann has been an active member of the West Philadelphia Republican Club of the 27th ward of Philadelphia, and served the city of Philadelphia as its deputy city controller. Under Mayor S. Davis Wilson, he served a term as assistant director of supplies and Durchases, and while serving in that office, Colonel Herrmann was honored by many civic organizations of Philadelphia for his work in charge of the upper Pennsylvania flood relief work, and his management of the Philadelphia flood relief force in Louisville, Ky.

In his community of the 27th ward of Philadelphia, he has served on many community welfare service agencies as ward chairman of the Red Cross, Salvation Army, and Community Chest drives.

On Colonel Herrmann's birthday in 1935, Hon. Marcel De Verneuil presented to Colonel Herrmann the decoration of Officer d'Academie by the French Government at the Penn Athletic Club.

Throughout his very active life, Colonel Herrmann's accomplishments have been many, but I would like to call particular attention to one endeavor that might well be emulated in other areas of our Nation.

During World War II and the conflict in Korea, right down to the present, he has been mailing magazine subscriptions to our Armed Forces hospitals overseas, as well as to U.S. Veterans' Administration and Armed Forces hospitals in this country, thereby bringing sunshine and get well greetings throughout the year to our disabled and hospitalized service people. This work of bringing sunshine to our disabled veterans is a service embracing all Government hospitals, and includes stamps so that the hospitalized veteran can keep in touch with his loved

On behalf, therefore, of his many friends and admirers I would like to extend to him, his lovely wife, and his charming daughter our best wishes for an abundance of good health and continued opportunities for fruitful service in the years ahead.

Pioneering by United States in World Accomplishments

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. WILEY. Mr. President, the Nation. I believe, can be deeply gratified by the succession of successes we have had in space pioneering, and other fields.

Unfortunately, the upcoming summit-as well as the hullabaloo over the plane incident over the Soviet Unionhave resulted in obscuring major accomplishments by this country.

However, I do not believe we can afford to let these go by unnoticed. Specifically, I refer first, to the almost miraculous success by the Space Agency in reaching out 8 million miles into space to turn on the radio transmitter of Pioneer V to radio messages back to earth.

In itself, this feat is unparalleled in history.

Second, the U.S. atomic submarine, Triton, has just completed a complete encirclement of the globe, submerged in the ocean.

Covering 36,000 miles in 84 days, the A-sub and its gallant, heoric crew, succeeded in providing our country with another "first" in such accomplishments.

The Space Agency, as well as the armed services-more particularly, the crew of the Triton-deserve the national gratitude for these splendid feats.

At this time, I ask unanimous consent to have two articles printed in the Appendix of the RECORD: First, a statement by the National Space Agency delineating the "long reach" out into space to provide us with radio signals back to earth; and second, an article from to-day's Washington Post containing a brief review of the round-the-world trip by the atomic submarine, Triton.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

PIONEER V 150-WATT TRANSMITTER TURNED ON AT 8 MILLION MILES

The powerful 150-watt transmitter aboard the U.S. interplanetary spacecraft Pioneer V was commanded on for the first time at 5:04 a.m., eastern daylight time, today and worked satisfactorily.

It was a good clear transmission, lasting about a minute and a half.

The command signal was sent from the 250-foot radio telescope at Manchester, England, when the spacecraft was some 8,001,000 miles from earth. About one and a half minutes later—the time it took the signal to travel to the spacecraft and the probe's response to return to earth-Manchester received the first 150-watt transmission.

'This is truly a historic event and yet quite in character with the other accomplishments of this amazing spacecraft," said NASA Administrator T. Keith Glennan. "We are certain that the world's scientific community shares our elation over this new success of Pioneer V.

"To our British colleagues at Manchester, directed by Professor Lovell, we extend our hearty congratulations on their magnificent tracking-communications achievement.

"Our congratulations also go to the many, many contractors involved in this interplanetary experiment. A special pat on the back is due the Space Technology Laboratories, Inc., for an outstanding job of payload

packaging and tracking."

Since launch at Cape Canaveral, Fla., March 11, the 94.8-pound probe has been telemetering to earth scientific information daily via a 5-watt transmitter. Early Saturday when it was apparent that the 5-watt unit had nearly reached its transmission limit, it was decided to attempt to energize the 150-watt transmitter, believed to be the largest ever operated in space.

This called for a three-step sequence. First a signal was sent to the spacecraft from Manchester at 5 a.m. yesterday which put power into tube filaments through a current-limiting resistor, thereby warming the filaments for about a minute.

At 11 a.m., eastern daylight time yesterday, the first step was repeated and a second command was sent which removed the current-limiting resistor and supplied full filament heating for several minutes. The circuit passed both tests successfully.

Finally, at 5:03 a.m., eastern daylight time, this morning, Manchester sent the final command in the three-part sequence. This energized the 150-watt transmitter as well as an electric converter serving it, both of which had remained idle in the "hard" vacuum of space since launch, undergoing constant radiation.

The 150-watt unit measures about 7 by 5 inches and consists of two amplifier tubesabout the size of those found in most household radios-along with capacitors, coils, and resistors. The entire package weighs 5 pounds.

Because of the enormous power drain imosed on the system by the 150-watt unit, the big transmitter is being operated only about 2 to 3 minutes every 6 to 8 hours.

Manchester can now receive data at the rate of either 8 or 64 bits per second. For the past few weeks, Manchester and the 60foot South Point, Hawaii, tracking dish have been operating at only one bit per second owing to multimillion-mile distances and the weakening signal strength. Hawaii will continue to command the spacecraft at a rate of one bit per second.

Power for the probe comes from 4,800 solar cells in four arms jutting from the 26-inch spherical package.

The solar cell output constantly charges 28 chemical batteries, the size and shape of standard flashlight batteries only a great deal more powerful. These in turn power more than 40 pounds of experiments, electronics, a receiver, transmitters and assoclated logic units.

At this time it is impossible to predict how long the spacecraft will continue to relay information. In recent weeks, a minor component failure has been noted and compensated for. Also some slight deterioration in the batteries has been observed, possibly the result of leakage in the vacuum of space.

By any measure, however, the probe has stamped itself a true pioneer of interplanetary space.

To date the probe has returned more than 109 hours of data on cosmic radiation, charged particle energies and magnetic field phenomena. In 2 short months, the probe has overturned well entrenched theories about solar flare effects and the extent of the earth's magnetic field.

The probe was launched under the direction of the National Aeronautics and Space Administration with executive management supplied by the Air Force Ballistic Missile Division (ARDC).

THIRTY-SIX THOUSAND MILES IN 84 DAYS-U.S. SUB CIRCLES GLOBE SUBMERGED

(By Edward T. Folliard)

A nuclear-powered submarine, the U.S.S. Triton, has traveled round the world under water.

The announcement was made yesterday at the White House, where President Eisenhower awarded the Legion of Merit to Capt. Edward L. Beach, the Triton's skipper.

A Pentagon official said the Triton's circumnavigation of the world, following approximately the voyage charted by Ferdinand Magellan in 1519-21, was intended to give a boost to America's prestige in advance of next week's summit conference in Paris.

The Triton's journey ended, however, at a time when most of the world was looking toward Moscow, where Soviet Premier Nikita S. Khrushchev was raising a storm about an American spy plane and saying its invasion of Soviet airspace was "aimed at wrecking the summit conference."

President Eisenhower did not seem upset by the thunder from Moscow as he congratulated Captain Beach, a former White House naval aide, pale after his journey of about 36,000 miles in 84 days under the sea. (The Magellan expedition took about 3 years.)
The citation that went along with the

Legion of Merit awarded Captain Beach said the Triton's voyage had proved "man's ability under trying conditions to accomplish prolonged submerged missions" and had made possible the testing of new and com-plex equipment in the world's largest submarine.

'This historic voyage," the citation continued, "took his ship into strange waters under difficult and frequently unknown conditions. As a result, the Triton collected much valuable oceanographic information."

The Triton, largest and most powerful submarine ever built, was commissioned on November 10, 1959. She began her trip around the world as a shakedown cruise, starting out with a dive off Montauk Point Long Island, on February 16. She surfaced yesterday morning off Rehoboth, Del., where Captain Beach was picked up by a heli-copter and flown to Washington.

The 7.750-ton submarine broached-partially surfaced-twice during the cruise. The first time was on March 5, off Montevideo, Uruguay, when it became necessary to transfer a critically ill chief petty officer to the cruiser U.S.S. Macon. The second time was off Cadiz, Spain, on May 2.

The Triton already had circled the globe, and Captain Beach wanted to pay homage to Magellan, who sailed from Cadiz flying the flag of Charles V of Spain.

For the remainder of the voyage, the Triton was submerged, mostly

periscope depth.
Said the Navy Department:
"The submarine salled from Montauk
Point directly to St. Paul Rocks, a group of small, rocky islands about 55 miles north of the Equator and northeast of the eastern tip of Brazil. This was the reference point for the actual circumnavigation, the point to which Triton was to return before proceeding to Cadiz.

left St. Paul Rocks on February 24, intending to round Cape Horn in about 9 days. Off the Falkland Islands, she changed course to rendezvous with the Macon and transfer the crewman who was suffering from kidney stones. This put her several days behind schedule and added some 2,000 miles to her voyage.

"Rounding Cape Horn on March 7, she set a course for Easter Island, passed about 1,200 miles south of Hawaii, and arrived off Guam on March 28. The previous day she had paused to hold memorial services as her track passed about 100 miles from the spot where the first U.S.S. Triton is presumed to have been lost on March 15, 1943, as a result of a Japanese depth-charge attack.

"Leaving Guam, Captain Beach sailed the submarine to the Philippine Islands, passing near Magellan Bay on Macton Island, where the 16th century navigator was killed.
"The submerged circumnavigation com-

pleted, Triton sailed to a point off Cadiz, broached the surface briefly, and then returned submerged to the United States.'

In the course of the 84-day voyage, 42 members of the crew received word of advancement in rank or rating, 8 became fathers, 1 reenlisted and 1 extended his present enlistment.

Amendments to the National Housing Act

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. McDONOUGH. Mr. Speaker, I have today introduced three amendments to the National Housing Act which will improve the administration of this act and also add some fiscal responsibility to the operation of the act. I submit herewith an explanation of these amendments.

A BILL TO AMEND TITLE I OF THE NATIONAL HOUSING ACT

This bill would make permanent the Federal Housing Administration's title I property repair and improvement program and would remove the dollar limit on its loan insurance authorization. Under present law the program will expire on October 1, 1960, and the amount of insured loans which may be outstanding is limited to \$1.750 million. The bill would make no changes in the operations of the program itself.

Under this program the FHA insures qualified lending institutions against loss, within prescribed limits, on loans made to finance repairs, alterations, and improvements in connection with existing structures and the building of new nonresidential structures. The maximum maturity of these loans is either 3, 5, or 7 years, depending on the size and purpose of the loan. FHA's liability to an institution is limited to 10 percent of the total amount of all title I loans made by that institution. Also, under coinsurance provisions enacted in 1954, FHA's liability on each individual loan is limited to 90 percent of the loss.

Prior to the enactment of title I in 1934, improvements to existing homes had, as a rule, proved difficult to finance except at very high interest rates. Real estate mortgage financing, on the one hand, is too cumbersome, slow and expensive for the relatively small sums involved. Personal installment credit, on the other hand, does not adequately meet the credit needs in this field for a number of reasons. The items involved in a modernization job, such as a new roof or a new bathroom, cannot be covered by a chattel mortgage. Also, manufacturers of the products used are generally not in a position to help provide the credit involved, partly because the many materials used generally come from from a number of different sources, and partly because, in property repair and improvement work, the cost of labor at the site of the property being improved makes up a very large part of the total cost of the job. Finally, the people who do the repair work are very frequently self-employed artisans or small firms who are unable to extend much These inherent and continuing credit. difficulties, which are not present in the financing of such products as automobiles and television sets, have been largely overcome by the FHA property repair and improvement program.

Title I has now been in operation for 25 years and during that time has demonstrated its basic soundness. Over 23 million loans amounting to about \$12.5 billion have been insured. About 2.6 million of these loans are now outstanding. Over 1 million loans were insured in 1959 in a total amount of about \$1 billion. Insurance losses during the entire life of the program have amounted to well under 1 percent of the aggregate loan amounts, and premium income has been sufficient to cover both these losses and FHA's operating expenses and to provide adequate insurance reserves as well.

The program has also been especially helpful in urban renewal and rehabilitation, as it encourages the repair and conservation of existing properties and the prevention of blight. This will be of increasing importance as more of our cities emphasize urban rehabilitation and code enforcement.

In the past a great deal of unnecessary uncertainty and confusion has resulted among lenders and dealers when faced with frequently recurring expiration dates of the program. Lenders cannot successfully participate in the program unless they establish specialized facilities for making the loans, for investigating dealers from whom they intend to purchase notes, and for making collections. When faced with frequently recurring expiration dates, it is difficult for lenders to make long-range plans for carrying on these operations. Similarly. many home-repair firms finance major portions of their business through the FHA program so that a disruption, or even a threatened disruption, in this program results in substantial hardship for them. On several occasions the enactment of continuing legislation has been delayed until the expiration date was either very close at hand or until the program had actually expired.

Making the program permanent by removing the date and dollar limitations would avoid these unnecessary hardships. The Congress can, of course, still terminate or modify the program whenever it believes that changed conditions warrant such action.

The extension of the program during this session of the Congress is necessary because of the October 1 expiration date. An increase in the authorization is also needed, since it is estimated that the present authorization will be exhausted before September of this year.

BILL TO AUTHORIZE INCREASE IN TREASURY BORROWING FOR MORTGAGE PURCHASES IN FNMA SPECIAL ASSISTANCE FUNCTIONS

Under existing law, the FNMA borrows funds from the Treasury to purchase mortgages under its special assistance functions. These functions include the purchase of special classes of mortgages designated by the President.

This bill would provide authorization for increases, to be made from time to time in appropriation acts, in the maximum amount of these mortgage purchases. Future borrowings from the Treasury to obtain funds for these purchases would be added to the now existing revolving fund and would remain available and be used in the same manner as funds borrowed in the past, and interest would be paid thereon in ac-cordance with present law. Current estimates of activity in the program indicate that \$150 million will be required for commitments and purchases in fiscal Year 1961, principally in support of the urban renewal and relocation housing programs under sections 220 and 221 of the National Housing Act.

BILL TO AUTHORIZE INCREASE IN TREASURY BOR-ROWING FOR PUBLIC FACILITY LOANS

Under existing law, the funds used by the Housing Administrator to make loans to communities for public facilities are borrowed by him from the Secretary of the Treasury. This bill would provide authorization for increases, to be made from time to time in appropriation acts, in the amount which the Housing Administrator may borrow for this purpose. Such future borrowings would be added to the now existing revolving fund and would remain available and be used in the same manner as funds borrowed in the past, and interest would be paid thereon in accordance with present law. Currest estimates of activity under the public facility loan program show that the present maximum amount of borrowings-\$100 million-will be entirely obligated early in fiscal year 1961. The proposed legislation would permit borrowing of an additional \$100 millionwhen authorized in appropriation actsestimated to be required to finance the Public facility loan program through fiscal year 1963.

What Kind of President Do You Want?

EXTENSION OF REMARKS OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. JOHNSTON of South Carolina. Mr. President, I hold in my hand a clipping from the New York Times of Wednesday, May 11, entitled "What Kind of President Do You Want?" writ-ten by Mr. James Reston. The first two paragraphs read as follows:

The tragedy of President Eisenhower in the spy-plane case is that he and his colleagues have created almost all the things he feared the most.

He wanted to reduce international tension and he has increased it. He wanted to strengthen the alliance and he has weakened it. He glorified teamwork and morality, and got lies and administrative chaos.

I ask unanimous consent that the entire article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

> WHAT KIND OF PRESIDENT DO YOU WANT?-III

(By James Reston)

WASHINGTON, May 10 .- The tragedy of President Eisenhower in the spy-plane case is that he and his colleagues have created almost all the things he feared the most.

He wanted to reduce international tension and he has increased it. He wanted to strengthen the alliance and he has weakened it. He glorified teamwork and morality, and got lies and administrative chaos.

Everything he was noted for-caution, patience, leadership, military skill, and even good luck-suddenly eluded him precisely at the moment he needed them most.

And the paradox of it all is that, despite the wonder of the world, there is an ele-ment of reason and even of inevitability in

the whole melancholy story.

This is the main point at a time when the Nation is picking a President for the sixties. For the heart of the problem here is that the Presidency has been parceled out, first to Sherman Adams, then to John Foster Dulles, and in this case to somebody else-presumably to Allen Dulles, but we still don't know.

INSTITUTIONALIZED PRESIDENCY

From the "personalized Presidency" of Jackson, Lincoln, Wilson, and the two Roosevelts we have passed to the "institu-tionalized Presidency" under Eisenhower. It has some good points, but it disperses authority, removes the President from many key decisions and leaves the Nation, the world and sometimes even the President himself in a state of uncertainty about who is doing what.

Long before the spy-plane case some of the Nation's most distinguished historians noted this trend.

"To a far greater degree than any of his predecessors," wrote Edward S. Corwin of predecessors," wrote Edward S. Corwin of Princeton in "The President—Office and Powers," "President Eisenhower has employ-Powers, "President Eisenhower has employ-ed the Cabinet as an instrument of collec-tive policymaking. * * * Each member is expected to assume full responsibility for the conduct of the affairs of his depart-

"Each of these gentlemen, according to the to the President, is an independent officeholder with his own views of appropriate policy, with which the President has no warrant to interfere."

It may be going far to say that the President felt no "warrant" to interfere with the established policy of aerial intrusion over the Soviet Union, but there no doubt exists here what Professor Corwin calls an air of presi-dential "detachment," an attitude of "reign-ing rather than ruling" and relying on the staff to carry on established policies even when new conditions, such as an impending summit meeting, intervened.

THE CENTRAL POINT

Prof. Walt W. Rostow, of Massachusetts Institute of Technology spells out the prob-lem in "The United States in the World

"For whatever reasons-diffidence, uncertainty, or inner convictions-" he wrote, "President Eisenhower did not impose his own insights, his own sense of direction on the Nation's policy.

"He remained loyal not to his views of substance but to his principles of administration. He decided, in effect, only when his immediate subordinates could not. He maintained the kind of relationship [with the Cabinet] he had built up during the war with Alexander, Montgomery, and Bradley-a relationship in which, within the agreed strategy, the field operator was given maximum scope."

maximum scope."

Here, perhaps more than anywhere else, lies the explanation of the spy-plane confusion. The field operator was given "maximum scope." There was an "agreed strategy" in Washington, but the specific operation was not authorized by the President, or even on the President's mind until the crash.

The President, in short, was loyal to his subordinates and to his principles of administration, but the tragedy is that he "did not impose his own insights, his own sense of direction in the Nation's policy."

By nature no man could be less inclined

than Eisenhower to risk a provocative adventure into the Soviet Union just before perhaps the last Big Four summit meeting of his career, or to say when it was done that it had not been done, or to insist in the end that he would do it again.

This is why it is a tragedy. For in an instant of savage misfortune he was caught in a system of his own choosing, and the question now is whether this concept of the Presidency is adequate for the sixties.

Blind America

EXTENSION OF REMARKS OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. GROSS. Mr. Speaker, there is evidence of a growing awareness throughout the Nation that the foreign trade policies of the U.S. Government are taking us into deep trouble.

An editorial in the Mason City (Iowa) Globe-Gazette of May 6, 1960, points out how and why "America is pricing itself out of not only the world market but altogether too great a proportion of our own market."

The Globe-Gazette might have cited another example—one of many—of how American industry is being penalized; a loan of \$5 million from the redevelopment loan fund to the Government of Yugoslavia for the purchase of 20 diesel railroad locomotives. This is another of those "soft" loans which means that if ever repaid it will be in Yugoslav dinars and these, by agreement, cannot be taken out of the country. The "loan" is at 3½ percent interest. But to cap the sheaf of this deal, the locomotives are being purchased abroad.

There will be a growing number of depressed areas in this country and increasing demands upon Congress to open the Federal Treasury for the spending of hundreds of millions of dollars for the relief of these areas unless prompt action is taken to revise foreign trade and foreign lending policies.

"That is as plain as the nose on your face," says the Globe-Gazette editorial

and I ask that it be reprinted in full at this point in the RECORD:

WHAT'S HAPPENING TO FOREIGN TRADE?

The growing threat to American industry—and American jobs—is forcefully demonstrated by what has happened in the case of four familiar, typically American products: Sewing machine, automobile, bicycle, typewriter.

The sewing machine was an American invention and for many years monopolized the world markets. But last year this country exported 20,000 sewing machines and imported more than 2 million. The old order has completely changed in this field. As recently as 1953 this country imported

As recently as 1953 this country imported only 29,500 automobiles. Last year the figure was 668,070. Ironically, a substantial proportion of the imports were cars made by American firms which have established plants abroad.

Bicycles have been described as an American development in their finest form, but last year we imported nearly 600,000 of them

while exports were practically nil.

As for typewriters, this country exported only 55,000 units but imported 370,000. America's preeminence in that field of trade has declined to the point where foreign interests have ever taken over a big American typewriter plant which apparently couldn't make a go of it.

The corallary of and explanation for all that has been related here is that America is pricing itself out of not only the world market but altogether too great a proportion of our own market. Blind indeed is the person who can't recognize this. It's as

plain as the nose on your face.

Visits to U.S. Parks and Forests Set Record

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1960

Mr. WILEY. Mr. President, the preservation of our forests as well as park resources is essential for: First, conserving soil, water, forest, fish and wildlife and other resources. Second, retaining outdoor lands as significant features of America's landscape. Third, providing recreational areas for our people.

Today, 181 million acres of national forest lands and 183 areas are administered by the National Park Service.

Last year more than 144 million visitors utilized these outdoor forest and park lands.

As our population increases—and urban, suburban, and industrial areas expand—our parks and forests become increasingly significant, not only economically, but also as vacation lands for the people of the country.

Recently the Milwaukee Journal published an informative article on the tremendous way in which the American people are going out of doors. I ask unanimous consent that the article may be printed in the Appendix of the Reconp.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, May 8, 1960] RECORDS SET FOR U.S. PARK, FOREST VISITORS

Washington, D.C.—The American vacationer set a record for Federal recreation area visits last year and probably will exceed it in 1960. The two principal barometers of visits to Federal recreation areas are the Agriculture Department's Forest Service and the Interior Department's National Park Service.

In 1959, 144,333,000 visits were made to the 181 million acres of national forest lands and to the 183 areas administered by the National Park Service.

The Forest Service said visits to the national forests hit an all-time high of 81,521,000—the biggest gain of any single year since 1946. They rose 19 percent over the 68,400,000 visits in 1958. In comparison, the gain in 1958 over the previous year was 12 percent and in 1957 it was 16 percent.

NATIONAL PARK TOTAL

The National Park Service said travel to the 29 national parks and the 154 other areas administered by the Service rose to 62,812,000 in 1959, an all-time record and an increase of 4,315,000 over the number recorded in 1958.

Forest Service officials said the greatest use increase occurred in undeveloped areas, where 1959 visits were up 33 percent from 1958. The officials were disturbed at their trend because much of this use was caused by lack of space at developed camp and picnic grounds.

Latecomers who could not find a space at established areas set up camp or picknicked where there were no facilities to protect public health or fireplaces for protection against forest fires. The Service said that despite efforts to meet growing recreation demands, the increase in use continues to exceed capacity and serious overcrowding has resulted.

HUNTING AND FISHING

The Forest Service said some of the heavier use of undeveloped areas was due to the increased number of visits by hunters and fishermen. Such visits jumped from 17 million in 1958 to 20 million last year.

The most popular purpose for recreation visits was general enjoyment of the national forests. Picknicking, fishing, hunting, and camping followed in that order of popularity,

Areas Eligible Under the Depressed Areas Bill

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. WIDNALL. Mr. Speaker, last Wednesday when the House passed the Depressed Areas bill, an amendment was offered by the gentleman from Pennsylvania [Mr. FLOOD], making it necessary that an area have 6 percent or more unemployment at the time an application for assistance was made. The author of the amendment, as his sole explanation of the amendment. stated, "Mr. Chairman, this is merely a perfecting amendment. I do not want to make a speech about it. I submit it to the Chairman and I hope he will accept it." The amendment was adopted. I endeavored to obtain an explanation of the effect of the amendment, by seeking recognition, but did not receive it until after action was taken. I then stated, "Mr. Chairman, I should like to find out what this amendment does to the bill. I presume from what was said by the majority leader, he fully approved the original Spence bill as it applied to many areas throughout the United States. As I understand this amendment, it would materially curtail the number of eligible areas. I think it ought to be so understood." Mr. Chairman, I asked the Department of Labor to prepare a new list of the areas that would appear to qualify under the bill as it passed the House and the Senate and was sent to the President. In order that Members may have the benefit of this information, I will insert the new list at the conclusion of these remarks. The at the conclusion of these remarks. bill, as it came from the committee, made 192 industrial areas eligible. The bill as it passed the House with the Flood amendment, reduces that number to 143 areas. On that basis, if we had had three or four more "perfecting" amendments, we would have done away with the problem entirely.

I am sure Members will be interested in noting that included among the areas that must be declared to be depressed areas are Philadelphia, Pittsburgh, Detroit, Louisville, Kentucky, and Atlantic City. Inclusion of Philadelphia as a depressed area is of particular importance. That area's unemployed total of 119,300 persons exceeds the unemployed totalapproximately 100,000-in all 12 of the areas in Pennsylvania on which there is general agreement that they are areas suffering from chronic unemployment. In other words, the hard hit areas now must share with Philadelphia dollar for dollar the assistance that was supposed to go to the truly depressed areas. On a straight pro rata basis, Philadelphia would be entitled to slightly more dollars of assistance than all the depressed areas in the whole State of Pennsylvania.

The list follows:

Tentative list of urban areas that may qualify for Federal assistance as areas with substantial and persistent unemployment under various legislative proposals 1

¹ This listing is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a ² to 5-year period, generally extending through March 1960. Later data, now becoming available for some areas, could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual—basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

* Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on a bimonthly basis.

* Borderline.

* Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "smaller areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000, is not available in Washington on a consistent basis.

ATTACHMENT TO MAY 1960 TENTATIVE LIST OF ELIGIBLE URBAN AREAS UNDER PROPOSED AREA ASSISTANCE LEGISLATION

Summary of eligibility criteria used The administration (Kilburn) bill (H.R. 4278):

1. Unemployment is now 6 percent or more of the labor force discounting seasonal or temporary factors.

2. The annual average unemployment rate in the area has been:

(a) At least 50 percent above the national average for 4 of the preceding 5 calendar years.

(b) At least 75 percent above the national average for 3 of the preceding 4 calendar years.

(c) At least 100 percent above the national average for 2 of the preceding 3 calendar

Area redevelopment bill (as passed by Congress):

1. Unemployment in the area is now 6 percent or more of the labor force.

2. Local unemployment rates have been: (a) At least 6 percent during 18 of the preceding 24 months.

(b) At least 9 percent during 15 of the preceding 18 months.

(c) At least 12 percent during the preceding 12 months.

Ukrainian Rite Church Silent, but Not Dead

EXTENSION OF REMARKS OF

HON. NORMAN BRUNSDALE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. BRUNSDALE. Mr. President, one of the saddest tales following World War I was the destruction of the independence of the Ukrainian people of southern Russia. However, because of love for their institutions which they were permitted to retain for some years, they managed to endure the trials imposed upon them by a Communist govevrnment at Moscow.

When these institutions were gradually undermined and eventually destroyed, their suffering was complete. The final destruction so to speak of their church, the persecution of their priests, and finally the practical elimination of their church and its right to exist as such, was completed on April 10, 1945, when the Russian Communist Govern-ment arrested all Ukrainian Catholic bishops and the archbishop and put them in prison.

In the United States the Ukrainian Congress of America is a closely knit organization composed of people who have become citizens of our land, respected

and God-fearing people. In my State there is a branch of this Ukrainian Congress which recently, with other State councils, declared April 10 as the Ukrain-

ian Day of National Solidarity.

I have received a letter from the president of the organization in North Dakota, as well as two editorials concerning the Ukrainian Church, entitled "Ukrainian Rite Church Silent, but Not Dead." and the other "An Appeal to the Conscience of the Free World," taken from a publication of the organization. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the letter and editorials were ordered to be print-

ed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE

OF AMERICA, INC., Bismarck, N. Dak., April 30, 1960. Hon. NORMAN BRUNSDALE,

U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR BRUNSDALE: Our organization recalls with sorrow, that 15 years ago in April Russian Communists launched their brutal drive to crush the Ukrainian Catholic Church.

The offensive began in April 1945 with an attack in the press. On April 10, 1945, Russian Communist regime arrested all the Ukrainian Catholic bishops, the archbishop-Metropolitan Joseph Slipy at the head, and

imprisoned them.

Archbishop Metropolitan Joseph Slipy of Lviv was jalled and sentenced, is now seri-riously ill in Siberia. The latter, who alone of other 10 bishops, is still alive after a term of 15 years penal servitude in the concentration camps, was recently again sentenced for 7 more years for writing a pastoral letter to his faithful and he continues to be a prisoner and a martyr of the Soviet Union.

Since that memorable date, at the hands the Russian Communist regime the Ukrainians have lost 3,000 priests, 500 theology students, over a thousand monks and nuns, and over 4,000 churches and chapels, 195 religious premises, 38 Catholic publishing houses, and over 1,000 schools. Millions of the faithful also became victims of the

Communist terror.

On this occasion we would like to recall similar destruction of the Ukrainian autocephalic Orthodox Church in Ukraine where within 10 years from 1921 to 1931 Russian Communist regime unjustly arrested and annihilated 80 bishops with the Metropolitan Vasyl Lypkiwsky at the head, and also thousands of priests and millions of the faithful.

At the same time our organization recalls similar destruction of Christian churches in Lithuania, Estonia, Latvia, Byelorussia, Rumania, Hungary, and in many other countries subjugated by the Russian Communist

regime.

Having removed the shepherds and the clergy the Reds decided to deliver a decisive In March 1946 they declared Ukrainian church be wiped out and they staged an artificial "synod" which proclaimed "union" with the Russian Orthodox Church. This Russian Orthodox Church is now subservient to the Communists, supports Communist regime and helps Russian imperialism by reclassification of other non-Russian nations. Therefore the faithful of the Ukrainian Catholic Church went underground and became a "silent church."

The facts stated in this letter indicate that the Russian Communist regime destroys with premeditation the leaders of the Christian churches of the non-Russian nations, persecutes the church and the faithful, seeing in them the only obstacle against its imperialistic expansion without respecting even the simplest principles of ethics and morals.

The Ukrainians all over the free world and especially in the United States, Canada, Great Britain, and Germany, under the leadership of their hierarchy and their councils have been united on April 10, 1960, in joint prayers for the persecuted church of Christ and her The Ukrainians also declared April leaders. 10 as "Ukrainian Day of National Solidarity" in tribute to the martyred Ukrainian Catholic Church. They prayed that the free world might understand the present tragedy of Christ's church in the Ukraine and in other countries subjugated by Communist Russia, and that the free world might preserve itself from similar tragedy.

Enclosed is a copy of the America, Ukrainian Catholic daily of April 7, 1930, which has an editorial for this event under the title "Destruction of the Ukrainian Catholic Church in Ukraine," by Dr. L. Mydlowsky, and a copy of an editorial of Register of April 10, 1960, by Ray Whitehead under the title, "Ukrainian Rite Church Silent, But Not Dead." All of these editorials illustrate the condition of the persecuted church in Ukraine.

Therefore, I respectfully request to present to the U.S. Senate the dreadful situation of the religious persecution in Ukraine. I also request that the Secretary of State propose to the American delegation in the United Nations the condition of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly.

Please kindly accept these few facts for your information and our organization and the Americans of the Ukrainian descent would appreciate inserting all of the enclosed editorials, including this letter into the Con-GRESSIONAL RECORD as a matter of public

Respectfully yours,

Dr. ANTHONY ZUKOWSKY, President, UCCA, State Branch of North Dakota.

UKRAINIAN RITE CHURCH SILENT, BUT NOT DEAD

(By Ray Whitehead)

Of the 12 million Eastern Rite Catholics, 5,500,000 are Ukrainian Catholics of the Byzantine Rite, and their large numbers explain why the Communists' post-World War II all-out drive on the church started in the Ukraine.

When the western parts of the Ukraine fell under Red tyranny in World War II, Moscow in the spring of 1945 demanded that metropolitan Archbishop Joseph Slipyj and his bishops give up their allegiance to the Pope and pass under the jurisdiction of the Russian Orthodox patriarch of Moscow.

The demand was rejected, and shortly thereafter the Russian secret police arrested the metropolitan and all the bishops. The metropolitan was tried secretly and sentenced to 8 years at hard labor, and the other bish-

ops received similar terms.

With the removal of the hierarchy, Moscow appointed three renegade priests to work among the clergy for a break with Rome. When several hundred priests met in Lvow to protest these antichurch actions and to appeal to Stalin for protection under the Soviet Constitution, they were arrested.

Following up their sally with a savage attack, the Communists jailed or executed one-third of the 3,000 priests of the country and deported the rest or forced them into

civil occupations. A few were able to fiee.

Having removed the shepherds and the clergy, the Reds decided to deliver a decisive blow. In March 1946, they declared the church wiped out and its members transferred to the jurisdiction of the Russian Orthodox Church. The faithful went underground and became the "Silent Church."

But Russia did not limit its attack on Ukrainian Catholics to the Soviet Union. In Poland it arrested Bishop Kotsylowsky of Sambor and his auxiliary in September 1945. Later the car of Bishop Theodore Romzha of Uzhorod in Carpatho-Ukraine "accidentally" collided with a Red army vehicle and he died. An Orthodox bishop was "appointed" by the Reds to his diocese.

In 1950 the last of the Ukrainian Catholic bishops in Red territory, Bishop Pavlo Goy-dich of Presov in Czechoslovakia, was arrested with his auxiliary and both were sentenced to life imprisonment. The Reds declared the diocese incorporated into the

Russian Orthodox Church.

To the Communists the Ukrainian Rite Church seems liquidated, but they are mis-It has merely been silenced for a

The battle is bloody and the martyrs are numerous, but the church has Christ's word that the gates of hell will not prevail against it. Communism will one day be a putrefying corpse and a sickening memory.

AN APPEAL TO THE CONSCIENCE OF THE FREE WORLD

We follow with great interest the events taking place in South Africa where both Negroes and many whites raised an open rebellion against the racial discriminating policies of their Government. We sympathize deeply on hearing that many suffered bodily injuries and others paid dearly with their lives in defense of their human rights. It was encouraging to hear that the Security Council of the United Nations, on the presentation of the grievances which came from the 29 nations of the Afro-Asian bloc of the U.N., in spite of the protests of the representative of the South African Government, took up the question of the bloody outbursts in South Africa. The settlement of this question in the spirit of divine and natural law will bring peace not only to South Africa, but it will influence the making of true peace throughout the world.

But true peace in the world will not come from high sounding meaningless words, nor from the lying phraseology about brotherhood of nations and world peace carried to the Western World by the wolf in sheep's clothing, the Soviet Premier, the enslaver of human dignity and whole nations-

Nikita Khrushchev.

In 1938 Nikita Khrushchev, through the will of Stalin became the appointed commissar of the Ukraine in the role of a Secretary of the Communist Party in Ukraine. He followed in the footsteps of his predecessors, Postishev and Koslor. In bloody letters the history of the Ukraine recorded Khrushchev as the merciless butcher of thousands of Ukrainian political prisoners at the beginning of the German-Soviet war, formal liquidator of the Ukrainian Catholic Church with the imprisonment of its whole hierarchy and their superior Metropolitan Slipyj, and the murderer of hundreds of priests and thousands of faithful.

On Paim Sunday, which falls on April 10, 1960, the Ukrainians of the free world, under the initiative of the Ukrainian Catholic Metropolitan of Canada, His Grace Maxime Hermaniuk, are preparing an All Ukrain-ian Day of national solidarity. The occasion for such an expression of common solidarity is the 15th anniversary of the bloody purge of the Ukrainian Catholic Church by the Communists. This persecution is only one link in the long chain of bloody persecutions to which for the last 43 years Communist Moscow subjected Christ's Church and her faithful in countries which fell under the Red imperialistic heel.

One of the first countries to fall a victim of the bloody Communist regime was the Ukraine. During the 40 years of domination by the Communists, the Ukrainian history recorded most important events: The millions of victims of the artificially produced famine of 1932-33, the mass imprisonment and shooting of people as happened in Vinnitza, the banishment of thousands of Ukrainian young men and women to work on Asiatic virgin lands, the destruction of the Ukrainian Autocephalic Orthodox Church, and as mentioned previously, the formal destruction of the Ukrainian Catholie Church.

On this All Ukrainian Day of national solidarity, we appeal to the conscience of the free world, which has in the last few days in the spirit of brotherly love, given voice to the bloody events of South Africa. We call upon all who stand together in this drawn out struggle against the present Red barbarism. We raise a brother's voice of warning not to overlook what is taking place on the other side of the Iron Curtain, es-Pecially in the Ukraine, because the indifference of the free world will truly be the cause of the enslavement of many other nations, and the physical destruction of millions of people. Let us therefore, united in brotherly love, be ever watchful and active in battle with evil—if we wish true

The 25th Birthday of REA

EXTENSION OF REMARKS OF

HON, ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. LEVERING. Mr. Speaker, since the rural electrification program was launched 25 years ago today, 96 percent of the farms of America have been electrifled, demonstrating how free enter-Drise and a sympathetic Government can work together to solve vexing and difficult problems for human beings. Those who have been active in the rural electrification movement, know from the history of REA that rural electrification has been a real fight all during its history and even before the Rural Electrification Administration was born. Leaders during the formative period of the program as well as those today also know that the REA program and the American farm family have a close relationship.

Mr. Speaker, I will never forget the joy and excitement which came into the farm home in Ohio, where my family and I still live, when the lights were turned on in the 1930's. A large percentage of the families who get their electricty from rural electric systems live and operate family-type farms. Because rural electrification has made possible a level of living comparable to urban living, the farm family has become more content with their environment and I feel electrification has been an important factor deterring the flight of young people from farms to other occupations. Farm boys and girls can now be proud of their homes and their way of life. Of course, many young people have left the farm in recent years, mainly because of relatively low farm incomes; but, I believe that had not electrification come to agriculture the movement would have been much more rapid. If the income

of the family farm can be brought in line with other occupations the family farm will continue one of our proudest and most respected ways of life. Thus, the problems of the family farm and of the rural electric systems are entertwined; their fortunes go up and down together: policies affecting the wellbeing of one cannot help but affect the other

The battles waged by our beloved and distinguished Speaker RAYBURN, the late Senator George W. Norris, the great independent of Nebraska who for 25 years reigned supreme in the Senate as a man who worked for the future of his country and its resources, former Congress-man John Rankin, of Mississippi, and others, were battles of no greater importance than those which have come before the 86th Congress and will come before succeeding Congresses.

Mr. Speaker, the success of the rural electrification program has been so overwhelming that many opponents no longer try to attack it openly, instead they are coming forth with proposals labeled "Improvements" of the program.

Here are a few examples of these

improvements:

The REA has suffered a downgrading of its Administrator. The Secretary of Agriculture in 1957, instituted a pro-cedure of having a political appointee in his office pass on all major loans before the Administrator is given permission to act on them. This action so aroused Congress that we mustered almost a two-thirds vote expressing disapproval of so flagrant an injection of politics into the program.

The rural electric systems suffered an attempted curtailment of the Administrator's loan-making authority by the Comptroller General in 1958; the Comptroller General issued a ruling that would have seriously limited the use of REA loan funds to finance lines to rural consumers which the power companies considered desirable. The Senate, how-ever, by unanimous vote reversed this ruling.

Bills to impose the high-interest policy on REA have been offered and backed by the full force of the White House, the Budget Bureau and the Department of Agriculture. A concerted campaign to build up pressure in Congress for such legislation has been carried out by the Secretary of Agriculture and others. But the REA high-interest push is merely a part of a broader tight-money drive, and it has been a stubborn one.

Tight-money policies have already been successfully put across against the Veterans' programs, housing programs, Farmers Home Administration, Federal Land Banks and the Production Credit Association, to mention a few. So far we have held the line where REA has been concerned.

Another example: The Secretary of Agriculture has argued for, and has drafted and sent to Congress proposed legislation which would abandon the REA program of the past 25 years and substitute in its place a plan for sending the rural electric systems to Wall Street for their long-term financing. This proposal was so drastic, I might say fantastic, that no Member has been willing to fight for it, or for that matter, even to introduce it.

These are the problems rural electrification has been facing in recent days. I am proud to be included among those who have defended the rural electrification program against these damaging attacks; I am proud that I have supported legislation which strengthens the program and keeps REA on the same successful track that it has followed for 25 years. It behooves us, I believe, to remember the stalwarts who made this program possible and who by their staunch support defended it during its early period; we can gain strength from their struggles and their victories for present battles and those that may lie ahead. Today on the occasion of the 25th anniversary, we should here dedicate ourselves to the philosophy that the early legislators on rural electrification incorporated in the program-local leadership, responsibility, and control with Federal administration keyed to human needs of rural America rather than to the financial desires of vested interests.

As we honor rural electrification for the advantages it has brought to rural America, we should never lose sight of the benefits it has brought to the electrical manufacturing industry, to all other industries, in fact, to the country as a whole. An important result of the rural electrification program is the increased business it brings into rural communities; it stimulates private business both locally and nationally. Surveys indicate that for every dollar invested in rural power facilities farmers invest \$3 to \$4 in wiring, plumbing, and electrical appliances. Also when power is available, the establishment of industry in rural areas is encouraged.

Back in 1935, when the REA experiment was just beginning, it was argued that all farmers who wanted electricity had it and that there was no market for power out in the country. Experience in the past 25 years has demonstrated how wrong this contention was. At this point. I want to include a fine article by Virginia Cruikshank, contained in the March 26 edition of the Delaware (Ohio) Gazette in my district, which carries a graphic account of how REA has changed the face of America:

ELECTRICITY IS BOON TO FARMERS (By Virginia Cruikshank)

Some of us may have forgotten just how rugged life was in the rural areas before we had electricity.

Remember the coal stoves, kerosene lamps, washboards, water buckets, hand milking, and all the other hand-powered chores that made the farmer and his wife old before their

No one would want to return to that kind of rural living, although we may sometimes wax sentimental about the old days. We are even digging around in the attic and cellar those items mentioned above for some of because our city neighbors who are moving to the country prize them as antiques.

Eleteric power has changed the face of all rural America. Not only has it brought an end to a lot of the drudgery, but it has changed the entire outlook of rural people. They are no longer country hicks. Their life has become the envy of many city people.

This year the Nation is paying tribute to its rural electric system on the 25th anniversary of REA. President Roosevelt signed the Executive order May 11, 1935, that brought the Rural Electrification Administration into being.

Use of electricity today has passed the wildest dreams of 1935. USDA researchers have found that there are 450 ways to use electricity on the farm and in the farm home.

And just wait until we get all those bulk tanks installed around here in the next year.

Consumption of power will zoom.

Only about 4 percent of the farms in the United States are still without electric power. In the territory of the Delaware Rural Electric Cooperative, there are only two farms and two houses without power, but the company is willing to build the lines to them whenever the owners are ready.

Soil Conservation Service Chalks Up High Score During First 25 Years

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. ASPINALL. Mr. Speaker, Mr. Roscoe Fleming of Denver is a westerner who writes with authority on conservation matters and natural resources. Mr. Fleming recently wrote, for the Christian Science Monitor, a definitive article setting forth the story of the U.S. Soil Conservation Service's first 25 years of operation. Under leave to extend my remarks I should like to include Mr. Fleming's article, from the Christian Science Monitor of May 3:

Soil Conservation Service Chalks Up High Score During First 25 Years

(By Roscoe Fleming)

Denver.—From a simple organization to provide depression-days employment by saving American soil, to well-nigh "everybody's handy man" in the whole national range of conservation: This is the story of the U.S. Soil Conservation Service's first 25 years.

In addition to its major role of administering a national program through local soll conservation districts run under State law by farmer-rancher members, SCS measures snowpack, gages soil fallout contamination, and supplies and receives a vast deal of soiland water information from and to virtually every Government agency in the field, and many State and private ones.

It carries out Department of Agriculture responsibilities in watershed protection and flood control, including direct supervision of large "pilot" projects in 11 major watersheds, and of several hundred "small watershed" projects under a special act of 1954; and it administers the special \$150 million Great Plains conservation program of 1956.

PROJECTS DESIGNED

It helps develop the yearly agricultural conservation program; gives technical aid to participating farmers, and designs permanent-type conservation projects and practices; and gives similar aid in the soil bank conservation reserve farmers' home and rural development programs.

It administers the Federal part of the national cooperative soil survey, which is steadily carrying on the enormous task of classifying the Nation's soils as to capabili-

ties and drawbacks.

Outside of this, and many, many types of informal assistance not specifically called for by law, the service, as the saying goes, has little else to do. One thing its employees can be sure of is that they won't lead a dull life. In the West they may spend a week slogging over "snow courses" a couple of miles above sea level, and the next in any of a dozen other activities.

But the cooperative soil and water conservation program remains as the backbone of the Service's activities, and the statistics are amazing as well as the setup, which is unknown anywhere else on earth and is generally considered one of the most massively successful of all Federal partnerships with people and local governments.

STORMS SWEPT SOIL

It had its inception during the dark days of the 1930's when Hugh H. Bennett, who became the first SCS administrator, estimated that the equivalent of a half-million acres of precious topsoil yearly was clogging the rivers on their way to the sea—beside the billions of tons being picked up and blown as far as England by the "black roller" duststorms,

The need to save the soil was enormous, but even so the Federal Government and Congress wanted to lead rather than to dominate. The result was the form of the SCS Act, which called upon local people and States to do the leading.

As of 1960, there are 2,865 soil conservation districts organized under State laws significantly, some have recently taken to calling themselves soil-and-water districts.

All taken together have nearly 2 million members, and incidentally an effective and aggressive national association.

MANY TREES PLANTED

Land in districts includes 1,662 million acres and covers 90 percent of all soil in farms and ranches. States whose rural and privately owned land is wholly within districts now number 21—this roll includes Alabama, Arkansas, Connecticut, Delaware, Georgia, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Mississippi, Nebraska, New Hampshire, New Jersey, North Carolina, Rhode Island, South Carolina, Tennessee, Vermont, West Virginia, and Wisconsin, plus Puerto Rico and the Virgin Islands.

Cooperators have planted 34,000 miles of windbreak trees, in a program that has never stopped since 1934; they have built 32,000 irrigation reservoirs larger than farm ponds, planted 6,500,000 acres to trees, put 43 million acres under improved grazing practices, and so on.

The soil conservation districts governed under State or territorial laws by elected boards of members comprise in effect a sort of one-purpose extra level of Government covering most of the Nation. To a perhaps surprising degree, these boards and districts have stayed clear of factionalism and partisan politics. There's no party where the Nation's tilth is concerned.

ELIGIBLE FOR LOANS

They are being increasingly consulted, although as yet far from enough, by all sorts of local and State zoning and other agencies and districts.

Their members are eligible under strict rules, for various types of Federal loans and grants, all dedicated to building up and conserving the Nation's very foundation of its livelihood, the good land and soil.

The goal here, as elsewhere, is a completely conserved America in which every acre shall find its highest use or a combination of such uses, both in feeding and otherwise sustaining the Nation, and giving beauty and refreshment to its citizens for all time.

Despite the impressive statistics of accomplishment, this goal is far from being accomplished. Some 1,300,000 basic conservation plans have been prepared by would-be

cooperators; but only a fraction of all farm projects have been completed, because of the sheer magnitude of the national task.

Even so the magnitude of a quarter century's accomplishment is impressive. More than 990,000 farm ponds have been built under SCS auspices alone; more than 1,100,000 miles of terracing, to check rapid and destructive runoff. Also some 36 million acres have been contoured and adapted; crop rotations now are standard on some 62 million acres.

Nationwide, is the United States making progress? Would new droughts bring more "black rollers"? Are the offshore Continental Shelves being extended with precious topsoil from Nebraska or Missouri?

According to the SCS Administrator, Donald A. Williams, speaking to Colorado coperators, the answer is yes and no. Like Alice, we are having to run as fast as we can to stay where we are. The gross loss of good soil through erosion has been cut by half. But modern practices and the onrush of population and industry are taking much which remains—perhaps too much.

NEW CROPLAND NEEDED

Superhighways with their cloverleafs devour many thousands of acres of good soil yearly—and quite often slice brutally through hundreds of farms, leaving fragments of inadequate size for a living. The rush to the suburbs by both people and industry has rooted out farms and farm families by the hundreds.

Mr. Williams estimated that the gross loss to such activities runs to a million acres yearly. And he pointed out that the whole problem concerns the 88 percent of nonfarm dwellers, almost as much as the remaining 12 percent of the people who farm.

He said that "Resources for the Future" (the research project financed by the Ford Foundation) estimates there'll he about as much farmland in A.D. 2000 as now; but, Mr. Williams added, much of it will be remoter and less-adequate land, slowly and expensively put into service to replace the good lands now going.

A national soil-and-water policy—in effect national zoning—might avert some of the consequences, he said, but in lieu of that the United States might be able to build a network of cooperation among all agencies and interested people.

The assistant administrator, Gladwin E. Young, speaking in Colorado in April, was even more specific. At present rates of farm production the United States will need a quarter of a billion more acres to feed the people by 1980, and a half billion more by the year 2000—or, in the latter case, as much new cropland as the Nation now has. Yet counting up all sources, the Department of Agriculture is able to see only 63 million new acres in sight.

HUGE QUESTION MARK

All of this is quite without regard to the demands of wildlife groups and other such societies that room be left for wild things for the people to enjoy; and, on the other side of the picture, the increasing problems presented by growing watercourse pollution and the effect of pesticides and other sprays, and contamination by detergents and other chemicals and radioactive fission products.

But it all ties in, and presents one huge question mark: What sort of home are the American people making for their children of AD. 2000? This date is nearer at hand, incidentally, than this Nation is from the beginning of the national conservation movement under Theodore Roosevelt and Gifford Pinchot.

The various aspects of the work of the service are almost as amazing in detail as are the huge statistics. They show, a reassuring thing, that the country folk of Amer-

ica, at least, are awake to both the opportunities and responsibilities of conservation.

Take, for example, the so-called small watersheds projects authorized by the 1954 act. This act bridges over a recognized gap in conservation. Erosion is no respecter of fence lines. The land of a good cooperator may nonetheless be harmed by floods from higher up on the watershed.

Those in the thousands of small water-sheds—some of major size—may now join and ask SCS aid, in working out a plan to heal the watershed as a whole. More than 1,200 applications for such aid now are on file, and more than 200 projects are underway. The applications cover more than 90 million acres.

Then there is the special case of the Great Plains, so wind whipped, and so at the mercy of the changeable climate. In 1956 Congress authorized a 10-year, \$150 million program of grants-in-aid to Great Plains farmers and ranchers who would "droughtproof" their own corners of its enormous expanse of a half-million square miles.

PLANS ACCEPTED

As of March 1960 the plans of more than 4,000 farmers and ranchers had been accepted for aid; these plans mean that some 30 percent of their acreage will be put back in grass, the original condition of the Great Plains.

Soil Conservation Service has not automatically expanded. In fact, it has lost a function or two, such as that of administering the 7 million acres of "limited-use" lands taken over by the Government to prevent their blowing away during the Dust Bowl days, and now administered by the Forest Service largely for strictly controlled grazing.

Nor does SCS have to directly do with the 180 million acres of national forests nor the equivalent amount of rangelands administered by the Bureau of Land Management; nor with State-owned lands, nor the irrigation functions of the Bureau of Reclamation.

ACT AMENDED IN 1936

It originated from the Soil Erosion Service of the Department of Interior under Secretary of Interior Harold L. Ickes, who had recommended it as a means of giving temporary employment during the depression, not primarily as a soil-saving act.

The original act was amended in 1936 to provide for farm relief after the original Agricultural Adjustment Act was declared unconstitutional, thus to place the agricultural program on the firm ground of conservation of natural resources.

Dr. Hugh H. Bennett, long a fighter for soil conservation, was Chief of the Soil Erosion Service and later of the Soil Conservation Service until 1951. Dr. Robert M. Salter was the second Chief, and Dr. Donald Williams, present Chief, has served since 1953.

In chronicling its activities for the present anniversary, SCS points out that 40 Members of Congress who voted for it—the vote was unanimous—are still in the House and Senate,

The Story of the U-2

EXTENSION OF REMARKS

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent that an editorial entitled "The Story of the U-2," which appeared in the May 10 edition of the Chicago Daily Tribune, be printed in the Appendix of the Record at this point:

THE STORY OF THE U-2

The shooting down of an American observation plane in Russia is being described as a costly diplomatic defeat and as a blow to the forthcoming summit conference.

What has happened is that the Russians have succeeded at last in knocking down one of the high-altitude planes which they have seen often on their radar screens and which they had good reason to believe were on reconnaissance missions. The Russians were not surprised.

Readers of the Chicago Tribune—at least, those with long memories—also should not be surprised. More than 3 years ago—on April 17, 1957—this newspaper published an exclusive story by its aviation expert, Wayne Thomis, describing the U-2 and telling how it was being called the supersnooper or St. Peter's special because of its very high ceiling. The story mentioned that an extensive camera installation is included in the airplane's nose section. Mr. Thomis also reported that it was believed the U-2 flew nearly 2 miles higher than any jet fighters then in operation.

It is the job of our central intelligence agency to get all the information it can about Russia's military power. In the pursuit of that objective it is probable that many U-2 flights have been made to photograph missile launching sites and other installations. The flight of pilot Francis G. Powers was made on May I, an important holiday in the Soviet world, when there was likelihood that an effort might be made to do something spectacular. While it may be unfortunate that May 1 was shortly before the opening of the summit conference, there was also good reason for keeping Russia under close observation on May Day.

No doubt the Russians have been trying for about 5 years to knock down a U-2, first with jet fighters and then with anti-aircraft missiles. The United States also has an antiaircraft missile, the Nike Hercules, which has hit targets at altitudes up to 100,000 feet. The tardiness of the Soviets in developing antiaircraft missiles against high-altitude airplanes may be judged by the fact that it took about 5 years to get a U-2.

It is possible that a lucky hit brought down pilot Powers, that he was projected from the plane automatically, that he was unconscious as he drifted down in a parachute, and that he had no chance to use any instrument of self-destruction. So until more facts are known it would be unfair to censure him. On the contrary, Americans can take satisfaction in knowing that we have the technological skill to build such a remarkable machine as the U-2 and young men brave enough to fly them on the most dangerous missions.

Premier Khrushchev of course is trying to make propaganda hay out of the incident and he will continue to do so. At the sumit conference, however, he cannot seriously contend that the United States has done anything new or anything that Russia itself hasn't done or tried to do. He also goes to the summit conference with the knowledge that the United States has some good photographs of the Soviet Union taken from high-altitude airplanes.

In the bargaining at the summit the Soviet demands and claims will be deterred only by the knowledge which the Russians have of U.S. power. The incident of the U-2 should not encourage them to believe that the United States is poweriess.

Young Abraham Lincoln

EXTENSION OF REMARKS

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. CURTIN. Mr. Speaker, this year the Lehigh County Republican Committee in my district sponsored two essay contests on the subject of "Abraham Lincoln" as a part of the Lincoln Day celebrations, one being for senior high school students and the other for junior high school students. I am very proud of these fine students and the essays they wrote for this contest. This year, the contest for the senior high school students, in which several hundred students competed, was won by Raymond Wolf, a junior, of the Central Catholic High School in Allentown, Pa.

Under leave to extend my remarks, I would like to include the winning essay of this young man, entitled "Young Abraham Lincoln":

YOUNG ABRAHAM LINCOLN

"All that I am, or hope to be, I owe to my angel mother."

These words, spoken by Abraham Lincoln, show the love and admiration he must have had for his mother. Nancy Hanks Lincoln was born in Virginia in 1784 and as she grew up she acquired a reputation for industry, cheerfulness, and intelligence. At the age of 22, she met Thomas Lincoln and on June 12, 1806, they were married in the backwoods of Kentucky. After the birth of their first child, Sarah, they moved to Rock Spring Farm, where Abraham Lincoln was born on Sunday, February 12, 1809.

Character descriptions of Thomas Lincoln, Abraham's father, vary with different authors. He is often accused of being a shiftless vagabond. One writer, in talking about him, says: "He was one of those thriftless men who blame circumstances for their failure and, though he never knew it, he was a problem in the household as long as he lived."

But let's take a look at' the circumstances which influenced Thomas Lincoin's life. At the age of 6 years, he was left an orphan by the death of his father. From that time on he supported himself by farmwork and odd jobs, and learned the trades of carpentry and cabinetmaking. When he became 16 years old, he enlisted to fight against the Indians. He was uneducated and is sometimes accused of hindering Abraham's education. However, Herndon quotes Sarah Bush Lincoln as saying: "Mr. Lincoln never made Abe quit reading to do anything, if he could avoid it. He would do it himself first * * * he himself felt the uses and necessities of education and wanted his boy Abraham to learn and he encouraged him to do it in all ways he could."

Nancy Hanks Lincoln was an unusually intelligent and deeply religious woman. This, no doubt, influenced Abraham a great deal. She is spoken of as being a beautiful woman in her youth. She knew how to use the rifle and farmer's tools, as well as being an excellent seamstress. "She could not only kill the wild game of the woods, but she could also dress it, make of the skins clothes for her family and prepare the flesh for food." Her physique was less hardy than that of those who surrounded her. It is

because of this that she became a victim of the milk-sickness epidemic and died on October 5, 1818.

About a year after the death of Nancy, Thomas Lincoln, realizing the need of a matron in caring for the house and children, married Sarah Bush, widow of Daniel Johnston, a jailer, and mother of three children. Sarah did much to improve the household. When she came, she brought with her a large supply of household goods, which were greatly needed by the Lincolns. She made Tom Lincoln put windows, doors, and a floor in the cabin. Most important of all, however, she made it clear to the children that she would show no partiality in her dealings with them.

It can be seen that Abraham Lincoln inherited some of his father's characteristics. Thomas Lincoln was a man of great strength and a good wrestler. Abe excelled in all kinds of athletics and his strength has become proverbial. At the age of 8 years, Abe is said to have handled an ax almost as well as his father. Another ability inherited by Abe was that of storytelling. This contributed greatly to the wit which made Abraham

so popular.

Much of Abraham's education is the result of the efforts of both his mother and stepmother in fostering his love for reading. Nancy Hanks Lincoln read the Bible to Abe and his sister. After the arrival of his stepmother, however, Abe had more time to read because the railsplitting was now shared with his cousin and his stepbrother. Sarah Bush Lincoln was quick to notice Abe's passion for knowledge and gave him encouragement, as well as the opportunity to study. One biographer says of Lincoln: "The in-One biographer says of Lincoln: fluence upon the growing lad of two such women as Nancy Hanks and Sarah Bush was worth more than that of the best appointed college in all the land."

Altogether, Abe attended four different log cabin schools and was taught by five teachers. His total formal schooling amounted to about 10 months, which was not inferior to the education of most pioneer boys of that day. These schools taught reading, writing, and arithmetic and one even taught a course in etiquette. Abe was the best scholar in school, and was always ready to prompt others.

"Abraham Lincoln was a product of the library rather than a child of the school. Every public library in America should have the likeness of Lincoln * * * as an example of what can be achieved by a boy with borrowed books."

Abe always made friends with every new family that arrived in the neighborhood, and would soon find out if they had brought any books with them. If they had, they could be assured of having a steady helper for odd jobs, at least until Abe had read every book they had. Some books that made an impression on Abe were "Aesop's Fables," "History of the United States," "Weem's Life of George Washington," and "Pilgrim's Progress."

"While it is admitted that Lincoln was born in a one-room log cabin withdrawn from the centers of population, it is equally true that the home was no more humble than the birthplaces of thousands of boys who helped to shape the destinies of the new nation. In fact this Lincoln birthplace cabin might be exhitibted as a typical pioneer residence at the beginning of the 19th century."

Although Lincoln is not known to have held any particular religious preference, as a boy he came in contact with a great number of religions. The Lincolns were a religious family. Abe's father, in his travelings, was a member of various denominations. His mother was a very religious woman, and between the two of them, Abraham was taught to embody the highest ideals of Christianity.

No name has been applied to Abraham Lincoln more often than "Honest Abe." His parents can be credited with establishing and cultivating this virtue in him. The books he read also influenced him greatly in regard to honesty. "Aesop's Fables" contains many lessons in honesty. The story of George Washington and the cherry tree in "Weem's Life of George Washington" no doubt impressed him. It has been said that during his employment as a storekeeper, having discovered that he accidentally measured the wrong amount of merchandise for a customer, he walked a number of miles to correct the error. Surely the name "Honest Abe" will always live down through the years.

"One of the characteristics which Abraham Lincoln revealed in both his writings and behavior was the attribute of thankfulness. His discerning parents must have cultivated this desirable quality when he was but a child. There is evidence that each day Thomas Lincoln, the father, paused before their frugal meals to thank God for such blessings as were provided."

A great and important virtue which Abraham Lincoln practiced was obedience. He appreciated what his parents, especially his mother and stepfather, had done for him, and showed his love for them. The testimony of Sally Bush, his stepmother, concerning him was: "I can say what not one mother in a thousand can say: Abraham never gave me one hard word."

"Lincoln came into the estate of manhood morally clean. He had formed no habits that would cause years of struggle to overcome, he had committed no deed that would bring the blush of shame to his cheek, he was as free from vice as from crime. He was not profane, was no brawler, never gambled, and he was honest and truthful. He had a genius for making friends, and was the center of his social circle."

The greatness of our 16th President of the United States has been heralded to every young schoolchild. However, let us remember that Abraham Lincoln began in his youth to develop simple attributes into outstanding character traits. He matured in strength, virtue, and knowledge. He was a God-fearing and honest man. He always fought for what he believed to be a righteous cause.

Few people will ever develop fame and popularity such as Lincoln's. But we can improve in our own ways. Just as Lincoln had many obstacles to overcome, we all have our own.

By using our talents to the fullest of our extent, and by striving to eliminate our faults, we can form a good, strong character. The longer we wait to develop our talents and traits, the harder it will become to improve ourselves. Remember, it took men such as Lincoln to build up our country and it will take others like him to preserve it.

Eisenhower and Republican Administration Enters Plea of Incompetence

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an article written by Walter Lippmann, which appeared in today's Washington Post and Times-

Herald, May 10, 1960. The article entitled "The Spy Plane" in Mr. Lippmann's Today and Tomorrow column follows:

TODAY AND TOMORROW (By Walter Lippmann) THE SPY PLANE

In the middle and mess of the affair of the spy plane there is one critical question of particular urgency and importance which needs to be dealt with. This is the official statement made with the President's approval that "it has been established that insofar as the authorities in Washington are concerned there was no authorization for such flight as described by Mr. Khrushchev." If this is true, then the command of very dangerous military missions is not securely and unquestionably in the hands of the responsible authorities in Washington, in the hands, that is to say, of the President, the Secretary of State, the Chiefs of Staff and the Director of Central Intelligence.

Who, then, has the authority? If the authority to order a deep penetration of Soviet territory with a military reconnaissance plane is in some headquarters command not in Washington, how do we know, how does the world know, that the authority to strike a blow is not also outside of Washington?

In denying that it authorized the flight, the administration has entered a plea of incompetence. For there can be no acceptable excuse for an unauthorized flight of this kind. The President cannot afford to let the question of where the responsibility to authorize such flights resides go by without an unequivocal answer. By word and by deed he must remove all doubt that the authority to command in these dangerous matters is in Washington and nowhere else. The honor, the self-respect, and the self-confidence of the country demand it.

Although it is no doubt true that the President did not himself authorize this particular flight, it is no doubt true also that he knew such flights were being made. The general public was perhaps surprised to hear about them. But for the Russians and for many others among us there was no surprise at all.

Why, then, knowing that such flights were being made, did the President fail to realize the risks of continuing them right up to the meeting at the summit? Is it because he was not paying sufficient attention? Is it because his closest advisers were not paying sufficient attention? It looks like that. It seems as if the country has been humiliated by absent-mindedness in the highest quarters of the Government.

There is nothing shocking or novel, of course, in the disclosure that we have been spying on the Russians. They have been spying on us. Spying is in its very nature a dirty business, outside the law and outside the moral code. The only crime recognized in the spy business is to be caught, although this crime can be compounded by lying about it and then being caught in the lie itself.

In this affair, there is on the record as the known its arrival.

In this affair, there is on the record as we know it serious prima-facie evidence, not of unusual immorality but, of inefficiency. Why did not the President forbid all such flights when the summit meeting was agreed to? It is not enough to say that he did not authorize this flight. Why did he not forbid it?

There is reason to suspect, also, that whoever did authorize the flight and was responsible for preparing it was unaware that the Russians had developed a missile capable of knocking the plane down. The equipment carried by the pilot, the Soviet money, and the poison needle, suggests that he was prepared for a forced landing through engine trouble perhaps, after which he would work his way across country, or falling that and having been caught would commit sui-

What the pilot was not prepared for was to have his plane disabled by a Russian mis-sile. For this meant that the Russians had him spotted. Under these circumstances once his plane had been hit, his money and his poison needle were useless. If he had killed himself, if he had exploded his plane, there would still have been his corpse and the wreckage of the plane 1,200 miles inside the Soviet Union.

It was a failure of intelligence not to realize that the Soviets had a missile capable of knocking down so high flying a plane. It was inefficient not to take this possibility into account as a factor which greatly multiplied the risks of making such a flight on the eve of the summit meeting.

Tribute to the Honorable Arthur E. Summerfield

EXTENSION OF REMARKS

HON, CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, on Saturday, April 30, 1960, the city of Flint, Mich., dedicated its new main post office. I wish to join in congratulating all those who have had a part in planning and building this fine new edifice. There is no question that the opening of Flint's new post office is part of a beginning of a new era for Flint, Mich. The city has been greatly enhanced by this magnificent new structure which has been described as one of the most modern post office buildings in all the World. One individual who has done so much toward making this new postal facility become a reality and who has, perhaps, contributed as much to the spirit of Flint" as any single individual is the Honorable Arthur E. Summerfield.

I believe it is most appropriate that I place here in the Congressional Record, the excellent tribute paid Postmaster General Summerfield by President Eisenhower which I read at the dedication of Flint's new post office. The President's message follows:

I am delighted to join in this tribute to my friend and coworker in Government for nearly 8 years.

During that period he has been responsible for a great modernization of our postal system, thereby vastly increasing its efficiency.

He has fought to place the Post Office Department on a pay-as-you-go basis, some-thing that should, in justice to all our citizens, be done at once.

He has served the American people with diligence, ability, and dedication, both be-fore and since he entered public life.

Please give him my warm personal re-gards, and my best wishes to those gathered in his honor.

An editorial which appeared in the May 1 issue of the Flint Journal entitled, "New Post Office Dedication Has Special Significance," clearly and adequately sums up what the good people of Flint, Mich., think of their great Postmaster, General, Arthur E. Summerfield.

The editorial follows:

NEW POST OFFICE DEDICATION HAS SPECIAL SIGNIFICANCE

Saturday will be a notable day in this community.

Flint's new main post office will be dedicated.

But while our new facility is only one of almost 3,000 which have been constructed throughout the United States during the Eisenhower administration, Saturday's ceremony will be much more than just another building dedication.

A report on the structure's beautiful exterior and the unbelievable equipment with which it is equipped cannot begin to explain its special significance. Its full meaning cannot be measured in terms of increased operating efficiency or improved postal

It goes much deeper. To understand it is to understand Flint and the type of energy. faith, cooperation, drive, ingenuity and leadership that made possible its fabulous

progress and growth.

The main post office is the core and one of the principal buildings in the multimilliondollar Central River area development which promises to greatly enhance the entire community. Saturday's dedication is expected to furnish added impetus to the 35-acre project designed to link eventually the downtown business district with Flint's college

and cultural development. The development was conceived by communty leaders who were convinced that rehabilitation of the downtown Flint River area was a necessary and vital part of Flint's dynamic future. The progress made toward fulfillment of this imaginative project has been the result of splendid cooperation from the city, the Post Office Department, the Greater Flint Downtown Corp., the Committee of Sponsors of the College and Cultural Development, owners of the land involved, and a great many public spirited business concerns and individual citizens.

The building to be dedicated is the springboard, in the most important single structure in the development's center area. Without it, the dream might never have gone beyond the drawing board stage.

That is one reason why our new postal center represents more to Flint than a more convenient mail distributing point. It is responsible for making a vision become a practical plan by which all of Flint will

But it is even more than that. It stands as a 'symbol for the type of community which it is helping to expand-a community in which it was possible for a boy with little formal education to start to work in its shops and work his way up to one of the most responsible jobs in the Nation.

That boy, of course, was Arthur E. Summerfield, Postmaster General of the United

Undoubtedly when he helps to dedicate his hometown postoffice, his memory will take him back to his boyhood when he paddled canoes down the Flint River past the site of the new building. And he'll prob-ably think back to his days as mailboy at the Weston Mott plant.

Characteristically he can be expected to give credit for the success he has attained, not only in business and politics, but as head of the Government's second largest operation-second only to national defense-to his associates, friends, family, and com-munity. A humble man, Mr. Summerfield is sincere in his belief that only in a community such as Flint would he have had the opportunity to advance as he has. He becomes greatly emotional when he refers to his hometown and the people who live in it.

There is great pride in his voice when he tells his Washington friends of Flint, the city in which people possess the spirit and the knowhow to get things done.

In turn, Flint is proud of its Postmaster

He has a record of accomplishment as a member of President Eisenhower's Cabinet which is unmatched in Post Office Department history. He realized goals which he was told could never be gained. Opposed by both a hostile Congress and determined postal unions when he presented his program more than seven years ago, he has won not only many hard-fought battles but the respect and esteem of his former foes.

When his second nomination went to the Senate for confirmation following Mr. Eisenhower's reelection in 1956, Mr. Summerfield not only was given a unanimous vote of approval but Democratic leaders who formerly had opposed his program took the occasion to go on record in praise of the Postmaster General. In the House of Representatives he was hailed as "the father of the modern post office" and the National Association of Postmasters 2 years ago saw fit to honor him as "the greatest Postmaster General in history."

Certainly Mr. Summerfield has earned the recognition and applause of his Nation. Just as he was a success as a local busines man, he has been an outstanding public

servant.

All of us are extremely proud of him, and the building which he will help dedicate Saturday always will be remembered as the home post office of Flint's Postmaster General-one of our most distinguished citizens.

Mutual Security

EXTENSION OF REMARKS OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, mutual security began under a Democratic President. It has continued under a Republican President. The large majority in the Foreign Affairs Committee which supports it comes from both parties.

An excellent editorial in the Boston Herald of May 10, 1960, emphasizes the need for bipartisan support of this program. I include it as part of my

remarks:

CONTINUING AID

The President has won the first round in his foreign-aid fight. The \$4 billion authorization bill agreed to by the House and Senate conferees is only \$88 million short of the White House request, which is a better than average response.

But the big test, as Mr. Eisenhower is well aware, comes on appropriations, not authorizations; and foreign-aid opponents are hoping to knock \$1 billion out of the spending program when it reaches the House Appropriations Committee.

Was the President justified in urging Congressmen to lay aside party interests on this issue and vote the full program? We think so, and we hope the House and Senate leadership will take this view also.

Foreign aid is, of course, not above controversy or criticism. The way it is ad-ministered, what it costs, to whom it goes, the emphasis on military as distinguished from economic aid, these and other questions need to be discussed fully and freely. But the underlying issue—whether to continue foreign aid in an adequate and meaningful way—is no longer debatable.

This is the last year of the Eisenhower aid program. The President in 1961, whether he is Mr. Nixon or one of the Democratic hopefuls, is bound to have different ideas, just as Mr. Eisenhower had different ideas from Mr. Truman. But these differences don't and won't go to basics. The foreign aid program, which was launched by the Democratic postwar administration, has been carried forward in all its essentials by Mr. Eisenhower's Republican administration, and will continue to be carried forward by the next administration, whether Democratic or Republican.

It is this continuity which Congress is being asked to preserve now. The President is pleading, not for the superficials, but for the backbone of foreign aid. A \$1 billion

cut would break that backbone.

"It would be," as the President warned,
"for America and all the free world, a crushing defeat in today's struggle between communistic imperialism and a freedom founded

in faith and justice.

"It would mean, within a matter of months, new international tensions and new national problems of the utmost gravity for every one of our citizens.

"It would mean the virtual abandonment of an effort which has yielded our Nation greater benefits in security, better neighbors, and opportunities for expansion of profitable trade than has been achieved by any comparable expenditures for any other Federal purpose."

This is too much to destroy in the name of partisanship. Congress must face that

Drug Prices

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1960

Mr. KEFAUVER. Mr. President, many thoughtful articles have been printed on the problem of drug prices and certain practices with respect to competition between some of the ethical drug manufacturing companies. A very thoughtful and painstaking article was written by Mr. David L. Cowen, which was published in the Nation magazine of April 16, 1960. I ask unanimous consent that it may be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOSE PRETTY LITTLE PILLS (By David L. Cowen)

The third round of the Kefauver hearings on the drug industry, temporarily shunted aside by the civil rights squabble, was scheduled to begin this week. The Senate subcommittee conducting the hearings will be able to build on the massive body of statistical data collected during the recent second round, devoted to the tranquilizers.

It is now clear that in the tranquilizer field there exists a tremendous spread between manufacturers' costs and selling prices; that some prices remain constant despite lower costs of production; that comparisons among domestic prices indicate that some are maintained at higher levels than purely competitive conditions would permit; and that comparisons with foreign prices show that American prices are often the highest in the world.

The companies, of course, sought to refute each of these contentions, but one gets the impression of adroit polemics rather than sound argument. To cite but one example, it is difficult to accept the contention that lower prices abroad reflect only lower wage scales, lower living standards, etc., when one discovers that meprobamate, which costs Carter, its American patentee, \$4.99 per pound and is sold to American pharmacists for \$3.25 per 50 tablets, costs the British producer from \$6.38 to \$7.35 per pound and is sold to the British pharmacist—under the same brand name, Miltown—at \$1.48 per 50 tablets.

The profit picture of the drug industry, whether based on net worth, investments, sales, or otherwise, places the industry in the forefront of American manufacturers. For example, estimates for 1959 indicate that the rate of return for 11 drug companies was 21 percent of net worth as compared with 10.7 percent for all manufacturing corporations. The estimates for three large tranquilizer houses—Carter; Smith, Kline & French; and American Home Products Corp.—were 55 percent, 42 percent, and 36.8 percent, respectively

The subcommittee has also concerned itself with the reasons for the high prices and large profits. The discussion that follows will point up some of the factors involved and discuss their implications in terms of broad public policy.

1. Patents: The position of the United States on drug patents and brands is more considerate of the inventor than in other countries. In Germany, for example, a process may be patented, but not a drug product. In the United States, too, patents are possible on compositions of old and known ingredients for which the patentee has discovered a new use.

The impact of the patent and the brand name on price is dramatically illustrated by a comparison of prices paid by the Military Medical Supply Agency with those paid by the druggist. The subcommittee's findings demonstrate perfectly that the greater the number of suppliers (in this case licensees). the lower the price, both absolutely and in proportion to the prices paid by the druggist. When, because of patent rights, there is but one supplier-as with SKF (Smith, Kline & French) and chlorpromazine—the price to the Government is about 70 percent of the price to the druggist. Where there are two suppliers-Wyeth and Carter for meprobamate—the price to the Government is about 60 percent of the price to the druggist. However, where there are several suppliers, as with reserpine, the results of competition are eye opening. Ciba has sold reserpine to the Government for 1.5 percent of its price to the druggist (60 cents as compared with \$39.50 per thousand) and Panray at about 25 percent (70 cents as compared with \$2.65).

The investigations, moreover, brought out another aspect of the patent process that makes it particularly vicious when applied in the drug field. The hearings revealed, for example, that Carter had rather imperiously decided with which drugs of other companies it would permit its meprobamate to be combined. It refused at one time to permit a combination with a drug whose patent had run out; it refused one request apparently because the other patent was held by too small a company. Since in some cases there may be medical advantages to be gained by certain combinations, any legal process which permits the withholding of a drug is contrary to public policy.

2. Research: Figures presented by the companies themselves indicate that on an average (for 20 companies) only 6.4 percent of the sales dollar can be charged to research, Carter, American Home, SKF, and Ciba spent 2.7, 3.2, 8.9, and 13.9 percent of their sales dollars, respectively, on research in 1958. As Senator Kefauver worded it. "Research is important, but [it] has only a limited effect on the high price of drugs and the high profits of the company."

But there were undercurrents in the subcommittee's findings on research that should perhaps be of greater concern than the impact on prices. For example, there is evidence of a great deal of floundering about, a great many dry hole projects, and a great deal that seems to have been left to chance. Some of the floundering is undoubtedly necessary, perhaps even desirable, but there seems something unsound going on when SKF, after 10 years of research, could claim no more in the way of achievement than the recognition that another firm-Rhone-Poulene of France-had produced what SKF's own chemists had been looking for; chlorpromazine

Certainly the role that chance has played in the development of tranquilizers puts industrial research in a dublous light. The drugs' properties were discovered as a byproduct of the search for antihistamines. SKF, for all its alertness in picking up the patent rights on chlorpromazine, investigated it "principally as a surgical premedicant and antiemetic agent." While the drug industry is capable of some highly valuable "pure" research, its laboratories today are mostly busy with the "applied" variety leading to the production of practical medical agents. But even in this field the public health cannot always rely on private enterprise alone, a fact which the Kefauver hearings underscored.

Until recently, for example, the industry was subject to the criticism that it was shying away from cancer research because the successful company would be forced to share its findings with the whole industry. In addition, the Government's "crash" cancerresearch program dragged from 1953 to 1958 because of the industry's desire to protect its patent policies.

It took 24 months of negotiation for the drug companies to go from the Government an understanding acceptable to them on the Government's right to insist upon unlimited licensing if production should prove inadequate. Under this agreement, the companies are well protected: when the Government feels that there is inadequate production, it cannot move in for 90 days; hearings and appeals are possible, and the burden of proof of shortage rests with the Government. (What happens, meanwhile, to pricing policies is anybody's guess.) On this basis, there has recently developed some desirable industrial activity in the field of cancer research financed by Government grants.

There must have been considerable moral pressure on the industry to accept the Government's aid in cancer research, for the industry has virtually refused similar aid for mental health. Although many millions have been available, only \$100,000 in Government grants have been awarded, probably as a consequence of the industry's fear that "It's not too large a step to go from appropriations for medical research to appropriations for medical care payments and for medical care direction and administration."

The hearings also touched on the matter of basic research. The success of new drugs—whether as palliatives or genuine therapeutic agents—has given us a faise sense of security. As Dr. Augustus Gibson, director of Merck's research, has stated, "Perhaps, the time has now come to look for the answer to some of the more basic

problems." We have been treating symptoms, but we know little about causes and prevention: basic research must concern itself with understanding the disease.

In the field of mental illness, as the hearings brought out, the need for basic research The mechanisms of action of is very real. the tranquilizers are still largely unknown. There is uncertainty as to whether they merely suppress symptoms or have real therapeutic value. Most important, of course, is that their number and variety could possibly be multiplied a hundredfold without contributing anything to the understanding of the causes—chemical, psychological or sociological—or prevention of mental illness. In all the hullabaloo about the spectacular reductions in the population of mental hospitals due to the use of tranquilizers, some attention ought to be paid to the statistics on admissions. In New York State hospitals, for example, the current rate is 28,000 as compared with 21,000 in 1955. This is a one-third increase.

The subcommittee also effectively deflated the intimations of the American drug industry that its research activities are alone responsible for discovering the tranquilizers. True, the industry must be given some credit for breaking down the "reluctance of academical psychiatry" and the "reservations of clinical psychiatry" to the use of tranquilizers. (Even this it did not do entirely alone, for by 1957 the National Institute of Mental Health was spending \$39 million anhually in this field.) But Thorazine, Com-pazine and Sparine are all developments by Rhone-Poulenc of France, which holds the basic patents. Ten of, the fourteen new drugs claimed to have been discovered by Ciba from 1948-58, including reserpine, were the work of the parent Swiss company. Meprobamate was developed in the United States by Dr. Frank M. Berger, a Czech physician who had produced and written about mephenesin, the parent compound of meprobamate, in England, 3 years before he joined Carter here.

Another cause for concern-not pursued by the subcommittee-crept into the hearings: the methodological shoddiness of the clinical studies that go into the testing of a drug. Some of this derives from the fact that many, if not most, of the studies are initiated and supported (some would say "insidiously ') by grants from industry, a condition which leads to haste and prejudgment.

Thus on every count-goals, scope, quality, and effectiveness-there are some criticlsms to be voiced of the research activities of the industry. The conclusion is in-escapable (and it is one with which the Refauver subcommittee will perhaps not become involved): that an anarchy exists in industrial medical research. That this anarchy is no longer tenable is emphasized by the virtual absence of any mention of industrial research in a recent survey of the National Institutes of Health by its Chief of Resources Analysis. NIH has great potential for the planning, promotion, coordination, and evaluation of medical research; the continued aloofness-or exclusion-of the industry from participation must in some way limit the effectiveness of the Institutes.

3. Advertising and sales: In Senator KE-PAUVER's preliminary remarks at the opening of the second round of the hearings, he referred to "certain alleged excesses of promotion and advertising which, it has been held, unduly enhance the price of the prodnent. The selling costs of 20 drug com-Danies account for 24 percent of the selling Price; for the 4 big tranquilizer manufacturers, the percent of sales that goes to selling costs varies from 19.5 to 33.9, and on the average, selling costs amount to about twothirds of the cost of goods. For two companies, selling costs exceed production costs.

Obviously, selling cost is high and obviously it affects the selling price to the consumer. The question is, how much of the excessive? One is constrained to say that most of the cost of "dissemination of product information" is excessive, for three reasons: Much of the dissemination is extravagant, too much of it is misleading, and most of it should not be necessary.

The extravagance of medical advertising is proverbial. The detail men, on good salaries and expense accounts; costly brochures and books (some of general value, many of a purely promotional nature); flamboyant advertisements in the professional literature and in the mails; gimmicks, gadgets, mountains of samples, banquets and convention parties-these hardly exhaust the list. The flamboyancy and repetition of the advertising suggests that the drug companies expect the physician to react on the same subconscious, emotional, nonrational level in the ordering of drugs as does the housewife in

choosing detergents.

The sending out of samples has been dubbed a form of payola by the Wall Street Journal. The sample is not sent to the practicing physician for clinical assay—that has already been made. It is sent as a gift (the doctor can give it away or sell it) to impress the product on the doctor's memory. Since even small companies practice quality control of their product and are subject to governmental inspection, one must wonder whether or not the doctor's tendency to prescribe the product of the big company is a consequence of the subtle seduction of the samples, gimmicks, dinners and good fellowship of the detail man, or of the assumption that since the company is big and spends a lot of money on advertising, its products are therefore better. One wonders how these doctors rationalize what the profession euphemistically calls the incidents which have, at various times, involved the quality and utility of products of respected companies.

The medical journals are themselves partly to blame for accepting extravagant drug advertising. The extensive use of art workusually in magnificent color-suggests that the doctor can't, or won't, read. If it is too much to expect these journals to eliminate advertising altogether, perhaps they ought at least to consider the transformation of advertising to paid announcements, uniform for all companies, following a prescribed format, containing complete information (negative and positive) and instructions, and set in uniform and ordinary type.

There is, in addition, a considerable amount of misleading advertising, some of it dangerous. This suggests, of course, the need for policing, but also points up the fact that much of the advertising could be dispensed with altogether. Medical-adver-tising copywriters can teach the rest of their trade something about the language of mis-They have been guilty of understanding. They have been guilty of every possible offense-accenting the positive, willful suppression or underplaying of negative or dangerous results, misleading and questionable data, ghostwriting, inflated and spurious bibliographies, faked endorsements, quotations out of context. While most companies are probably not guilty of these practices, the problem is widespread enough to have given rise to the suggestion that there be created a special commission, composed of industrial, professional, and governmental agencies, to deal with it. But self-policing by the Pharmaceutical Manufacturers Association and the increased activity of the American Medical Association have proved ineffective.

A final word on medical adversing: It is disgraceful that American medicine has not provided itself with satisfactory institutional means of keeping the profession informed of therapeutic developments, and

that the profession must rely on the vagaries

and biases of advertisers.

The second round of the subcommittee hearings was concerned primarily with the the economic aspects of the manufacture and sale of tranquilizing drugs. There are, however, much broader problems of public policy involved.

The tranquilizers are perhaps the secondmost-used class of drugs; about one-third of all prescriptions call for them. In 1958 their wholesale sales totaled about \$160 mil-They are used all over the world. They have had a beneficial effect on the mental health picture from the point of view of both the individual and of society. Their use is expanding in anesthesia, obstetrics, dermatology, dentistry, and geriatrics.

The tranquilizers are drugs, and it must be remembered that any drug is potentially dangerous. There is no need here to run through the whole litany of "side effects," ranging from "unpleasant mouth" to the fatal breakdown of white blood cells. are well known and can usually be controlled by the physician. But it does need to be emphasized that there is ample medical evidence against their indiscriminate use. Psychiatrists contend that even the general practitioner may be unable to manage tranquilizers properly, and lament their too casual use. All agree that they should not be used by the public for the relief of everyday tensions; the American Psychiatric Association has been adamant on this score. In addition, the World Health Office believes "must be classed as potentially habit forming" and that they should be subjected to national control.

For these reasons, many persons believe that tighter controls over their sale are necessary. It is true that they are "pre-scription drugs" (under Federal regulation, they cannot be sold except on prescription). the same loopholes that make barbiturates and amphetamines—which are also "prescription drugs"—so available, exist for tranquilizers. That this is a serious matter is evidenced by the fact that despite the Federal regulations and despite the stringent New York State pharmacy act, the city of New York has made the same prescription requirement a part of its health code.

By the same token, care must be taken to see that these drugs do not attain the status of "over-the-counter drugs"-i.e., become available at drugstores without prescription. The danger exists. Carter first considered meprobamate as an over-thecounter item, then changed its mind. Yet this company-which prides itself for having fought off for 17 years the Gov-ernment's finally successful attempt to force 'Liver' out of the title of Carter's Little Liver Pills-might change its mind again if Miltown suddenly were made obsolete by a new product. Ominously, Printers' Ink asserts that the ethical-drug advertising agen-cies are "looking forward for added growth" to the shift from prescription to over-thecounter drugs.

Over-the-counter drugs are generally subtect to "restrictive sales"-that is, they can be sold only in pharmacies. The Proprietary Association, an organization of manufacturers of publicly advertised drugs, is campaigning to break down this restriction. The campaign has already met with some success: aspirin, Bromo-Seltzer and similar items can, now be picked off the supermarket shelf. If Madison Avenue gets its clutches on overthe-counter items, the jump from prescription to over-the-counter sales will be fol-lowed rapidly by the jump to nonrestrictive The Proprietary Association is thinking this far ahead, and recently stymied a resolution before the National Drug Trade Conference which provided that prescription drugs reclassified as over-the-counter drugs "continue to be dispensed only by or under

the personal supervision of a registered pharmacist." The Proprietary Association demanded that the resolution include the telltale phrase: "* * * subject to such exceptions as may be dictated by the future

status of such drugs."

Both the physician and the pharmacist must come to the aid of the public welfare by standing firmly against the expansion of drugs generally-and of tranquilizers particularly—to over-the-counter and nonre-strictive sales. One shudders at the prospect of seeing the shelves of the supermarket stocked high with more than 57 varieties of tranquilizers.

There are many still broader ramifications involved in the general use of tranquilizers. The tranquilizers can affect the whole society-its cultural dynamics, stasis, decay. What happens to a people accustomed to avoid all anxiety, who know no fear, who need not think, or love or hate? What happens to a people without an urge to create? Or to a people who must take the proper potion before being able to do any of these? And what happens to such people when they meet up with "normal" people. or with "noble savages" who have not had the advantages of the most advanced psychopharmacology?

Beyond Huxley, I have found no study by an anthropologist, sociologist, psycholo-gist, psychiatrist, philosopher, or any com-bination of these, on the impact of the tranquilizers on man and his culture. As we watch over the decline of the West, we see the beams-the bombs and the missiles; but perhaps we miss the motes-the pretty

little pills.

The problem deserves serious study now. Psychopharmacology is in its infancy, but the potentialities for the manipulation of the human mind and personality through drugs are as limitless as the gyri of the human brain.

Flame of Freedom-Powerful in Poland

EXTENSION OF REMARKS OF

HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. BATES. Mr. Speaker, earlier this month, we marked with appropriate addresses, Poland's Constitution Day, the equivalent of our Fourth of July.

Throughout participation in this important event, we told the Polish people that Americans have not forgotten a pledge to help Poland restore her freedom and independence and to welcome her back to the Western family of nations.

We are proud to give strong support to the hopes and aspirations of our Polish friends who, through no fault of their own, have been forced to endure Soviet oppression and to live in a twilight zone between the darkness of tyranny from the East, and as yet, the unsteadily flickering rays of encouragement and moral and economic aid from the West. One thing we may be certain and that is of Poland's desire to remain free and to fight until this goal is achieved.

Despite Communist pressures and renewed efforts to re-Stalinize the hated system of government, the situation in Poland, due to the unbending will of the Poles, faithful in allegiance to the Western civilization, is and will continue firm. I am sure that the problems of Poland and other nations under the yoke of the Soviets, will be uppermost in the minds of the President when he attends the summit meeting shortly.

Poland has made notable contributions to our own freedom and liberty and her great leaders, Casimir Pulaski, Ignace Jan Paderewski, Frederic Chopin, and others enriched the world by their life and spirit.

I am proud to say that thousands of my constituents in the Sixth Massachusetts District are of Polish extraction and they are justly proud of the Polish record in developing our own country. The freedom and liberty they have here they wish to share with their brothers and sisters in Poland. We must do all we can to achieve this cherished dream of freedom.

Joseph Kennedy-UMWA

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 27, 1960

Mr. DENT. Mr. Speaker, it is refreshing to learn that a very capable public servant is coming back to the Washington scene.

I speak of Joseph T. Kennedy who is coming back to the UMWA.

I have had the pleasure of working with Joe Kennedy while I was the floor leader in the Pennsylvania State Senate and he was secretary of mines in our great State of Pennsylvania.

I wish him Godspeed and good health in his new duties:

JOSEPH KENNEDY RETURNS TO UMWA AS AS-SISTANT TO THE PRESIDENT

(By George J. Curilla, Jr.)

Joseph T. Kennedy of Wilkes-Barre, Pa., as of April 1 assumes the post of assistant to UMWA President Thomas Kennedy at International headquarters of the union in Washington, D.C. The Kennedys are not related.

The new appointee, who served as secretary of the Pennsylvania Department of Mines and Mineral Industries for more than 5 years under two Governors, "will have charge of contracts, grievances, and um-pires' decisions across the country," accord-

ing to President Kennedy.

Kennedy, who was the UMWA president's administrative assistant for 7 years when the latter was serving as vice president, was on leave of absence from the union while holding down the cabinet post, first under former Gov. George M. Leader and more recently under incumbent Gov. David L. Lawrence.

Kennedy's new duties will be similar to those handled by Vice President W. A. Boyle when Boyle served as assistant to now President Emeritus John L. Lewis. Lewis' resignation as UMWA president, Thomas Kennedy's elevation, and Boyle's designation as vice president occurred at a special meeting of the UMWA international eexcutive board January 14.

Joseph Kennedy, who submitted his resignation to Governor Lawrence March 15 to become effective April 1, said he did so with regret. He expressed his gratitude for being given the opportunity to serve under the

present Pennsylvania chief executive and also his predecessor.

'Notwithstanding the fact that I've admired these men [Lawrence and Leader] for many years, my first love is the United Mine Workers of America," he said.

A Democrat, Kennedy replaced Republican William J. Clements of Coaldale, as mines

secretary on January 18, 1955.

As secretary of mines, Kennedy was responsible for establishment of a pioneering coal research program which he said gave him his "greatest satisfaction in office because Pennsylvania became the first among the 28 coal-producing States to adopt such a program," adding that "it has also stim-ulated the Federal Government in this field."

The former cabinet officer spearheaded the Commonwealth's efforts in rescue and salvage operations following last year's Knox mine disaster near Pittston, Pa., and also gained recognition at the outset of his administration in helping to uncover a scandal involving the flushing of mine voids along the northeast extension of the Pennsylvania Turnpike.

Kennedy, a member of the UMWA for 44 years, is a former hard coal miner. He started work at the Lance Colliery of the now defunct Lehigh & Wilkes-Barre Coal Co. in 1916 at the age of 12 and subsequently held various jobs at the Loree No. 3 Mine of the Hudson Coal Co. until 1929. He holds membership in Local Union 20, District 1.

He served as secretary in the District 1 President's office from 1920 until 1937 and then was named district statistician. He held the latter post until 1945 when he was appointed secretary to the international secretary-treasurer.

Kennedy, who held many local union offices and membership on mine committees over the years, participated in negotiations for both anthracite and bituminous wage agreements for more than two decades.

He has attended district, tridistrict, and international conventions of the UMWA for more than 30 years and was a delegate to the coal mines committee of the International Labor Organization at Dusseldorf, Germany. in 1953.

Kennedy is a graduate of the University of Scranton where he majored in education, statistics, and business administration.

"Unauthorized" Spy Plane Is Poorest Kind of Alibi

EXTENSION OF REMARKS OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I call to the attention of the House an editorial appearing in the Nashville Tennessean, one of our great newspapers, pointing up a major cold war blunder.

The editorial follows:

"UNAUTHORIZED" SPY PLANE IS POOREST KIND OF ALIBI

Now that the real story of the spy-plane disaster over Soviet Russia is coming to light, the American public is entitled to know who was responsible for this major cold-war blunder.

The fact that we have been trying to find out what was going on behind the Iron Curtain has been well known. And we may be sure that our efforts have been matched by Soviet Russia in seeking out American

But it will be hard to explain why the United States undertook this latest venture in Russian air just before the May 16 summit meeting without properly weighing the chances of detection and exposure.

To say that this was an unauthorized exploit by a civilian flier is just another way of muddling the picture. For it has been made clear that the supersecret U-2 singleengine jet was chartered from the Lockheed Aircraft Co. by the National Aeronautics and Space Administration, which in turn was being serviced by the Air Force.

One point that has been carefully skirted is the part played by Mr. Allen Dulles' Central Intelligence Agency, and this also involves the part played by the National Security Council and President Eisenhower himself.

There was a good deal of cunning in the Way Nikita Khrushchev misled the United States in his first announcement of the plane's destruction over the Ural Mountains, far from the nearest free-world border, for that led the State Department into a trap and brought forth excuses which later proved to be without merit.

The solar plexus blow came when it was revealed that the U-2 pilot has survived and, according to the Soviets, confessed his spy

Never has Mr. Khrushchev had a better chance to denounce the United States as an aggressor, and he is making the most of it. His threat of a public trial for the unfortuhate pilot may never be carried out, but it is something for Washington to worry about. Coming at the same time as the summit session, it could have a devastating effect.

Spying between the United States and Russia is old stuff indeed. For our part, there is a need to guard against surprise attack, but the Russians can say that they have reason to react strongly when shadow planes, traveling at great height, cross into their territory

They are saying this now with a vengeance, and the facts make it almost impossible for our best friends to defend our course. photographing of military installations, which seems to have been substantiated, cannot lightly be brushed aside.

What, it may be asked, was the great emergency that caused this information-gathering flight? We know of none.

But we do know that its embarrassing fallure has damaged the position of the United States and its allies before the summit, and may make any kind of agreement harder to

From Russia's standpoint, the opportunity is given to make further boast of its rocketry, though this is the point on which their story falls down. For if the spy plane had been hit by the first shot from a ground-to-air rocket, it cannot be believed that the pilot Would have had the chance to ball out.

Such an inaccuracy, however, does not carry too much weight in view of the rash of errors attributed to the State Department in trying to confuse the issue.

Information gathering, as it is termed in Washington, is a necessary part of the cold war, and it may last for years to come. it is not something which should be left in the hands of people whose actions, at times, seem to verge on the irresponsible.

Let there be no more talk of unauthorized espionage flights when it is all too plain that such a hazardous venture would never be undertaken by an individual unless someone in the higher echelons had given the word. The Chesapeake and Ohio Canal National Historical Park, H.R. 2331, Six Acts of Congress

> EXTENSION OF REMARKS OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. FOLEY. Mr. Speaker, the Chesapeake and Ohio Canal has been the subject of specific Federal legislation since 1825. Since most of these acts are not included in the United States Code and thus not readily available to the Members of the House, I have inserted them in the Congressional Record. Moreover, since H.R. 2331 does not repeal these acts and expressly reaffirms the act of September 22, 1950 (64 Stat. 905) and the act of August 1, 1953 (67 Stat. 359), all acts are set out in their entirety:

> T (Mar. 3, 1825, ch. L11, an act)

Confirming the Act of the Legislature of Virginia entitled "An Act incorporating the Chesapeake and Ohio Canal Company, and "An Act of the State of Maryland, confirming the same"

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the Act of the Legislature of the State of Virginia, entitled "An Act incorporating the Chesapeake and Ohio Canal Company," and the same is hereby ratified and confirmed, so far as may be necessary for the purpose of enabling any company that may hereafter be formed by the authority of said Act of incorporation, to carry into effect the provisions thereof, in the District of Columbia, within the exclusive jurisdiction of the United States and no further.

SEC. 2. And be it further enacted, That, should the State of Virginia or Maryland desire, at any time, to avail itself of the right secured to it, by the twenty-first section of the Act aforesaid, to take and continue a canal, from any point of the Chesapeake and Ohio Canal, to any other point within the territory of the District of Columbia, or through the same, on application to the President of the United States, by the executive of the State, the President is authorized and empowered to depute three skillful Commissioners of the United States Corps of Engineers, to survey and examine so much of the route of such canal, as may effect, in any manner, the navigation of the Chesapeake and Ohio Canal. The said Commissioners, or a majority of them, shall ascertain, as far as practicable, whether the canal proposed to be constructed by the State aforesaid, shall injure or impede the navigation of the Chesapeake and Ohio Canal, and report to the President of the United States the facts and reasons on which they may ground their judgment thereupon which report shall be submitted to the Congress of the United States at their session next ensuing the date thereof for their decision thereon; and if Congress shall be of opinion that the said canal may be cut in the manner proposed, as aforesaid, without impeding or injuring the navigation of the Chesapeake

and Ohio Canal, the same shall be conclusive thereon.

H. CLAY, Speaker of the House of Representatipes.

JOHN GATLLARD President of the Senate pro tempore. Approved:

JAMES MONROE.

WASHINGTON, March 3, 1825.

TT

(June 16, 1933, ch. 90, 48 Stat. 201, 202 (15 U.S.C. title 1, sec. 702)

Sections 202 and 203a of the National Industrial Recovery Act provide:

For the purchase of the Chesapeake and Ohio Canal and appurtenant land in the District of Columbia and Maryland, including, for a considerable portion of the length the canal, the bed of the Potomac River where it adjoins the canal right-of-way, and the construction of a parkway as well as the rehabilitation of the existing canal as an historic site, including incidental expenses.'

III

(August 7, 1946, ch. 788, 60 Stat. 885—(16 U.S.C. § 17j-2), title 16)

Conservation

Sec. 17j-2. Same; road maintenance and repair; administrative expenses; lectures, investigations, telephone service, etc.

Appropriations for the National Park Serv-

ice are authorized for-

(a) Necessary protection of the area of federally owned land in the custody of the National Park Service known as the Ocean Strip and Queets Corridor, adjacent to Olympic National Park, Washington; necessary repairs to the roads from Glacier Park Station through the Blackfeet Indian Reservation to the various points in the boundary line of Glacier National Park, Montana, and the international boundary; repair and maintenance of approximately two and seventy-seven one-hundredths miles of road leading from United States Highway 187 to the north entrance of Grand Teton National Park, Wyoming; maintenance of approach roads through the Lassen National leading to Lassen Volcanic National Park. California; maintenance and repair of the Generals Highway between the boundaries of Sequoia National Park, California, and the Grant Grove section of King Canyon National Park, California; maintenance of approximately two and one-fourth miles of roads comprising those portions of Fresno-Kings Canyon approach road, Park Ridge Lookout Road, and Ash Mountain-Advance truck trail, necessary to the administration and protection of the Sequoia and Kings Canyon National Parks; maintenance of the roads in the national forests leading out of Yellowstone National Park, Wyoming, Idaho, and Montana; maintenance of the road in the Stanislaus National Forest connecting the Tioga Road with the Hetch Hetchy Road near Mather Station, Yosemite National Park, California; and maintenance and repair of the approach road to the Custer Battlefield National Monument and the road connecting the said monument with the Reno Monument site, Montana.

(b) Administration, protection improvement, and maintenance of areas, under the jurisdiction of other agencies of the Government, devoted to recreational use pursuant to cooperative agreements.

(c) Necessary local transportation and subsistance in kind of persons selected for employment or as cooperators, serving without other compensation, while attending fire-protection training camps.

(d) Administration, protection, maintenance, and improvement of the Chesapeake and Ohio Canal.

(e) Educational lectures in or in the vicinity of and with respect to the national parks, national monuments, and other reservations under the jurisdiction of the National Park Service; and services of field employees in cooperation with such nonprofit scientific and historical societies engaged in educational work in the various parks and monuments as the Secretary of the Interior may designate.

(f) Travel expenses of employees attending Government camps for training in forest-fire prevention and suppression and the Federal Bureau of Investigation National Police Academy, and attending Federal, State, or municipal schools for training in building fire prevention and suppression.

(g) Investigation and establishment of water rights in accordance with local custom, laws, and decisions of courts, including the acquisition of water rights or of lands or interest in lands or rights-of-way for use and protection of water rights necessary or beneficial in the administration and public use of the national parks and monuemnts.

(h) Acquisition of rights-of-way and construction and maintenance of a water supply line partly outside the boundaries of Mesa Verde National Park.

(i) Official telephone service in the field in the case of official telephones installed in private houses when authorized under regulations established by the Secretary.

IV

(June 10, 1948, Public Law 618, ch. 435)

An act to authorize the Secretary of the Interior to have made by the Public Roads Administration and the National Park Service a joint reconnaissance survey of the Chesapeake and Ohio Canal between Great Falls, Maryland, and Cumberland, Maryland, and to report to the Congress upon the advisability and practicability of constructing thereon a parkway, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That there is hereby authorized to be expended from the appropriations made to the National Park Service for parkways the sum of \$40,000 for the purpose of making a joint reconnaissance study by the Public Roads Administration and the National Park Service of the federally owned Chesapeake and Ohio Canal between Great Falls, Maryland, and Cumberland, Maryland, to determine the advisability and practicability of constructing a parkway along the route of the Chesapeake and Ohio Canal, including a report of estimated cost.

(Sept. 22, 1950, Public Law 811, ch. 987— (H.R. 8534))

An Act to authorize the acceptance of donations of land to supplement present parkway lands along the line of the Chesapeake and Ohio Canal between Great Falls and Cumberland, Maryland.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized to accept on behalf of the United States donations of land and interests in land in the State of Maryland as additions to present parkway lands along the line of the Chesapeake and Ohio Canal, between Great Falls and Cumberland, Maryland. The lands to be acquired shall be sufficient to increase the present parkway width to an average of one hundred acres per mile for the entire length of the parkway. The title to real property acquired pursuant to this Act shall be satisfactory to the Attorney General of the United States.

Sec. 2. The Secretary is also authorized to accept land and interests in land for the parkway and, in his discretion, to convey in exchange therefor former Chesapeake and Ohio Canal property now under his administrative jurisdiction or other property accepted by him for the purposes of this Act. In any land exchanges consummated pursuant to this Act, the value of the federally owned property conveyed shall not exceed the value of the property accepted by the Secretary.

SEC. 3. All property acquired pursuant to this Act shall be administered by the Secretary in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535, 16 U.S.C. 1946 ed., sec. 1-3), entitled "An Act to establish a National Park Service and for other purposes."

VI

(August 1, 1953, Public Law 184, ch. 310— (H.R. 5804))

An Act to authorize the Secretary of the Interior to grant easements for rights-of-way through, over, and under the parkway land along the line of the Chesapeake and Ohio Canal, and to authorize an exchange of lands with other Federal departments and agencies, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That the Secretary of the Interior is hereby authorized and directed to grant perpetual easements, subject to such reasonable conditions as are necessary for the protection of the Federal interests, for rights-of-way through, over, or under the parkway lands along the line of the Chesapeake and Ohio Canal, now or hereafter acquired, for the purposes of electric, telephone, and telegraph lines or conduits, gas, oil, and water pipelines, tunnels, and water conduits, or for other utility purposes incident to industrial, commercial or agricultural use, or to the supply of water for domestic, public, or any other beneficial use, where it is intended to use such rights-of-way for any one or more of the purposes herein above named.

SEC. 2. No part of said easements shall be used for any other than the purposes for which they are granted, and in the event of any breach of this restriction, or in the event of any failure to observe the conditions in said easements, either of which shall continue for a period of ninety days after notice thereof, or in the event the said easement is abandoned for the purposes granted, the entire interest herein authorized to be granted shall, upon a declaration to that effect by the Secretary of the Interior, revert to the United States.

SEC. 3. The Secretary of the Interior shall cause an appraisal to be made of the fair market value of the said easements, including the resulting damage, if any, to the residue of the parkway lands, which appraisal, after approval by the Secretary of the Interior, shall be paid in cash by the grantees requesting the easement as the consideration for said easements when granted by the United States.

SEC. 4. The Secretary of the Interior is further authorized, in his discretion, to grant perpetual easements, subject to such conditions as are necessary for the protec-tion of the Federal interest, for rights-ofway through, over, or under the parkway lands along the Chesapeake and Ohio Canal, now or hereafter acquired, for railroad tracks or for other utility purposes: Provided, That such easements may be ganted in exchange for the relinquishment of existing easements across land now or hereafter in Federal ownership within the parkway: Provided further, That the Secretary may cause an appraisal to be made of the value of such easements and may require payment to be made by the grantee as provided in Section 3 of this Act: Provided further, That no part of said easements shall be used for any other than the purposes for which they are granted, and in the event of any breach of this restriction, or in the event of any failure to observe the conditions in said easements, either of which shall continue for a period of ninety days after notice thereof, or in the event the said easement is abandoned for the purposes granted, the entire interest herein authorized to be granted, upon a declaration to that effect by the Secretary, shall revert to the United States.

Szc. 5. The Secretary of the Interior is hereby authorized, in his discretion, when in the best interest of the United States, to convey at the fair market value, to counties and municipalities for roads, streets, highways, or other municipal facilities, by proper deed or instrument, any lands or interests in lands of the United States within the parkway along the line of the Chesapeake and Ohio Canal, under the jurisdiction of the Department of the Interior and located within the boundaries of such county or municipality, which are not needed for parkway purposes, but not to the extent of severing in any manner the continuity of the parkway lands from Great Falls to and including the city of Cumberland, Maryland.

Scc. 6. The Secretary of the Interior, and the heads of other departments and agencies of the Federal Government administer ing lands along or adjacent to the line of the Chesapeake and Ohio Canal, are hereby authorized, for the purpose of facilitating the development, administration, and maintenance of said parkway, to transfer jurisdiction between their respective departments and agencies over such portions of the lands under their respective jurisdic-tions along or adjacent to the line of said canal as are surplus to their respective needs, without reimbursement, and under such conditions as may be mutually agreed upon by the Secretary of the Interior and the head of the other department or agency concerned; and such transfer of jurisdiction by any department or agency of the Federal Government in possession of such lands is hereby authorized.

Approved August 1, 1953.

Health Aid for the Elderly

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. IRWIN. Mr. Speaker, in recent weeks we have read and heard considerable comment on the various issues involved in the matter of providing health insurance for the aged. In this morning's edition of the New York Times there is an editorial which compiles major points of the proposed legislation and brings into sharp focus the job which lies ahead. Pursuant to permission previously granted, I include this editorial in the Record:

HEALTH AID FOR THE ELDERLY

The administration's program of health insurance for those over 65 has laid the main issues right on the line. They are: First, the use of the Federal social security mechanism versus State administration with Federal subsidies and, second, compulsion versus freedom of choice.

Under the administration plan the various States would be authorized to provide financial aid to elderly people in meeting the costs of hospital and medical care, either directly or through private agencies. The Federal Government would share the costs of the whole operation with the States. Participation by individuals would be voluntary, but limited to those whose incomes were less than \$2,500 in the previous year (couples \$3,800). On the other hand, the widely supported Forand bill provides that the entire operation be carried on by the Federal Government as part of the wellestablished old-age and survivors insurance system, with eligibility for all those eligible for regular OASI benefits.

We believe that the arguments for using social security are overwhelming. Governor Rockefeller has done well to say that the administration plan could result in "a very serious fiscal situation, very high costs and cumbersome administration" and to urge that medical care for the aged be an added health feature of the social security system, with those who benefit contributing

to their own protection.

The relatively high expense, per person covered, of the administration plan has two chief causes. First is the fantastic cost of setting up and operating new machinery of administration in possibly as many as 50 different States, and second, the expense involved in checking on the incomes of millions of beneficiaries to prove eligibilityboth at the start and, as incomes change, in the future too. And the complexity and diffusion of administration and control Would be little short of bewildering.
As for the issue of "compulsion," i

ishes with just a little thought. The only involved in the Forand plan compulsion would be that of paying slightly increased social security taxes. Beneficiaries would have a wide choice of hospitals approved by the Government as part of the program. (Under those circumstances who wouldn't

want to accept the benefits?)

As a matter of fact, the administration bill involves the same, but a less obvious, kind of compulsion. Taxpayers as a whole-including those not given protection-would be compelled to cover the costs of State and Federal subsidies. The bogy of "socialism" in social security health protection is also easy to dispel. Under the Forand bill neither hospitals nor surgeons taking care of beneficiaries would be under Government

There are many positive advantages in using social security. For example, it would avoid what amounts to a "means test" for eligibility-something abhorrent to Americans-and would automatically relate payments to ability to pay without investigation. Also, it would take effect nationally at once, while State cooperation might be far from unanimous and also slow in coming.

The administration bill, however, offers substantially more benefits than does the Forand measure. But, except for persons on relief, they couldn't be had until the subscribers themselves had paid \$250 (couples \$400) for health care, in addition to their 824 enrollment fee. And, after that, they Would have to pay 20 percent of all their subsequent expenses. The alternative of purchasing health insurance from private agencies, even with a 50-50 assist from the governments up to \$60, would also be expensive. It looks as if the voluntary plan would be used most by those who need it least.

A satisfactory measure would have to be less costly than the administration planbut provide more protection than does the Forand bill-if possible financially. And the Forand measure doesn't cover the 4 million or so people over 65 who are not getting social security. It is unfortunate that so little time remains in the present session of Congress to hammer out a plan that will meet the need and the phenomenal public demand. If that can't be done, this matter should surely be made a "must" for the next Congress when it meets.

The National Poultry Stabilization Act

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 11, 1960

Mr. HUMPHREY. Mr. President, S. 2516, the National Poultry Stabilization Act, sponsored by myself, Senator Mc-CARTHY, Senator ENGLE, and Senator WILLIAMS of New Jersey, is pending be-fore a subcommittee of the Senate Committee on Agriculture and Forestry.

Earlier this year hearings were held at which widespread producer approval of the bill was expressed. One of the organizations which strongly supported the measure was the U.S. Poultry and Egg Producers Association, Inc. This organization has now prepared a pamphlet which sets out in question-and-answer form a thorough explanation of S. 2516.

The pamphlet answers many of the questions that are asked concerning the operation of producer-managed farm commodity programs of the kind favored by the Senator from Minnesota.

I ask unanimous consent that this pamphlet be printed in the Appendix of the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

(This booklet was prepared by the U.S. Poultry & Egg Producers Association in order to explain the purposes of the association and of the National Poultry Stabilization Act. It presents the questions and answers discussed most often at regional meetings. If you have any questions that are unanswered

here, please feel free to contact us.)

1. Who is the U.S. Poultry & Egg Producers Association?

The U.S. Poultry & Egg Producers Association is a national association of producers of poultry and eggs, founded in 1957.

2. What is the purpose of USPEPA? The primary purpose of our association is to establish a national commodity organization composed of producers of poultry meat and eggs on the same level as other modity organizations such as the National Milk Producers, National Wheat Growers, National Swine Producers, etc. There are 32 commodities who have their own national organization of producers. These commodity groups in other industries actually reflect the desires of the producers of that commodity. Up until the founding of USPEPA, there was no such organization for producers in the poultry industry.

3. What are you trying to accomplish? We believe in a program which will bring the supply of poultry products in line with the demand for these products. A plan of this sort will stabilize the poultry industry so that the independent family-size producer of poultry and eggs will be assured of a fair market price for his product; a price that will enable him to remain in business and make a decent living for himself and his fam-We feel that this goal can best be reached through the use of enabling legislation

and a "self-help" program for the poultry

industry. It will result in the consuming public benefiting through an adequate supply of poultry and eggs at reasonable prices, and the entire national economy will benefit through improved purchasing power for poultry farmers nationwide.

Very simply, we are trying to find ways in which we can improve the price and stabilize the market for poultry meat and eggs. This can be accomplished through the enactment of enabling legislation which will give producers the "tools" to work out their own problems. An example of this legislation is the National Poultry Stabilization Act.

4. What is "enabling legislation" and the

National Poultry Stabilization Act?

Enabling legislation is a form of Federal legislation which, when passed by Congress and the President, will give producers the right to choose the type of program they feel will benefit them most. In other words, after the bill has been passed, producers would decide on a certain plan to stabilize poultry and egg prices. This plan might take the form of a national marketing order or agreement to provide for the control of surpluses, control of unfair trade practices, establishment and maintenance of certain quality standards, research projects, or programs of promotion and advertising in order to increase consumer demand, or overcome certain unfair prejudices for a particular commodity.

The National Poultry Stabilization Act is an example of enabling legislation. type of act is advantageous because:
1. It gives producers the "tools" to work

out their own problems. It does not tie them to any specific program which may become outmoded.

2. It sets up a plan whereby growers can work out their program with the Secretary of Agriculture, who must work with them under the terms of the bill in order to bring production into balance with market needs.

3. It allows complete freedom of activity in that there are provisions for changing the type of program and for enlarging production as it is needed.

4. It is a "self-help" program because the industries themselves would finance any promotion or marketing plans they agree upon. There would be no use of tax funds except for incidental Department of Agriculture expenses in assisting industry advisory boards.

5. How will stabilization be accomplished? The first law of economics teaches that an oversupply brings a drop in price. Therefore, if supply is either adjusted or distributed in such a fashion to avoid burdensome surpluses, the law of supply and demand will work in favor of the producer, and yet guarantee the consumer an adequate supply of wholesome poultry and poultry products. The establishment of surplus removal pools and supply control may be used as methods of removing and controlling surplus.

6. Just what are the needs?

With consumption of eggs dropping, for example, there is great need for a real promotion and consumer education program. It is imperative that the industry dispel some of the unfounded truths about the nutritional values of our products. The National Poultry Stabilization Act would provide ample funds for research, promotion and consumer education to help increase consumption and demand. Every producer would participate in supporting these essential activities. Conceivably, existing promotional agencies, with their past experience, could be retained to conduct this activity.

7. Where would money come from for these

programs?

Each commercial producer would be assessed a certain percentage of his farm income from poultry and eggs. The percentage, by law, has a celling of 4 percent. However, it might be any amount, not to exceed 4 percent, depending on how elaborate a program is undertaken.

8. Would expenditures be confined to sur-

plus pools and promotions?

No. Expenditures could include research, surveys and studies as long as they pertain to the production, processing, distribution and promotion of poultry and poultry products affected by this act.

9. Who would administer this entire pro-

gram?

The administration of such a program would be in the hands of a National Advisory Board. Each section of the poultry industry would have its own board, so that the egg producers would have their board, the meat bird producers another board and so on. respective board would be composed of 65 percent primary producers and the remaining seats could be allotted to allied industry such as mills, processors, and others.

10. How would this council come into

existence?

The Secretary of Agriculture would make appointments of both regular members and alternates on the basis of nominations received from producers throughout the coun-Representation on the council would be allocated to various States or regions on the basis of the volume of that given product produced in that particular State or area.

11. Would this advisory council have polic-

ing powers?

The advisory council, if it found a particular violation of the law either in product shipped or in assessment paid, could take the violator into court and attempt to prove their case. The council in itself is not a court or a jury.

12. Who would determine the program for

the industry?

Upon congressional adoption of the National Poultry Stabilization Act, the Secretary of Agriculture would appoint three program formulation committees, one for each of the three major phases of the poultry industry. This committee would be appointed in the same manner as the Advisory Board. This committee would then be charged with the responsibility of formulating a program for its respective commodity.

13. Would this program then become ef-

fective?

No phase of the program could become effective or be enforced until approved by a 65 percent majority of those producers voting in favor of the program in a referendum conducted by the U.S. Department of Agri-culture. In this way, the final word rests with each individual producer. Once the majority accepts a particular program, then, of course, it would become binding on all producers of that commodity.

14. Could this program formulation committee draft a program of greater benefit to any one area or any particular size producer?

While it is not very likely, such a thing could happen. However, the producer in the referendum has the final word to prevent such inequities. Under the act all producers are equal regardless of size or location.

15. Once the producers vote for a program

could the council change it?

No policy changes can be made without submitting the changes to the producers in another referendum. Details can be worked out by the advisory council as long as they conform to the letter of the law and the letter of the program submitted in referendum to all producers. The Secretary of Agriculture has the authority to see that the law is not violated.

16. What price would be guaranteed under

such a program?

The National Poultry Stabilization Act does not contain any provisions for Government support or guaranteed prices for poultry products. Each individual farmer will benefit from the general stability granted the market through adjusting supply to meet demand.

17. Could new producers enter the in-

Yes, they could enter as additional production is needed or as existing production must be replaced. This would allow expansion in an orderly fashion, rather than to the detriment of the entire industry.

18. What is to prevent this type of farm program from becoming a "political foot-

ball"?

The fact that the National Poultry Stabilization Act is enabling legislation is in a large measure an assurance that it will remain what the majority of the industry wants it to be. It enables the industry to solidify behind an objective with a common goal. Any changes to be made either in program or method of achieving the goal are to be made by the industry itself in a referendum. There is no need to go back to Congress to ask for amendments. The industry itself can make its own amendments, subject to producer approval. This is a new concept in farm programs aimed at reducing the tax load for everybody because it is producer financed and administered while stablilzing a major segment of our entire economy-the farmer. This act protects both producer and consumer.

19. What are production controls and how

will they affect me?

Production controls are a means of bringing supply into line with demand so that farmers can receive a fair price for their product. They might work through assigning each farmer a quota stating how much poultry, meat, or eggs he might produce. This can be regulated through the number of chicks started or through the amount of the product that is marketed. (A quota would be completely negotiable. It can be bought or sold so that fredom of entry, or exit, or expansion is retained. If a poultryman wants to go out of business he can sell his quota to someone else who wants to start e new farm or enlarge his old one.) He can be as efficient as possible with his allotment in order to earn the largest amount of money from it.

20. Won't controls cut my farm down to the point where it will be too small?

No. The only thing production controls would try to accomplish would be to control unneeded and unwarranted expansion in the broiler industry and to try to bring about a small cutback in the egg industry. Most agricultural economists estimate that if the broiler industry is held to its present size for a time, consumer demand will catch up with it and good prices will return. Then gradual expansion can be allowed in line with increasing consumer demand. In the egg production industry a slight cutback may be necessary (perhaps a 5 percent cut) for a few years until population catches up with production. In both industries a real consumer promotion program could be started under the Stabilization Act. For instance, if a tax of 1c per chick were levied on each chick sold in this country a sum of \$20 million could be raised. (There are 2 billion chicks hatched per year; 11/2 billion broiler chicks and one-half billion layer chicks.) The money raised could be used for a real consumer promotion program or to fight the cholesterol or other scares that have cut down on consumption of eggs, or to remove surplus from the market when and if that situation develops. However, all these programs are ineffective unless production is controlled, because production of poultry products can always increase faster than consumption of those products.

21. Aren't controls a form of socialism?

Won't I lose all my freedoms?

Certainly not. Almost every industry in this country uses some sort of control of production and they are all prospering. The oil industry has a Federal board which regulates the amount of oil that can be produced by the wells in order to keep supply in line

with demand. And you don't find the automobile industry producing cars just to keep them low in price. One thing farmers must learn from industry is that in industry the price determines the supply, in agriculture the supply determines the price. As far as socialism is concerned, the best way to prevent socialism is to keep small businessmen and farmers numerous, healthy, and pros-As long as there are many small independent farmers there will never be socialism in this country. It is only when the means of production become concentrated in a few hands through the formation of large corporations and cartels that the country will be threatened with socialism, because then there will be excessive prices and profits and there will also be a demand by the people to have the Government take over the means of production. In regard to freedoms, the only freedom that is restricted under production controls is the freedom to produce too much. Farms can grow in size merely by purchasing another farmer's quota. These quotas will become capitalized into farms, which will then become more valuable, instead of being worth very little as they are today. Farmers must decide whether they want the freedom to produce as much as possible, or whether they want good and stable incomes. They cannot have both under today's conditions.

22. Who is supporting this type of legis-

lation besides USPEPA?

The Stabilization Act is being supported by the National Grange, the National Farmers Union, the National Council of Commodity Organizations for whom USPEPA is the recognized spokesman for the poultry industry, and by many other groups and organizations.

23. Who will manage the program?

The act provides that the program shall be managed by producers themselves working with the Secretary of Agriculture through their own producer committees.

The National Poultry Stabilization Act can bring the poultry industry back to more prosperous times. It can return poultrymen to the point where they can make a decent living from their family-sized farms without longer hours and bigger investments. Most major advances that have benefited people have been made through legislation. There are minimum wage and hour laws to protect workers; antitrust laws to protect consumers against excessively high prices in industry; social security laws to protect people from loss of income during old age, and many other programs for the benefit of the people.

Farmers cannot exist in a free market when the price of almost everything they buy is controlled or administered by large corporations. The Stabilization Act accepts the basic concept that producers are responsible for the market surplus and they must devise some means to cope with it, and it gives them those means through programs which can be initiated under the bill.

Production planning would be simplified as year-to-year price variations were leveled out. Farmers could be free of the fear they might lose their farm under a periodic low price. There would be no loss in efficiency since each farmer would try to produce his quota as cheaply as possible in order to increase his individual profits. This approach to agricultural planning can stabilize the market. It can take the feast and famine characteristics out of agriculture and provide a good and stable income to most poul-

24. Will the U.S. Poultry & Egg Producers Association support other legislation?

USPEPA will support any legislation that is beneficial to the poultry industry. wholeheartedly endorse the Family Farm Income Act of 1960. This bill contains a supply control program similar to that in the Stabilization Act, plus provisions for direct compensatory payments to farmers when necessary.

Better Government purchasing methods and more use of poultry products in school lunches are also part of our program.

25. How can I help bring the National

Poultry Stabilization Act to life?

First, by joining the U.S. Poultry & Egg Producers Association as the only national exclusive producer organization dedicated to the stabilization of the industry and to the preservation of the independent family poultry farmer.

Second, support your membership with a contribution either to the legislative fund or to the organizational fund to help carry on the work in Congress and to assist in bringing this information to all poultrymen

in the country.

Next, discuss this measure in your poultry Organization, seeking their support as well.

Then, write a letter to your Congressman and your Senators. This is most important. Keep the USPEPA posted on your efforts, and we will try to assist you in any way at our command.

It is a long up-hill fight-but pulling together we can accomplish this much needed security—this much needed stabilization Which will preserve our free enterprise sys-

tem and our way of life.

It is fitting that the poultry industry standing on its tradition of independence should pioneer a new concept for an effective Program which may well lead to a reevaluation of our entire national farm program.

While we do not suggest that the National Poultry Stabilization Act is perfect, we do feel that it is more than adequate to supply that vehicle so necessary to our survival. As events occur, the industry itself can correct any weaknesses or imperfections.

We need all the help possible in order to realize all our objectives. We invite support from cooperatives, poultry associations

and individuals.

If you are interested in a prosperous poultry industry, please complete the following form and send it to us. [Not printed in RECORD.]

The Public Wife

EXTENSION OF REMARKS OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. BOLLING. Mr. Speaker, the following witty and perceptive speech by Doris Fleeson was given at the ladies' luncheon of the Chamber of Commerce of the United States on May 3:

THE PUBLIC WIFE

(By Miss Doris Fleeson, political columnist, United Features Syndicate)

Mrs. Canham, honored guests, and targets, and innocent bystanders, my purpose today is to suggest that a bill of rights for the Public wife is long overdue and to hint to her quite plainly my own conviction that she owes rather more to us in the area of the general welfare than has been the case in the recent past.

In short, I want to help her to release er creative energies so that she can help to release ours.

There is plenty to do for all of us, believe

Let me say first that I am happy to be here. I deeply value the mark of confidence represented in Thelma Canham's invitation to me to speak on an occasion for which

the final responsibility must be hers. It is very little for me to do for a dear friend.

She, of course, has reason to believe I have learned something in a long career. But she knows, too, that I have acquired some rather positive opinions in the process.

My esteemed colleague, Joe Alsop, was once accused of having many prejudices. He re-plied in his best Alsopian manner: "I have no prejudices. I have certain well-reasoned convictions that only a damn fool would dispute." That was before he went to Slab Fork, W. Va., of course. But it remains the perfect slogan for a columnist and I consider that I am being extremely generous in giving him a byline for it.

I noted still another clue to columnists upon reading Thornton Wilder's "The Ides of March." A Wilder character was ex-plaining Caesar's relationship toward women, including Cleopatra, and observed that Caesar was a born teacher, it was "a sort of fury in Thus he could not forbear instructing this young and presumably malleable queen in the art of responsibility.

Now, I am not so intellectual that I accept this as the central truth of that famous relationship, but I could see its validity and its relevance to my own trade. Perhaps Caesar today would be a columnist though I doubt if Mary Haworth or Dear Abby would need to fear him as a rival. He would probably compete with me-so many men do.

I shall try not to be unbearably didactic in my approach. For my abiding conviction about my life's work as a political reporter is that politics is an art to be practiced and nowhere does it show itself in so many individual forms for which no absolutes can be laid down.

Public life is, I think, an accidental business requiring a maximum of flexibility and a minimum of dogma for it is based upon human nature. And human nature is rarely more richly and amply displayed than in the efforts men make to achieve a tolerable form of government.

From the standpoint of my own north of Ireland temperatment and my Covenanter ancestry, the public wife is decidedly underprivileged in the political conflict.

She is discussed by the public ad infinitum and often ad nauseam but she is denied the right to talk back. She must leave it to others to explain the convictions which form the basis of her actions and to suggest why she is what she is and does what she does.

The general theory of her place in the cosmic scheme seems to be that she should be a mirror which reflects her husband only in the most flattering light. And yet she is the person who knows him best. Still, any attempt at detachment on her part is interpreted as a kind of political infidelity by the same people who tear her husband to ribbons on any or no provocation.

Man is, according to Pascal, a reed but a thinking reed. The public man may claim that distinction; his wife must be content to be just a reed-but never a broken one of course. Just let her try dodging the constituents because she has a headache.

Sometimes another curious schizophrenia afflicts political partisans and admirers of a public wife, particularly a Presidential wife. They hold that she is immune from comment unless it is flattering. Thus all critics are driven to that underground where anything goes.

The result is that Presidential wives tend to be singularly unfortunate in their biographers. After they have been safely dead a long time, they may if they are lucky get approximate justice. But usually if there is anything more revolting than the usual campaign biography it is the inanities written about the candidate's wife.

They are unspeakably dull-yet these women sit at the eye of the hurricane, the point of danger where the decisions are being made.

I have a feeling too that the public wife has a very important effect on what the prayer book calls the things left undone which we ought to have done. She is or can be the attention-caller in this area.

The uncrowned queen of public wives is naturally the wife of the President. She has hit the jackpot all right but has found it to be only a bigger goldfish bowl than she

has ever known before.

My own acquaintance with public wives began-oh dear-with Mrs. Calvin Coolidge. A very nice place to begin I may say. Yet my first recollection of her was hearing the tokes made about her husband's jealousy of the secret service men whose job it was to accompany her. This is the same husband who is famous for his trite prose but wrote of her: "For 30 years she has borne with my infirmities and I have rejoiced in her graces," That day he wrote music.

Much of what I know about Mrs. Coolidge's predecessors I owe to the writing and research of Bess Furman of the New York Times. are agreed that this Nation has had all kinds of first ladies, very different from one another, but all have had one thing in common: The great American public thought it had

the right to tear them to bits.

A rare few have managed to treat the White House as a privileged sanctuary. This is the other extreme and a shockingly narrow

view of a tremendous opportunity.

It is a sorry fact that the only President's wife who needed to have it so was the most traduced first lady in our history. Mary Todd Lincoln's critics found publishers for an outpouring of vitriol which marred and maimed an already unstable personality. know how that Mary Lincoln was mentally ill and we also know much more about mental

But it was possible even then to recognize the emotional burdens carried by the wife of a Civil War President and it was known that Mrs. Lincoln, herself a southerner, had two brothers in the Confederate Army.

The roll is a long one. Dolly Madison made the White House a gay and lovely place—and Congress criticized her for her extravagance and refused to pay for her

Mrs. Rutherford B. Hayes took an intelligent interest in the social problem of poverty and backed the cause of temperance when workingmen's wives were victimized by the unregulated saloon. She was ridiculed as Lemonade Lucy.

President Jackson always believed that

his wife died as a result of public unkind-ness over her plight when it was discovered that her divorce from her first husband was

What happened to Mrs. Roosevelt when she decided that the depression was not strictly a man's problem is recent history. To defend her today is superfluous but her courage and humanity were not always so well rewarded.

As even Representative Walter knows. the original Bill of Rights arose out of the keen apprehension of the Founding Fathers that something very specific needed to be said at once regarding human rights in the infant Republic. The phrase applies to the first 10 amendments to the Constitution which were speedily ratified by the various State legislatures.

It lends itself surprisingly well to the situation of the public wife.

Article I protects religious belief, free speech, free press, free assemblage, and the right of petition for the redress of griev-ances. Our article I might say succinctly: The public wife has the right to be herself.

Article II allows the people to bear arms. Simple: The public wife has the right to

talk back.

Article III forbids the quartering of soldiers in our homes in time of peace and only under prescribed rules in time of war. Could we translate this into rules that the public wife need accommodate only so many house guests at any given moment, need tour Mount Vernon, climb the Washington Monument, and inspect the cherry blossoms only a given number of times in any one season?

I am reminded of the Cabinet officer who told a real estate agent here: I want a house with a drawing room for 200 at cocktails, a dining room which will seat 36, and 1 bedroom with bath.

Article IV secures us against unreasonable search and seizure. Easy again. There shall be harsh penalties levied against the snoopers and spies into the private life of the public wife.

Comes now the famous fifth and who really would want to part with it? It insures us against double jeopardy, against testifying against ourselves, and being deprived of life, liberty, and property without due process of law. Let us say that the public wife shall enjoy similar safeguards of her good repute.

Articles VI and VII spell out that right to due process in criminal and common law. It includes jury trial, confrontation of witnesses, and the assistance of counsel. It seems very little to ask for the public wife that criticism of her should be confined to the light of day.

Article VIII forbids excessive bail and fines, cruel and unusual punishment. We might put it that the public wife is excused from trying to please all of the people all of the time.

Article IX says that the enumeration of certain rights in the Constitution shall not be construed to deny or disparage other rights retained by the people. This opens the door to our personal tastes.

Let the public wife wear pink, maybe it isn't becoming but it might be her husband's favorite color. Let her wear sleeveless sheaths—if she has the figure for it—but try not to be jealous if she has and you haven't.

Article X, a favorite in this forum, I suspect, protects States rights. We can say that the public wife of Wisconsin need not be Alabama's notion of a dream princess but I'm afraid we can do little here for wives of the President and Vice President. They will simply have to depend on a certain amount of federalization of taste and custom

of federalization of taste and custom.

I may say that I have cleared my constitutional interpretations with Justice Douglas of the U.S. Supreme Court. He assures me I am on firm ground but adds he cannot commit the U.S. Senate.

I do not intend that all the defensive shall be borne by the public of the public wife. In one very large area she seems to me to be doing much less than her part. I refer to the changing patterns of social and family life which are of such intimate and central interest to women.

It surely needs no exposition before any audience except possibly the DAR that the status of women is changing at breakneck speed in a changing world. Mrs. Canham's husband was chairman of the womanpower commission which found that 9 out of 10 American women would at some period of their lives become a member of the labor force working outside their homes.

The same automation which has freed them from so much drudgery in the home has thus strikingly operated to direct them into outside occupations.

May I suggest in all candor and detachment that we more prosperous members of society are the victims of this change fully as much as our less fortunate sisters. Sometimes I think our problem is the greater because we lack the spur of economic necessity to compel us to seek productive and satisfying new outlets.

Too many times we have therefore not done so but have relaxed into a kind of rootlessness and conspicuous consumption which unfortunately have given much ammunition to critics of our country.

I nominate the public wife to pick up the reins of leadership in the new society. We need her leverage upon the sources of power to help us preserve the enduring values in spite of changes in outward form.

I want her to make and maintain understanding contact with the preachers, the teachers, the civic leaders, the workers in the fine arts too. They are the real VIP's of our society and we should show that we think so.

This country can no longer afford to let our showplaces in the Government, the White House included, become merely showcases for fashion only and the lowest common denominator of the public taste.

I am not proposing an end to the amenities of life. And all of us prize our primary role, so enchantingly described by Stephen Vincent Benét in John Brown's Body:

She was often mistaken, not often blind And she knew the whole duty of womankind To take the burden and have the power And seem like a well protected flower To hate the sin and to love the sinner And see that the gentlemen got their dinner And always always to have the charm That makes the gentleman take your arm.

There is good reason to believe that our times are producing a new kind of public wife, who is aware of some existing vacuums,

Much is made of the expanding role of the Vice President today. He has no new constitutional powers and I personally cannot see the Congress giving him any more. But he has had many ceremonial duties and he has been accompanied every inch of the way by a wife who does her homework—and I do not mean the regrettable effort to include the pressing of his pants. I am sure she uses her valuable energies otherwise and she should.

State Department experts testify that Pat Nixon learns before they embark on their travels what the experts think she should. Republicans know that she carried the load of national party hostess in many ways and many places. She does the little things that count so heavily with the party rank and file. I would not be at all surprised if the loyalty shown Mr. Nixon by the organization is due fully as much to Mrs. Nixon's attitudes as to his.

Among Democrats we see in the current Presidential limelight women very different from one another, but alike in their public understanding, their unstinted gifts of care and attention to their husbands in a time of supreme testing.

Muriel Humphrey perceived quickly that her Hubert needed backstopping and her personal testament of confidence far beyond what she had had to attempt in Minnesota. At the sacrifice of letting her daughter plan her own June wedding she is telling the Humphrey story in supermarket and Slab Fork. She is a great success because she believes in something bigger than their own fortunes.

Jackie Kennedy, drawn to the presidential stage from a sheltered environment at a very early age, turns a brave, bright face on much that must be new to her and on aspects of human nature which all of us require time and maturity to understand and to forgive. I think of her as I did of Margaret Truman in terms of my own daughter and I have cheered them both as they planted their pretty feet on the hard public path and held their heads high.

That sparkling face at Senator Lyndon Johnson's shoulder is his Lady Bird and don't let that soft phrase fool you. Few politicians can rival his management skills but his Bird can. The hand is light but the base it establishes for his expansiveness is firm and sure.

Evie Symington was born into her public role. All Democrats as well as the Senator should be grateful to that long line of distinguished Republican ancestors who imbued her with remarkable understanding of polities and public life. She has an artist's faculty for imparting her treasures of warmth and cultivation.

As an old advocate of equal rights for men, I will even allow candidates for President not to be married—and you all know who. Besides, think how many women voters would be disappointed if he chose only one.

Perhaps it will seem that I am asking too much of presidential wives when I nominate them for leadership in the family sector of our society. I have a carrot for them however as well as a stick.

Why shouldn't the wife of the President have a salary and expense account as he does if she earns it? I don't mean merit badges either. I mean something you can take to the bank. Fully as much as he, she is called upon for extraordinary expenditures in line of duty and I suspect she has to take a lot of guff from him about how much the distaff side of the White House costs. I know Mrs. Roosevelt did.

With her own income she would need no hint of patronage or favor to hold her own high place. Is not the laborer worthy of his hire? A salary and expense account might take the place of some of those widows' pensions Congress rather patronizingly later bestows when and as it gets around to it.

I suggest too that before a politician is criticized for having his wife on the payroll, the facts be ascertained about what she does for it. The extravagant costs of campaigning are surely familiar to the dimmest wits among us and the bills have to be paid somehow.

It seems to me I have talked a great deal about a topic on which I have instructed you to talk less. I am grateful for the chance. The public wife has had to forgive me much for in writing about her husband. I am sure I have often seemed to her obtuse, insensitive and plain wrong. But she has on the whole been generous.

Long may she wave in a free society to which she makes a significant contribution.

The Deadly Spray

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in Sports Illustrated of May 2, 1960, entitled "The Deadly Spray":

THE DEADLY SPRAY

(In the war against his insect enemies, man has reached the point where his poisons not only kill birds and animals but threaten the human population as well.)

(By John O'Reilly)

In the last 3 years the U.S. Department of Agriculture, warring against the fire ant, has sprayed more than 1,750,000 acres in the southeast with chemical pesticides far more poisonous than DDT.

In the last few weeks the U.S. Fish and Wildlife Service has reported finding 59 species of animals, including game birds, dead on the ground in sprayed areas. These

animals all contained residues of dieldrin or heptachlor, the two chemicals used.

In the same period the Food and Drug Administration declared a zero tolerance for heptachlor in foodstuffs for human con-

Thus man's chemical warfare against his insect enemies has at last reached the point where it threatens the well-being of himself. The multimillion dollar campaign waged by the Department of Agriculture against the imported fire ant has brought the whole question of the mass use of pesticides into violent focus. Yet the spray several in which scientific investigators have found alarming results. Here are some of the others:

Heavy losses of game and nongame fish were discovered 4 months after DDT was sprayed on a large tract of forest in the watershed of Montana's Yellowstone River. On less than 300 yards of stream 600 dead or dying whitefish, brown trout and suckers were counted, and Prof. Richard J. Graham found fish dying 90 miles below the treated watershed. The fish were found to contain DDT.

On the east coast of Florida 2,000 acres of tidal marsh, traversed by 354,000 linear feet of ditches, were sprayed by airplane with dieldrin to control sand flies. The fish kill was nearly complete, estimates running to between 20 and 30 tons, or about 1,750,000 fish, representing some 30 species.

Robins and other highly desirable birds vere wiped out in a number of communities in the Midwest, where spraying with DDT has been conducted for control of the Dutch elm disease. On the campus of Michigan State University Dr. George J. Wallace found original nesting robins were killed and others moving in to replace them also fell prey to the poison.

Damage to birds and mammals was reported by T. G. Scott, Y. L. Willis and J. A. Ellis from applications of dieldrin for control of Japanese beetles in Illinois.

Research conducted by the U.S. Fish and Wildlife Service has shown that as little as 1/200,000 of an ounce of dieldrin per day in the food of pheasants resulted in eggs of low hatchability and chicks subject to abnormally high death rates.

Some streams already have been polluted With pesticides, and DDT has been found at the mouths of even the largest rivers, including the Mississippi and the Columbia.

All the foregoing were the results of a program which, according to the Pesticide Committee of the International Association of Fish, Game and Conservation Commissioners, in 1958 accomplished the following: "Chemical controls were applied to more than 100 million acres of land in the United States, with additional millions more in Canada and Mexico. Mixed with dusts, oils, Water and other solvents, emulsifiers and carriers, the volume totaled between 2 and 3 billion pounds and cost the consumer over \$500 million. Currently, one-sixth to onefifth of our croplands and millions of acres of forest and range lands are treated annually with pesticides in quantities of a few ounces to 25 or more pounds per acre." for the future, the report added: "Ento-mologists expect a fourfold increase in the use of insecticides during the next 10 or 15

On March 28 Justice William O. Douglas in effect proposed that the entire problem of mass spraying of toxic chemicals be reviewed by the Supreme Court of the United States. He stressed the importance of the issue in an indignant protest when the Supreme Court refused to consider the legality of a Department of Agriculture program to spray DDT from airplanes on more than 3 million acres of land in 10 States.

Justice Douglas' action climaxed a 4-year battle by 13 residents of Long Island, N.Y., including Dr. Robert Cushman Murphy, the ornithologist, and Archibald B. Roosevelt, son of President Theodore Roosevelt, to curb pesticide spraying in their area. They had sought an injunction in 1956 against the Department of Agriculture's spraying of DDT to eradicate the gypsy moth, on the grounds that it would poison vegetables, animals and human beings. While the case was moving through the courts the Department moved through the air and the spraying was done. The Government then said it had no intention of repeating the spraying. The second circuit court of appeals held, therefore, that the question was moot, or a dead issue, and the Supreme Court refused to review this decision.

A THREAT TO HUMAN HEALTH

After discussing some of the testimony in the case, Justice Douglas wrote, "The public interest in this controversy is not confined to a community in New York. Respondents' spraying program is aimed at millions of acres of land throughout the eastern United States. Moreover, the use of DDT in residential areas and on dairy farms is thought by many to present a serious threat to human health, as evidenced by the record in this case as well as by alarms sounded by others on the problem. The need for adequate findings on the effect of DDT is of vital concern not only to wildlife conservationists and owners of domestic animals but to all who drink milk or eat food from sprayed gardens.

"I express no views on the merits of this particular controversy. Nor do I now take a position on the issue of mootness. But I do believe that the questions tendered are extremely significant and justify review by this court."

It is not only the scope of the spraying program but the changing nature of compounds used that has led to such mounting concern. Since World War II, when DDT was put on the market, the deadliness of pesticides has increased markedly. Insects were found to develop immunity to DDT, and so the demand arose for stronger compounds with a wider killing effect. A long list of new organic pesticides was therefore developed, including the chlorinated hydrocarbons. Now more than 200 pesticides are sold in various formulas under thousands of trade names.

Dr. Clarence Cottam, director of the Welder Wildlife Foundation, Sinton, Tex. (SI, January 21, 1957), and former Assistant Director of the U.S. Fish and Wildlife Service, is one of the leaders in the campaign against the wholesale and indiscriminate spraying of these toxic materials.

"The magnitude of this problem is tremendous," Dr. Cottam says. "It suggests to me that ultimately legislative action by Congress may be necessary to give more effective protection to man and his resources against overzealous operators. Knowledge needs to be available concerning the probable or possible indirect, as well as the direct, effect of the projected operational program."

The new chlorinated hydrocarbons have many curious properties. As a group they are highly toxic, but some are more poisonous than others and their effects are different upon different organisms. Upon being ingested some of them change form. In the body tissues of animals, for example, heptachlor metabolizes to heptachlor epoxide, which has proved to be more poisonous than the original compound. These chlorinated pesticides are also surprisingly stable and remain in the environment long after they have been deposited. Dieldrin and hepta-chlor remain lethal to invading fire ants from 3 to 5 years and possibly longer.
In the case of the imported fire-ant pro-

gram, appropriations for eradication were voted by Congress, and it then became the

obligation of the Department of Agriculture to carry out the program through its Pest Control Division. Officials administering the program have held that if they were permitted to carry on an all-out campaign the ant could be eliminated and any areas suffering damage to wildlife would be repopulated naturally. It is a matter of historic irony, however, that the entire furor over the fire ant has been concerned with an insect which, on further investigation, has turned out to be something less of a menace than it was originally made out to be.

Not so the poisons. One of the warnings sent out to local residents in advance of the spraying, for instance, says: "Cover gardens and wash vegetables before eating them; cover small fish ponds; take fish out of pools and wash pools before replacing the fish; don't put, laundry out; keep milk cows off treated pastures for 30 days, and beef cattle 15 days; cover beehives or move them away; keep children off ground for a few days; don't let pets or poultry drink from puddles."

Gradually the imported fire ant seemed to lose some of its viciousness. There were denials that it ate crops. Health officials said it was not a menace to human beings. Dr. Kirby Hays, an entomologist who was sent to Argentina by the State of Alabama to study the ant on its home grounds, reported that the people of Argentina considered the inspect beneficial because it attacked a number of destructive insects. Last week the National Wildlife Federation asked Congress outright to stop or drastically modify fire-ant control programs, pointing out that "the fire ant is a nulsance, but nothing more." The value of its control, said Louis C. Clapper, acting conservation director, "is more than offset by long-term damage to wildlife, fish, domestic livestock, and poultry and beneficial soil organisms." The department itself cut down the recommended dosage of 2 pounds per acre to a quarter pound per acre, with a second spraying of the same amount 3 to 6 months later. Meanwhile, biologists were following the

trail of the sprayers. At the 25th North American Wildlife and Natural Resources Conference held last month in Dallas, Dr. James B. DeWitt, of the U.S. Fish and Wildlife Service, delineated the results of research he and his coworkers had conducted at the Patuxent Wildlife Research Center near Laurel Md

It was Dr. DeWitt who listed the 59 species of poisoned animals that had been obtained from areas sprayed for fire ants. The list included songbirds, quail, rails, ducks, rats, mice, raccoons, foxes, snakes, frogs, and fish. Dr. DeWitt also reported that earthworms, an important food of some birds, taken as much as 12 months after treatment of an area with the pesticide, contained from 1 to 10 parts per million of heptachlor

The cost of the fire-ant program has been great. During 3 years Congress has appropriated \$7,200,000 for the spraying. With additional funds appropriated by State legislatures, the total cost has risen to between \$10 and \$12 million. Meanwhile, both the spraying and the controversy continue, although some States have reduced or withdrawn financial support of the program.

Most of those who are in violent opposition to such massive spray programs agree that pesticides have become an unavoidable part of the economy. However, they do make strong pleas for a revised approach to the problem. Instead of stronger poisons with wide killing ranges, they urge less toxic but more specific chemicals and the use of spot methods of application rather than the wholesale dosing of big areas from airplanes. Above all, they plead for greater coopera-tion between biologists and those exercising control programs.

A bill to that effect, called the Chemical

Pesticides Coordination Act, was introduced

in Congress on March 31 by Representative LEONARD G. WOLF of Iowa. This bill would require advance study of the effects upon fish and wildlife before any Federal program using chemical pesticides could be undertaken. It would require not only preliminary study by the U.S. Fish and Wildlife Service but also by the game and fish department of the State affected. The Fish and Wildlife Service would be directed to cooperate in developing methods that would achieve the necessary controls while minimizing damages to wildlife resources.

A VIEW OF BLACKEST PESSIMISM

Many of those taking an active part in the controversy feel that this is a good step, but that a much broader appraisal of the mass use of chemical poisons is needed. Dr. Wallace of Michigan State, viewing the drastic toll of robins and other birds after his investigations, expressed a view of blackest pessimism and indictment: "The current widespread and ever-expanding pesticide program poses the greatest threat that ani-mal life in North America has ever faced worse than deforestation, worse than market hunting and illegal shooting, worse than drainage, drought, or oil pollution and pos-sibly worse than all of these decimating factors combined." Dr. Cottam, more temperature but no less positive, argued for "selective and specific pesticides which we can use to control pests without significant detrimental effects to other public values or to other members of the biota which are of high economic, social, or recreational importance. It has been done before." Dr. Cottam concluded, "The possibilities are there, and the promised rewards are worthy of our best efforts."

A Planned Economy To Match Russia's

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Don Paarlberg entitled "Freedom and Forced Growth" which appeared in the Wall Street Journal of May 3, 1950, and an editorial commenting thereon entitled "Liberty in Escrow" which appeared in the same edition of the Wall Street Journal:

FREEDOM AND FORCED GROWTH

(By Don Paarlberg)

(Mr. Paarlberg is an economist serving as special assistant to President Eisenhower. The speech from which these remarks are excerpted was delivered to the New York City Invest-In-America Committee)

Everyone has heard the frequently stated goal of Chairman Khrushchev-that of first equaling and then exceeding the United States in the output of goods and services.

During the last decade or so the best computations show that our economy has been advancing at a rate somewhat in excess of 3 percent annually. The consensus of in-formed estimates is that the Soviet Union has been growing at something like twice that percentage.

In absolute amounts, say those who have studied the problem closely, the yearly increment of growth in this country is roughly comparable in volume with that of the Soviet Union, though greatly different in composition. Our own economic output is weighted heavily by consumer goods and services; the Societ economy is heavily weighted by capital investment and military outlay. Last year the rate of economic growth in this country, in real terms, was 7 percent, this being larger than usual by virtue of the fact we were emerging from a recession.

If the Soviet Union were to use its increments of economic growth for advances in the well-being of its people, we would, of course, be happy. But if it uses them to threaten us militarily, or to subvert the underdeveloped and uncommitted nations, then the matter is a serious one indeed. The counsel of history is that we consider the Soviet Government as being concerned with matters other than the living level of its citizens. Even if we totally discount the statistical comparisons, the economic advance of the Soviet Union is evident in judgments made by visitors to that land, who compare present conditions with the remembered circumstances of former years.

Those who characterize the economic challenge of the Soviet Union as a serious threat may be classified in two broad groups.

First, there are those whose primary interest is in other matters, but who use the rise of the Soviet economy as a new rationale for the promotion of programs they have long held dear. Chief among these are the proponents of pet spending schemes. Their programs have, during the past 30 years, been successively rationalized on the basis of overcoming the depression, winning the war, and expanding social services. Now they are rationalized on the basis of promoting economic growth so as to match the Soviet standard. These pet schemes are attached to whatever is the prevailing public concern.

Second, there are those who endeavor, from honest motivation, to deal constructively with this problem. These people and their proposals merit our consideration; it is here that I intend to focus my remarks.

POOR STRATEGY

Whereas formerly the tendency was to play down the economic challenge of the Soviet Union, some people now overplay it. counsel us to accept the Soviet challenge on whatever terms it is laid down. If the Soviet Union generates a certain rate of economic growth, we are told that we should strive to equal or approach it. If they set up specific objectives, industry by industry, we are told that we should adopt a similar approach. If they issue an economic challenge in any field, it is said that we should automatically accept it and try to outdo them. "Whatever you can do, I can do better." This may be a good song but it is poor strategy.

This form of strategy would have the leaders of the Soviet Union selecting the area of competition, choosing the issues they wish to raise, and naming the field in which we are to contend. Inevitably they would choose such objectives and name such areas of competition as were advantageous to them.

If we allow the Soviet Union to name the area in which our two nations are to compete, we would in effect make their objectives our own. We would in time take on their image. It would be a foolish man who would accept the Soviet objectives and emulate the Soviet technique of regimentation in an effort to beat them at their own game. Such an effort is not likely to win, and if it were, the fruits of victory would have been foregone before the battle began. Far more is at stake than merely to see which country can post the largest statistic measuring the annual rate of growth.

There are various ways of trying to register the larger percentage increase in the rate of growth. We could lengthen the workweek, recruit millions of women and old people for the labor force, reassign half of our clerks and waltresses to other duties,

squeeze down the level of consumption, dispense with certain of our frills, and forcibly extract savings from the people to spend on capital investment. This is what the Soviet Union does. But if we were to imitate them, we would lose our character as a free and independent people. We cannot succeed with their system.

This kind of argument is being made: By central direction of its economy, the United States vastly increased its output during World War II. Now, it is said, we are faced with a similar challenge. We should, it is maintained, prune away, by Government action, some of the frivolities of our free economy, adopt a program of austerity, and by some form of central direction channel a greater share of our resources to capital investment.

Let us examine this argument carefully:

there is a persuasive sound to it.

The United States temporarily adopted central direction of its economy during the two Great Wars, firm in the belief that freedoms temporarily surrendered would be taken up again at the close of the war. The first war lasted 21/2 years; the second one lasted 41/2. The desire for freedom was kept alive during these relatively short periods; when the wars were over we again took up our freedom, only slightly impaired by its tem-porary and partial eclipse.

What is the probable duration of the economic rivalry between the United States and the Soviet Union? This may be a rivalry whose duration is to be measured in decades or generations rather than in years. No man can say how long it will be; no man would

predict that it will be brief.

FREEDOM IN JEOPARDY

Could we put freedom aside for decades, and then reinstate it? If a whole generation were deprived of freedom or had its freedom substantially impaired, would freedom be sufficiently cherished so that we would re-turn to it? Would the desire for freedom be strong enough to shatter a pattern of regimentation, laid down and congealed over a period of decades? To put these questions to the test would place in jeopardy our most precious heritage. It would demonstrate that we hold in low esteem the capabilities and the merits of our free system.

We need to be reminded that economic freedom, extended to all the people, is a relatively new concept in the world's history. It has emerged only in recent centuries, only in parts of the world, and only at immense cost. It is not the kind of system which can be put in escrow. It must be practiced if it is to be kept alive. This system, which has rewarded us beyond our brightest dreams, deserves better than that we should voluntarily impair it through fear of a still-distant competitor.

The President has expressed utmost confidence in the ultimate victory of representative government and an enterprise economy. The Vice President has said we can win this horse race with the Soviet Union, providedand I emphasize this-provided we don't try to ride their horse.

While we should recognize and respect the economic capabilities of the Soviet Union. we should not underestimate our own capabilities and our own strength. These are immense, presently more than twice those of the Soviet Union.

To promote the right kind of solid growth a shared responsibility, a responsibility which rests upon private persons and local and State governments as well as the Federal Government.

The Federal Government cannot long force a high rate of economic growth upon us unless basically the people want it. And if we want it, which we should, there are many ways to bring it about besides making it the sole responsibility of the Federal Government.

PROVIDE A CLIMATE

The Federal Government can help provide a climate within which enterprise and economic growth can flourish. It can round out and supplement the efforts of State and local governments in the development of human and natural resources, being careful in the process not to preempt, substitute for, or discourage local and State efforts. It can pursue sound fiscal and monetary policles. It can help create a climate favorable to savings and investment. It can develop policies which will put money to work and men to work. It can create a setting which is in harmony with the objectives of you who encourage the people to invest in America. The Federal Government cannot, singlehanded, take responsibility for producing a specific rate of economic growth.

How can we improve the performance of the American economic system? There is no mystery about it. The key is the preservation of the initiative, vitality, energy, and

resourcefulness of our people.

Enhanced economic performance comes from these solid sources, not from politically motivated spending in behalf of evergreater centralization of governmental power and authority, and certainly—most certainly—not from the adoption of techniques alien to our system.

LIBERTY IN ESCROW

In the remarks reprinted elsewhere on this page, Mr. Paariberg discusses the central economic—and highly political—question before the Nation:

Should this country adopt central direction of the economy in order to outpace the

Soviet rate of economic growth?

As Mr. Paarlberg says, there is a "persuasive sound" to the argument that we should. The Soviet economy, we are told, is growing at a rate something like twice ours. Unless the United States does something fairly drastic about this, it would seem inevitable that U.S. economic preeminence will diminish and the U.S.R. will become the strongest economic nation in the world, with all the political power that implies.

Put in such terms, the threat is grave, indeed. It seems to us, however, that the advocates of a Government-directed economy get off the track in several ways.

For one, they tend to regard comparative growth rates too uncritically. You can step up the rate by turning out lots of shoddy merchandise. You can step up the rate by making lots of munitions. Quantity, in other words, is not the only criterion of sound growth.

But the real point here is that the two economies are not properly comparable. The Soviet economy is at a much lower level of development than this one. It is concentrating, as it has almost from the beginning, on heavy capital investment in heavy industry, not only to produce war weapons, but also to get a sufficient economic base from which might—maybe, someday—flow consumer-goods prosperity for the Soviet masses.

The United States, obviously, has long since passed that stage. American businessmen continue to pour tremendous sums every year into expanding the industrial base because of rising demand and anticipations of population growth. But the base itself is there, capable of producing simultaneously the most formidable military power in the world and the highest standard of living for the greatest number in human history.

Instead of comparing apples and oranges, we would do better to phrase the issue this way: If the Soviet economic base were now as large as ours, were now providing both military might and consumer plenty, and if the Soviet economic growth rate were still twice as large as ours—then we would have something to think about. But that is demonstrably not the case today, and there is no evidence that it will ever be the case.

In this light, the question becomes: Is it wise to junk the free economy on account of a threat that shows no sign of materializing?

We are not assuming to read the future; it is the proponents of Government regimentation "to meet the Soviet challenge" who do that. For our part, we are going on facts abundantly plain. The free economy unleashes the greatest possible potential for economic growth. That is a fact. The regimented economy squashes the potentials, as by definition it must. That is a fact.

Another way the advocates of a centrally directed economy miss the boat is in their carelessness about the political implications of their proposals. As Mr. Paarlberg trenchantly observes, economic freedom for all is a relatively new and rare development; so is political liberty. The two are inextricably entangled. If the State decrees the details of your economic existence, what is left worth having of any political liberty? The remainder won't remain long anyway.

Some of these people, to be sure, protest that they are not trying to junk the free economy—entirely. Yet that is where they are aiming, whether they know it or not. They want to meet the Soviet dictatorship in its chosen fields and by its chosen methods. They want specifically to transfer the allocation of the Nation's resources from private hands to the Central Government.

It is bad enough for the United States to forfeit freedom through the machinations of calculating politicians. It is something worse if we let ignorance put our liberty in escrow.

Youth Fitness

EXTENSION OF REMARKS

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include a statement on youth fitness, written by J. Spencer Gray, editor of the Herald of Westchester, Westchester County, N.Y. Mr. Gray, a member of President Eisenhower's Committee on Youth Fitness, is himself a devotee of perfect health and a very vigorous and able newspaperman.

His crusade in behalf of the youth of Westchester to give attention to physical fitness is to be commended.

He points out quite aptly that in the hurried times in which we live it is not unusual for youngsters to overlook one of the most important things in life, namely, their personal health, in the relentless struggle for material things.

Mr. Gray says that it is a solemn obligation of the youngster to his elders, to his community, and to his Nation, to stay well and strong.

The statement follows:

[From the Herald of Westchester, May 5, 1960]

Have Our Children Forgotten or Did They Never Learn?

(By J. Spencer Gray)

The physical well-being of youth is today under the spotlight more than at any time in our history. It is Youth Fitness Week—an observance proclaimed by President Eisenhower and Governor Rockefeller.

As part of New York State Fitness Week, thousands of youngsters in Westchester and the rest of the State are demonstrating their physical and emotional fitness, their prowess and agility. Many schools are holding openhouse programs so that parents and others interested may see demonstrations of the physical training and the gymnastic skill of their offspring.

The observance and the demonstrations it brings are especially heartening to this writer, a long-time believer in organized, rigorous programs aimed at improved physical, mental, emotional, social, and spiritual fitness, and a veteran member of President Eisenhower's Committee on Youth Fitness.

We have come a long way since the writer had the privilege of working with some of the pioneers in this field who urged that our county and our Nation voluntarily undertake to discipline itself physically, to avert the possibility that high living standards, an abundance of material wealth, and our widely prevalent ease and luxury would not lead us down the road to deterioration and collapse.

The campaign for a physically fit youth, better equipped with energy, stamina, and endurance to lead the United States of America of tomorrow, has truly paid rich dividends.

But, what of the intellectual fitness of our youth? Its moral fitness?

What of the values and ideals on which

our Nation has prided itself?

What of the virtues of inner strength, of outer compassion, of human warmth and understanding, of determination to see the right done for the sake of the right and not for any ulterior goal?

How stands the youth of Westchester, New York State, and the Nation on these crucial counts?

Can it be that with our feverish preoccupation with staying ahead of the enemies of our Nation in some technological and economical areas and catching up with them in others we run the risk of spawning a race of human automatons?

Can it be that we as a people have put too much stock in material success for its own sake, and that our offspring today—our physically fit but morally neutralist youth—reflect this worship of success to the exclusion of countless other values many of us of an earlier generation were taught to venerate?

Can it be that in our Nation's relentless emphasis on individualism and individual rights, our youth has never learned—or learned only inadequately—the solemn obligations of the individual to his elders, to his siblings, to his community, to his Nation?

Can it be that our youth has grown up in too much of an atmosphere of ridicule and disdain for, or cynicism about, the simple virtues of home and family; the urgent need for humility of the individual and sublimation in the greater good?

Have our children forgotten how to dream—or did they never learn? Does preoccupation with the present blind their eyes to visions of tomorrow—visions of better things, of a more equitable society, of the elimination of pain and suffering * * * visions worthy of the highest dedication and most determined effort?

Are our children too concerned with the easily attainable, with the glitter of immediate reward?

In the omnipotent dominance of the nuclear age, have our offsprings lost all concern with, or interest in, the values of yesterday—in the eternal truths whose relevance becomes greater, not less, with each scientific advance? In the wisdom and experience passed on by elders who may have been less sophisticated, less knowledgeable in their day, but were nonetheless able to set the stage for the constructive and hope-

ful aspects of modern society as well as its terrifying, fearsome aspects?

What of gratitude for the heritage of the past, for the sacrifices of parents that gave youth its bright hopes and opportunities?

Has gratitude become passé—too "corny"

for youth of the nuclear age?

We have no answers for these questions. They are merely thoughts and observa-

tions, not concrete conclusions.

They came to mind as we thought of youth's physical fitness, and then of its mental and moral fitness.

But we are disturbed.

We are fearful of where the youth of today is heading, what it will do with its great material abundance and unlimited opportunity for good—or evil.

These are some thoughts worth pondering in this critical day and age.

Rocket Power-Key to Space Supremacy

EXTENSION OF REMARKS

HON, OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. BROOKS. Mr. Speaker, since the launching of Sputnik I, our people have been hearing many arguments concerning the reasons for America's space lag. As we may well know by now, our secondary position can be attributed in large part to Soviet superiority in rocket thrust. In an address delivered on May 10 before the American Rocket Society in Los Angeles, Maj. Gen. Don R. Ostrander, Director, Launch Vehicle Programs, National Aeronautics and Space Administration. gave a splendid comprehensive review of the NASA program planned to overcome our country's deficiency in this field. Because of the vital importance of this program to the security of our country. I believe General Ostrander's address will be read with interest and profit by every American.

The address follows:

ROCKET POWER-KEY TO SPACE SUPREMACY

I chose the title for my talk today very deliberately. I thought it was appropriate because I, as the one who has the responsibility for producing the launch vehicles for our space program, am probably the man who is more interested than anyone else in the country in increasing the thrust and the weight-carrying capability of our vehicles. And I am speaking to the group upon whom we are going to have to rely to achieve this—the American rocket industry.

The question has been repeatedly asked and heatedly argued in recent months as to whether we are in a space race with Russia. Now, whether we are in an overall space race with Russia is, I guess, a matter of semantics. The word "race" normally connotes two or more contestants running on the same track, taking the same hurdles, and trying to reach the same goal. In this case we don't know what the other track is like, we don't know what the specific goal of the other fellow is, and we don't know how hard he is running. In addition, I think it would be a mistake, even if we knew these things, to try to pattern our program on his in a sort of "me too," "anything you can do, I can do better" approach. I think that we should set our own goals, point toward them with a broad, logical, scientifically sound program, and then run just as hard as we can. In the long run I firmly believe that we will be better off than by simply shooting for spectacular propaganda firsts. If in the process we achieve significant firsts, fine, but it should be as an outgrowth of our own sound program, not as our sole and primary goal.

Leaving semantics aside, however, I think that we have to face the fact that we are in a competition—whether or not you want to call it a race—just as we are in financial, economic, psychological, and ideological competition across the board. Certainly there is no question in my mind that in my area of responsibility, the area of greater rocket weight-lifting capability, we are in a race and I plan to conduct my business accordingly.

Recognizing then and admitting that it is a competition or a race, or whatever you want to call it, let's review where we stand

Since the Soviets placed Sputnik I in orbit in October of 1957, the United States has attempted 40 satellite launchings. These efforts succeeded in injecting 18 payloads into earth orbits, 9 of which are still aloft. During this same period we have tried five lunar or deep space probes, of which two can be classed as succeeses.

I think that it is interesting to try to interpret trends from these statistics. The record shows 17 major launchings by the United States in 1958 and 19 in 1959, with a boxscore of 47 percent successes in 1958 rising to 58 percent in 1959. Before we get too exuberant over this achievement, though, I must point out that we are down to 50 percent in 1960 so far.

What do these statistics mean? Well, I think they point up several things that are significant. First of all, 45 major launches in a little over 2 years represent a beginning for our space program of a not inconsiderable magnitude. So far our choice of vehicles has been limited to direct descendants of those with which we began our space effort. All to date are improvisations using components developed either under our vari ous missile programs, or for the Vanguard IGY program. The second point is the importance of repetitious use of a vehicle in increasing its reliability. The marked up-swing in reliability in 1959 can be laid, I think, to improvements in design and to the correction of component deficiencies which were made after diagnosis of our failures.

We have no accurate way to determine the reliability which the Russians have achieved in their space program so far. We know of six Soviet successes but we do not know, of course, how many of their attempts resulted in failure. I am sure, though, that all of you in this audience can conclude from your own experiences that their rate falls something short of 100 percent.

It is no secret that the Soviets outmatch us in the department of rocket thrust, and that as a result they have the capability of placing much heavier payloads in space than have we. You can get any number of very lucid rationalizations of how the United States came to trail the Soviets in the matter of rocket size. One of these explanations points out that both the Soviet and United States boosters are based on ICBM hardware. Each nation sized its rocket engines to place a high yield warhead on an intercontinental target. Our U.S. warhead technology permitted a lighter vehicle requiring lower thrust than that of the Soviets. All of this is true, but regard-less of the reason, the facts of life are that the Soviets did have a large booster vehicle in 1957. With the exception of the Vanguard program, our development of specialized space vehicle hardware did not really get underway until about a year later. When you consider the remorseless facts of rocket development lead times, I think that it is understandable why we have yet to put into

service the new, higher thrust launch vehicle hardware which will enable us to match or surpass Soviet payload achievements.

Although we are behind the Soviets in the weight lifting area, it does not follow that we are far in arrears in overall rocket technology—in our knowledge of how to design, develop, and use advanced rocket systems. In fact, I am confident that we are not significantly behind the U.S.S.R. if you consider this field as a whole, and I think that we may well lead them in many areas.

I have discovered that trying to find out where we stand relative to the Soviets in the field of guidance is a pretty futile exercise. I can get as many opinions as there are experts. Several of our vehicles which are now in or nearing operational status have guidance systems which their salesmen claim have an absolute capability of duplicating the feat of Lunik III in sweeping around the moon's backside. They point out that the test of a guidance system is not whether a particular lunik successfully accomplished this maneuver, but its probability of repeating the performance. may all be well. The fact remains that they did it, and I, for one, am impressed with it. However we stack up with them today in the field of guidance and control, it appears to me that we are certainly going to need some advancements in the state of the art in order to design a system with the precision and dependability required for the manned lunar landing and earth return mission, for example.

From the standpoint of numbers, our 18 satellites placed in orbit compare very favorably with the Soviet 3, or our total of 23 successful major launchings with their 6. for that matter. From the standpoint of total weight of scientific instrumentation launched into earth orbits, the Soviets are ahead of us by several thousand pounds, and we have not even approached their achievement in payload weight on lunar and deep space probes. However, the yardstick by which our space accomplishments should be measured is not solely by payload weight. nor for that matter the total number of successful launchings, but rather the extent and quality of useful scientific information our payloads have returned to us and the distance this new knowledge has carried us toward our goals.

Our program of space exploration really has three elements with related goals. The first of these is the space sciences program, which seeks to learn new facts about the shape of the earth, its upper atmosphere, the ionosphere, the earth's magnetic field, cosmic rays, the radiation belt, the aurora, solar-terrestrial relationships, astronomy, etc.

A great many of the experiments undertaken as part of the space sciences program are inspired by requirements of other elements of our program. For example, determination of the extent, intensity, and time variations of the radiation belts; measurements of temperatures inside and on the outside surfaces of satellites; and measurements of the energy and frequency of micrometeorite impacts, all are of great importance to the Mercury and follow-on man-inspace programs.

This, of course, is the second element of our NASA space program. The goal of Project Mercury is not the propaganda value of a spectacular first. Rather, its goal is to determine the functions that a man can perform in space to pay his way in future space exploration. Man is a complex servo mechanism—a computer endowed with reason—but he is a pretty delicate mechanism compared with electronic devices and imposes environmental demands which compromise design and cost weight. So one of the things we are trying to find out is for which missions he is worth all this complexity and weight. We have made excellent

prograss with Mercury so far. If all goes well, an astronaut should make his first suborbital flight this year, and orbit the earth in 1961

The third element of our program relates to the application of the knowledge which we gain to space systems which can be applied to the good of mankind. For example, as you know, we plan to place in orbit under our Project Echo, large, metallic coated mylar spheres which can be used as passive reflectors to permit microwave communication over vast distances. Also, weather satellites such as Tiros I, which is still returning excellent televised pictures of cloud cover, and its successors, Tiros II and Nimbus, will, we hope, allow major advances in weather forecasting.

Thus we are, I think, embarked on a scientifically sound, balanced and aggressive program of our own design. We are literally building our fund of knowledge of space from the ground up, guided by definite goals—our own goals. To date we have been less handicapped by the lack of greater payload capability than is popularly supposed, because much of this early exploratory Which forms the foundation of our later efforts can, with proper planning, be accomplished with the rather primitive tools that we have available. I don't mean to imply that we wouldn't be delighted to launch heavier payloads, and in the near future we are going to have to have order of magnitude increased in our ability to carry heavier weights into space. We are going to have to fly more complex flight paths, and we are going to need a higher degree of guidance precision than we have needed so far.

Now, let us examine our program to create this new generation of launch vehicles we

need for the task ahead.

The philosophy upon which our launch vehicle program rests is based upon three fundamental precepts:

First, we are creating a standardized fleet of trucks, if you want to call it that, with a minimum number of different types in the fleet.

Second, closely linked to the first, we propose to attain reliability through repetitive use of the vehicles in our fleet.

Third, to avoid early absolescence, we want to insure that each new vehicle we develop incorporates the most advanced technical approaches and growth potential consistent with the reliability we require.

Before discussing the present and planned vehicles in our program, I would like to dwell for a moment on this philosophy and

some of its implications.

Speaking of the first two of these precepts—minimum variety and repetitive use of standardized vehicles—our objectives here are, of course, economy and reliability. The costs of developing launch vehicles are already high and they are going up in a geometrical progression with each new, larger, and more advanced vehicle that we add to our fleet. The Nation cannot, and fortunately need not, afford two major vehicles, one NASA, one military, with approximately the same capability. That is why we are conducting cooperative programs with the military on the Scout, the Agena B, and the Centaur. That is why, too, that we canceled Vega in favor of the Air Force Agena B.

While on the subject of a minimum variety and repetitive use of vehicles, I want to stress that this same philosophy governs the NASA component and technique development program. We explore various technical approaches methodically and, I think, adequately, in our applied research efforts. But we try to settle on one approach which our analysis shows to be best before we go into full scale hardware development. An example is our decision to use liquid hydrogen and liquid oxygen as a propellant-oxidizer combination for chemical upper stages.

I think the contribution to reliability of amassing a large number of flights on a given

vehicle is obvious. I want to add, though, that we do not subscribe to the "develop in haste and fix at leisure" route to reliability. NASA is reliability conscious to the point where I think some of our project people would be glad if they never heard the word We have recently added a staff element, headed by Dr. Landis S. Gephart, to direct the NASA-wide reliability program. Our operating elements, such as the George C. Marshall Space Flight Center in Huntsville, have engineering groups whose sole business is to insure that reliability is considered at every step, from conceptual design, through detail design, selection of materials and components, development test, flight test, production quality control, and launch pro-cedures—the entire spectrum of operations which influences the probability that complex launch vehicles, spacecraft, and all the myriad elements that make up the space mission systems, will function as intended.

On the other hand, we cannot allow our

On the other hand, we cannot allow our desire for reliability to become such an over-riding obsession that we timidly decide on the tried and true—and often obsolescent—approach in planning each new vehicle. That is why we have the third precept I mentioned. The tough job is to have both reliability and long, useful life. NASA is tackling this job by aggressively probing for real breakthroughs which promise quantum gains in mission capability. We bet heavily, to win, only after we have solid evidence that we have a winner.

As I mentioned earlier, we are still limited to the launch vehicles with which the United States began its space program, or their direct descendants. A few have been retired—the Jupiter C which served us so well back in 1958 when we so greatly needed a U.S. satellite in orbit to repair, in some measure, our badly mauled prestige; and the Vanguard which, in spite of its troubles, more than earned its development cost in the information provided by the three scientific payloads it orbited. In addition, it paid dividends by giving us upper stages for the Thor-Able, the Thor-Delta, and the Scout.

Thor-Able, the Thor-Delta, and the Scout, Also due to be retired this year is the Juno II, based on the Jupiter IRBM, and the Thor-Able. The Thor-Delta, which is a Thor-Able improved through the addition of coasting flight attitude control and the accurate and flexible Titan radio guidance system, will be used through 1961 in a 12-vehicle program, but no follow-on procurement is planned.

All of these vehicles are destined to be replaced by two vehicles, the Scout and the Thor-Agena B—the Scout because of its relatively low cost, which is about \$750,000 per copy including all launching costs, and its high reliability potential; and the Thor-Agena B because of its combination of greater payload, flexibility of operation, and potential high reliability.

The Agena B stage will also be used by NASA, as well as the Air Force, on top of the Atlas as a first stage. The Atlas booster will increase the 300 mile orbit payload capability of the Agena B to about 5,300 pounds.

Later in 1961 we are scheduled to launch our first Centaur. The Centaur will be the first vehicle to employ a high energy upper stage, and this liquid hydrogen-liquid oxygen stage is the first to employ a rocket engine developed primarily for space use. The added specific impulse afforded by hydrogen as a fuel gives the Centaur half again the payload of the Atlas-Agena B in a low orbit, and nearly three times as much payload when used as a lunar probe, which is one of its principal missions in the NASA program. For the first time, the Centaur, the United States has a launch vehicle able to duplicate the payload capability of the sputnik vehicle.

The Centaur is of major interest to the Department of Defense as well as the NASA. In fact, the Centaur performance objectives

originally stemmed from the Department of Defense requirements for a 24-hour communications satellite. The importance of the Centaur to NASA, however, is much more far-reaching than the capability of the Centaur vehicle itself because of its relationship to Saturn. The Centaur upper stage will become the top stage for Saturn. In addition, four Centaur engines will power the second Saturn stage. In fact, liquid hydrogen begins to look as though it will dominate the launch vehicle upper stage picture both as a fuel for chemical rockets and as a working fluid for nuclear rockets.

The Saturn vehicle is being developed under the management of Wernher von Braun's Marshall Space Flight Center. As most of you know, the Saturn first stage consists of a cluster of eight uprated Jupiter-Thor-type engines, with a total thrust of 1,500,000 pounds. On top of it we will use the two hydrogen-oxygen stages I just mentioned. When we get this Saturn C-1 vehicle, which is the initial version of Saturn, our payload capability gets a king-sized boost—to 25,000 pounds in a 300 mile orbit.

One, and possibly two later versions of Saturn are planned. The second model, called C-2, will add another stage using four 200,000 pound thrust LO₂-LH, engines. The third model, if we decide to build it, will be called the C-3 and will have still another stage, using two of these 200,000

pound thrust engines.

We have had a great deal of study and analysis in progress for the past year to try to define the vehicle which will follow the Saturn. The principal mission which we have used as an objective in these planning studies has been that of landing a manned spacecraft on the Moon, then returning a 10,000-pound reentry package to the Earth. The study has followed two principal approaches. The first was what you might call the brute force attack, known as Nova.

There have been many references to Nova,

as a vehicle, in the press and elsewhere. Nova is not a vehicle—it is simply one of a number of vehicle concepts which we have considered for the use of the 1,500,000 pound thrust single chamber F-1 engine now under development for NASA at Rocketdyne. Under this brute force approach, six of these large 1½-million-pound-thrust engines would be used in the first stage. Four hydrogen-oxygen stages could be piled on top of this big booster to give us the 10,000-pound lunar return package that we need. This concept is beginning to face increasing competition from vehicle studies with nuclear upper stage rockets.

This planning effort has given our program, I believe, a clear sense of direction

and pace

As to direction, the major long range goal of the NASA program is manned exploration, first to the Moon, then the nearer planets. This goal focuses attention on the vehicle development program, the Mercury program and follow on manned Earth satellite programs, preliminary unmanned explorations of the lunar surface, the variation of the space environment between the Earth and the Moon, and on all the host of basic and applied research which must provide us with the information we need to realize this goal.

To carry out these programs, NASA will launch between 25 and 35 major vehicles and 100 sounding rockets a year over the next 3 years. Actually, in later years the pace of individual launchings may go down somewhat rather than increase, as we place in service the new, large, complex, and exceedingly expensive vehicles such as Saturn and its successors, each of which will have the payload capability of several of its predecessors.

I would like to summarize then by simply saying that I feel we are embarked upon a broad, technically sound and logical pro-

gram with definite goals in mind—our own goals. We are undoubtedly going to have our share of failures in this program—as you in this audience know so well, they have to be expected in this kind of work—and we will undoubtedly have to adjust the detailed timing and content of the program as we move along and learn more. But we do have a plan, we are getting good support from both the administration and Congress, and I feel from my short experience with NASA that we have outstandingly competent people at all levels of the organization to supervise the program.

We were awfully late in getting started, but I feel that we are now off and running. This is not a crash program that I am talk-ink about, but it is a vigorous and an aggressive one. My prediction is that in the long run it is going to prove sounder than a hysterical crash program trying to compete for spectacular propaganda firsts.

Home Rule and the GOP

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleageus the following editorial which appeared in the Washington Post of May 11, 1960:

HOME RULE AND THE GOP

The Republican drive for home rule is long overdue. Even though it is the administration's bill that is being throttled by the House District Committee, most of the support for the discharge petition has come from northern Democrats. Since the Republican voters who went to the primary last week clearly expressed their support for local self-government, Carl L. Shipley of the Republican State Committee has launched a campaign for GOP signatures on the petition. Commissioner McLaughlin is also lending a hand. It would also be a timely moment for the White House to speak out in behalf of the home-rule bill.

In trying to give the bill a boost the local Republicans are also sponsoring six amendments. Some of them seem to us desirable. The many diverse elements in the population of the District would probably be better represented if three members of the legislative assembly were elected from each of the five wards instead of having all 15 assemblymen elected at large, as the bill now provides. A second GOP amendment would require Congress to make a "Federal contribution to the District budget in lieu of taxes." That will meet with plenty of opposition, but it reflects sound policy and ought to be approved.

Useful also would be the item veto which the local Republicans would give to the Governor and the President. The designation of party affiliations on the ballot, however, would lead to emphasis upon partisanship instead of individual qualifications for assemblymen, and should therefore be rejected. The local GOP would also be well advised to drop its proposals to reduce the pay of assemblymen and to modify the investigative powers of the assembly. These issues could be more appropriately raised, if desirable after there is some experience on the part of the proposed local government.

None of the amendments should be permitted to get in the way of the major objective, which is home rule itself. It is quite impossible to satisfy all groups in regard to

details. If Mr. Shipley and his associates are really interested in carrying out the mandate they have had at the polls, let them unloose a whirlwind drive to get the bill to the floor where it can be debated and amended in accord with majority views.

Cradle of American Seapower

EXTENSION OF REMARKS

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, on Sunday, May 8, 1960, an article appeared in the rotogravure section of the Boston Sunday Herald. It is a colorful description of New England, "Cradle of American Seapower."

Under unanimous consent I insert part of this article in the Record because of the pride we have in New England of our outstanding leaders of the U.S. Navy and our splendid defense plants.

The South Weymouth Naval Air Station is commanded by Capt. Vincent L. Hathorn, who is doing an excelent job. Captain Hathorn has the respect and admiration of all of the people of the South Shore area of Massachusetts.

The "weekend warriors," a Naval Air Reserve group, is performing a great patriotic service that merits the praise of all Americans,

The Westinghouse Electric Corp., of Hyde Park, has given yeoman service to the Nation.

These leaders, installations, and industrial components are within the borders of my congressional district, I salute them all.

The article follows:

NEW ENGLAND—CRADLE OF AMERICAN SEAPOWER

New England is home port for the U.S. Navy.

It is the birthplace of the mighty deterrent against aggression; ever watchful, everready to defend at all costs the principles on which the Nation was founded.

Today, the Navy in New England is more than a powerful force for peace. It is an integral part of the region's economy.

Historically, our Navy had its beginning here, shortly after the Battle of Lexington in 1775. It was then that Jeremiah O'Brien and his four brothers sailed a lumber sloop into battle against the formidable British sloop-of-war Margaretter.

New England contributed two of the first six ships of the fleet authorized by Congress in 1794. They were the *Independence* and the historic *Constitution*.

In the years since, the Navy and New England have grown and prospered, working as a team for their mutual good.

Old and established industry geared to the needs of the Navy has flourished throughout the six-State area.

And as the ships and weapons of war evolved from the conventional to the nuclear, new industry, particularly that of electronics, mushroomed almost overnight.

During World War II alone, almost \$18 billion was contracted by the Navy to industry throughout New England.

Today, nuclear-powered submarines—the world's first nuclear-powered ship—guided missile destroyers and cruisers are moving in

an almost endless chain from New England shippards.

At the Boston Naval Shipyard alone, the annual payroll totals slightly less than \$56 million.

Everywhere throughout the entire New England area is reflected the Navy's transition from conventional to modern weapons of war.

It is the continuing eternal vigilance in which industry plays a leading role, the story of which is told in the following pages.

We are proud to be part of this New England tradition that has helped maintain the U.S. Navy as the most powerful in the world.

BOSTON-NERVE CENTER OF THE NAVY IN NEW ENGLAND

Boston is the nerve center of the Navy in New England, headquarters of the 1st Naval District.

From Boston, the Navy radiates into the tiniest towns, the biggest cities—and the bleak wilderness—of five New England States, Maine, New Hampshire, Vermont, Massachusetts, and Rhode Island.

"The Old Man"—Navy parlance for the commandant of the district—is Rear Adm. Carl F. Espe. He's a tall, soft-spoken man, who runs a "tight ship," as his subordinates say admiringly.

His headquarters is located in the massive 9-story Summer Street building known the world over to Regulars and Navy veterans alike as "Fargo" or "SS Concrete."

Old "U.S.S. Concrete" went into "dry-dock" a little less than a year ago, and since has been undergoing complete renovation and modernization.

The task of restoring the block-long headquarters to shipshape condition is being handled by the M. Spinelli & Sons Co., Inc., of Cambridge. Approximately \$1.5 million is required to restore the headquarters, floor by floor.

The Navy itself was born in New England. Beverly and Marblehead have for years laid claim to being the birthplace of the U.S.

Here the first ships of the permanent Navy took to the water, notably the historic Constitution and the Independence.

Our first Naval engagement was fought and won here by the five O'Brien brothers. Today, it is the crucible of the nuclear

In 1902 the district was established solely for coastal defense of the area from Cape Cod to Barnegat, N.J.

Shortly after the turn of the century, it was reformed to take in all the New England coast from Eastport, Maine, to Chatham, Mass., with headquarters at Portsmouth.

In 1912, headquarters moved permanently to Boston.

Every Navy activity in the five-State region comes under the admiral's supervision with the exception of naval air and airship training and supporting establishments directed by the Marine Corps.

One of the major units of his command is the Civil Engineer Corps—public works—a highly skilled organization whose job is to provide the facilities and the industrial products that give the mighty Navy its muscle.

Every branch of the Navy is represented in the district, from air stations to submarine bases; from major fleet headquarters to training schools.

The world's most powerful radio transmitter capable of communicating with surface and submarine forces in the North Atlantic and Arctic Oceans is being constructed at Cutler, Maine:

Fleet Air Wing 3, plus long-range, antisubmarine patrol planes are based at the huge Brunswick, Maine, Naval Air Station.

Further south, is the Portsmouth Naval Base, the bustling shipbuilding station from which were produced submarines which accounted for more than 30 percent of all Japanese shipping destroyed in World War

Largest shipyard within the district is the Charlestown Naval Shipyard with its

annex in South Boston.

Charlestown is the site of the 124-yearold Ropewalk, which for more than a century manufactured all the Navy's hemp and manila rope. The site, too, of the Forge Shop, the most fully equipped in the Navy, and only shop capable of forging the huge chain and 60,000-pound anchors for the Forrestal class carriers.

The Navy's first Officer's School was established there in 1815, the forerunner of the

Naval Academy at Annapolis.

South of Boston is the hub of the Navy's Air Reserve activities at the old blimp station at South Weymouth.

Biggest concentration of Navy in New England is at Narragansett Bay, R.I.

The Quonset Naval Air Station and the home base of the Atlantic Fleet's famed Seabees at Davisville, are on the western shores of the bay.

Thirteen other components of the Newport

Naval Base lie across the bay.

They include the Naval Station, War College, naval hospital, OCS Training Center, Justice School, Supply Depot, Underwater Ordnance Station, and the Naval Magazine and Net Depot at Melville.

The base also is the home port of the Destroyer Force of the Atlantic Fleet.

Scattered throughout the 5-State district are 22 Reserve training centers.

Six New England colleges and universities have Naval Reserve Officer Candidate Corps—Harvard, Holy Cross, Tufts, MIT, Dartmouth, and Brown.

The Navy in New England is far more than a powerful arm of the Nation's defense— it is a vital cog in our economic well-being.

Each month of the year, an estimated \$60 million is expended by the Navy in New England, a figure approximating nearly \$720 million per year.

Of that sum, a little more than \$38 million

is allocated in Greater Boston.

Approximately 25,000 persons working for the Navy in the district are paid wages of about \$12 million a month.

That's the broad picture of the Navy in New England-historic beginnings of both; a saga of friendliness and cooperation.

SOUTH WEYMOUTH-HOME OF THE "WEEKEND WARRIORS'

South Weymouth—stamping grounds of the colorful "weekend warriors"—the Naval Air Reservists who rank among the finest civilian-military pilots in the country.

It's a Navy station that is young in years,

yet steeped in tradition.

The mission of the "warriors" began at the old Squantum Naval Air Station, where Naval Reserve Aviation was born, in 1923. There, a group of World War I aviators, aided by the late Rear Adm. Richard E. Byrd, set up operations in an old hangar housing a battered old seaplane.

A year later, Reserve aviation became of-ficial when two squadrons were authorized

in the 1st Naval District.

When World War II began to rumble across Europe, Squantum underwent drastic modernization and expansion. Through the war Years it served as the Navy's secret primary training base for 2,300 fiedgling aviators from Allied Nations all over the world.

The arrival of the jet age, an expanded Reserve training program and proximity to Logan Airport sounded the death knell for Squantum in 1953, forcing a move to the old lighter-than-air base at South Wey-

The station from which cigar-shaped blimps had patrolled the airlanes searching out lurking submarines in the the seas be-low, during World War II, also had undergone a checkered career.

With the end of World War II, South Weymouth was closed and placed in "caretaker" status.

But when the Korean war triggered re-activation, the Navy gave the old station a drastic facelifting to make ready for the training of Navy and Marine air reservists.

Fighter planes replaced the blimps. New runways, roads, towers, barracks, and other facilities sprang up almost overnight.

Today, 21 squadrons of "weekend warriors" train at South Weymouth, ready at a moment's notice to drop civilian ties and chores "if and when the bell rings."

They are highly trained modern minutemen who form a reserve pool fully capable of integration into fleet air wings during

Each man trains at the station one weekend a month. Once a year they take an intensive 2-week active duty period, usually at a base or bases scattered throughout the continental United States.

Their recall to duty with the Navy air wings in Korea and resultant accomplishments, proved the tremendous value of the

ready, and topnotch reservists.

The huge pool of air talent was provided by the Navy at a cost of 61/2 times less than it would have cost the Government had the men been on full-time, active duty.

To maintain the razor-sharp efficiency of the "weekend warriors" a continual evaluation and modernization of facilities and equipment is directed by the Navy.

Arrival of the superjet age at South Weymouth meant expansion to accommodate the new planes of the "weekend warriors."

Major alterations to the station have been contracted by the Navy to the Gil Wyner Co., of Malden.

The contract calls for construction of a 2,000- by 150-foot runway extension.
It also entails at a total cost of \$1,094,844,

a parallel taxiway, 2,000 by 75 feet, together with a blast erosion protection area and a holding area.

South Weymouth, with its colorful "weekend warriors" is a prime example of the tax-

dollar well spent.

Their weekend training expends less than 1 cent of the defense dollar. Yet, during the Korea war, South Weymouth and 27 other Reserve stations accounted for one-third of all the air strikes against the Communists.

Training of the "warriors" represents one

of the most economical measures in the Na-

tion's air defense program. TIME, THE ATOM, AND THE NAVY

Time, and the atom have combined to revolutionize the ships of the U.S. Navy.

The World War II and Korea diesel powered ships-of-the-line are bowing to the atomic age, as did sails to steam a generation ago.

It was the incredible Nautilus that sounded the advance of atomic energy.

The powerplant within the pioneer Nautilus will, said Adm. Robert B. Carney, former Chief of Naval Operations:

"Sweep our present day fleet-mightlest in the world though it is—off the seas and replace it with task forces of incredible speed, limitless cruising range, and crushing striking power."

First stages of that revolution are present now right within New England.

It was the Nautilus first, built at Groton,

Now, within the First Naval District, at Fore River, it continues:

The U.S.S. Long Beach, nuclear powered cruiser—first of its kind in the world—launched last July 14.

The U.S.S. Bainbridge, nuclear powered destroyer-also the first of its type in the world.

Each, when it joins the fleet, will represent the greatest concentration of military and industrial effort ever to be incorporated into a warship.

An indication of the tremendous evolution within the Long Beach itself is the total absence of conventional weapons.

Gone are the big guns-the huge fire and smoke belching monsters that battered the Nazi and Japanese fleets into helpless hulks in World War II.

The Long Beach instead, is studded with missiles capable of delivering at tremendous speeds nuclear missiles. Push-button controls will send deadly surface-to-air missiles aloft to destroy enemy aircraft.

Amidships, it is equipped with antisub-

marine missile launchers.

The Bainbridge, named for the heroic Commodore William Bainbridge, famed for his exploits at Tripoli and in the War of 1812, similarly will be "loaded" with pro-ducts of the atomic and electronics age.

It will have a far greater cruising range than conventional frigates, and a far greater

sustained rate of speed.

Twin surface-to-air Terrier missile mounts are fore and aft of the 550-foot Bainbridge. She will also carry antisubmarine and some conventional armament.

Development of the two atomic "firsts" here in New England is further testimony of the faith the Navy has in the "know-

how" of local industry.

The Westinghouse Electric Corp., Sturtevant Division, Hyde Park, Mass., is installing air handling equipment on both the Long

Beach and the Bainbridge.

That's the type of work Westinghouse Sturtevent has been doing for exactly 100 years. Its ties with the Navy go back 81 years, to 1879, when it installed its first ventilating fan aboard the old U.S.S. Richmond.

Specially designed ventilating fans by Westinghouse Sturtevent are going into the

Long Beach and Bainbridge.

The fans will ventilate the equivalent of their own weight within a 24-hour period aboard the atomic-powered ships. Approximately 175 will go into the new cruiser, 65 into the Bainbridge.

Largest within the Long Beach will handle 20,000 cubic feet of air per minute; the smallest, 500 cubic feet per minute. Prior and during World War II, the Hyde

Park situated Westinghouse Sturtevant installed more than 30,000 ventillating fans in every type of vessel in the Navy.

The impact of the new fleet growing within New England matches that which stirred the Nation when the first fleet went down the ways here 166 years ago.

An inkling of the significance this new atomic-powered fleet is contained in the fact that a golf-ball size piece of uranium is equal to 465,000 gallons of oil or 6 million pounds of coal.

No longer will the cruising range of our fighting ships be limited to the amount of bulk fuel they can carry.

The range—and subsequently the striking power—of today's Navy has been extended immeasurably.

Birth of the atomic Navy here is a profound tribute to New England industry that has helped maintain the U.S. Navy as the most powerful in the world.

No Deterrent Gap

EXTENSION OF REMARKS OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent editorial, which appeared on May 8, 1960, in the Washington Star. There has been much discussion in recent weeks regarding the deterrent capability of the United States, particularly in relation to our missile program. For this reason I believe the editorial is timely and merits the attention of the public. The editorial follows:

NO DETERRENT GAP

The American people can take considerable comfort, we think, from a statement made on the House floor last week by Chairman Mahon, of the Military Appropriations Subcommittee

Mr. Mahon, a Democrat who halls from Texas, is a careful and well-informed student of this Nation's military program. He has been at it for a long time, and his committee has just finished a 4-month study of the defense budget for the coming fiscal year. Thus, Mr. Mahon speaks with authority when he says he does not believe there is a deterrent gap at this time between us and the Russians, and that he sees no reason why there should be any such gap during the next 3 years.

There is a difference between a deterrent gap and a missile gap. A missile gap exists in the sense that the Russians have and will continue for some time to have more ICBM's than we have. This results from a deliberate decision by the President and his defense advisers-a decision based on a number of reasons, including faith in the deterrent quality of our Armed Forces. Whether this decision was wise or not will be tested by whether we have a major war in the early It is interesting, however, to note Mr. Mahon's statement that he does not believe the decision was influenced by any thought of placing budgetary considerations ahead of national security, which refutes an accusation often made by some Democrats.

Our deterrent force is our whole force, as distinguished from the missile component alone. It is composed of all the services in all of their diversifications. And when Mr. Mahon says there is no gap he means that this whole force is strong enough to strike back, after a surprise attack, with such power that no aggressor would be willing to accept the damage to his own country which would result from an attack on us. In this connection, incidentally, Mr. Mahon had a word of warm praise for Defense Secretary Gates, which must have come as music to the ears of that often beleaguered official.

A small item in the news this week also has a bearing on the question of our deterrent capability. This was a dispatch from Hill Air Force Base in Utah, which quoted Maj. Gen. O. J. Ritland, commander of the Air Force Ballistic Missile Division, as saying that the Minuteman will be operational by the summer of 1962 instead of 1963, as had been anticipated.

This is very good news from the deterrent standpoint. For the Minuteman, a solid-fueled ICBM which can be fired from underground silos or mobile launchers, will be our deterrent ace in the hole. It is designed to back up and perhaps to replace the Atlas and the Titan. Once it becomes operational and available in sufficient numbers, the danger of an attack on the United States will be exceedingly remote.

In a word, it looks as though our defense effort is moving along at a better pace than one might think from listening to some of its critics. We hope the Senate will accept the House-approved defense money bill, including the changes in emphasis on certain programs recommended by Mr. Manon's committee and adopted by the lower Chamber.

What's Wrong With Railroads? The Competition Is Tough and the Rules Are Archaic

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. VAN ZANDT. Mr. Speaker, recently widespread coverage was given a speech by Secretary of Labor James P. Mitchell in which he advised railway management and its employees to join hands in satisfying the needs of the Nation's railroads for a workable, dynamic competitive position in the American transportation system.

As a result of Secretary Mitchell's speech at the Railway Employees Department Convention, at Chicago, Ill., April 27, 1960, other modes of transportation have declared there are two sides to the coin and have expressed their views on the subject.

The following editorial which takes issue with Secretary Mitchell appeared in the Harrisburg (Pa.) Evening News, May 4.1960:

WHAT'S WRONG WITH RAILROADS? THE COM-PETITION IS TOUGH, AND THE RULES ARE ARCHAIC

What is basically wrong with the railroad industry?

In one word: competition.

Secretary of Labor Mitchell made this diagnosis in a much ballyhooed speech on transportation last week.

Among other troubles plaguing the rail industry, Secretary Mitchell said, is this-

"The present structure of government regulation is based upon a time in economic history when the rails had, in effect, a monopoly in transportation. By protecting the public welfare in the regulation of railroads, the Government protected the public interest in the only mode of transportation that mattered."

It wasn't too many years ago, the Secretary pointed out, that an American traveled from one town to another by rail, or he stayed home. An industry shipped its goods and got its raw materials by rail, or not at all. The railroads tunneled mountains, crossed rivers, spanned plains, and what moved for any distance moved over them.

Yet though railroads now are in fierce competition with trucks and buses on a network of high-speed highways and with faster airlines moving in on passenger traffic and, increasingly, on cargo, the regulations under which the railroads must operate today are substantially the same ones of their long ago monopoly days.

Secretary Mitchell was on high ground with his declaration that the regulations "must be accommodated to the new competition."

But when he calls for the railroad management and the railroad unions to get together in "a joint recommendation" on "the fundamental overhauling of the ICC and the laws that govern transportation," Secretary Mitchell is urging a hazy approach. After all, recommendation has been piled upon recommendation throughout recent years—by railroad management, labor, economists,

congressional committees and the Interstate Commerce Commission which completed a massive 3-year study and made its recommendations only a year ago. Not a week passes that the mail is not loaded up with the plaints and complaints of the railroad industry or railway unions and that the various railroad spokesmen aren't making speeches or issuing statements.

What possibly could be new in the new batch of recommendations that the Secretary proposes railroaders now make? Congress, which alone can do something about the archaic regulations, has all of the data and information it could possibly need to legislate changes. And Congress isn't even seriously considering the many revisions already proposed.

Secretary Mitchell was making an even hazier proposal when he said: "I suggest that we seek the gradual elimination of all Government subsidies in transportation in America and consider the introduction of user charges so that each mode of transportation carries its fair share of the burden of public expenditures from which they now profit unequally."

Yet it well may be argued that the truckers, for all the familiar railroad bleating that the Government subsidizes them with free highways, already are paying heavy "user charges" in gasoline taxes, tire taxes, sales taxes on vehicles and equipment, registration taxes—both State and Federal.

And isn't it some kind of subsidy, when the railroads are exempted from property taxes as they are here in Pennsylvania? The Pennsy, for instance, has multimillion-dollar real estate holdings right here in Harrisburg on which it doesn't pay a cent of tax. But any trucking company pays the full property tax on its terminals and holdings.

Who is being treated unequally on this tax subsidy front?

What is the yardstick upon which the equality urged by Secretary Mitchell is to be determined?

It's true the American merchant marine is heavily subsidized. But this isn't done to give the rallroads unfair competition. It enables American ships to ply the seas in competition with Government-owned and subsidized shipping of other nations. But even more than this, it guarantees that in the event of war our Nation would have a merchant marine available when it desperately needs it.

Charges that airmail is airline subsidy are wide open to the challenge that it is, instead, simply payment for services rendered. Clear-cut subsidy, such as Government-built airports, are defended by proponents with the same national interest argument applied to shipping—the availability of all possible airlift in the event of international emergency.

The same national interest argument can be, and is, raised by some railroad interests, in behalf of subsidies for railroads. This is exactly opposite to the course suggested by Secretary Mitchell.

Although the Secretary's "eliminate all subsidies" proposal is completely unrealistic, Congress well could examine the present subsidy situation. Perhaps ways can be found to work out fairer distribution of what Secretary Mitchell calls "the burden of public expenditures." Revision of archaic regulations, which hark back to the monopoly era of railroading, certainly would go a long way toward equalization for the rail industry in today's wide-open competition for passengers and cargo.

Employment of the Physically Handicapped

EXTENSION OF REMARKS OF

HON. LAURENCE CURTIS

OF MASSACHTISETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CURTIS of Massachusetts, Mr. Speaker, the President's Committee on Employment of the Physically Handicapped does splendid work under the chairmanship of our former distinguished member, Maj. Gen. Melvin J. Maas, USMCR, retired.

As was noted in tributes paid to him in the Congressional Record of Friday, May 6, at page 9056, he is particularly well able to engage understandingly and effectively in this field as he himself works courageously under the handicap of blindness.

Mr. Aaron Solomon of 11 Stanley Road, Waban, Mass., president of Ace Electronics Association, Inc. of Somerville, Mass., has set a splendid example of effective help to the physically handicapped by giving employment to large numbers of them in his company.

At the recent annual meeting of the President's Committee, Mr. Solomon made a speech on this subject, and paid tribute to the effectiveness of the ability and value of his physically handicapped employees. It is hoped that his remarks Will stimulate other employers to give employment to the physically handicapped. Statistics prove that they give a good account of themselves in employment. The slogan of the President's Committee is "it's ability that counts, not disability."

I include Mr. Solomon's speech as part of my remarks.

UTILIZING HANDICAPPED WORKERS IN SMALL BUSTNESS

(Remarks by Mr. Aaron Solomon, president, Ace Electronics Association, Inc., Somer-Ville, Mass., before the annual meeting of the President's Committee on Employment of the Physically Handicapped, Washington, D.C., May 5 and 6, 1960)

MANAGEMENT'S RELATIONSHIP WITH AGENCIES SERVING THE HANDICAPPED

Frankly, I feel somewhat like the batter Who has come up to bat after three men each have singled, the bases are now loaded, and I am sent in with instructions to drive the winning run in. Thus, I am pleased that my subject, "Management's Relationship With Agencies Serving the Handicapped" deals with what I think is the most portant phase facing us today in rehabilitation in relation to the proper placement of physically impaired individuals into the American economy.

Initially, let me make the statement that my appearance here today as a speaker is not to make you, my audience, "comfortable" by avoiding controversial aspects of this problem. The program of the President's Committee for the Employment of the Physically Handicapped does not have to have me comment on its usefulness, as your presence here today indicates its value to all of us, but I must pay tribute to General Maas, Admiral McIntire, and many of the people Who did so well in the past in setting up

this humanitarian program. done prior to my entrance into it, has made the job much easier; the road is well paved and the general public has been well indoctrinated on the subject of employment of

physically handicapped people.

To get down to the meat of my discussion, I think we are all aware that presently the increase in physically impaired people on an annual basis is over 300,000 men and women whereas the placements in employment fall far short of this figure. Therefore, a full analysis is necessary as to how we can better bring these figures into balance. Therefore, I am going to reduce my analysis down to a businessman's method of calculation. the proper operation of my small business, I require certain facts and figures from my executive staff, such as: (1) Available funds in the bank; (2) obligations payable; (3) total business volume booked daily; total business volume shipped daily; (5) list of overdue orders: (6) engineering problems requiring immediate solution; (7) long-range engineering problems; and (8) immediate and long-term equipment require-

As you can see, in order to stay in a competitive situation, I must have facts and figures available immediately in order for me to maintain my work force of 170 employees among whom number approximately 120 physically impaired individuals with multiple physical as well as mental disabilities. My comment is that unfortunately to date the professionals in rehabilitations such as clinics, hospitals, vocational training centers, and workshops do not analyze their programs in a like manner. Also, unfortunately, because of their professional status, they look to the individuals with disabilities as their clientele and lose sight that all the work that they do in their clinics, all analyzing, vocational training and such, points only to the one goal—proper placement. Placement in my mind has not had the correct emphasis and I would like to suggest for your thought and consideration that we in business realize the customer is our most valuable asset, so must we now look to the American employer as our most important customer for in truth all of our work is in vain unless it culminates in the proper placement in the working

rolls of the physically impaired client.

I recommend that we go back to rehabilitation clinics such as the public and pri-vately supported vocational rehabilitation workshops and other groups and start to bring in to the program the small businessman. We have done an exceptional job as a committee in bringing in Hughes Aircraft, Raytheon, General Electric, Jones & Laughlin Steel, and many others but I must point out to you that our actual customers making up 97 percent of the working population the country employ less than 50 people. It is to this group our effort must now channel if we are ever to realize the increased placements required throughout the coun-

Yes, it has been good policy to use the names of the presidents of these massive corporations and they, in turn, have given us more than lip service. The organizations they represent have taken in a number of these physically impaired people and added them to their work rolls, but there is a saturation point with companies like Hughes Aircraft, Raytheon, General Electric and others, and only if we can now reach the other 97 percent of employers, can we hope to make any strides toward bringing the annual figures for physically impaired as against placement into a better balance.

My recommendation is that we analyze the various bodies of advisers and board members and add to these the small suc-cessful businessman. He is well disposed to-

ward assisting in this program and frankly, any good business must have multiple customers, the more the better because the falling out of one cutsomer can wreak havoc on his business if he has only one or two customers. I have seen businesses where catastrophe and disaster follow any falling out with a customer of such magnitude.

We have had tremendous amounts of free advertising, radio, television, newspapers, and this job has been done well and adequately by the President's Committee, the State committee as well as local organizations but we must now concentrate on moving into the greater area of placement.

Bear in mind the small businessman does not have a personnel department.. In most instances, he not only has to hire each and every individual employee but also he knows them by name and even knows their personal problems. He normally is a driving type of individual who is seeking success and this in the social sense he can gain in the community as one who is willing to assist in worthwhile projects-and this drive of his will enable us to open many doors by bringing him into our organization. His drive, brought on by one or two placements in his establishment, will enable him to sing praises to other small employers, because, frankly, he does not meet with the presidents of the big corporations. They live in separate worlds but he, if properly cultivated, can become a working salesman for our program.

I speak to you not as one who is talking academically but as one who has started a academically but as one who has scarted a business with three employees 6 years ago, embarked on a program of using the talents of the physically impaired employees, and 99 percent of whose success is the result of their output, their loyaity, and their deter-mination to do a good job and their willingness to accept the responsibility of employment. There are many other "Aaron Solo-mon's" lying dormant throughout the country and if we use these people on our program they, in turn, are what we need and only by bringing them into the program do I see success in the balance of the figures that are disturbing me.

We must change our whole philosophy of the placement of physically impaired people. We no longer are dealing with a personnel department staffed with psychologists, phy-sicians and college-trained placement counselors; we now are dealing with everyday people and therefore our placement agencies, whether they like it or not, must now do considerably more work such as a more complete evaluation of the job opportunity in the small manufacturing plant, retail estab-They must lishment or service company. know the available jobs and accept the responsibility of the placements suggested to small industry.

A greater concentration must be made on working with the job applicant so that he is ready mentally as well as physically to ac-cept employment because, remember, the small businessman is a busy little beaver normally handling multiple facets on his own operation. He does not have the time to be the father confessor to his employees and only by good initial placements can we gain his confidence. This will enable us where we place one, to place a second, third, and fourth, and then after these placements, we can bring him into the fold and ask him to go out to sell others in small businesses like his own to open their doors. He, too, can have the satisfaction that I

enjoy, knowing that over and above our making a living, we are contributing more than we are called on by this useful placement of

handicapped people.

Looking over our hiring the last few years, I am greatly disturbed to find that few if any placements have ever been referred to my company by private placement agencies where the employee pays a fee for the referral. This opens a tremendous area for us in the President's Committee as well as the State committee to find the jobs for the impaired which the private fee-paid employment agencies do not handle.

As I look to the problem of a physically impaired person in the small local community, I realize that it is very difficult for the large industries many miles away to be the salvation for their employment, in view of the difficulties in transportation and other problems brought on by distance, and it is therefore my humble opinion that our only recourse for success is to bring in the small businessman, as I have indicated.

Now, possibly I have stepped on a few toes in my discussion but frankly, it doesn't disturb me because my only interest in the program we are now discussing is that each physically impaired person with ability to perform a job be directed towards full employment, and if that is accomplished, that is all I am interested in.

We must look at another problem—analyzing many of the private charitable agencies—it almost seems to me as though they are busy raising funds to pay fund raisers. Their programs, as a result, give less and less real service to either the handicapped or the community, and I find more and more lipservice being rendered at more and more meetings which ultimately end in sessions of preaching to the converted. These people must open up their advisory councils to businessmen who will work at the project of employment of the physically impaired people and not sit at an annual meeting and hear a report on a number of placements, far too low, for the public and private money spent on programs of rehabilitation.

We are most fortunate that the Office of Vocational Rehabilitation has allocated tremendous amounts of research funds to many of these workshops and placement agencies, but basically we give too much importance to the psychological programs as against a down-to-earth plan for placement in industry at a working wage commensurate with the requirement of the job, which is actually the ultimate in rehabilitation.

I do not anticipate a very pleasant situation when the questions start but I would like to state to you right now, those questions that I know the answer to I will give you all the answers but those I don't, I sure as the devil will find out the answers, as I, too, am open minded on this problem.

In closing, I would be remiss if I didn't give you some of the inner feelings I have about our program. I thank the Good Lord daily for the good fortune He has given me that enables me to make a living and give that little something extra which I am able to do through my company. I must remind you that my appearance here today is only made possible by the productivity of so called "unemployables" who not only make a fair and good living for themselves but also now have a feeling of belonging to the great American people, and enable me to visit with you, talk to you, plead with you, and cooperate with you towards the goal of more jobs for our physically impaired brethren. With the Good Lord's help, I hope to continue to make this phase of my life as worthwhile to me as it has been to date, and offer to you my full and complete dedication as evidenced by the time I spend on speaking to groups on the local level and State level. I plead with you that we do a litle soul searching toward bring-ing in the small businessman. He is our solution and salvation in this most inspiring project.

Presidential Qualifications—Letters From Fifth Grade Students

EXTENSION OF REMARKS

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. MUMMA. Mr. Speaker, this being a presidential election year, there should be considerable interest among the voting population of our Nation that will be generated more and more shortly. The conventions are not too far away now. However, despite the importance of elections in our country, there still is a certain amount of apathy and reluctance, on the part of those who would otherwise be eligible to vote, to make a decision and cast a ballot.

It has always been my lot to encourage everyone who can vote, to go out on election day and do just that. It is encouraging to me and I note with considerable interest that while the fifth grade students of Derry Township Public School at Hershey, Pa., are too young to vote, they do have their minds made up on the importance of the Presidential Office and the kind of man to elect to that high office.

I supplied to Miss Miriam Snyder, their teacher, copies of House Document No. 386, of the 85th Congress, entitled "Our American Government" which she distributed to her class. My observation is this—that if the publication can convey the importance of selecting a man of presidential timber—I am happy to get as many copies of this publication into the hands of school students as long as my supply holds out.

The letters written by the fifth grade students follow:

DERRY TOWNSHIP PUBLIC SCHOOL,
HERSHEY, PA., May 4, 1960.
The Honorable Walter M. Mumma,
Member of Congress,
Harrisburg, Pa.

DEAR CONGRESSMAN: The pupils of our fifth grade and our teacher, Miss Snyder, wish to thank you for your kind of cooperation in sending us free information concerning our Constitution and the work of the different departments of our Government. We treasure these booklets and will keep them for future reference.

Enclosed are a few of our papers we wrote in English class about the coming presidential candidates.

Respectfully,

KAREN SAVAGE, A Fifth Grade Pupil, 10 Years Old.

A BIG MAN FOR A BIG JOB

(By Anita Meiser (10 years old), English, grade 5, May 4, 1960)

I think that a man who wishes to run for the highest office in the United States, the Presidency, must first think of the problems and responsibility that he will encounter.

Problem No. I will probably be money, which would include trade with other countries, wartime supplies, and education, health, and welfare. Other problems could be the colored people in America, the race with the Russians, and so on.

The President himself should be physically and mentally fit. He then could cope with people or things that rise up against him, such as complaints about taxes. He should be willing to hear suggestions and requests. A President should have knowledge of politics. An office of Governor or Senator would give him a good background of politics.

A President should have confidence in himself. He should be able to make decisions and then carry them out. He should think for himself, and act like and be a leader.

A man that is leader of a country must realize that his job is not to be fooled with. It holds together one of the greatest and strongest nations in the world. He should remember that for all of his terms, and not forget it. He is the big man.

A BIG MAN FOR A BIG JOB

(By Robert Fisher (11 years), English grade 5, May 3, 1960

I think a man big enough to occupy the job of President must be strong both mentally and physically. He should have the courage to face the fact that he is the highest Government man of the United States. He should also have the courage to go on long trips overseas to visit other countries and talk to their leaders. He would have to be strong mentally because he would have many hard decisions to make and laws to pass. He would have to be strong physically so that he could make the long journeys overseas and overland without getting ill and also if he did get ill he could recover easily.

I also think that this man would have to know very much about law in order to make a good President for our country. He should be a very thrifty man and not waste his own or our country's money. He should be very well educated and should be self-reliant.

A Big Man for a Big Job (By Karen Schmehl (10 years), language, grade 5, May 4, 1960)

I think that our next President should be sensible and have stamina. He should know how to handle nationwide problems, such as the Negro-white trouble in the southern part of our country. He should agree to help in foreign problems. The President should have a sense of responsibility for his country. He should think of others in time of need, and try to provide for their needs. He should be liked by the people. The people should be able to trust him, and feel that our United States is safe in his hands. He should do justice to everyone no matter what their color, race, or way of thinking. The President should feel sure of himself because the people of the United States will back him up. He should live up to his title, the President of the United States of America. As Lincoln said, "Of the people, by the people, and for the people."

A BIG MAN FOR A BIG JOB (By Jean E. Vernet, Jr., age 10, English class,

May 4, 1960)

I think that a man who has the job of President of the United States of America should have courage to face difficult problems that might occur in his term. He must have a sense of responsibility for his country and the people in it. He should be trustworthy in every way to his country. He should use all his best ability to preserve, protect, and defend the Constitution of the United States of America. He also should have an education and a healthy body. I think he should be kind and sincere at all times. He should have some political experience.

A BIG MAN FOR A BIG JOB (By Michael Mathers, 10 years, language, Grade 5, May 4, 1960)

My idea of a man to occupy the presidential seat must be fully responsible, and in good health, and be able to talk very fluently. He must be patient, careful to hear everyone's side of any crisis that might arise, and have much self-control. He also should have a political background, and be a man of different ideas. He must be born in this country. He should be conservative-minded, and not a spendthrift. He must be very polite to his Cabinet, other countries, and, in general, everyone he should meet or know. Another quality he should have is being able to know what our country should have, in numbers of men, artillery, warships, and airplanes; and what the cost is. He should also have much self-confidence.

A BIG MAN FOR A BIG JOB

(By Harry Urban (10 years), English, grade 5, May 4, 1960)

I think the man that would best suit the Presidential Office would have to be loyal to his country. He would have to be strong in mind as well as in body. By this I mean that he would not panic in time of war and still stand out to the other nations. I think he should also have some political background, such as Senator or even Vice President. He should know what his country wants and how it feels toward other nations.

It is not well to be bad tempered. We should not be impatient about the race for

I think he should be able to handle the

problems at hand. He should also know some of the "high brass" from some of the other countries, but be diplomatic about it, too.

I think he should have been raised in the

right environment.

He should not be entirely guided by his alds.

He should not favor his own State first, but think of the whole country. No State should be first to him, nor should he hold any city first and give them extra privileges.

I think he should not favor people by their race. He should think of all America and the people of whom he is a leader.

Hartford Courant and Waterbury Republican Comment on U-2 Fiasco

EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. KOWALSKI. Mr. Speaker, the shock and embarrassment felt by the American people in our Government's handling of the U-2 incident are reflected in editorials carried yesterday by two of our leading Connecticut newspapers, the Hartford Courant and the Waterbury Republican.

The Courant editorial is summarized in its title, 'Uncle Sam, Spy—and Stumblebum."

The Waterbury Republican editorial points out that "The spy in the sky flasco has shaken and embarrassed the American public."

Under unanimous consent, I bring the texts of these two editorials to the attention of my colleagues in the House: [From the Hartford Courant, May 10, 1960]

UNCLE SAM, SPY-AND STUMBLEBUM

Apparently the official Soviet line is that the American spy-plane mission was a piece of deliberate provocation designed to prevent agreement at the summit. But surely responsible statesmen on both sides of the iron curtain know that this is nonsense. There may be some doctrinaire Communists who still repeat the Marxian ritual statement that all capitalists are warmakers. But for the most part this unhappy inci-dent shows Uncle Sam up not so much as a warmonger as inept.

Why all the fuss? Every government knows that every other government is en-Every government gaged in spying. Soviet Russia presumably more than most. After all, we have Russian spies sitting in U.S. prisons right now. Probably the incident sent tremors around the world not only because of its unhappy timing just before the summit, but for other reasons too. First, it was a particularly spectacular kind of spying. Second and more important, it caught the U.S. Government in a lie. And third and most important, it has raised still unanswered questions as to whether Uncle Sam's left hand lets his

right hand know what it is doing.

After all, what would we and the world have thought if some Soviet high-altitude plane had flown, say, from Cuba across the continental United States, hoping to land in Kamchatka, only to be shot down in the middle of Kansas, with a pilot who lived to Then again, it has been downright humiliating that the U.S. Government, leader of the free world, made through its State Department an official statement that Mr. K. was able to show up as a lie. Let us hope that all Washington has now learned what it should have learned long ago: First, if you say anything at all, tell the truth. And second, if you can't tell the truth, don't say anything at all.

Even more disturbing is the hint of a lack of discipline and control in our Government. The President and Secretary of State should certainly be aware of any such intelligence activities, though not necessarily of the details. But the CIA and Pentagon should not only know the details, but should be sensitive enough to political and diplomatic overtones never to risk such a mission at

such a delicate time.

It is distressing to hear that an Air Force manual claims the privilege of flying information missions without specific authority from the President or his civilian advisers. This reflects an appalling lack of discipline. The prospect of thermonuclear war is so frightening that no responsible government would allow one to start. But what if the armed services or intelligence services of any nation, let alone the United States, feel free to play with dangerous military hardware over another nation's territory? The risk of an unintended, accidental launching of pushbutton war is already too great without our adding to it.

It might be well if President and Congress were quietly and carefully to study the whole subject afresh. The first necessity is to make certain that nobody goes off half cocked. The second is to make certain that whatever is said on behalf of the U.S. Government is the truth.

[From the Waterbury Republican, May 10, 1960]

The spy in the sky flasco has shaken and embarrassed the American public.

The timing of the reconnaissance episode splashed over the front pages of newspapers throughout the world could hardly be of better advantage to the Soviet Union near the eve of the summit parley in Paris. can understand Russian Premier Mikita Khrushchev's glee in announcing and de-nouncing the American attempt to probe the internal activity of his country.

At first, America was slightly enraged that a U.S. plane, supposedly under the supervision of the National Space and Aeronautics Administration and engaged in weather observation, should be downed for wandering, for whatever reason, across the border into Soviet air space. The State Department and administration officials misinformed the U.S. public inadvertently, for the information given them, and the cause of much of our discomfiture emanates from that hush-hush agency headed by Allen Dulles, Central Intelligence.

It now appears the flight was ordered by that department with an eye for ferreting out just what, if any, stunt the Russians were preparing for a presummit splurge. similar to the Soviet target practice at the moon's expense prior to Khrushchev's U.S. visit. The gamble taken was immense, and as the world now knows, boomeranged.

The Kremlin, as might be expected, handled the incident with the best of its propaganda prowess, sharpening a razor edge to pare Western prestige and purpose at the coming heads of state meeting. The principal hope of the world's peoples, the relaxation of global tensions, has been somewhat dashed.

Khrushchev will doubtless use this windfall to pressure the Western Allies on a stand on Berlin and only a full summoning of Western moral and military authority will deter a session of reckless and relentless bargaining by the Moscow agents.

Americans were not only disturbed at the spy story, they were surprised. They seldom realize that not only do we conduct highly secret intelligence and counterintelligence operations, but we maintain a lethal ring of airbases around the Soviet Union. In times of military or civil chagrin these installations and agencies are given inordinate and ominous publicity without the proper perspective and understanding of their purpose and necessity.

The cold war is brought home in a sudden flash by the faux pas of one of our chief agencies. Americans are taken back. "Spy," by consensus, is a nasty word. Intelligence is preferable. Therefore, we operate an intelligence network the world over, gleaning, as best we can, information and knowledge otherwise unobtainable from behind the Iron Curtain or the Bamboo Curtain or any official opaqueness.

This data is demanded of a government competing for the leadership of the free world and the survival of democratic and capitalist institutions in other areas of the globe. Communist spies in the United States have been caught in number. Their espionage, sabotage, and subversive activities make mandatory counterintelligence. Such systems are realities in international affairs, however unpalatable they may seem.

The unfortunate error of judgment, and the consequences it may have, should in no way impugn the cardinal need of intelligence work in assuring the security of the Nation. But it should prompt an examination of the lines of authority in such matters and guarantee that similar action will not be taken at so crucial a time without the consent of the President and the readiness to answer to the public conscience.

Co-ops Are Good Business

EXTENSION OF REMARKS

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Jennings Daily News of Jennings, La., which gives some interesting facts regarding the financing of electric cooperatives:

[From the Jennings Daily News, May 6, 1960] Co-ops Are Good Business

(EDITORS NOTE.—The following is reprinted from "Rural Louisiana," the newspaper of Louisiana electric cooperatives. The Louisiana cooperatives are celebrating the 25th anniversary of rural electrification in America, with special programs next Wednesday, May 11. This editorial gives the background and details of financing of electric cooperatives.)

MEMBERS CAN HELP

Loyal members of rural electric cooperatives who remember only too well when less than 2 percent of the rural homes and farms had electricity can help refute a lot of the nonsense being fed urban and city people about REA and member-owned co-op systems.

First; members can explain that the electric co-ops are not Government agencies, but are local private enterprises belonging to the people they serve. If borrowing REA money makes the co-ops "government enterprises" what about all the FHA and VA home owners, big industries such as Kaiser Aluminum, etc?

Second. Members can explain that REA is merely a banking agency, that it lends money to both private companies and privately owned electric cooperatives. In fact, there are 21 commercial, privately owned utilities in Louisiana borrowing from REA as compared to only 13 rural electric cooperatives. This is a fact that is seldom publicized or mentioned to city and urban people. Members can explain that REA owns not a single foot of electric lines anywhere, but just loans money and expects it to be repaid on strict schedules—plus interest.

Third. Members can explain that as member-owners, they have stockholder and ownership rights, that they own and operate the cooperatives through an elected board of directors, which in turn hires capable management. They can point with pride that they are the only consumers of electricity who not only get low, competitive rates, but also share in the ownership and control of the business.

Fourth. Members can point with pride that whereas only 2 percent of the rural homes and farms had electricity-essential for decent living and progress of our Statein 1937; today the member-owned rural electric co-ops in Louisiana provide 98 percent area coverage. And, furthermore, this was done at no cost to taxpayers while the Government has been doling out and giving away millions to foreign governments for, of all things, rural electrification. While on the subject, members can also say with pride that rural people and their member-owned electric co-ops have not only kept faith with the Government in repaying loans while building for progress, here in Louisiana, they have repaid millions in advance of schedules.

These four facts repeated by the more than 130,000 owners of rural electric cooperatives and their families in Louisiana would do so

much to blot out the untruths and constant stream of advertisements and propaganda going to unsuspecting city and urban folks.

It is a great story, so why not tell it at every opportunity to urban and city friends?

Should We Recognize Red China?

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include an article by Dr. Paul K. T. Sih, director of the Institute of Asian Studies at St. John's University, New York, with a preface by His Eminence Richard Cardinal Cushing, archbishop of Boston:

SHOULD WE RECOGNIZE RED CHINA?

PREFACE

(By His Eminence Richard Cardinal Cushing, archbishop of Boston)

"The recognition of Communist China is an objective of international communism supported by its most powerful propaganda program. In the East and the West, on both sides of the Iron Curtain, the call is echoed by our friends and our foes to be more realistic about China.

"Many reasons are given in the secular press and in the publications of the Reds why we should establish diplomatic relationships with the Chinese mainland where 600 million people are governed by force. Dr. Paul K. T. Sih, Director of the Institute of Asian Studies at St. John's University, New York, answers some of these reasons in this pamphlet. I hope it will be read and reread throughout our country. The pressure for the recognition of China is becoming greater, stronger and more effective. That is especially true since the death of John Foster Dulles, late Secretary of State, who was the most powerful voice in the West against the recognition by the United States of the Chinese Red regime.

"Experiences of the past teach us the duties of the present. Trade, for example, would prepare the way for recognition or it would follow it. The comment of Dr. Sih on this subject hits hard at the communistic line most frequently followed in behalf of the recognition of China. Remember how the scrap metal, which the democracles shipped to Nazi-allied Japan, under the guise of 'free trade' was turned into the bombs which blasted half of Asia and were hurled at our men in the Pacific?

"This pamphlet gives us the facts behind the present policy of our Government. The U.S. policy is that President Chiang Kaishek heads the only legal Government of China.

"His government—officially the Republic of China—is now on the island of Formosa, but it is not there by choice. It was driven out of China by Communist armies. The Communists, under Mao Tse-tung, took over the mainland and set up their own rule. There has never been an election on the China mainland under the Reds. There is no evidence that the Chinese people want the Communists as their masters.

"The Chinese Communists fought the United Nations in Korea. They supported a Communist war in Indochina. They took over Tibet by force. They helped Communist terrorists in Malaya and in the Philippines. They keep saying they will take Formosa by armed force, if necessary. They

have infiltrated into Latin America. They are dedicated, as are the Communists of Russia, to dominate the world.

"Internationally the Chinese Communist regime does not conform to the practices of civilized nations; does not live up to its international obligations; has not been peaceful in the past, and gives no evidence of being peaceful in the future. Its foreign policies are hostile to us and our Asian allies. Under these circumstances, it would be folly for us to establish relations with the Chinese Communists which would enhance their ability to hurt us and our friends."

"These words of John Foster Dulles are as true today as they were when he uttered them a few years ago. This pamphlet by Dr. Sih will help us to understand the sound logic behind them."

(By Paul K. T. Sih)

The controversy over policy towards China, which has now lasted nearly 10 years, has centered mainly about the question: Should Communist China be diplomatically recognized by the United States? If Communist China were recognized by this country, she would be in a good position to occupy the Chinese seat in the United Nations and to adjust her international relations with the free nations. Arguments relating to recognition have, naturally enough, changed somewhat as the years have gone by. However, the main principles remain unchanged. As principles, they cannot change.

Those who advocate closer diplomatic ties between the United States and Communist China base their arguments on five assumptions:

1. To recognize Communist China is to be realistic. The Communists are in firm and permanent control of the mainland of China. Though we do not like the regime, it is in power and will be there for a long time to come. There is little that we, or the free Chinese in Taiwan (Formosa), can do to change the situation. We must be realistic. Since we cannot ignore 600 million people in mainland China, we must deal with the Communist regime.

2. To recognize Communist China is to enable us to expand our trade. Red China is a potential buyer of Western production. It is a great untapped market for trade. As other free nations, notably Britain, are trading with Red China, the American embargo, with its outright ban on United States-Red China trade, has become, more or less, academic. Recognition of the regime would provide means for furthering the interest of our businessmen concerned with Far Eastern trade.

3. To recognize Communist China is to relieve international tension. Crisis and tensions exist everywhere in Asia. This results from our failure to recognize Communist China. By cutting diplomatic relations and forbidding ourselves to communicate with the regime we deprive ourselves of the means whereby we might wage peace without risk of war.

4. To recognize Communist China does not signify our approval. Recognition implies neither approval nor disapproval. It is merely a practical arrangement suitable for maintaining contact with a regime. We recognized Soviet Russia in 1933. Why should we not do the same with Communist China which is, after all, a tyranny no different from that of Communist Russia.

5. To recognize Communist China is to drive a wedge between Communist China and Soviet Russia. Chinese communism is different from Soviet communism. Expanded trade between the free world and Communist China would drive a wedge between Moscow and Peiping and perhaps even make a Tito out of Mao Tse-tung. Through such trade, ties between the Red

and the free world would be strengthened, while corresponding relations between Peiping and the Kremlin would be weakened.

These arguments, at first so appealing, are in fact utterly false. Indeed, the reverse is true.

1. To recognize Communist China is to betray both realistic principle and American practice. Communist China in no way represents the will or aspirations of the Chinese People. It came to power by force and continues to hold power by force. Information reported by Pelping Itself refutes the idea that the Communists are firmly entrenched on the mainland. The regime was imposed by force and deceit. A certain number of people did cooperate with the Communists but this was mainly from fear of reprisals against themselves or their families. day, after 10 years, less than 2 percent belong to the Chinese Communist Party. It has kept itself in power by constant purges and liquidation of at least 18 million of the mainland Chinese in 10 years. It has sublugated 600 million people, but it has not Won their hearts.

Ruthless oppression of Tibetan peoples is one case in point. The International Com-mission of Jurists, a nonpolitical organization representing 30,000 judges, lawyers and professors of law and under the chairmanship of Purshottan Trikamdas, a distinguished Indian lawyer, has urged the United Nations to investigate mass murder and organized suppression of the people of Tibet. It has put the total of slain Tibetans at 65,000 and collected evidence showing least a prima-facie case of genocide against Red China." (The New York Times, June 6 and July 25, 1959.) No regime representative of its people would have to resort to wholesale persecution in order to keep itself in power.

Though the practice of the United States in the matter of recognition necessarily permits some elasticity, yet the fundamental principle of judgment has always been that of Jefferson who said in 1792: "It accords with our principles to acknowledge any government to be rightful which is formed by the will of the nation, substantially declared." (Works, 4th ed., vol. III, p. 489.) Insistence on the substantial nature of the declaration of popular approval remained the guiding principle of the practice of the United States for the next 150 years. Effective control of a land depends on popular consent of the government.

2. To recognize Communist China is to benefit the economic interest of the Red regime itself, not that of the United States. Recognition of Red China would result in trade beneficial to the Red government, not to the free world generally or the United States in particular. Great Britain, one of the first non-Communist countries to recognize the Red regime, found the answer the hard way. After the Communist occupation of the mainland, British investments amounting to hundreds of millions of dollars were promptly confiscated by the Peiping regime.

As for the United States, which used to do a \$1 billion business in China, the prospects of trade are virtually nil. If we have any doubt about this statement, we need only refer to the story told by Charles S. Miner, for many years the representative of Manhattan's C. V. Starr & Co. in China. He was permitted to leave the Chinese mainland in the summer of 1956, after his company had suffered losses totaling nearly \$5 million. Said Miner: "Our companies were wrung dry like dishrags until we had lost everything.

* To all intents and purposes, this was the swan song of American business in China."

Red China is definitely oriented to trading with other members of the Communist bloc

and they only trade with the Western nations when it suits their political purpose and when it is made on their terms. Of Red China's exportable surplus, estimated at \$4 billion, 80 percent, or \$3,200 million, is earmarked for Russia and its satellites. Besides, Red China is required to spend what it gets from its exports to buy goods from Russia and other Communist states.

To trade with Communist China is to set ourselves in a very disadvantageous position. Four things are evident:

(a) Red China can never be expected to purchase from the free world anything other than strategic materials for purpose of war.

(b) To ease our restrictions on trade with Red China would give prestige to the regime and bolster the economy of Red China which is facing serious difficulties.

(c) An expansion of trade with the free world would undoubtedly improve Communist China's terms of trade, especially with the smaller nations in Asia. Red China's cutprice dumping policy in exporting rice and tin has already disturbed the predominant rice economy of Thailand and Burma, and the predominant tin industry of Malaya.

(d) Red China is engaged in narcotics smuggling on a gigantic scale. Drugs are a state monopoly, a foreign exchange earner, and a political and economic weapon for furtherance of Communist expansion. In 1955, it was estimated that the narcotics sold in America were valued at \$350 million. To propose trade with Red China would expose ourselves to much more of this traffic in drugs.

3. To recognize Communist China is to increase, not to decrease international tension. The systematic exploitation of world tension is the very essence of Communist technique. Red China is deliberately seeking to increase tensions of every kind; intellectual, political, economic, social, diplomatic, and military, to a point beyond en-durance by the free world. When relief is sought by concessions, new tensions are created. Communism, both in Russia and in China, operates under this grand strategy. Conflict must be incessant. Neither Soviet Russia nor Red China can in principle accept a true peace. They will stop creating tensions only when their policy of world conquest has been completely carried out or when they are themselves placed under counter pressures, political, economic, and psychological, so great that they themselves must make long overdue concessions to justice and a humanly acceptable world order.

In the second volume of his "Selected Works," Mao Tse-tung himself declares that "political power grows out of the barrel of a gun." Recently this axiom was reaffirmed by the Peiping Defense Minister in this language: "Our policy is a policy of fight-fight, stop-stop—half-fight, half-stop. This is no trick but a normal thing." This expresses the deepest basis of the entire philosophy of communism, as can be seen in the Communist revolt in Laos strongly supported by the belligerent propaganda of Red China.

At times we must negotiate. But this does not mean that we should recognize the regime. We negotiated the Korean Armistice with Chinese Communists. We took part with them in the Geneva Conference of 1954 which ended the hostilities in Indochina. Since August 1955 we have conducted negotiations at the ambassadorial level with them, first at Geneva and later at Warsaw. We sought thereby to bring about the liberation of Americans unlawfully detained in Communist China, and to establish a condition of tranquility in the Formosa area.

We do not advocate the use of force to achieve an unified China. In fact, the contrary was proclaimed in October of 1958 in the joint communique of President Chiang Kai-shek and Secretary Dulles. If Red China were sincere to negotiate with us, she could freely do so through the existing channels without seeking recognition. Experience indicates that Red China seeks recognition in order to gain more strength and prestige for furthering international tensions rather than to relieve them. Even though China has been plagued by widespread flood and drought, the Red government refused assistance offered by the International Red Cross which sought to relieve the miseries of the Chinese people. Clearly the Communists do not even wish to lower the inner tension of their own society. How then can we expect them to lower tension toward other peoples?

4. To recognize Communist China is to enhance the prestige of the regime. To receive recognition from the strongest and most influential country in the world after recognition was first denied would be a triumph for Red China greater than military victory. This would certainly be the general appraisal of our action if we now accorded recognition of the Peiping regime. Recognition in this case would imply something more than approval. It would imply capitulation. It is the most dangerous thing that we could possibly do. Who among those clamoring for recognition of Red China would now clamor for recognition of Hitler Germany simply because it was in effective control of Germany? How much good did recognition do us then?

There are abundant precedents to support nonrecognition. The last Republican Secretary of State before John Foster Dulles—Henry L. Stimson—pronounced in 1932 what became known as the Stimson Doctrine, namely, that recognition should be denied to any government forcibly imposed by a foreign power. The basic elements of the Stimson Doctrine were upheld by Secretary of State Cordell Hull in 1936 during the Roosevelt administration. They were also reaffirmed by President Truman in October 1945, when he declared that "We shall refuse to recognize any government imposed upon any nation by the force of any foreign power."

With regard to Communist China, we realize that as an alien rule, the Red regime cannot remain. Now more than ever it is important that we keep firm with Mao and faithful to the Chinese people. Mao is in very great trouble at this moment. The communes have failed. The people are rest-changes, unless we from without insist on adding to Mao's prestige. Should we recognize Red China, the cause of resistance to communism would suffer everywhere, and both the survival of Chinese communism and its further aggression would be assured.

It is true that we recognized Soviet Russia in 1933 on condition that she would not interfere in U.S. affairs. The Soviet Union has not kept that condition or any other important international commitment. We have a long and well documented history of Communist duplicity. Such cynical betrayal of truth has never been equaled in the history of mankind. Had there been clear warning about Soviet Russia's insincerity it is doubtful if recognition would have been accorded in the first place. In the case of Communist China, we have been unmistakably forewarned.

5. To recognize Communist China is to give strength to Sino-Soviet solidarity. There is definitely some discord between Peiping and Moscow. Yet the area of discord is accepted by both governments and subordinated to the greater mission of the Soviet-Peiping coalition, that of sovietizing the entire world. The unity is further consolidated by the fact that both face a common obstacle, the United States. Economically, politically, and militarily, Peiping depends upon Moscow. From the foundation of the Chinese Communist

Party until now no one has successfully demonstrated any lack of fidelity to Communist principle either in the teaching or in the practice of Mao Tse-tung. There are variations from the thought of Marx himself, but these variations all have their full sanction in the developments of Communist thought and practice under Lenin and Stalin.

Mao today represents the most faithful practitioner of Leninist-Stalinist communism in the entire world. With overwhelming frankness, Mao asserted: "The whole world looks upon communism as its savior. So also does China today. The Chinese Revolution is indeed a glorious and important part of the world revolution." (New Democracy, released in 1940.) Again, he said: "We Communists never conceal or disguise our political planks. Our future and ultimate program are to push China to socialism and communism; this is definite and beyond question" (addressed the Chinese Communist Party Congress, 1945). Yet we persistently refused to believe Mao's blueprint for world domination just as we persistently refused to believe that announced by Hitler long before he came to

Because of this fidelity of Chinese communism to the realization of a universal empire, Russia and Red China can be expected to act as a coordinated team for the indefinite future, a team that would be immensely strengthened in prestige and effectiveness if recognition were accorded by the United States.

Besides the above, there are still two reasons why we should not recognize Red China:
(1) Recognition of Red China would very likely mean the liquidation of free China;
(2) recognition would compel us, before long, to accept Red China into the United Nations. This would be a very great loss. Three things are obvious:

- 1. Taiwan, the site of free China, is a vital link in the Island chain of defense set up by the free world in the Pacific. Military forces on Taiwan (some 600,000) are an important factor in the balance of power in the Pacific and are a constant deterrent to the renewal of Communist aggression in Korea or anywhere else in Asia. Should Taiwan be given over to the Reds, Japan, the Philippines, and all of southeast Asia would be seriously threatened.
- 2. We have concluded bilateral and multi-lateral treaties with other Asian nations, besides free China. If we were to abandon our commitments to free China in order to appease the threatening might of Red China, no country in Asia could feel that it could rely upon our protection against the Communist menace. These comparatively weak nations would be strongly tempted to come to terms—the best they could get—with the Communist giant.
- 3. The anti-Communist Government of the Republic of China in Taiwan is a symbol of Chinese opposition to communism. only rallying point in the world for non-Communist Chinese, the only alternate focus of loyalty for millions of Chinese on the mainland, in Taiwan, and throughout southeast Asia. If the Republic of China were liquidated, it would extinguish a beacon of hope for millions of mainland Chinese. Taiwan's own 10 million population would be delivered to the slavery of the mainland, and the 12 million oversea Chinese would become subject to further pressure as instruments of infiltration and subversion in the countries where they reside.

As regards admission of Communist China to the United Nations, Red China is certainly not qualified for membership. The very simple reason is that the U.N. in its first statement defines itself as an assembly of peaceloving nations. How then can Red China be admitted when the General Assembly on February 1, 1951, condemned her as an aggressor for her aggression in Korea? Red China is still at war with the world or-

ganization. In March 1959, an official broadcast of the Peiping radio declared that because of United States domination of the U.N., Communist China would henceforth consider any U.N. resolution on Korea as unilateral and thus null and void. The immediate case in point is the broadcast from Peiping in August 1959, in which the U.N. was warned that gravest consequences would follow if the U.N. were to send observers to Gravest consequences to whom? the United Nations? To accept Red China, still under condemnation as an unrepentent aggressor and defiant of all the principles on which the U.N. is based, would strike at the very foundation of this international body.

In a word, Communist China is not eligible for seating under the terms of the United Nations Charter. If admitted (Communist China would become a permanent veto-wielding member of the Security Council. This would severely impair the effectiveness of the U.N. It would also be against the welfare of all the non-Communist nations throughout the world. This seemed clear to Congress in 1956 when, in an unprecedented showing of unanimity, a resolution opposing the seating of Communist China in the U.N. passed the House of Representatives by a vote of 391 to 0 and the Senate by a vote of 86 to 0. This position was reaffirmed by the House on August 17, 1959, by a vote of 368 to 2.

Some writers propose that in its refusal to recognize Red China, the United States is setting herself in an isolated situation. Not so. Of the free countries of the world, 44 recognize the Republic of China, 22 recognized Peiping. Many of the 22 recognized Peiping before it had demonstrated its law-lessness. Of the 13 countries of the Far East, only 3 recognize Red China. Instead of being isolated, we stand with the overwhelming majority of the nations of the free world.

In China, as in so many other nations, there is a continuing struggle between two rival forces and ideologies—that of the Western democracies and that of Communist tyranny. The Western democracies are seeking to establish international order through law, justice, and peace. The Communists seek to establish a universal empire through lawlessness, disorder, injustice, and war. The situation is certainly a very difficult one.

The China problem is only part of the universal problem imposed on us by the world-conquest policy of communism. our times we must accept this impasse, and work for its solution with wisdom, courage, and, above all, patience. We cannot accomplish anything good by a hasty, inadequate solution. This only causes further and greater disaster. For the present, we must sustain tension. The signs are that on mainland China growing discontents are evident everywhere. Dissensions between armed forces and civillans are also a matter of serious concern to the regime. Abuses, segregation, overwork, and poor food caused by the inhuman program of the people's communes may well create the conditions in which a reaction toward freedom will take

Profound principles deep in human nature itself are at work in China and throughout the Communist world to bring about a correction of the violent and inhumane distortions of human life imposed upon such large numbers of mankind by communism. These inner natural forces seek justice, order, peace and freedom. The situation is perilous. Yet we should take hope from the situation in Kerala. There the inner revulsion against communism came to expression in resistance that achieved its effect with a minimum of bloodshed and with a maximum of efficacy. We may hope that the patience, firmness and courage of the Chinese people will in time find its means

of expression. Indeed, we can be absolutely certain that this will take place. There is something deep in Chinese society that abhors the present monstrous regime and its attack on all that is sacred in human life.

There are several stages in the evolution of a better situation. But we of the free world can assist only if we are clear in our conception of communism and if we refuse absoluetely to give in to its seductive propaganda, its diplomatic intrigue, or its military pressures. The free world has thus far shamefully submitted to bluff and abuse. A beginning will be made and our aurora of freedom will again be seen in the sky above the captive peoples as soon as we decide quietly but firmly that we will no longer endure bluff or abuse. We need only mention Berlin and Quemoy to show how powerful the free world can be when we act like men, free men, and that we do not quake at the distant growling of irresponsible men in Central Asia.

The nations in Asia and Africa are looking to U.S. leadership with regard to the recognition of Red China. Those which have already recognized the Regime are considering a readjustment of policy in conformity with present realities. The assault on Tibet has shaken their old attitudes. Burma looks with alarm to the 1,000-mile border that she shares with Red China; India wonders about the three small buffer states-Nepal, Bhutan and Sikkin-that Peiping could seize next; Indonesia sees the prized "spirit of Bandung" callously broken. But just at a time when these so-called neutralist countries in Asia tend to revise their unrealistic sympathy for Red China and to become anti-Communist, it would certainly be most foolish for us to make a deal with Communist China.

We know that our cause is just. We also know that our anti-Communist effort must stand fast and firm. No amount of words or promises will fulfill our purpose if there is doubt in this simple test of whether Red China should or should not be recognized. We are in a state of crisis, but all the ultimate realities are on our side. Our policy of nonrecognition is absolutely sound. policy along with our continued political, economic, cultural, and military support of the free democratic forces throughout Asia represents the finest glory of our country in this 20th century. Whatever our failure in the details of application, our policies are fixed on principles that we cannot change without terrible damage to China, the free world and to our own country.

Dr. Frederick M. Binder Is Inaugurated as the New President of Hartwick College, in Oneonta, N.Y.

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. STRATTON. Mr. Speaker, on Monday, Dr. Frederick M. Binder, a youthful educator who has nevertheless already established an enviable record of accomplishment and service in his chosen profession, was officially and formally inaugurated, amid all the customary academic ceremony appropriate to such an occasion, as the new president of Hartwick College, in Oneonta, N.Y., one of the fine, outstanding institutions of higher learning located in

my congressional district. As an editorial from the Oneonta Star of May 10, points out so aptly, this auspicious occasion marks the beginning of what is likely to be a period of even greater growth and development for this fine college.

Under leave to extend my remarks I include herewith the editorial:

DR. BINDER'S CHALLENGE AS HARTWICK'S PRESIDENT

A great day has passed for Dr. Frederick M. Binder and Hartwick, the college which he now officially leads as its president.

Hartwick is a young college (age 32), which has begun to find its worthy place in higher education. Dr. Binder (age 39) is a young man who has found his place as the vigorous leader of a vigorous school in an age of vigorous education.

The challenges have been many in the last decade at Hartwick. Many of them were solved by Dr. Miller Ritchie, president from 1953 until last year. Money was raised, buildings the second transcendings. ings went up, and enrollment increased.

Many more challenges face Dr. Binder, who alms to work toward constant improvement of faculty and excellence of students.

Potential students will not be scarce in the decade of the sixties. Record numbers of high school graduates will be available each Year. But obtaining the right ones—the ones Hartwick wants as it raises its academic sights on educational targets—is a job for Dr. Binder.

This challenge he accepted Monday with the presidency of Hartwick College. Those Who have come to know him in the 8 months he has been active—so very active—in the Oneonta area, are as confident as he that the goals will be achieved.

Former Congressman Phillips Declared U-2 Case Shows Need for Return of American Ideals

> EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960 Mr. KOWALSKI. Mr. Speaker, a dis-

tinguished former Member of this body, Hon. Alfred N. Phillips, has sent me a telegram on the U-2 case which I bring to the attention of my colleagues.

Former Congressman Phillips points out how the honor of the United States has been sullied by the mishandling of this situation and pleads eloquently for a return to high ethics and lofty ideals.

Here is the text of Mr. Phillips' telegram to me:

Hon. FRANK KOWALSKI, U.S. House of Representatives,

Washington, D.C. Many people including the writer are utterly shocked at the photograph on the New York Dally News front page of Secretary of State Herter and Director of Intelligence Dulles laughing over the plight they have sotten us into. Was this by the orders of the President of the United States of American How can these men or any American laugh when they have sent possibly to his doom an out-of-uniform American held as apy, who can justly be shot under interna-tional law as a spy? Furthermore it is cer-tainly no laughing matter when the foreign policy of our Government has been proved to be based on falsehood, misstatements, and chicanery. It is hard to believe that anyone directing the destinies of our country could guide it any way except through truthful honesty and integrity and that goes for everyone from the President down. I trust that in the House of Representatives of the United States you will do your part to see that those responsible for the low estate into which our country has fallen will be brought to account for it and relieved of their responsibilities no matter who they are and that the historic high standing and honor and ideals of the United States of America will be put back again as standards by which all of us can live best.

Personal regards,

ALFRED N. PHILLIPS.

Shreveport Shouldn't Be Gouged Again

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to submit for the reading of the Members of Congress an editorial, entitled "Shreveport Shouldn't Be Gouged Again," which is taken from the Times-Picayune, New Orleans, La., under date of April 29, 1960. This editorial has reference to the determined effort of the Department of the Interior to drill again and again on the land which the people of Shreveport, La., gave to the United States for military purposes, only.

The editorial follows:

SHREVEPORT SHOULDN'T BE GOUGED AGAIN

An Air Force "inkling" that part of Barksdale Field near Shreveport may be declared surplus to its needs is ominous enough; but to convert 7,400 more acres of the base into a Federal oil field, without recognition of Shreveport as the original donor, would be rank injustice.

It would be the third time Shreveport has been similarly gouged. In 1951 and again in 1953, some 4,000 to 5,000 fringe acres were in effect diverted from dedicated military purposes to "oll field" purposes. passed from the Air Force to the Interior Department and the latter did the leasing. On each occasion "assurance" was given this would be the last such diversion.

If military operations and operating room are to be whittled down, then the excess should be returned by Congress to Shreveport. This would hold good whether there was oil around the property or not.

It is encouraging to see that at least one member of a House Armed Services Committee, Representative STRATTON, of New York, favors turning it back to the city-"some" of it, anyhow; and that John M. Ferry, special assistant secretary of the Air Force, "completely agrees." We hope this subcommittee will sponsor a bill to turn all of it back as the Air Force "turns loose."

As to intimation that through surplus declaration the excess may be returned to private ownership: Private owners, of course, including oil property owners, transferred the whole original 22,000 acres to Shreveport; it cost Shreveport nearly \$2 million some 30 years ago to make the donation; and at last accounts, it still was paying on the bonds.

The only satisfaction derivable is that the oil money has been going to the Government, rather than to surrounding property owners and oil interests who have been draining, the common pool at the expense of the Barksdale pool.

Shreveport has had a lot of good out of Barksdale; but the way it's worked out doesn't support any contention that "Give to the Government and the Government will

do the right thing."

A Tribute to John Taber on the Occasion of His 80th Birthday

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CELLER. Mr. Speaker, John TABER is dear to all of us. His years of service have inspired us with greater affection for him.

Here is a man who, in the words of Grover Cleveland, regards "public office is a public trust"; hence our uttermost confidence in all he says, all he does.

You know, I particularly like John because he is unafraid—unafraid at times even if he is all alone. He knows ofttimes one man with courage is a majority. He does not care, even if it is unorthodox, so long as he feels it is right.

They say John is old. Nonsense, he is voung at 80

What is the secret of John's longevity? Does the clock stop for him? What vitamins does he take? From what fountain of youth does he drink? He has no "tired blood" and no need for Geritol. What is his secret? Did he make a pledge to Mephistopheles as did Goethe's Faust? Of course not. What is the answer? Well, he allows each additional day to help him grow more like himself-John Taber.

When I first knew him 38 years agowhen we were freshman Congressmenhe seemed to me then to be rather hardboiled, as though he could break but not bend, but gradually I recognized that the toughness was but a facade. Underneath he was kind and amiable.

He never seems to suffer from combat fatigue. His unflagging spirit is ever present to conserve our financial strength. He is the Cerberus of the Treasury.

His is the best example of the process of a congressional career. It is an endless process. You continually turn the last page of a chapter of an assignment only to be confronted with another chapter of tasks to be completed. A congressional career is not a mere course to be finished or a prize to be achieved. It is continuous and involves blood, toil,

tears, and sweat.
Viewing John's character, I find it good. Does not the psalmist say: "Better is the fragrance of a good name than the perfume of precious oils." John has a good name. And you know, character is what you are when no one is looking. JOHN is indeed worthy, when unattended. when alone. .

He has wondrous capacity for work—despite the weight of years. I am sure he says, "While the candle burns, there is so much to be done."

And he still cares, still dares. He knows, too, that "even the oldest tree some fruit will bear."

He has drunk fully of the wine of life. He follows what Mark Twain said:

So live your life that when you go, even the undertaker will be sorry.

I have observed his wise practicality. He knows that if you want the rose you must put up with the thorns.

Charles de Gaulle stated:

We may well go to the moon, soon, but that's not very far. The greatest distance we have to cover still lies within us.

In other words, one must know oneself.

John does. He knows the long, arduous, spiritual road to travel within himself.

John just grows, learning something new every day. He knows that to be 80 years young is more cheerful and hopeful than to be 40 years old. John is cautious and wise. He knows that the fool often crosses the stream while the sage ponders.

Growing old is as individual and as personal as the kind of woman you marry or the wine you drink. There are those old at 30 and others young at 90. The old, at whatever age, say, "It's too late"; the young, at whatever age, say, "It's never too late."

Cato learned Greek at 80. Sophocles wrote his immortal "Oedipus" when he had numbered more than his four-score years. Theophrastus began his book, "Characters of Men," at 90. Goethe completed "Faust" when he was 80. Chaucer, that mighty youngster at 60, composed his "Canterbury Tales."

So to you, John, at 80, I say you have the youth, the enthusiasm, the convictions to carry you through in triumph at the very least—another score.

How do I know this? Because we youngsters, members of the same club, have drunk from the same spring—the waters of work, of purpose, and of faith.

Vagrancy and Arrest on Suspicion

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting, most informative, and educational article written by Justice William O. Douglas, a man well-qualified in law and practice entitled "Vagrancy and Arrest on Suspicion" that appeared in the independent monthly publication The Minority of One in the May 1960 edition:

Vagrancy and Arrest on Suspicion (By Justice William O. Douglas)

In spite of the revulsion which libertyloving people have long had against banishment, it lingers on in many magistrate courts. Who has not heard a judge tell a transient, "Don't come back here again or you go to jail"? Scores of people are thus banished from our cities every day. Those exiled are not traitors, or even thieves. They are wanderers, men of the "open road"; persons whose only crime in many cases is in being jobless and homeless, the same people who have been the heroes of much of our great literature and whose way of life has been glorified and envied by others for generations.

The statistics from Tucson show the intensity of this new campaign. While the year 1956 showed 276 arrests for vagrancy and 260 convictions, the 3 subsequent years show a marked increase. In 1957 there were 644 arrests, with 632 convictions, in 1958, 1,829 arrests with 1,613 convictions and in 1959, 1,226 arrests with 1,192 convictions.

If one does not plead guilty but asks for a trial, he faces a substantial delay during which he must remain in jail, since he is usually unable to post bond. He may thus spend more time in jail awaiting trial than he would have spent had he pleaded guilty. These circumstances combine to induce most to plead guilty, regardless of the facts.

As I reflected upon this crusade and talked to local people in Tucson about the problem, I became disturbed. Well-to-do people are welcomed with open arms to that fine community. But is not a destitute person entitled to look for work in a Sunshine State?

What happens in Tucson and elsewhere is illustrated by a recent case. The defendant was picked up by officers after midnight while walking the city streets. He was not drunk or disorderly. He had no criminal record. "I thought this was free America," the man told the judge. "You are trying to make a criminal out of me and I'm not." He was a casual worker, without a regular residence. That was his crime. Sentence was suspended for a week to enable him to get a residence and a job. "If you don't, I have a place of residence for you for 6 months," said the judge.

How is the vagrancy statute used in relation to other crimes? It is common, I believe, in some cities to make regular roundups of prostitutes, charge them with vagrancy, impose modest fines, and discharge them. Then the vagrancy charge is substituted for prostitution and perhaps even ameliorates the punishment. But is the vagrancy statute sometimes used as a cloak or cover for arresting and convicting people for some other crime that cannot be proved or for conduct that is not a crime?

On a journey to Afghanistan, I learned of a political leader who had campaigned too vigorously against the church and was prosecuted for sacrilege. Though acquitted of that charge, he was convicted of vagrancy and disorderly conduct. We in the United States have known of convictions for lesser crimes when the true offense was a major one which the prosecution had difficulty in establishing. We have also seen that vagrancy statutes are sometimes used to justify arrests which otherwise would not be lawful. One notorious incident of the kind occurred in California in 1935 where waterfront strikers were convicted of vagrancy during a period when there was a police drive against radicals." The Court of Appeals reversed the judgment because it was convinced that the convictions were based not on vagrancy, but on communism at a time when the Communist Party was on the ballot and wholly lawful in California.

The volume of vagrancy cases in the courts each year is large. The FBI Uniform Crime Reports for 1953 on a national basis show 88,351 arrests for vagrancy out of a total number of arrests of 2,340,004. The figure for 1957 was 69,520 arrests for vagrancy out of a total of 2,068,677 arrests. The figure for 1956 was 75,478 arrests for vagrancy out of a total of 2,070,794 arrests.

The speed with which some of these cases are handled is startling. Professor Foote relates that betweer 50 and 60 defendants were processed by one judge in 15 minutes, and one court handled 1,600 cases a month. The defendant was commonly not informed of the charge until he was "tried." No pretense of proving the crime charged was made. And usually these defendants were without the aid of counsel.

Moreover, a good look at the way our magistrates' courts operate may give vagrancy cases a new dimension in our thinking. The Court held in Tumey v. Ohio (273 U.S. 510) that a criminal trial in a State court violates due process when the judge is paid for his service or can recover his costs only when he convicts the defendant. Some magistrates' court still thrive on that practice. A justice of the peace who finds a defendant guilty gets \$5; a justice of the peace who finds a defendant innocent gets nothing. This is not a problem peculiar to vagrancy. But whether it is brigaded with vagrancy or traffic cases, it is a blot on the administration of justice.

Idleness and destitution in the modern setting have haunting aspects of welfare and of the right to work—both of which lack criminal elements as we know them. These three elements, now inseparably combined, should be segregated. The welfare element should be integrated with our vast welfare programs. The right to work should be part of our employment procedures. Criminal activity should be treated for what it is. Can we as a people be proud to say that a destitute person looking for a job—in a sunshine State or elsewhere—is a criminal? How can we hold our heads high and still confuse with crime the need for welfare or the need for work?

To what extent are vagrancy laws used to control suspicious persons and to permit arrests not otherwise legal?

The FBI Uniform Crime Reports, already mentioned, show that arrest on suspicion is common in this country. Those arrested in 1956 on suspicion and released without prosecution ran at the rate of 280.4 people per 100,000 inhabitants; and the total of persons arrested either for a specific offense or for suspicion alone, and released without being held for prosecution, was at the rate of 666.7 per 100,000 inhabitants. And the figure for arrests on suspicion in 1958 was 96,740.

There is no crime known as suspicion. Nor is there any Federal crime known as holding for investigation. Yet it is common in the District of Columbia to make arrests for the latter purpose. There were 7,367 persons so arrested in 1958, all of whom were later released.

A recent report of the Illinois division of the American Civil Liberties Union states, "Almost daily the Chicago newspapers report police investigations in which suspects are taken into custody for questioning."

One purpose of arrests on suspicion is obvious. It is to hold men incommunicado with the hope of getting confessions from them. Yet this practice violates the requirements of Federal law, and of the law in most States, that any person arrested be promptly arraigned so that he can have the advice of counsel and be released upon ball.

Arrests for suspicion are not countenanced by the Bill of Rights. The fourth amendment allows arrests, as well as scarches, only for "probable cause." Police must make out part of their case at least before the citizen is arrested. We do not permit the practice engaged in in some other lands of allowing arrests on suspicion or at the caprice of the police so that long interrogation can follow with the hope it will make out the necessary case that justifies the arrest. Under our system the arrest is warranted not by what the police discover afterwards but by what they knew at the time. Not many of the provisions of the Bill of Rights (I am sorry to

say) have been held to be incorporated in the standard of due process which the 14th amendment demands of the States. Yet the fourth amendment is one of the select few. The result is that arrests on suspicion are unconstitutional at the local as well as at the Federal level.

The persons arrested on suspicion are not the sons of bankers, industrialists, lawyers, or other professional people. They, like the people accused of vagrancy, come from other strata of society or from minority groups who are not sufficiently vocal to protect them-selves and who do not have the prestige to prevent an easy laying on of hands by the

The bar has had increasing responsibilities thrust on it since World War II. We experienced in that decade and a half a rash of measures designed to increase our security in a troubled world. Investigations led the way; loyalty procedures for Federal employees were adopted; the investigation of the attitudes and beliefs of men was extended to employees working for firms doing business With the Federal Government; State loyalty programs were adopted. Thousands upon thousands went through "the security wash." Some bar groups did good work in offering

their services to these suspects. Yet, by and large, we sat by and watched the parade of branded people march to oblivion. It is not to our credit that we did this. We salved our consciences by saying that no one has the right to work for the Government, and from that premise found power in Govern-ment to put the scarlet letter "S" on the foreheads of thousands of our people.

This, we hope, is a transitory, not a recurring problem. The arrests for vagrancy and the arrests for suspicion promise to be more enduring. They, like the poor whose problems gave rise to these remedies, are likely to be with us for a long time.

I hope that bar groups across the country concern themselves with these local problems and try to discover how our system can be designed to dispense justice to vagabonds

as well as to corporate clients.

It is important for a nation with moral authority in a troubled world to reduce its consumers of injustice" to a minimum. The measure of the health of our legal system is the justice dispensed at all levels. that we be rid of the ancient poor laws that oppress our people, better that we outlaw arrests on "suspicion" and without "probable cause," better that we have judges who hold no monetary stake in the outcome of a trial than that we reach the moon. Conquering of space has glamour and glitter; and it will be tremendously important in future centuries. But we live on earth; and here we will remain—at least, most of us. Vagrancy and arrest on suspicion are not distant, remote, speculative; they are just around the corner in many of our communities. It is what takes place in this block and in this neighborhood that gives the true reading on the health of our democratic way of life and on the actual vigor of our Bill of Rights.

The Heinrich Model Airplane Contest

EXTENSION OF REMARKS OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. BECKER. Mr. Speaker, the following is a statement by the Secretary of the Smithsonian Institution, the Honorable Leonard Carmichael, on the occaslon of presentation, May 9, at the Smithsonian Institution, of an award and tribute paid to 17-year-old Peter Shoemaker, who lives in Baldwin, Long Island, N.Y., the district which I repre-

Peter won this contest in which 90 students of the Baldwin High School participated by building a scale model of the Heinrich Airplane of 1910. Mr. Carmichael's remarks follow:

SUGGESTED DRAFT OF REMARKS BY THE SECRE-TARY, WHEN RECEIVING A SCALE MODEL OF THE HEINRICH AIRPLANE OF 1910 FOR THE NATIONAL AIR MUSEUM

Congressman BECKER, Peter Shoemaker, and friends, on behalf of the Smithsonian Institution, National Air Museum, I am pleased to accept this scale model of the

Heinrich airplane of 1910.

It is an honor, Mr. Congressman, to have you with us this afternoon. I join with you in admiration for the enterprise and genius of Arthur and Albert Heinrich who lived in the district on Long Island which you represent in our Congress. I also congratulate you on the ability and airmindedness of your constituents who organized and participated in the contest from which this excellent model resulted.

Arthur and Albert Heinrich who became interested in aviation about the time that the Wright brothers made their first flight, had a similar brotherly ability to work together, constantly striving for improvement, Today, the ninth day of May, marks the Golden Anniversary of the Heinrich brothers first airplane. Fifty years ago, taking turns in piloting this airplane, powered with an Emerson engine of 60 horsepower they first experienced the marvelous thrill of being airborne, teaching themselves to fly and enjoying the added thrill of being airborne in an airplane of their own design and construction.

Those fledgling flights were at slow speeds, low altitudes, and of short duration, but from that first success the brothers pro-gressed to the designing, building, and flying of better and larger and faster airplanes. When they had become proficient as pilots, they opened a school where a number of aeronautical early birds learned the thrill of wearing wings. During World War I, the Heinrich brothers patriotically joined in the war efforts and not only expanded their flight school but also produced one of their best planes, a military scout known as the Victor. Today, Albert Heinrich has retired, and Arthur has recently passed away. The aeronautical world is richer for their accomplishments

That first Heinrich airplane had a short life. After several rough landings and breakages, there came a final fluttering fall from which the pilot was able to extricate himself but which left the wounded bird too weak to rise again, but here, thanks to the skill of Peter Shoemaker, Heinrich No. 1 lives once more in miniature.

We are pleased to add this scale model to the national collections as a gift from you, Peter. I admire your craftsmanship in producing a reproduction which accurately illustrates the specifications of the original airplane. I also express our appreciation to Charles Raven, Corydon Johnson and his associates, the school faculty at Baldwin, the Grumman Aircraft Engineering Corp., and the others who organized and conducted the contest.

I think it particularly significant, Mr. Congressman, that the pioneer flights by the Heinrich brothers in this airplane were made in a field that is now occupied by one of the public schools of Baldwin. This contest, in which the youth of your area participated, and which Peter has won, has, I am sure, increased the interest and pride of the students in the aeronautical history

of their town. Exhibited here, this model will illustrate to our millions of visitors a pioneer accomplishment in flight by the Heinrich brothers of Baldwin, Long Island.

Electronics on the Mountainton

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. FLOOD. Mr. Speaker, last evening I had the pleasure of attending the annual dinner of the Greater Wilkes-Barre Chamber of Commerce which was held in the Wilkes College Gymnasium, in Wilkes-Barre, with some 1,000 in attendance, and the occasion was the 76th anniversary of the Greater Wilkes-Barre Chamber of Commerce. It was indeed a most impressive affair and made even more so by the inspiring address of the evening delivered by the Honorable Frank M. Folsom, chairman of the executive committee, board of directors, Radio Corporation of America. As a member of the board of directors of the Greater Wilkes-Barre Chamber of Commerce, I wish to take this means and opportunity on behalf of all my fellow members to thank Mr. Folsom for taking the time from his extremely busy schedule to honor us on Tuesday evening with his presence and to further congratulate him on his fine address. We in Luzerne County are looking forward to the fine new facility which is being constructed by RCA for the manufacturing of semiconductors. We are indeed delighted to have RCA as a new addition to the badly depressed economy of my congressional district of Luzerne County. It gives me som and the address delivered by Mr. Folgreat pleasure to have inserted at this point the biographical sketch of Mr. Folsom on Tuesday evening of this week:

SPEAKER OF THE EVENING

Born in Sprague, Wash., May 14, 1894. Frank Marion Folsom became president and director of Radio Corp. of America in 1949. Today, as chairman of the executive committee of RCA's board of directors, he can look back upon a life full of accomplishments and the rich heritage he can pass on to his three daughters and 24 grandchildren.

A direct descendent of John Folsom, who settled in Hingham, Mass., in 1683, Frank Folsom, began his career at the age of 16 as a clerk with the Lippman Wolfe Department Store, Portland, Oreg.

Before joining RCA in 1943 as a director, his accomplishments in the field of merchandising placed him high in the annals of American business. In 1944, he startled the communications world by inviting 100 competitors to a meeting in Philadelphia. There he revealed design plans for television considered top secrets, handed his guests blueprints for RCA's production plants and told them precisely what RCA thought of television's future. He wanted strong competition to inspire aggressive selling. That is what he got.

Another of Mr. Folsom's merchandising triumphs was the now celebrated 45-rpm system of recorded music. It took courage, faith, and top-notch selling techniques to make the system a success.

Mr. Folsom has received a director of laws degree from 7 colleges and universities; he serves on the boards of directors of 22 corporations, in addition to being permanent representative of the State of Vatican City to the International Atomic Energy Agency, he is a member and/or officer in 7 national organizations; is a trustee of 2 colleges; belongs to 8 prominent social clubs, and has received 13 outstanding orders and awards.

ELECTRONICS ON THE MOUNTAINTOP

(Address by Frank M. Folsom, chairman, executive committee of the board, Radio Corp. of America, at Chamber of Commerce, Wilkes-Barre, Pa., May 10, 1960)

I have been in this pleasant valley on numerous occasions and always have been impressed with the fine spirit of friendship and hospitality, which again makes it a real pleasure to be with you today.

On behalf of the Radio Corp. of America,

On behalf of the Radio Corp. of America, I express grateful appreciation for the warmhearted welcome that the people of this fine city have extended to us in locating our new semiconductor plant at Mountaintop. We look forward to many happy and prosperous years of association, and we shall do our very best to be a good neighbor.

My thoughts go back to schooldays when we learned in geography that this area of Pennsylvania was noted for coal. For this reason you may be interested to know that discovery of germanium, a metallic element in ash deposits in chimneys in Wales, played quite a part in opening the new era in electronics, which now brings a new industry to this region. For a while chimney sweeping for germanium showed some promise of becoming a real business.

From now on you will hear more and more about transistors, or semiconductors, as we call these mighty mites of electronics. When they were first demonstrated in 1948, by Bell Laboratories, their magic was performed by specks of germinum. Naturally, demand for that element increased and a hunt for it ensued. In this country only traces of germanium are found in coal, and not enough to make it commercially practical to extract. This meant that other sources had to be found. Germanium is now refined from zinc and lead ores. Silicon is also used and, along with germanium, it is a first cousin of coal.

As a result, the supply of basic materials is more plentiful and transistors are being produced by the millions. They have led to revolutionary developments in electronics, and in many ways supplement electron tubes. By virtue of their size and small current consumption, ruggedness, lightweight, and reliability over wide temperature ranges, the semiconductor devices are ideal for compact portable electronic equipment. And, of course, they are perfect for missiles and satellites in which space is at a premium and weight must be at a minimum.

We at RCA plan to be at the forefront in all phases of semiconductors, the future of which is tremendous. These devices already comprise what is heralded as the world's fastest growing big business. It is predicted that military demands for transistors will exceed 300 million before the end of 1965, and that millions more will be needed for industrial use. Today transistors and related devices are selling at an annual rate of \$500 million. It is estimated that the rate will be \$1 billion by 1963.

So you see, this area has a stake in a great technological innovation—an exciting new industry. We consider Mountaintop a splendid location for our expanding manufacturing facilities for high reliability semiconductor devices for military, industrial, and electronic data processing applications. Production will get underway this summer and by the year end we expect to have about 400 employees with an expanding rate as time goes on.

Now you may wonder why we bring an electronic operation of this kind to Wilkes-Barre. The attractive industrial and community features and progressive spirit of this area were convincingly presented to us by the Greater Wilkes-Barre Chamber of Commerce, the industrial fund, the Committee of One Hundred, Inc., and the Pennsylvania Industrial Development Authority. Under such auspices there was no chance of missing the wonderful opportunity that exists here. Wilkes College has greatly impressed us by its progressive faculty and modern facilities for technical training, and the same holds true of the engineering laboratories of Kings College.

Of paramount importance is the excellent supply of skilled labor in this community. That was a primary factor in our decision to locate here, which, incidentally, is just a 2-hour drive from our semiconductor headquarters at Somerville, N.J. The excellent highway system extending in all directions and the fine Wilkes-Barre-Scranton Airport are added incentives.

We feel at home in Pennsylvania, for RCA is operating at 30 separate locations, employing 4,500 persons in 17 counties of this Commonwealth. Our Pennsylvania payroll is more than \$25 million annually and we pay more than \$1 million in State and local taxes each year. We annually purchase about \$1 million worth of materials, components, and services in this State from about 2,300 suppliers, the majority of which are small business firms. Our manufacturing and engineering activities in Pennsylvania are located in Lancaster, Croyden, Canonsburg, and Sellersville. And the RCA Service Co. has 20 locations.

Today about half of our business is in products and services that did not exist 10 years ago or were just being introduced on the market. Then our annual business was around \$400 million; today it is approximately \$1½ billion.

At the time of our formation, 41 years ago, our business was primarily wireless telegraphy. Then came radio broadcasting and television which naturally led us into the entertainment field, as did our acquisition of the Victrola phonograph. Today 46 percent of our business is nonentertainment and we expect that phase of our operations to greatly expand. I am sure that at the end of the decade of the sixtles we will be in other fields now as remote as was television in 1920.

Today 34 percent of our business is in sales to the Government, largely for defense purposes. Five years ago electronics accounted for about 8 percent of the Government's defense budget; now it is more than 16 percent. And by 1965 it is estimated that it will exceed 20 percent, representing a dollar volume of \$10 billion.

In keeping pace with progress, we expect to find new opportunities for growth in this State, and we look forward happily to our new relationship in your splendid community.

Through experience we know what wonderful resources, facilities, and skills are available through the well trained and loyal people who live in Pennsylvania. Our new plant which, as you know, will be situated on 38 acres in Crestwood Industrial Park, will be completed early in the summer. Some time in the future we hope you will all have an opportunity to visit the plant.

Mountaintop, Pa., is a good address for such a modern plant, the products of which will long continue to play an important role in the conquest of outer space. There is an interesting comparison with the past in which the industrial growth of this region was related to mining activity below the ground. Now comes a new electronic facility that holds promise of expansion through devices that are blazing new trails in communications and industrial operations. As

your coal has heated countless homes and run thousands of factories, so now millions of little semiconductor devices, akin to anthracite, will be manufactured here for use in countless radio and television sets as well as auto radios, clocks, telephones, jukeboxes, and all types of communications equipment including that used in missiles and satellites.

Now, because semiconductors are to be a product of this locality, you might like to know a little more about them and their future as we see it. By virtue of their dimension and performance, they have led us into a microera—an electronic era of miniaturization.

Instruments and components, which only a few years ago were comparatively large and heavy, now are compact and light. Wafer-like components are combined into a single unit smaller than a sugar cube. The engineers call them micromodules.

Automation, computation, switching, and control are some of the important big tasks assigned to semiconductors in this new age of electronic wonders. Now we are dealing with ounces instead of pounds, with cubic inches instead of cubic feet, with millionths of a watt instead of watts of power. Everything seems to be moving in the microminiature direction. Some of the new devices are so small they are made under microscopes.

For use in computers, our laboratories have developed a new electronic "brain" cell that fits in the eye of a needle; 100,000 of these cells can be packed into a square foot.

There seems to be no end of developments. We have crossed the threshold of a great new frontier in communications. We hear predictions that eventually electronic computers may make 80 percent of industry's executive decisions. And scientists smile with confidence when they tell us that these electronic machines some day will converse electronic machines some day will converse with each other and quickly exchange information, regardless of differences in language or distance.

One of the newer members of the semiconductor family is the tunnel diode, so named because electrons tunnel through the diode at the speed of light. It is pinhead in size, and, in many instances it promises to revolutionze electronic circuits, instruments and systems, yet it was introduced only 2 years ago.

The space age, in which electronics plays such a vital role, is only about 3 years old. In that period we have witnessed one of the greatest human accomplishments of all time—the projection of satellites into orbit despite the earth's gravitational field and many other barriers. Man's knowledge is being extended—new scientific information is being collected and recorded by electronic computers.

Scientific instruments are being packed into relatively small spheres. When the capacity of automatic instruments can no longer make measurements, the urge will become greater to send trained scientists and astronauts along with the instruments to operate them more effectively, and to see and hear directly what is going on out among the planets and stars.

Whoever dreamed, even a few years ago, that an American satellite such as Pioneer V would be sending back radio signals and scientific data from a distance of more than 8 million miles, shattering all records for long-distance radio communications. And we may yet hear its signals across 100 million miles. We are told this is only the beginning.

Recently one of our miniature television cameras was launched inside a Redstone missile and it sent back pictures of the missile hitting its target. The television camera and a transmitter were ejected from the missile in a capsule at an altitude of 40 miles and as the capsule fell slowly to

earth, the TV transmitted pictures which were received 75 miles away.

The uses of such a device are obvious, especially in wartime when a commander far distant from the target could know immediately whether the missile hit the target

and the extent of the damage.

For 6 weeks now, the RCA-designed and constructed Tiros satellite has been hurtling around the globe, flashing back by radio and television reports on whether conditions in outer space. It was built by the RCA Astro-Electronic Products Division, under the general systems management of the National Aeronautics and Space Administration and the technical direction of the U.S. Army Signal Research and Development Laboratory at Fort Monmouth, N.J.

Tiros, the Nation's most advanced space-borne TV eye, comprises the most elaborate electronics installation ever sent into orbit. It is equipped with approximately 450 transmitters and semiconductor devices such as will be made in the Mountaintop plant. Tiros carries miniature television cameras, video tape recorders, transmitters, solar cells, and rechargeable battery power suppliers, all of which are expected to function for about 3 months, during which time it is expected to complete about 1,300 orbits. As a result, metcorologists will have pictures galore of cloud formations over an extensive belt.

Since you have read the fascinating story of Thros in the newspapers, I will not dwell upon it further—except to say that it is a forerunner of remarkable achievements which are destined to make news, and each step will put the United States further ahead

in the conquest of space.

These developments which I have endeavored to sketch may help you to visualize that electronics has a future range as unlimited as the expanse of space. It is an inexhaustible laboratory in which pioneering never ends. The problems and challenges multiply with each discovery as we seek clues to new knowledge that will enable man to establish new routes in travel and communications across the boundless ethereal sea of the universe. Fantastic looking machines will sail across the heavens. Scientists of this generation and those to follow are destined to take part in this unprecedented conquest. Brains and billions will comprise the equation of success.

Semiconductors produced here in Mountaintop qualify to operate under your slogan, "Progress Through Action," for these little mites of electronics possess a tremendous potential. Action is their keynote.

Again let me say, all of us in RCA are happy to join with you in helping to fulfill the aims of the chamber of commerce in making the sixtles a golden decade for Greater Wilkes-Barre.

Better for What?

EXTENSION OF REMARKS

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. HOLLAND. Mr. Speaker, I would like to insert into the Record the editorial published by the Pittsburgh Post-Gazette and Sun-Telegraph on May 9, 1960, entitled "Better for What?"

It refers to our President's retort to a question asked him on why he was not reappointing William R. Connole to the Federal Power Commission, especially since he was the sole member of that

Commission who really represented the consumers against the gas-oil lobby and who fought for the consumers' interests.

"With arms folded over his chest and his face flushed," as one reporter wrote, "the President said, in effect, 'it is none of your business. It is my responsibility to appoint people and to get the best people I can. I think I can get a better man, that is all."

I join with the Pittsburgh Post-Gazette and Sun-Telegraph in asking "Better for what?" and "Better for

whom?"

It is no secret that the President has, since taking office in 1953, hoped to have legislation passed that would prohibit the Federal Power Commission from regulating the cost of gas at the source, thereby permitting the gas industry—which is actually owned and controlled by the oil interests—to charge what they wished. Each session, except the present one, legislation has been introduced to permit this.

Thanks to the policy of the present Federal Power Commission, this legislation is no longer required for they have been granting rate raises continually with the only dissenting vote being cast

by Mr. William Connole.

Apparently the President does not even want one vote registered against big interest. It certainly does not count; it has not stopped the increases; it has not influenced any fellow members of the Commission during the years, but it seems that the President does not want any appointment of his to even speak out against big business.

The President has from the start of his administration showed himself distinctly allergic to crusader types in Government—particularly in the agencies which regulate business. Where he is required by law to appoint a minority of members from the opposition party, he has always chosen Eisenhower Democrats or independents. This particular case is where an independent—Mr. Connole—was too independent for he felt the consuming public needed a spokesman.

Although time is running out for Mr. Eisenhower, he intends to see that only those in whom he is interested get proper representation.

It looks as thought the "better for whom" in this case, is "better for those who supported Ike," and the "better for what" is "better profits for big business."

The article referred to follows:

BETTER FOR WHAT?

The public has a right to be as indigent over President Eisenhower's refusal to reappoint William R. Connole to the Federal Power Commission as the President was when asked at his press conference why he is so determined to remove Mr. Connole from the scene.

Showing what the press described as evident irritation, President Eisenhower snapped back at his questioner in these words:

"First, why, this: Because it is my responsibility to appoint people and to get the best people I can. This Mr. Connole came to see one of my staff in December to ask about his reappointment, and they said they'd look into it. I think I can get a better man, that's all."

But that, in fact, is not all, as a growing outburst of support for Mr. Connole and possible congressional intervention may determine. Mr. Connole, a political independent from Connecticut, was appointed to the commission in the first place by this same President who now refers to him as "this Mr. Connole," as though he had never heard of the man.

Mr. Connole has compiled a commendable record on the FPC—one that certainly deserves more of an explanation from President Eisenhower than he has given so far for refusing to reappoint him. He is widely known as the only present FPC member who has fought consistently to hold gas prices down for the consumer, a stand which has alienated the gas industry, needless to say.

And Mr. Connole is the only present commissioner who has steadfastly maintained that the FPC should become a real regulatory agent—one with back bone—over the gas industry under terms of the Natural Gas Act; and in this position, which he alone held on the commission, he was supported by the

Supreme Court in 1954.

Shortly after the President's remarks on the matter the other day, the Great Lakes Conference of Railroad and Utilities Commissioners endorsed Mr. Connole's reappointment. A week earlier, utility commissioners from southeastern States, and before that, New England States, California, and Tennessee had urged his reappointment. And the same day President Eisenhower was dismissing the subject so curtly, a group of professors of administrative law and regulation at Yale, Columbia, Harvard, and Pennsylvania Law Schools came out strongly for his reappointment.

Obviously, with that kind of wide support—not to mention action by mayors of 60 large cities who also have urged the President to reappoint Mr. Connole—he cannot have done too bad a job. Yet, ironically, the one man on the FPC who has had the courage and integrity to fight for the consumer and to insist that the FPC do what it is supposed to do is the one commissioner the President is now trying to get rid of.

Perhaps the President can find a better man than Mr. Connole. But his past record of choosing members of key regulatory bodies has been something less than brilliant, as the growing list of improprieties, lack of judgment, and shenanigans in such agencies comes to light.

In view of Mr. Connole's record of battling for gas consumers against the pressures of the natural gas industry, the President's remark that he can find a better man than Mr. Connole raises pertinent questions: Better for what? And for whom?

H.R. 12117

SPEECH

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

Mr. ARENDS. Mr. Chairman, I would like to say to the committee that at the bottom of page 17, "Benefits to General Public," you begin to get into a question which has interested me very much. I picked up the paper the other day when this appropriations action was an-

nounced, and the headlines said, "\$4 Billion Appropriated for Agriculture."

It seems to me that we too often leave the impression that every dollar spent within the Agriculture Department is spent for the benefit of the farmer. In this section you have begun to get into the question and I was hoping your committee could set forth the total amount of what might be really charged to agriculture and what to the general public, so that there will be a better understanding on the part of our populace that agriculture as such does not reap the benefit of many of the dollars appropriated in the Department of Agriculture bill.

Mr. WHITTEN. I thank the gentleman for his statement. I am afraid much of the press is directed to the 88 percent of the people who are nonfarmers.

The CHAIRMAN. The time of the gentleman from Illinois has expired,

Governor Meyner Talks Food for Peace in Iowa Address

EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. WOLF. Mr. Speaker, last Saturday the distinguished Governor of New Jersey gave a fine talk on the subject of using food to win and hold friends abroad. I take pride in placing in the CONGRESSIONAL RECORD this speech, which occurred in Iowa at the State Young Democrats' convention:

ADDRESS OF GOV. ROBERT B. MEYNER, AT THE STATE CONVENTON DINNER OF THE IOWA YOUNG DEMOCRATS

What I say tonight is concerned first of all with the American farmer. Please note that I do not say I will talk about the farm problem. There is no farm problem; there is only an American problem. I object, in fact, to the way it is made to appear that what happens to American agriculture is the farmer's problem. So long as human beings require food for subsistence, anything that concerns the men who grow the food concerns everyone.

Since I plan to talk with you about agriculture, I might say at this point that we in New Jersey are proud of our farm heritage. Our oldest continually worked family farm was originally purchased from the Indians in 1640, and has been handed down from generation to generation ever since. Jersey farmers realize the highest income per acre-\$178.89—of any in the United States. And they have achieved this distinction in the most urban State in the Union. I like to think of this as another example of the efficiency with which farmers have utilized the great advances in farm technology.

In all the talk about the farm situation it seems to me we have a tendency to get lost in the small type. There are some great simplicities that are as true today as they were when man first put seed into the earth. We ought never to lose sight of these great simplicities in all the talk about parities and subsidies, quotas, and allotments. In fact, my principal criticism of Government

farm policy is that it has often wandered away from the fundamentals. Our farm surplus is not quite so awesome and gigantic as we have been led to believe. Actually, it is only 2 percent of the total farm product.

Two percent.

We need not be terrified by the agricultural surplus as long as a substantial percentage of the world we live in is badly underfed. There are large, populated areas where rainfall is slight. The land is unsuit-able for agriculture. The people are inadequately nourished.

Now, let us take these two fundamental facts—the present surplus here and the hunger elsewhere-and then try to fit into the picture the fact that we have not been able to connect these fundamentals in any way that makes sense to the human intelligence or the moral imagination.

What we see between these two great fundamental facts is not a bridge, but large storehouses of grain on which we pay more than a million dollars of rent a day even as

the grain spoils.

Now there are all sorts of explanations why this has to be. I have heard experts talk by the hour about all the difficulties that would be involved in matching surplus to need. I have heard elaborate theories about normal markets and abnormal markets, about structures and supports.

But all this is pinhead type against the life-size facts of the world we live in. Our problem is too much. The problem of others is not enough. And we haven't been ingenious enough to do the connecting moral

Incidentally, I should like to take by the hand the expert who thinks it makes sense to store food we can't use-I should like to take this fellow by the hand and set him down in front of a hungry child in Asia, Africa, or Latin America and let him try to get his point across—if he can.

I should also like to set him down in the path of starving food-rioters storming Government granaries in the face of rifles and bayonets. Let the expert make his point to

these so-called rioters.

I realize that a certain amount of clash and antagonism are a part of our way of life. But should small and large farmers feel they are being pitted against one another? Or the grower against the storer? Should Government support, encourage, and institutionalize those features of an agricultural system which breed waste, discourage initiative, and make the world see us as a glutton or a hoarder?

Yes, I know I have painted an extreme picture. I know that from time to time we have sent large quantities of food to other nations. And I am happy about the new arrangement under which wheat is being sent to India. Two facts should be observed in this connection, however.

The first is that we have been dealing in small fractions when we should have been dealing in whole numbers.

The second fact is that we have tried to justify our generosity to ourselves on the grounds that this was the best way to fight the cold war. I happen to believe that it was the best way to fight the cold war; but that is incidental. Why can't we do big things because they are the right things to do—and not just because we think we can gain a competitive advantage?

The United States became great not because it was shrewd but because it was open and free and because it said something to all men and not just to Americans alone. Nothing in our American history is more specific than that the men who came together at the Philadelphia Convention thought of this country as a human experience rather than as just a national experience. To them America was an idea—an idea that had validity for all men. This idea had to do with the natural rights of man, the relationship of

man to the state, the moral contract that binds each man to the next, and the need to provide the fullest possible growth for the individual.

Only a few years ago, we were reminded of these basic ideas when a conference was held in a little mountain city in Indonesis called Bandung. The nations of Asia and Africa which had finally won their freedom came together in this city to mark their historic emergence as members of the family of The ideas they invoked from history were the ideas that went into the making of the United States. Indeed, the Asian and African leaders acknowledged their great debt to the American Founding Fathers.

My point is that if the nations of Asia and Africa feel these ideas from the American past are relevant in the modern world, it is barely possible that they might still hold

some relevance for us, too.

These ideas, to repeat, are concerned with the need for human connection, with the fact of community, and with the nature of human freedom and human obligation.

We are being tested in the world today not just in terms of our ability to make the big bombs or the big missiles, but in terms of our ability to earn the good will and support of the overwhelming majority of the world's peoples. Our security depends not just on the amount of destructive force we can mount but on the amount of leadership we can exert in making the human community in the world safe for its peoples.

Last summer, my wife and I were part of the Governors' group that visited the Soviet Union. I came away with the realization that the challenge of the Soviet is far greater than I had previously supposed it to be.

I realized that the Soviet, far from sealing itself in from the outside world, was moving mightily to establish itself with other peoples, especially the peoples of Asia and Africa-The idea of the Iron Curtain as a symbol no longer had meaning alongside the massive efforts being made by the Soviet Government to identify itself with the needs and hopes of other peoples.

I saw the beginning of a powerful program of economic aid. It is actually only now get-ting underway. In 5 or 6 years, it may reach dimensions that may go far beyond even the

Marshall plan.

I saw delegations arriving from all over the world—trade delegations, religious delegations, scientific delegations, educational delegations, farm delegations—all taking part in important meetings.

And I realized that a basic shift in Soviet strategy had come about. The Soviet leaders realized that victory in the modern world could not be achieved on a nuclear battlefield but only through their ability to isolate the United States from the overwhelming majority.

When I discuss this challenge with some Americans, they tend to flinch. They be-come overwhelmed with foreboding. They come overwhelmed with foreboding. do not think the United States can hold its

own in that kind of showdown.

And it's interesting to me to see that, generally speaking, these are the same people who think we can find security just by building bigger bombs than the Russians and a better delivery system.

I think these people are wrong on both counts.

I think they are wrong in being First defeatists about our ability to hold our own in any nonmilitary competition with the Soviet

Second, I think they are wrong in thinking that the United States can find security in an atomic armaments race.

I have no fear about the capacity of the United States to give a good account of itself in a nonmilitary competition with the Soviet Union. The thing I fear much more is that we may not have confidence in that capacity-indeed, that we may not know how to put it to work.

I fear a policy of drift. I fear the effects of coasting at a time when we ought to be moving powerfully and with determination in a clearly defined direction.

I fear small minds in big jobs.

I fear men in policymaking positions who are trying to cut major problems down to their own size.

The American people-indeed, the whole of the human race—is now in a period of total danger. We must concentrate on the No. 1 world problem-real peace with jus-

The United States need not be a confused spectator in the making of such a peace.

We can move in two important directions. One concerns the form of the peace. The other concerns the substance of the peace.

So far as the form of the peace is concerned, I believe we should propose an immediate revision conference of the United Nations. I believe we should state our hope that such a conference can create a new and strengthened design for the U.N. One that can put an end to the insane atomic armaments race in the world; a United Nations that is strong enough to underwrite the safety and security of all nations, large and small; a United Nations that can deal adequately with the basic tensions that lead to crisis; a United Nations that can represent not just nations but people.

So far as the substance of peace is con-cerned, I believe we should utilize our full agricultural and industrial capacity in improving the conditions of the human com-

munity.

This calls first of all for a plan to do away with a delusion which seems to have taken root in Washington—the delusion that long-range military planning and long-range foreign-policy planning are a splendid thing—but that the best plan for agricul-ture is a policy of drift, blunder, and neglect.

I have never been quite sure why this delusion has grown up like crabgrass everywhere in our Nation's Capital—unless it is because Washington is a city rich in fertil-

When will our Government grasp the fact that our agricultural policy is our foreign policy?

When will it come to see that food and Politics are intimately bound up with each

When will it realize that a healthy foreign Policy and a sick agricultural program make no sense at all?

I believe that we should stop locking agriculture in the closet till the company goes home.

I submit that in a world bent double with hunger, the problem of surpluses and shortages is a problem worthy of all the intelligence, imagination, and compassion that we can bring to it-in a manner consistent with our national well-being.

Let us, for example, devote some of that intelligence and imagination to the problem of our grain surpluses, which at this moment are moldering away in giant granaries. If our betters are determined not to ship this grain abroad, can we not at least find other uses for it—just as the lowly peanut has been converted chemically into a thousand useful products. Are we sure, in short, that we are making the best use of the agricultural capital stored up in our granaries?

Just as the prudent man puts his savings to use, so that they go to work for him over a period of decades, so we should put our agricultural surpluses to work for us, investing them in a variety of humane enter-

We should propose that as soon as the U.N. is capable of taking over the world security function and relieving the nations of the burden of armaments, we are prepared to put a substantial share of our national wealth into the making of a better world.

The inventory of needs has never been longer. Nor has need for creative planning ever been greater. What we have done so far is only a hint of the things we can do to meet the needs before us.

And they say that if we reduce our war economy we will slide into a depression. What nonsense. Indeed, if Congress is really worried amout un-American ideas, this is where it ought to look.

As for me, I believe that the next few decades will be peaceful decades, and that we shall witness a regular sunburst of creative activity and material prosperity in America.

I think that we shall do so not in spite of peace, and its inhibitory effect on our economy, but because of peace, and its invigorating influence on our productive processes, on our free institutions, and on the major issues of our time.

For it is only when we make sense on this big issue—peace, peace with justice, peace with freedom—that we make sense on any issue. Thank you.

Figures Don't Lie (?)

EXTENSION OF REMARKS OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. WIDNALL. Mr. Speaker, this morning I received the May 9, 1960 political memo from COPE, published by the Committee on Political Education of the

AFL-CIO. In the first paragraph under a title "Living Costs Hit Alltime Record." it is stated that the cost of living in March reached an alltime record "just as it has almost month after month after month since the Eisenhower-Nixon administration has been in office."

It further states that in March "the average family was forced to pay \$12.57 for the same goods and services which cost only \$10 in 1947-49, according to Government figures." Once again we see the deliberate omission of unfavorable figures that would be attributed to a previous administration.

I contacted the Bureau of Labor Statistics and obtained the following unreported figures for the last 3 years of the Truman administration.

In 1950 the same goods and services cost \$10.38.

In 1951 the same goods and services cost \$11.10

In 1952 the same goods and services cost \$11.35.

These figures show that at the time the Eisenhower administration took office the figure of \$11.35 was the figure to be compared with the present cost of \$12.57. The American people are entitled to the whole truth. In 71/2 years of the Eisenhower administration there was a rise from \$11.33 to \$12.57 or \$1.22 for 71/2 years. In comparison, the rise during the last 3 years of the Truman administration was from \$10 to \$11.35 or \$1.35.

The same type of omission of full data took place in the Report of the Majority of the Joint Economic Committee and this was violently objected

to at the time by the republican minority members.

Since the Committee on Political Education of the AFL-CIO appears to be watching economic figures rather closely, we should expect that the next political memo from COPE will include the following important information disclosed by the President today in Washington. In April 1960:

First. Gross national product tops \$500 billion.

This figure is 2 billion larger than the President's economic advisers estimated earlier in the year.

Second. Consumer Price Index varied only one-fourth of 1 percent in 6 months.

Third. Employment reached 66,159,-000, a phenomonal increase of 1,892,000 over March 1960.

MOST IMPORTANT

Fourth. Unemployment lowered to 3,660,000-a decline of 546,000 from March.

The above facts and figures from the record speak for themselves.

An Outrageous Proposal

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, the people of Shreveport, La., bought and donated to the United States, for military purposes, the land on which Barksdale Air Force Base is situated. Despite the fact that the land was donated for this sole purpose, the Department of the Interior has twice ordered drilling to be done on this reservation. Now, again, the Department of the Interior is insisting that additional drilling be done. The people who donated this land do not feel that the United States has kept faith with them in insisting on turning this field into an oil and gas field. Under leave to extend my remarks. I present to you the feeling of my people as given in the following editorial taken from the Shreveport Times, Shreveport, La., under date of May 1, 1960:

AN OUTRAGEOUS PROPOSAL

Once again the Federal Government is planning to divert a huge chunk of Barksdale Air Force Base land, purchased originally through a Shreveport bond issue and donated to the Federal Government exclusively for military purposes, to private oil and gas exploitation with no return to the original donor-the city of Shreveport.

The Air Force now is considering declaring 7,400 acres of the base to be surplus property and then deeding it to the Department of Interior. The Department of Interior then would lease drilling rights to private interests, with all revenue going to the Federal Government.

This would be the third time that such a procedure has been followed by the Air Force and the Department of Interior with complete disregard to Shreveport. The first chunk of acreage was diverted by the Air Force to the Department of Interior in 1952 and leased to private minerals exploitation by the latter. A second chunk went the same way in 1953. Now a third chunk of 7,400 acres is proposed.

If this new plan is carried through, approximately half of the total Barksdale acreage, brought by the people of Shreveport through a bond issue still being paid off, will have been diverted from the purpose for which it was donated in order to make a special profit of a few million dolars for the Federal Government. It's just the same old story that always is written when the Federal Government starts moving in—a little bite first, then another bite, and then a big bite, and then nobody knows what.

The whole thing is outrageous and preposterous. The issue is not whether the land is essential to military purposes. If the Air Force says it is not, that decision must be accepted as authoritative. Nor is the issue entirely in the wording of the deed made by the city of Shreveport in giving the huge land area to the Government—an area which made Barksdale the largest military airbase in the world so far as land size was concerned. The issue is justice to Shreveport.

There is no question but what the land was given to the Government by the people of Shreveport exclusively for military purposes. There was, of course, no knowledge at that time that it had minerals value to its present extent. The Government seems to get around this clause in the deed by contending that the oil and gas would be lost to national security if drilling is not permitted. At the same time, other Government quarters claim that the oil and gas would not be lost, but simply would be tapped by offset wells outside the base. Their concern is that such tapping does not bring to the Government the comparatively small revenue which it would receive through base drilling. If the oil and gas is to be tapped by anyone, the people of Shreveport should be a beneficiary.

Representative Overton Brooks of Shreveport has been moving rapidly in trying to get justice for Shreveport if the new chunk of acreage is declared surplus. His contention that the surplus property or a part of it should be turned back to the donors instead of leased to private interests for minerals exploitation, has some support.

Representative Samuel S. Stratton of New York said in a House Armed Services Subcommittee hearing that there would be an element of fairness if some of the property was given back to Shreveport. John M. Ferry, Special Assistant Secretary of the Air Force in Charge of Installations, said he agreed but had no authority to take such a step. The New Orleans Times-Picayune took up the cudgels for Shreveport Friday with a lead editorial headed "Shreveport Shouldn't Be Gouged Again." After detailing the gougings of 1952 and 1953, the Picayune continued:

"If military operations and operating room are to be whittled down, then the excess should be returned by Congress to Shreve-port. This would hold good whether there was oil around the property or not.

"Shreveport has had a 'lot of good' out of Barksdale; but the way it's worked out doesn't support any contention that 'give to the Government and the Government will do the right thing.'"

The Federal Government lives and exists and survives off of money supplied by the people. It is not very pleasant to think of the Federal Government as a sharpster trying to gouge the people of one area because it may have found a "legal" way to do so.

"Triton" Voyage a Tribute to Electric Boat Craftsmanship

EXTENSION OF REMARKS

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. BOWLES. Mr. Speaker, this morning the U.S.S. *Triton* returned in triumph to its home port of New London, Conn., after completing its epochmaking undersea voyage which has so electrified the world.

There are many proud people in New London and in Groton this morning, Mr. Speaker, but none prouder than the men and women of the Electric Boat Shipyards in Groton, where not only the Triton, but also the Nautilus, the George Washington, and the Patrick Henry were built.

The official log of the Triton carries, in Capt. Edward Beach's own words, eloquent tributes to the skill and craftsmanship which made the Triton's 41,500-mile voyage under the sea possible. It is no coincidence that this most powerful submarine ever built, as well as the world's first nuclear-powered submarine, the Nautilus, and the first Polaris-firing submarine, the George Washington, were all built at Electric Boat. As the men of our Navy's submarine service can attest, only one quality ever leaves the ways in Groton—the finest.

Under leave to extend my remarks, I include as being of interest to my colleagues the following sections from the log of the *Triton*:

February 19: With speed increased to flank, our submarine cruiser begins to tear through the water at a speed few ships can manage on the surface, and yet there is no sensation of speed at all.

February 20: Slowed to half power, our normal cruising speed, which is still much faster than most ships can go.

March 4: One can become almost lyrical thinking of the tremendous drive of the dual powerplant of this grand ship. Except in clam water, there are probably not more than a few dozen ships in the world which can go as fast as we are right now, and we are doing it deep beneath the surface where they can't go.

March 4: Almost with disbelief, we note what speed we are registering. And looking at the various gauges of the propulsion equipment, we realize we have but scratched the surface or *Triton's* real potential. If we were really to let her out, as we might have to in war, she has even more under her belt.

April 5: (When the ship had been caught in a severe downward current of water while entering the Indian Ocean, and was plunged downward as in an air pocket.) Under the circumstances, Triton's size, tremendously strong hull, and great power pretty well eliminated any danger, especially since we had tight control of the ship at all times.

All Friends

EXTENSION OF REMARKS

HON, FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. BOW. Mr. Speaker, Addis Barthelmeh, one of the most successful public servants I have ever known, is about to retire after 35 years as the home demonstration agent of Stark County, Ohio.

As one who has been a friend of hers for all of these years, and who has enjoyed working with her in behalf of the people of Stark County whom both of us serve, I am pleased to include with my remarks an appropriate editorial from the Canton Repository:

ALL FRIENDS

There is a curious thing about Addis Barthelmeh, who is going to retire as Stark County extension home economics agent. After 35 years on the job of dealing with thousands and tens of thousands of people in this county, most of them women, she seemingly has no enemies.

Anyone with so many friends has done a tremendous job of public relations. Miss Barthelmeh is a genius at getting along with people, and she didn't polish up the knack artificially. She was born with it. She likes people. She likes to help them. She has shown thousands of farm families how to get more efficiency and pleasure out of their lives since she started her good work in 1925.

She could stop in any place, in Stark County, walk up to the nearest house and be received as a friend. As a matter of fact, her friends already are busying themselves with parties in her honor, though she isn't leaving until the end of next month. There are so many of them that they will need plenty of time to show how they feel.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Recorp, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Address by Hon. Barry Goldwater, of Arizona

EXTENSION OF REMARKS

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I made before the U.S. Chamber of Commerce on May 4, 1960.

There being no objection, the address was ordered to be printed in the Record, as follows:

SPEECH OF SENATOR BARRY GOLDWATER, U.S. CHAMBER OF COMMERCE, MAY 4, 1960

Disclosures before the McClellan committee which so clearly pointed up the results of the abusive use of power within the labor movement resulted in the passage last year of the Landrum-Griffin bill. While this measure is an infinitely better one than the do-nothing Kennedy bill which passed the Senate, Congress has still to come to grips with the real evil in the labor field. Graft and corruption are symptoms of the illness that besets the labor movement, not the cause of it. This cause is the enormous economic and political power now concentrated in the hands of union leaders.

Such power hurts the Nation's economy by forcing on employers contract terms that encourage inefficiency, lower production and high prices—all of which result in a lower standard of living for the American people.

It corrupts the Nation's political life by exerting undue influence on the selection of Dublic officials.

It gravely compromises the freedom of millions of individual workers who are able to register a dissent against the practice of union leaders only at the risk of losing their lobe.

All of us have heard the charge that to thus criticize the power of big labor is to be antilabor and antiunion. This is an argument that serves the interest of union leaders, but it does not usually fit the facts, and it certainly does not do justice to my views. I believe that unionism, kept within its proper and natural bounds, accomplishes a Positive good for the country. Unions can be an instrument for achieving economic Justice for the workingman. Moreover. they are an alternative to, and thus discourage State socialism. Most important of all, they are an expression of freedom. Trade unions, properly conceived, are an expression of man's inalienable right to associate with Other men for the achievement of legitimate objectives.

The natural function of a trade union and the one for which it was historically conceived is to represent those employees who want collective representation in bargaining with their employers over terms of employment. But note that this function is perverted the moment a union claims the right to represent employees who do not want representation, or conducts activities that have nothing to do with terms of employment (e.g., political activities), or tries to deal

with an industry as a whole instead of with individual employers.

As America turned increasingly, in the latter half of the 19th century, from an agricultural nation into an industrial one, and as the size of business enterprises expanded, individual wage earners found themselves at a distinct disadvantage in dealing with their employers over terms of employment. The economic power of the large enterprises, as compared with that of the individual employee, was such that wages and conditions of employment were pretty much what the employer decided they would be. Under these conditions, as a means of increasing their economic power, many employees chose to band together and create a common agent for negotiating with their employers.

As time went on, we found that the workingman's right to bargain through a collective agent needed legal protection; accordingly Congress enacted laws—notably certain provisions of the Clayton Act, the Norris-LaGuardia Act and the Wagner Act—to make sure that employees would be able to bargain collectively.

This is not the place to examine those laws in detail. It is clear, however, that they have overaccomplished their purpose. Thanks to some unwise provisions and to the absence of others that should have been included, the delicate balance of power we sought to achieve between labor and management has shifted, in avalanche proportions, to labor's advantage. Or, more correctly to the advantage of union leaders. This mammoth concentration of power in the hands of a few men is, I repeat, a grave threat to the Nation's economic stability, and to the Nation's political processes. More important, it has taken from the individual wage earner a large portion of his freedom

The time has come, not to abolish unions or deprive them of deserved gains; but to redress the balance—to restore unions to their proper role in a free society.

We have seen that unions perform their natural function when three conditions are observed: association with the union is voluntary; the union confines its activities to collective bargaining; the bargaining is conducted with the employer of the workers concerned. Let us briefly treat with each of these conditions, noting the extent to which they are violated today, and the remedial action we are called upon to take.

FREEDOM OF ASSOCIATION

Here the argument is so plain that I wonder why elaboration is necessary. What could be more fundamental than the freedom to associate with other men, or not to associate, as each man's conscience and reason dictates? Yet compulsory unionism is the rule rather than the exception today in the ranks of organized labor. Millions of laboring men are required to join the union that is the recognized bargaining agent at the place they work. Union shop agreements deny to these laboring men the right to decide for themselves what union they will join, or indeed, whether they will join all. The exercise of freedom for many of these citizens, means the loss of their jobs.

Here is the kind of thing that can happen as the result of compulsory unionism. X, a family man in Pennsylvania had been a union member in good standing for over 20 years. When the United Electrical Workers became the recognized bargaining agent at his plant, he refused to join on the grounds the UEW was Communist dominated—a judgment that had been made by the CIO itself when it expelled the UEW in 1950. The result, since his employer had a union shop agreement with the UEW, was that X lost his job.

The remedy here is to give freedom of association legal protection. And that is why I strongly favor enactment of State right-to-work laws which forbid contracts that make union membership a condition of employment. These laws are aimed at removing a great blight on the contemporary American scene, and I am at a loss to understand why so many people who so often profess concern for civil rights and civil liberties are vehemently opposed to them. Freedom of association is one of the natural rights of man. Clearly, therefore, it should also be a civil right. Right-to-work laws derive from the natural law; they are simply an attempt to give freedom of association the added protection of civil law.

added protection of civil law.

I am well aware of the "freeloader" argument, so often advanced by union leaders in defense of compulsory unionism. The contention is that a man ought not to enjoy the benefits of an organization's activities unless he contributes his fair share of their cost. I am unaware, however, of any other organization or institution that seeks to enforce this theory by compulsion. The Red Cross benefits all of us, directly or indirectly, but no one suggests that Red Cross donations be compulsory. It is one thing to say that a man should contribute to an association that is purportedly acting in his interest; it is quite another thing to say that he must do so. I believe that a man ought to join a union if it is a good union that is serving the interests of its members. I believe, moreover, that most men will give support to a union provided it is deserving of that support. There will always be some men, of course, who will try to sponge off others; but let us not express our contempt for some men by denying freedom of choice to all men.

The union leaders' argument that right-towork legislation is a "union-busting" device is simply not borne out by the facts. A recent survey disclosed that in all of the 19 States which have enacted right-to-work laws union membership increased after the right-to-work laws were passed. It is also well to remember that the union movement throughout the world has prospered when it has been put on a voluntary basis. trary to popular belief compulsory unionism is not typical of the labor movement in the free world. It prevails in the United States and England, but in the other countries of Western Europe and in Australia, union membership is generally on a voluntary basis. Indeed the greatest percentage of unionized workers are found in countries that prohibit compulsion by law. The unions in those countries operate on the principle that a union is stronger and better if its members give their adherence of their own free will.

Here, it seems to me, is the sensible way to combat graft and corruption in the labor movement. As long as union leaders can force workers to join their organization, they have no incentive to act responsibly. But if workers could choose to belong or not to belong depending on how the union performed, the pressure to stamp out malpractice would become irresistible. If unions

had to earn the adherence of their members the result would be-not only more freedom for the workingman—but much less dishonesty and high handedness in the management of the union affairs.

POLITICAL FREEDOM

One way we exercise political freedom is to vote for the candidate of our choice. Another way is to use our money to try to persuade other voters to make a similar choice—that is, to contribute to our candidate's campaign. If either of these freedoms is violated, the consequences are very grave not only for the individual voter and contributor, but for the society whose free political processes depend on a wide distribu-

tion of political power.

It is in the second of these areas, that of political contributions, that labor unions seriously compromise American freedom. They do this by spending the money of union members without prior consultation for purposes the individual members may or may not approve of, purposes that are de-cided upon by a relatively small number of union leaders. Probably the greatest spender in the labor movement is the powerful AFL-CIO Committee on Political Education (COPE) which is supported in its "educational" work entirely by union general funds.

It is impossible to say just how much unions spend on political campaigns; cer-tainly one can't tell from the amounts officially reported, which invariably present a grossly distorted picture. In 1956, for example, labor officially acknowledged expenditures of \$941,271. According to that official report, \$79,939 of the total was spent in the State of Michigan. However, a Senate investigating committee obtained evidence that in that year each of Michigan's 700,000 union members had been assessed \$1.20 as a contribution to a "citizenship fund," and that this money was made available for political activities. This suggests that labor spent, from that one source alone, almost a million dollars in Michigan, instead of \$79,000. By projecting the difference on a nationwide scale, we get a more realistic idea of the size of labor's political contributions.

Union political activity is not confined, of course, to direct financial contributions. In fact, this is one of its smallest endeavors. Unions provide manpower for election-day chores—for making phone calls, driving cars, manning the polls, and so on. Often the union members who perform these chores are reimbursed for their time off out of union funds. Unions also sponsor radio and television programs and distribute a huge volume of printed material designed to support the candidate of the union's choice. short, they perform all the functions of a

regular party organization.

Now, the evil here is twofold. For one thing, the union's decision whether to support candidate X or candidate Y-whether to help the Republican Party or the Democratic Party-is not reached by a poll of the union membership. It is made by a handful of top union officers. These few men are thus able to wield tremendous political power in virtue of their ability to spend other peo-ple's money. No one else in America is so

The other evil is more serious. Individual union members are denied the right to decide for themselves how to spend their money. Certainly a moral issue is at stake here. Is it morally permissible to take the money of a Republican union member, for example, and spend it on behalf of a Democrat? The travesty is deeper, of course, when the money takes the form of compulsory union dues. Under union-shop conditions, the only way an individual can avoid contributing to the political campaign of a candidate whom he may not approve is to give up his job.

The passage of right-to-work laws will help the situation. But putting unionism on a voluntary basis is only part of the answer. For even though a man can leave or refuse to join a union that spends money for purposes that he does not approve, there may be other factors that would dissuade him from doing so. In many communities strong economic and social pressures are exerted on behalf of joining a union-quite aside from the threat of loss of employment. As a result, a man may decide to join a union notwithstanding his disapproval of its political activities. The question remains, Should that man's union dues be used for political purposes? The answer is clearly "No." Unions exist presumably to confer economic advantages on their members, not to perform political services for them. Unions should, therefore, be forbidden to engage in any kind of political activity. I believe that the Federal Corrupt Practices Act does forbid such activity. That legislation has been circumvented by the "education" approach and other devices; and Congress and the courts, in effect, have looked the other way. only remedy, it appears, is new legislation (Supreme Court, Looper case).

In order to achieve the widest possible distribution of political power, financial contributions to political campaigns should be made by individuals and individuals alone. I see no reason for labor unions-or corporations-to participate in politics. Both were created for economic purposes and their activities should be restricted accordingly.

ECONOMIC FREEDOM

Americans have been much disturbed in recent years by the apparent power of big labor to impose its will on the Nation's economic life whenever the impulse strikes. The recent steel controversy, and the terms of its settlement, are the latest illustration of labor's ability to get its way notwithstanding the cost to the rest of society. When the strike began, neutral observers including Government economists normally friendly to the unions—agreed that the Steel Workers' wage demands were exorbitant and would inevitably cause further inflation; and that the steel companies were quite right in insisting that certain work rules promoted inefficiency and retarded production. Nevertheless, the steel companies were forced to accept a settlement that postponed indefinitely revision of work rules and granted a large portion of the union's wage demands.

The reason the union won is quite simple: It posed to the country the choice of tolerating stoppages in steel production that would imperil national security, or of consenting to an abandonment of the collective bargaining process. Since neither the steel companies nor the country at large wanted to resort to compulsory arbitration, the alternative was to give the unions what they asked. In this situation, the only power superior to union power was Government power, and the Government chose to yield.

One way to check the unions' power is for the Government to dictate through compulsory arbitration, the terms of employment throughout an entire industry. I am op-posed to this course because it simply transfers economic power from the unions to the Government, and encourages State socialism. The other way is to disperse union power and thus extend freedom in labor-management

Eighty years ago the Nation was faced with a comparable concentration of economic power. Large corporations, by gaining mo-nopoly control over entire industries, had nullified the laws of competition that are conducive to freedom. We responded to that challenge by outlawing monopolies through the Sherman Act and other antitrust legislation. These laws, however, have never been applied to labor unions. And I am at a loss to understand why. If it is wrong for a single corporation to dictate prices throughout an entire industry, it is also wrong for a single union—or, as is the actual case, a small number of union leaders—to dictate wages and terms of employment throughout an entire industry.

The evil to be eliminated is the power of

unions to enforce industrywide bargaining. Employees have a right, as we have seen, to select a common agent for bargaining with their employer but they do not have a right to select a national agent to bargain with all employers in the industry. If a union has the power to enforce uniform conditions of employment throughout the Nation its power is comparable to that of a Socialist

government.

Employers are forbidden to act collusively for sound reasons. The same reasons apply to unions. Industrywide price fixing causes economic dislocations. So does industrywide wage fixing. A wage that is appropriate in one part of the country may not be in another area where economic conditions are very different. Corporate monopolies impair the operation of the free market, and thus injure the consuming public. So do union monopolies. When the United Automobile Workers demand a wage increase from the auto industry, a single monolith is pitted against a number of separate, competing companies. The contest is an unequal one, for the union is able to play off one company against another. The result is that individual companies are unable to resist excessive wage demands and must, in turn, raise their prices. The consumer ultimately suffers for he pays prices that are fixed not by free market competition—the law of supply and demand-but by the arbitrary declsion of national union leaders. Far better if the employees of Ford were required to deal with Ford, and those of Chrysler with Chrysler, and so on. The collective bargain-ing process will work for the common good in all industries if it is confined to the employers and employees directly concerned.

Let us henceforth make war on all monopolies-whether corporate or union. The enemy of freedom is unrestrained power, and the champions of freedom will fight against the concentration of power wherever they

find it.

They Invented the Inch

EXTENSION OF REMARKS

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DADDARIO. Mr. Speaker, a distinguished Connecticut manufacturing concern is celebrating its 100th anniversary this year. The Pratt & Whitney Co. of West Hartford, Conn., is noted for its work in high precision machine tools and gages. Its byword is "accuracy."

Its history is replete with important milestones for industry and science in this country. When it built the Rogers Bond comparator in 1882, the forerunner of many measuring machines, it virtually standardized the inch, some 20 years before the Federal Government created the National Bureau of Standards.

I was interested to note, in an article in the Hartford Courant on Sunday, that we had again adjusted the inch just last summer, in July 1959. Until that date there were three different inches in use in the world. By international agreement, we shortened our inch by two-millionths of a measurement, and the British Commonwealth increased its inch almost by the same amount.

These accuracies are all the more important in an age of scientific accomplishment such as ours. In the handling of atomic energy, in the making of guided missiles, we often demand accuracies to five- or ten-millionths of an inch. Albert M. Dexter of Pratt and Whitney says this requires an accuracy on the part of gages, therefore, to onemillionth of an inch. Not long ago, Pratt and Whitney participated with the National Bureau of Standards in pushing the frontier of precise measurement to one-tenth of a millionth of an inch. From Mr. Dexter's computations, that is the thickness of one sheet of newspaper sliced into 30,000 separate sheets.

I should not pass this by without noting that Pratt and Whitney is familiarly called in the Hartford area by the name and by the suffix—West Hartford—to differentiate it from another firm of the same name—the Pratt & Whitney Aircraft Division of United Aircraft Corp. Each descends from the New England craftsmanship of Francis Pratt and Amos Whitney, the pioneers in metal working, but some time ago went separate business ways to become parts of a different corporate family. Pratt & Whitney Co. of West Hartford is a subsidiary of the Fairbanks Whitney Corp.

To provide further information, I submit an editorial from the Hartford Times of Saturday, May 7, which traces the industrial fame of the organization:

PRATT & WHITNEY, 100 YEARS OF INDUSTRIAL FAME

Many a manufacturing company points with pride to some outstanding contribution it has made to industrial progress or for the advancement of the general economy. At its 100th anniversay, Pratt & Whitney Co., Inc., would find it difficult to choose as its top achievement any one success among its long

list of outstanding industrial triumphs.

Much of the time of generations of Pratt
& Whitney craftsmen has been devoted to
the establishment of uniform standards for
manufacturing precision. Fineness is taken
for granted in an age used to measuring and
working to a millionth of an inch. Before
P. & W. took up the challenge there was no
reliable standard measure of anything.
There was no machine tool that could maintain uniform quality in operation.

Would the leading P. & W. contribution therefore be its devotion to precision and refinement of the international inch? But one must not forget that the company also brought out the means to make possible the introduction of standard threads on nuts and bolts. Much of the modern world is literally held together on the basis of this accomplishment.

Jokingly, ours has been called a tin-can civilization. Yet, except for a P. & W. innovation, a special micrometer to measure and help control the thickness of moving ribbons of strip steel, the making of cans would have been a wasteful and makeshift business.

The establishment of precision aids and the making of measuring devices was inci-

dental to the main work of the shop. That has been the manufacture of machine tools used to produce other manufactured products.

During the great industrial period of creativity 1900-1920, Pratt & Whitney contributed more new machine development than all other machine-tool manufacturers in the world combined. The company was the leader in design of entirely new types of machine tools and gages.

Out of its shops came the jig borer, thread miller, spline miller, vertical shaper, vertical surface grinder and reamers with right-hand cut and left-hand spiral, all of them rep-

resenting major advances.

Pratt & Whitney still is unexcelled in the field of design and innovation. It has automated many of its machines with use of taped controls for their operation. Thursday the company will dedicate its Centennial Hall at the West Hartford plant with a permanent exhibit of the latest P. & W. products as well as of early products and mementos.

It was no easy thing for Francis A. Pratt, the salesman and promoter, and Amos Whitney, the machinist and shop manager, to start this business 100 years ago. They did it in their own spare time after working a full day at other regular jobs.

Their first large order was for production of Spencer's automatic silk winders for use in the Cheney Bros. mills in Manchester, and by the Willimantic Linen Co. Manufacturing had just been stepped up when Pratt & Whitney were burned out. They started again, and soon were producing arms for use in the Civil War. This led to making the machines by which armaments were produced.

Pratt & Whitney made the first silent typewriter model, put together the Paige typesetter in which Mark Twain invested a profitless fortune, and produced tabulating machines and envelope machinery among more than 2,000 items for the worldwide market.

It would be impossible to sum up completely the economic benefits that Pratt & Whitney. Inc., has brought to Hartford and all of this region in its 100-year history. Certainly it has helped to make central Connecticut a famous leader in the machine tool industry.

Gathered here as an experienced labor force in its factory were some of the world's best craftsmen. Of Pratt & Whitney's nearly 3,000 present employes there are 597 who are members of its Quarter Century Club. They grew to proficiency under outstanding conditions of production, excellence, and attention to detail.

And although the company has its vast plant in West Hartford, employees come from 97 Connecticut communities and more than a dozen towns in nearby States, an indication of the widespread economic importance of the enterprise. The company's annual payroll is some \$16 million, its purchase of supplies amounts to about \$12 million, it pays annual town and State taxes of \$558,000, and the company's gifts to charity and education are on the order of \$50,000 annually. Such figures count heavily in the support of Connecticut prosperity.

Governor Ribicoff rightly has called the company one of the foundation stones of this State's industry. Importantly, the Pratt & Whitney story and its success should serve as inspiration to the scores of struggling small new industries in Connecticut. Some of them, too, will become giants in their fields.

To Pratt & Whitney Inc., industrially famous for 100 years, we pay our respects and look for the company to increase its fame in the years to come.

Soviet Deception Demands Drastic Surveillance Steps

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Thursday, May 12, 1960

Mr. THURMOND. Mr. President, on May 10, 1960, the State, of Columbia, S.C., published an editorial on the world famous spy plane incident which merits the attention of the Congress and all Americans interested in our national security. It is entitled "Soviet Deception Demands Drastic Surveillance Steps."

I ask unanimous consent that this excellent editorial from this outstanding newspaper be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOVIET DECEPTION DEMANDS DEASTIC SURVEILLANCE STEPS

Nikita Khrushchev's timely, propagandacharged report to the Supreme Soviet is a reminder that global war has not ended.

He told a shouting, applauding Parliament that a U.S. jet plane had been shot down and that the American pilot had confessed that he was on a spying mission, photographing Soviet military bases and industrial installations.

The Soviets have resisted all efforts to establish effective disarmament controls. Even President Eisenhower's "open skies" proposal has been flatly rejected. It would merely permit international aerial inspection to assure against a buildup for surprise attack

The United States and her allies cannot take a chance on the secret mounting of a Soviet sneak offensive. To avoid this possibility the United States has developed, from a weak beginning early in World War II, what is said to be the world's best intelligence system.

State Department spokesmen admitted that planes have been making reconnaissance flights along the frontiers of the free world for the past 4 years. It is a reasonable guess that these forays might extend into possible Soviet staging areas.

In order to defend ourselves intelligently.

In order to defend ourselves intelligently, we must know what our potential aggressor is doing. That involves certain risks, such as those faced when Francis G. Powers set out from Pakistan on a flight across the breadth of Soviet Russia.

Even the fact that the Soviets had emplacements in the mountainous heart of the U.S.R. equipped to shoot him down from an altitude of 12 miles is valuable military information.

Unless the pattern has changed recently, the Soviets are making almost daily feints by squadrons of planes against our Alaskan defenses. It is likely that they are carrying on similar probing operations all around the free-world perimeter. Soviet warplanes are flagrantly invading the airspace over Japan. Soviet submarines prowl off our Atlantic shores. One of their spy trawlers recently watched our submarine rocket tests 60 miles off the coast of Rhode Island. A pretty good indication of the effectiveness of Soviet spying activities in this country is the fact that the Reds stole most of our hush-hush atomic secrets.

On the other hand, there are strong indications that we know what is going on behind the Iron Curtain. We are aware of many Soviet military strengths and weaknesses. We know that certain of their rocket claims are hoaxes. We have made some mistakes in intelligence that have cost billions of dollars, such as the Arctic dew line that was erected to stop a Soviet bomber armada that did not exist. Proper intelligence avoids such expensive blunders in defense.

The United States has been criticized because the ill-fated Powers expedition came just before the summit meeting, taking an unusually big propaganda risk. But we know from experience that Khrushchev uses his major peace gestures to cover up some big political or military excursions. While waving an olive branch over the upcoming meeting, he has been able to establish an ideologibeachhead in Guinea on the west tip of Africa. He could also use the conference to cover up military preparations inside Russia.

The worst Khrushchev can say about the incident of the unarmed U.S. photographic plane over the Urals is that he caught us trying to find out what mischief his regime might be concocting.

Petition

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition from the Anti-Communist Confederation of Polish Freedom Fighters in U.S.A., Salem, Mass., April 11, 1960:

PETITION TO THE HONORABLE STATESMEN, DIPLOMATS, AND MAKERS OF AMERICAN DOMESTIC AND FOREIGN POLICY, WASHING-

In a few weeks, in Paris, there will be held the so-called summit conference. The leaders of great nations will meet. The leaders of great nations will meet. The reason for the conference is, naturally, to talk over peace terms, especially the elimination of fear for the new methods of warfare which may arise in a modern war situation.

At the conference both sides will speak of peace but words are also a means and an effort of bringing about a realization of the fact. President Eisenhower, for instance, a leader of the Western Nation with true apostolic and missionary zeal will speak in favor of a just peace based upon friendship, justice, freedom and respect of human rights. Khrushchev on the other hand thinks only of peace in the terms of pos-sessing the world, thus making it impossible to hinder any communistic activities.

Khrushchev's peace is the enslavement of millions of people through communistic oppression, it's the desire to possess the entire world.

There is then no reason for useless opti-

Secondly: Not long ago, an average American thought that all American problems may be solved through the help of money and technique, since with money and modern technique we won the war?-That is true. But what is worse, we lost the peace.

Therefore it is evident, that peace cannot be bought! Neither with gold nor the enslavement and captivity of nations. Peace is based on moral laws, justice, trustworthiness and respect. The moral laws are as realistic and unchangeable as the laws of physics and economy and without true moral aspects we can build only moral and political chaos.

Looking at the 40 years of the history of communism, at its conquests and robbery, at its murderous and bloody march, not heeding any laws of God and morality and taking under consideration the false communistic philosophy, we must sound the alarm and call upon the conscience of the leaders of the United States to change their tactics and politics because the false communistic philosophy must be fought with a philosophy based on moral assets. Therefore all agreements made with the Communists must come to an end and their false promises must be ignored. Conferences with Bloody Khrushchev must stop. Murder and communistic tyranny will remain forever a murder and an enslavement, an outrage against moral laws.

Communism based on material and Marxideas for 40 years has not changed or altered its ideas, seldom does it change its strategy but very easily and according to need and necessity, it changes its tactics. This the reason for the latest travels, visits and revisits of Khrushchev. That is the reason for calling of the summit conference, for behind all this undercover is the political policy of Khrushchev; namely, to deaden the opinion of the world in regard to their communistic oppression.

Therefore in writing this petition to the leaders of the United States, guiding myself not only with a feeling of loyalty to my native land, and with a fear of the future of Poland, but also taking under consideration the fate of the entire world, I plead with you leaders of the Nation.

America, in protecting and defending the freedom of the enslaved nations, is protecting and safeguarding at the same time its own freedom and happiness as well as that of the whole world. We call today for an alarm; for tomorrow may be too late. We must put an end to communistic action and to its leader Khrushchev. We must destroy the diabolical plans of this Red Nero and this Bloody Butcher of Budapest.

It must be done today-for tomorrow may be too late.

Besides the danger of communism, there arises in the world today another reviving power, Germany, which destroyed and now again rebuilt by America, begins to voice its opinion and perhaps tomorrow in unity with communism may endanger the peace of the world.

The Germans, with specialized officers, falsify facts and they take every opportunity to portray the American way of thinking and outlook for their own benefit.

The result-that along with the communistic danger there appears another, that of Germany.

Against these two dangers we must arouse public opinion and make realistic plans for a world peace.

The fate of the enslaved nations is a steppingstone and a key to peace in Europe and in the entire world. The matter of freedom for Poland is precisely linked with the problem of peace. If today I permit myself to petition the leaders of the West, I do it out of duty and love for my country and those to whom I am indebted; namely, those who still remain on the fighting front and to those who work in the underground.

I am informed that the most tragic decisions about Poland in the last years were made without the consent of the Polish people and outside of Poland. * * "Therefore, let decisions of hope and peace come and arise today in the West. * * Let the voice of the Polish people reach the conscience of the American leaders through the efforts of our friend, Jozef Mlot-Mroz. * * " This is the plea I receive from my friends: "We know of your protests through hunger strikes and if you are able and strong enough to perform another such a hunger strike to protest against inhuman treatment, Poland once again pleads for it. * * * Poland, with hopeful eyes, looks toward America and pleads for help."

This appeal had been made by the leaders of the Polish fighting nation; therefore, their plea I will certainly realize and as my

strength permits, I will carry out.

This is the reason of my new decision: A protest and hunger march to Washington, which a month before the summit conference in Paris I will put into action. April Easter Sunday, on foot I leave from Boston to Washington which I hope to reach within a span of 2 weeks. Then in Washington for a number of days preceding the summit conference, I will continue my hunger strike, calling forth in this manner for freedom of Poland and the other enslaved nations, protesting against any negotiations with communism and with its bloody leader. Khrushchev.

My decision is the result of my great love for my mother country, Poland, my loyalty to American happiness which my brethren in Poland do not possess. My decision is also a command of underground benefiting from the welfare and happiness of America. I take this step to remind the West of the Polish right to freedom and to arouse Americans to the near and grave danger of communism.

West awaken. Today's S O S of Poland and the enslaved nations is a warning for you today and tomorrow. West, awaken today. Tomorro... With respect, Tomorrow may be too late.

JOZEF MLOT-MROZ, President, Anti-Communist Confederation of Polish Freedom Fighters in U.S.A.

The Problems of Africa

EXTENSION OF REMARKS OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES Thursday, May 12, 1960

Mr. MUSKIE. Mr. President, on February 20, 22, and 26, 1960, Mrs. May Craig's column "Inside in Washington," which appears in several newspapers in my State, contained material of general interest to any thoughtful American who has an interest in foreign affairs.

In the column which appeared on February 20, Mrs. Craig explained the importance of the foreign-aid program, as it might apply on the Continent of Africa. At this time, Mrs. Craig was about to embark on an extended visit to that great continent.

On February 22, she shared with her readers the many practical problems which face a reporter about to undertake such a journey, and she was also able to communicate the sense of excitement that one feels in approaching such &

journey. On February 26, she summarized the briefing given by State Department personnel who are experienced in African

I ask unanimous consent that these three articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the REC-ORD, as follows:

From Inside in Washington, Feb. 20, 1960]
AFRICAN CONTROL MOVING FROM WHITE TO
BLACK TO RED

(By May Craig)

WASHINGTON.—The President is asking Congress for \$4.175 billion for foreign aid. That is \$240 million more than he asked last year. Congress cut him down last year and the indications are that they will cut him down even more this year. Congressmen are more willing to spend for defense than for foreign aid. They believe, generally speaking, that the strength of the United States is the shield of those whom the President would aid, and that however useful foreign aid might be to them, it wouldn't do much more than build them up for the Communists, if we came to that pass, either by way of subversion or cold conquest. President is keeping the defense budget lower than Congress thinks we should on the grounds that we must remain solvent, that solvency is as necessary as guns.

Then why spend for foreign aid, say the Congressmen. The President says that foreign aid is defense. He says that it is better to keep friends and allies, even neutrals, strong in their own defense, than to center all in the United States. He says this is a battle for the hearts and minds of men as well as a battle for the bodies of men, either dead in war, or as slaves. He says we need bases overseas and we need better standards of living there and we need to build up the small new nations just learning to walk. He says there are immensely valuable resources in foreign countries which we would need even to fight a war ourselves, and vast reserves of manpower, all of which would profit the Communication of the says the says the says the says the says there are immensely valuable resources in foreign countries which we would profit the Communication of the says there are interested as a says that it is better the says that it is better the communication of the says that it is better to be says the says that it is better to be says that it is b

the Communists if they should acquire them. Senator Syminoton, of Missouri, Democrat, an unavowed but known candidate for the presidential nomination, is recently back from a trip to Africa to say we should give Africa a billion dollars a year to build it up against communism. Syminoton is an expert in military defense, so when he says this, it shows that he regards foreign aid in much the same light that the President does, though Syminoton would spend much more for our own military defense, says we are lagging behind the Soviet Union dangerously, in missilery and space. He would keep our strategic Air Force strong and build more Polaris submarines.

Symington would put fewer restrictions on our aid funds, have more exchange students between United States and Africa, train more Americans in African languages, expand our diplomatic and assistance missions to Africa. In Africa, he says, the position of the Communists is as good or better than ours. The Soviet spends more than the \$116 million we are spending in aid in Africa now. The billion dollars he suggests for Africa would be about 1 day's income in the United States. "It would be better to spend less for swimning pools and dog food." he says, and provide for more foreign aid in Africa.

Americans have great investments in Africa, he said, private capital, and even that should make them willing to favor more aid to Africa, because if the Communists get Africa, their investments are down the drain—in Cuba Mikoyan reminded Castro that the Soviet Union in the Communist revolution expropriated without compensation.

The African Continent is four times the size of continental United States, and the beginning of the industrial revolution would have far-reaching consequences, Symington says. It would be well if we helped them in this, instead of letting the Soviet Union do it, putting the Africans under obligation to the Communists, economically and then politically and sentimentally, until the Communists' bill comes in, when they become satellites.

It is not easy for white people, who have for so long regarded dark people as inferior, to recognize them as equals in potential if not in accomplishments yet. For those countries which held vast colonies there, the wrench is anguish. The British have faced it—though late in India and Cyprus. Nobody gives up an empire easily. Suppose we had not killed off most of the American Indians and they were now in the majority and demanded that they get back America?

In Africa there is resentment against the United States for the brutal enslavement of Africans and the slowness of abolition of racial discriminations here, almost a hundred years since emancipation. There is one thing to be said about the situation in the United States—Negro leaders should pay more attention to making Negroes "good neighbors" as they force their battle against segregation of all kinds. Acceptance is the true goal and imposing themselves without responsibility on resentful whites, even though the dark people are entitled to equality, delays the day of friendly acceptance.

These racial antagonisms against those who are different are as old as man. They cannot be solved wholly in the head—the feelings, instincts are involved. The fear and hatred of the stranger is as old as the caveman, as old as the tribe.

In some of the new African countries, where the blacks far outnumber the whites, there is discrimination against whites, and the whites fear this and oppose with all their might the principle of one vote for one man, as proposed by such leaders as Tom Mboya of Kenya, where the unspeakable Mau Mau events occurred. Yet one vote for one man is embedded in the American and European political system. The whites in African countries know that will happenthey will be politically submerged in what is decided by vote. The same fear lies at the root of the rebellion of the French settlers in Algeria against de Gaulle's policy of Al-

Bob Ruark, the Scripps-Howard writer who has lived long in Africa, and wrote the frightful book "Something of Value" about the Mau Mau, is there again and writes pessimistically. He says the Red ribbon has already been tied to Africa—that Africa is passing swiftly to black hands and that it is only a matter of time when it passes into Red hands.

gerian self-determination. The Frenchmen will be outnumbered 8 to 1, at least, if

freedom comes and there is one vote for

one man.

[From Inside in Washington, Feb. 22, 1960] SHOTS AND THOUGHTS THAT PRECEDE A JOURNEY

(By May Craig)

WASHINGTON .- Ah, what a thing it is, to set forth from the accustomed haunts and see the ends of the earth and judge them. There is the forward look, the anticipation. Feelings are akin in touching, almost to the There is the sudden anguish of remembering home when far away-soon gone, but keen while it lasts. There is the burning of the heart, the sudden wetness in the eyes when homeward one returns from wandering in a foreign land. Those who do not so set forth, even in the mind, are poor indeed. These journeys of the mind are wonderful, too-and there are no bugs, no malaria, no dysentery, no running for planes and trains. The journeys of the mind are pure and quiet. But journeys there must be, else one vegetates.

It is a strange thing how one begins to separate from the accustomed haunts, before the actual departure. Everybody feels this. Things that were so vitally important, fade away. A Washington reporter who lives by the ticker, the telephone, the telegraph wire, the last radio news, the last edition of the paper—forgets them as the mind is fixed on what is to come.

The innumerable details of going on a long, fast journey are part of this predeparture absorption. The passport, the visa, the immunizing shots, fix the mind on the beyond. Plane travel makes problems of what to take, every ounce counts. In going to Africa, there is the problem of clothes and gear for heat and cold. Shoes to go to the American Embassy, and shoes to tramp in the Kruger Game Refuge. Much travel has taught me lessons. Take three of everything that is essential—one to wear, one to wash, one to lose.

Nylon and kindred quick-dry fabrics save the life of the traveler. Nobody carries a trunk any more. Two suitcases is all that can go on this trip to Africa. Since the first leg is by jet to Paris, the Air France line sent the ladies a light flat bag. Entirely unsuitable for a reporter—it has only handles, not deep enough to go on the arm, and no strap for the shoulder.

A reporter who must carry a typewriter, even though it be the lightest, takes one hand; the big pocketbook can be slung on the wrist of the same hand; the flight bag with the strap can be slung on the shoulder or on the back—that leaves the free hand to hold on to railings, and so forth. So, the pretty, white Air France bag will stay at home for less arduous traveling and an old Pan-Am bag left over from days when they had straps as well as handles, will go with me. It's a pity the expensive public relations people who think up these bags, do not consider the practical angles.

The new immunizations are like a magic cloak, they wrap you in safety in the midst of infection. The malaria which used to be so deadly, a lifelong curse, can now usually be prevented. The medicines now do not turn you yellow as the atabrine did in the World War II days. There is a brand new pill now, take it twice a week while in malarial areas—take one before you leave, to start off right. It's expensive—treasurer of my company will drop dead at sight of the bill, and I shall tell Senator Kefauver about it—he is having a Senate investigation of the high price of the new miracle drugs.

However, it is what the public health station here says take; it is what the White House requires of reporters who travel with the President. So, that's what I take. Malaria is not something to play with and the magic cloak is worth any amount of money.

There are shots for typhoid and paratyphoid, tetanus, plague, typhus, yellow fever, smallpox. There is antibiotic cream in a tube, in case you skin your knee or get a dirty little cut. Put on the cream, cover with Band-Aid, trust to the shots.

There is the preventive for dysentery, taken all the time; and something new if you unfortunately get it—this also required by the White House—and given at the Capitol to Members who travel. There is paregoric for the pain of dysentery if you get it, before the cure takes hold. There are two kinds of pills for colds and sore throats, the one for the sneezing, the other for the virus and sore throat infection. And the series of antiflu shots including Asian.

In traveling for news it is not just the danger and the discomfort of illness—it is that it upsets the schedule—the plane reservations, the hotel accommodations, the appointments to see important people. Once upset, there is nothing to do but cut out that part of the trip and take it up at the next point—you simply cannot get the reservations and the appointments without another long walt.

other long walt.
On this trip I will be traveling with a group of editors and publishers of small papers, a treat for a reporter—they have such different viewpoints. Many of us have been

together on similar trips, and that will be pleasant—we have learned all their sharp corners and how to avoid them—and vice versa. Paris will be cold; Khartoum has average temperature in the 80's. There will There will be the battle for bottled be rain. water, the change of currency every few days. The horrible decision to give up seeing something, in order to write what you have just seen. It's no good to the paper to have you go places unless you tell about it. There is the wrestling with mailing, journeys to the post offices—with an interpreter

And there is the wonder of new thingsdifferent people, with different ideas—this Africa is on the move, the people are simply swelling with new ideas, new demands, new rainbows of independence and health and education—they long for education. They make letters in the sand when they have no paper. They make you ashamed that we take so lightly all the things we have. They make you a little envious because the world is just opening up to them-a new world, and people on the move.

[From Inside in Washington, Feb. 26, 1960] STATE DEPARTMENT BRIEFING INDICATES IMPORTANCE OF TRIP

(By May Craig)

Flying is a chancy thing-torrential rains made us 2 hours late leaving, but the jet for Paris telephoned it would wait. All day this group of small-paper and radio-TV editors and publishers have been at the State Department being briefed. The attention given to us by the State Department is evidence of the importance they place on Africa, the newest continent to come into the light of the modern world. briefed by officials of African Affairs, Northern, Middle and South; by the Office for Economic Affairs; the State Department's United Nations Adviser for African Affairs; the U.S. Educational Exchange program; the U.S. Information Agency for Africa; the International Cooperation (mutual security) program for Africa. Andrew Berdin, Assistant Secretary of State for Information, who does the briefing (with White House News Secretary Hagerty on the President's trips) talked to us for more than a half hour.

"This group is important," said one. "How you look, how you dress and talk, comport yourselves, will be the image of the United States for the Africans you meet." This was Edward V. Roberts of the USIA for Africa. One of the most invaluable of our informants, he got at the heart of things, not just statistics, important though they be.

He said we must be prepared for suspicion. The Africans fear we may be setting up some new form of colonialism, and they think we neglect them, for the Europeans. They mistrust all whites. "And when you see how poorly they live, remember how far back they had to start. Their two great concerns are for independence and educa-They do not think of the world as divided by religion or ideology, or as East and West—but as the 'have' and 'have not'

They want to raise their standard of living—and they want to be recognized as human beings, as good as anybody else, he said, not as an inherently inferior race. They want the white man to admit it and show it. In all this we must not get sentimental about the Africans; they have their faults which must be balanced with our help in progress.

And progress they must-it is important to us that they do-on the side of freedom. It is an odd thing that in resenting the slavery and subjection imposed upon Afri-

cans by the whites-they do not seem to resent the slavery imposed on them by their own tribal chiefs, who sold them to slaversand that many of the slavers were Arabs.

Perhaps this is because the whites imposed colonialism on them. Nor do they seem to recognize the Soviet colonialism as such. As one official experienced in African affairs told me: The image they have of the United States is of a strong, rich country that has an extreme racist policy. We know that extreme racial prejudice in the United States is the exception, but that is always what the African hears about. Little Rock riots, for instance.

The educated Africans—and many of them were educated in England, France, the United States-know better, and one of the State Department men said that some of the African newspapers when they hear of an incident of trouble when a school opens with token integration, will ask U.S. officials how many schools open integrated without incident; or how many, all over the United States never had segregation. That is great progress.

As to the violent incidents in Africa by blacks against whites, young nations, revolutions, are usually bloody. The French revolution and the guillotine was bloody enough in the Reign of Terror which lasted for years. The African tribe, without the long history of refinement that France had, cannot be expected to have their revolution with frills and ribbon bows. Nor should we expect it.

An African friend of mine quoted: "That tree grows best which is watered by the blood of tyrants." (Thomas Jefferson.) The suspicion of whites by the blacks, is at the base of their neutralism, one of the State Department political analysts told us. And reminded of the years when the United States was neutral too, and George Washington warned against entangling alliances. This present attitude is not necessarily unchangeable; it will adjust as time goes on. depending somewhat on the attitude of the Western free world toward the struggling

Why did the Gannett news papers and broadcasting stations send their corresponddent to Africa? Because the world is small today; there is a battle that may be Armageddon going on. We need friends and allies. Africa is an immense continent, with great resources, human and mineral. It is well that we should have them on our side. And the first requisite between friends is that they should understand each other.

The Need for Effective and Meaningful Leadership in the State of Georgia and Elsewhere

> EXTENSION OF REMARKS OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. NIX. Mr. Speaker, by unwavering faith in the inherent greatness of the American character and in the passion for justice possessed by most Americans. has developed in me a reverential regard for those Americans who have come forth from time to time giving direction and leadership to the people of our country in times of tribulation and peril.

Today our Nation has come to its moment of judgment; men of all races and countries know of our might. In every corner of the globe the just, as well as the unjust, are aware of the circumstances of our birth as a Nation and of our heritage of equality, justice, and morality which flows from that event. Many sober-minded men and women of good will in our country know of our imminent peril but have maintained a troubled silence and wishfully hoped that our country would somehow choose to follow the high road to greatness. At the same time a vociferous minority misrepresents the thinking of the majority; distorts the meaning of democracy; creates a U.S. image of intolerance and arrogance; paves the road to our destruction and blithely seeks to lead us.

Mr. Speaker, to those millions of Americans, who in these times of tensions and difficulties have fervently hoped for constructive leadership, I am happy to say that in a prepared speech for delivery before the Seventh District Democratic Executive Committee at Rome, Ga., released Saturday, May 7. 1960, 11 a.m., one of our distinguished colleagues, Representative ERWIN MITCH-ELL, has drawn the blueprint for leadership and has charted the course for progress. It is particularly significant and encouraging to me and millions of other people in our country that the statement referred to above has come from a gentleman who is a citizen of the State of Georgia. It is a matter of the gravest importance to note that the speaker had the courage, the analytical ability, and the vision to call to task the present leadership of his party in his State and southern leadership in the Nation and to emphasize the fact that this type of leadership is not reflective of the true objectives of a democratic government.

Mr. Speaker, I share the hope of the distinguished gentleman from Georgia that the time is upon us when the citizens of that State must rise up and demand that those who are selected to lead and to express the will of the constituency, do so in terms reflective of the Constitution of the United States, decisions of the courts, as well as in terms which give assurance that the United States of America, in truth, believes in the dignity of mankind.

Mr. Speaker, I recommend that the thoughts expressed in Mr. MITCHELL'S speech are worthy of emulation by his colleagues from the State of Georgia and by men of high principle everywhere. Lastly, I suggest that the directors of the Voice of America program make available to the peoples of the uncommitted countries of the world this address delivered by the distinguished gentleman from Georgia:

REMARKS OF REPRESENTATIVE ERWIN MITCHELL PREPARED FOR DELIVERY BEFORE SEVENTH DISTRICT DEMOCRATIC EXECUTIVE COMMITTEE AT ROME, GA.

We are gathered today to set the rules and regulations for the primary in which the next Democratic candidate for the U.S. Congress will be nominated. This is an exclusive meeting, this is a meeting of Democrats. By our very presence at this occasion, we put the world on notice that we are not Republican nor Dixlecrat in our political philosophy. Each of you by virtue of acceptance of appointment to this committee has thereby made himself an official voting representative of the Democratic Party of Georgia and the United States. This being so, I feel it timely that we talk about the importance of Political parties, that we talk about the South's attitude toward the Democratic Party and that we discuss the caliber and attitude of political leadership that we in Georgia and the remainder of the South have today.

In America we have by our own free choice elected to operate under what is known as the two-party system. Every Member of the U.S. Congress is sent to that body under the label of Democrat or Republican. Is party affiliation important? To this I think we all would answer "yes" simply because at the State and national level it is imperative to have party affiliation in order to be elected. But the prime question is this, why is party affiliation important? There are many, many answers to this but most fundamental and most important is the fact that only by men and women of kindred thought joining together in a political organization can there be the unification and strength essential to the presentation and implementation of an effective course of governmental action. This is, of course, the legislative program and the platform which a party adopts and which it believes to be in the best interest of the Nation. Therefore, we who have vol-untarily cast our lot with the Democratic Party have thereby manifested our generalnot specific-but our general approval of the Political philosophy of the Democratic Party of the United States. It is essential that if the course which our party has chartered for Our country is to be effective that it have the support not only of you and me as officials of the party but the rank and file membership as well. Only in this way can the visions which emanate from collective thought become realities through legislative and executive action. The things I have said about the system of party are basic and re-Quire no further amplification, but it does emphasize that when any candidate seeks to run as a nominee of his party he thereby signifies that that particular party's ideas and goals most closely approximate his own. This being so, it is a source of amazement that we constantly return to office as Democrats, elected officials who have established the practice of berating our party, its leadership and its principles. It is absolutely astounding that we permit these men and women to bear the Democratic badge when they at every opportunity, through voice and Vote, join with the opposition party. I can say this because I believe in the Democratic Party. I can say this because I have not and will never be a part of the sham and hypocrisy that permeates the ranks of the Democratic Party in the South. And when I say this I am talking about political leader-ship both State and national throughout the South. May the day be forthcoming, and I say to you with the strongest conviction of which I am capable that this day will be forthcoming, when we Democrats will nominate and elect Democrats and will send scrambling those who use our party only as an expedient avenue to public office.

These wonderful 3 years that I have been permitted to represent you in the national Congress have taught me many things, and among the foremost is that the false, styled Democrats from the Southland do more harm to our region than any group of northern Democrats and Republicans could ever do. This small group of men and women, and thankfully it is small and will continue to grow smaller, is one of the major obstacles in the path toward unprecedented economic growth, development, and prosperity in our region. These are the people Who through their hue and cry have with a great deal of success instilled in the minds of Georgians and other southerners the false belief that the remainder of the Nation literally hates us. These are the ones who constantly cry out that northerners seek to crucify us, to insult us, to make whipping boys, or the crystolic seeks whipping boys, or the crystolic seeks whipping boys, or the crystolic seeks with boys of us. I have traveled throughout our

great Nation and I have never found this to be so. I have many friends in the Congress from all over the United States and I know that not to be their sentiment but that on the contrary the prevailing sentiment is that the South is a part of the United States just as is the West, North, and East, and that our Nation is no stronger than its weakest section. These political leaders who deem themselves the preservers of our way of life might well be called the destroyers of our future. These people through their neg-ative approach and with the help of a substantial portion of the southern press have sought to convey the impression that we in the South are the last bastion of freedom in our great Republic. This we know to be untrue. These same thought molders have developed the negative and defeatist attitude that the remainder of the Nation stands alined against the future growth and progress of the South. This we know to be untrue. Our fellow Americans regardless of where they come from stand ready to join with us for our mutual benefit if we would only let them. But the attitude of many of our political leaders closes the door to this prospect. They say we are suspicious of you, we don't trust you, and we will not cooperate with you. This pessimistic attitude has caused us suffering in many ways. Each year the influence of the South in Washington is being lessened. Southern opposition to the genuine needs of our metropolitan areas has lost support for the farm programs that are so vital to our economy. This same untenable attitude has led all public education in our State to the very brink of destruction. It warns of Federal domination, it shouts Federal encroachment and control, it says on the one hand "stay away Federal Government and let us operate our schools as we see fit" and then on the other hand it says to you and to me in the local school district that you cannot have the freedom of choice to determine locally what you desire done with your schools. This same leadership screams to the heavens shouting "States rights" when the Congress enacts legislation to insure the right of vote to every qualified American regardless of where he may live and at the same time is responsible for legislation that takes away from you the right to vote for the Democratic nominee for President. How many of you realize this? How many of you recognize the fact that when we go to the polls in November of this year to elect the President of the United States that here in the State of Georgia if you desire to vote for the Democratic nominee you will have no opportunity to do so? Our only opportunity will be to vote for a slate of unpledged electors who can cast the electoral vote of our State for whomever they may choose and without your and my concurrence, advice, or instruction. The same leadership that says there is no need for more legislation to insure the privilege of vote in Georgia is the very same leadership that is responsible for taking away from us the cherished right to cast our ballot for the specific Democrat we would like elevated to the presidency.

Tradition is fine. No one is more proud of his heritage than I. No one loves Georgia and the Southland any more than I but I am afraid that by and large our leadership has been guilty of too much tradition and not enough vision. This is the age of rockets and nuclear power. What is our past we will continue to revere and will continue to be enriched by it, but we must come of age politically. We must elect men to office who have a full consciousness of America's great reservoir of progress that is awaiting to be tapped. While we should continue to treasure the past and gain experience from it, we should no longer live in it. We must have leaders who are living in the present and are looking to the tomorrow.

These are my words for today. These are some of the impressions I have gained as your Representative and I pass them on to you with the deep conviction that only through affirmative and realistic leadership will the State that you and I love so dearly ever achieve its full capability. It is my hope and prayer that the Democrat you and I send to Congress shall have these qualities.

Asian Cultural Exchange Foundation

EXTENSION OF REMARKS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Thursday, May 12, 1960

Mr. SCOTT. Mr. President, the Asian Cultural Exchange Foundation, Inc., is bringing to the students of certain colleges and high schools interesting exhibits, featuring varying periods of Asian civilization. Increased understanding of Asian background and culture will become continually more useful to Americans. The foundation is to be commended for its valuable contribution.

I ask unanimous consent that an exchange of correspondence regarding the purposes of the foundation be printed in the Appendix of the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

SCHOOL DISTRICT
OF THE CITY OF BERKLEY,
Berkley, Mich., April 20, 1960.
ASIAN CULTURAL EXCHANGE FOUNDATION, INC.,

Asian Cultural Exchange Foundation, Inc., Chevy Chase, Md.
Gentlemen: The Asian cultural exchange

GENTLEMEN: The Asian cultural exchange program was discussed at the last meeting of the Berkley Board of Education.

We are interested in obtaining all the facts pertaining to this program and would appreciate having this information sent to us as soon as it is convenient. I presume that you have printed literature on the objectives of the program, types of membership, fees or costs, etc.

Sincerely yours,

M. P. ANDERSON.

Asian Cultubal Exchange Foundation, Inc., Chevy Chase, Md., April 28, 1960.

Mr. M. P. Anderson, Superintendent of Schools, School District of the City of Berkley, Berkley, Mich.

DEAR MR. ANDERSON: Thank you for your letter of April 20. In this connection I would like to acquaint you with the background of the Asian Cultural Exchange Foundation, Inc.

Returning to the United States in 1938 after spending 20 years in the Far East, I was deeply disturbed to find how little the average American knew about Asia and its people—which was equally true in reverse. I found this situation disturbing because even then it was apparent to me that a dynamic and unbelievably rapid evolution was taking place in Asia which would have most important and far-reaching effects on the world at large and on the United States in particular.

One thing was clear: If we are to avoid disaster on a major scale, some method must be devised to build a bridge of understanding between these 1,300 million Asians and the people of this country. As I considered

this problem and the conduct of people during the last two wars, the conclusion became inescapable that the solution could be found only through the "adults of tomorrow" of both continents.

One approach, therefore, was to start a system in our precollege schools which would effectively acquaint our "adults of tomorrow" with Asia and its peoples and open their eyes, minds, and hearts to the won-derful heritage of this oriental culture, its qualities, both good and bad, and the origins of these qualities. In short, to lay the foundation for a better understanding of each other.

It seemed to me that this could be achieved best by placing at the disposal of the school system examples of Asian artifacts and craftsmanship, reference libraries on Asia, etc., all of which could be used in classrooms in daily studies during the most impressionable years of the students' lives and thereby become integrated into the curriculum.

It is my ultimate goal to see each grade and high school throughout the United States equipped with comprehensive collections of Asian artifacts. In undertaking this objective, I was not unmindful of the magnitude of the project; the number of schools to be equipped; the problem of obtaining the necessary financial support; the difficulties in persuading the educators responsible for curriculums to introduce studies on Asia and the accumulations of the artifacts themselves.

Before approaching others to whom such a project might appeal, I was concerned with the necessity of demonstrating the practicality of the plan itself. Therefore, I decided to take a long-term and cautious approach. Accordingly, in 1939, I established a private organization for the importation arts and crafts from Asia and painstakingly built up what has been widely recognized as, perhaps, one of the most diversified inventories of Asian artifacts in the United States.

Finally, in June 1953, I found that experience had verified the feasibility of my original plan and, with the warm and enthusiastic support of the founders, whose names you will find in the enclosed brochure, the Asian Cultural Exchange Foundation was born. It was decided that with the limited funds available (although working with a rich and diversified inventory of Asian artifacts), the pattern of our future endeavors should first be established here in the Washington area. After conferences with the District of Columbia Board of Education and with their complete support of the project, the first comprehensive collection was presented by our foundation to Eastern Senior High School on December 10, 1953.

The impact on both students and teachers was most impressive. The essays and compositions written by the students and the opinions of the participating teachers were gratifying beyond our most optimistic expectations.

So far we have presented collections to six high schools in this city and one in Baltimore; we have loaned collections to numerous teachers' colleges, universities, etc., as well as a great number of community and church groups, etc.

Our goal is to arrange for individual communities to finance the cost of such collections by the community itself. For example, the Anacostia National Bank presented \$1,500 to our foundation with the request that we assemble a comprehensive Asiatic collection and present same to the Anacostia High School, which we did.

Thus, if a similar plan can be used throughout the Nation, the Asian Cultural Exchange Foundation will be in a position to remain independent and nonpolitical.

In your community there are public organizations, such as banks, insurance companies, department stores, service clubs, or any public-spirited individual or group of individuals who, no doubt, would like to see the children of their community better prepared for meeting the problems of the near future in connection with Asia, which without any doubt is the most important problem of today.

A number of Asian embassies, particularly those of Indonesia, India, Pakistan, and Burma, have given us every encouragement and assistance and have informed their respective governments of the people-to-people program of our group to build better understanding between their countries and the United States.

We are not overlooking the necessity of acquainting our Asian adults of tomorrow with the character and qualities of our own people. Contacts are being made with schools in various parts of Asia and, as soon as we have sufficient funds, this phase of our work will be more active. Numerous letters have been received from various Asian countries urging us to proceed with this desired objective.

We cooperated in the organization of the Oriental Club at Mary Washington College, Fredericksburg, Va., which is very efficiently in acquainting the students of the college with the Orient.

I might add that the Treasury Department has classified our foundation as a nonprofit and educational organization. fore, donations for our work are tax exempt to an amount up to 30 percent of the taxpayer's adjusted gross income and will cost the donor only a proportion of his gift.

I am enclosing a brochure and leaflet that

have distributed recently among thousands of adults.

Trusting that the above will give you a clearer conception of what we have done, what we are doing, and what we hope to accomplish-and what you can do-I remain. Sincerely yours,

S. KRIGER, President.

What is the Asian Cultural Exchange Foundation?

A nonprofit organization established to promote interest in the peoples of Asia through Asian arts and crafts.

How will the Foundation work?

Primarily, it will establish collections of typical Asian arts and crafts in high schools, colleges, libraries etc., these collections to be the property of the recipient.

In selecting the articles making up the collection, the Foundation works with the teachers at the school in order that the collection may be most usefully tied in with classes in art, workshop, geography and historv.

At whose expense?

Firstly, within the limits of the Foundation's resources subscribed by its founders.

Secondly, its services and counsel are available to anyone wishing to contribute to the same purposes as the Foundation's.

Why Asia?

In Asia lives half the world's population, Asia is of the utmost political and economic importance to the United States; yet it is an area little known and poorly understood by Americans.

Who makes up the Asian Cultural Exchange Foundation?

The founders are: Simon Kriger, Herbert J. Miller, Jr., Lawrence W. Wadsworth, Allen Haden, Perry Patterson, Gabriel Penners, Robert H. Reed, Livingston L. Blair and John Paul Collins.

Who can join?

The Foundation hopes that public-minded individuals and organizations will associate themselves with the purposes of the Foundation in Washington, as well as in communities throughout the United States. Correspondence is invited.

After 54 Years of Weeklies Editor Is Still Going Strong

EXTENSION OF REMARKS

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. EVERETT. Mr. Speaker, there appeared in the Commercial Appeal, one of the Nation's outstanding newspapers, on Monday, May 2, an article written by William A. Klutts, a fine newspaper re-porter of Ripley, Tenn., about Leslie Sims, of Alamo, Tenn., which is in our congressional district.

As you read this article you will notice that Mr. Sims has been in the newspaper business for 54 years. He is very courageous and publishes three fine newspapers in Crockett County.

This article follows:

OUR HOME FOLKS-AFTER 54 YEARS OF WEEK. LIES, EDITOR IS GOING STRONG

(By William A. Klutts)

ALAMO, TENN., May 1.—Leslie Sims, 68-year-old dean of west Tennessee weekly editors and publishers, has put in 54 years at his profession but still finds "something new every day."

"Look at this," he says, pulling an velope from the morning mail stack. a 2-page, anonymous letter, submitted for publication, about family troubles. First letter of that kind I ever got.

"It can't be published, of course, but the rub is that whoever sent it enclosed a dollar. Now how can I return the money?" chews his cigar thoughtfully and decides,

"Better put an item in the column."
The column, "The Editor's Say-So," occupies the left-hand column of the front page in Sims' three weeklies—the Tri-County News, of Friendship; the Crockett Times, of Alamo; and the Crockett County Sentinel,

It has been appearing, under this and other names, for more than 4 decades. Whatever is said there escapes the notice of very few Crockett Countians.

FOUNDED IN 1909

Their problems, small and great, have been Leslie Sims' problems since 1909, when he came back to the county of his birth, after 3 years' experience in printing in Hazel, Ky. With his father, a retired physician, and brother, Paul, he founded the Progress at

Paul joined the Brownsville States-Graphic in 1917 and has been its editor since 1925. yielding only to his brother in years of serv-

Leslie took over the Tri-County News in Friendship in 1912, shortly after it was founded; began publishing the Times at Alamo the day before President Franklin D. Roosevelt was inaugurated in 1933, and added the Crockett County Sentinel, a venerable publication dating from 1873, at Bells, in 1942. All three papers are published from an Alamo plant.

Sims launched his first paper with a cap ital of \$150, buying only a few fonts of type and a Washington hand press. He has seen costs of newspaper operation mount to figures which would have staggered old-time printers, but he keeps pace with the times and has in his shop only a few items of the equipment he had in the early days.

DEPRESSION TOUGH

"The depression era was pretty rough." he recalls, "when we seldom saw money offered for subscriptions. We took in all kinds of Produce. I had a big basement at home, and I had more to eat then than ever before or

"I became a pretty sharp trader. date running for office paid 20 gallons of sorghum to announce his campaign, and I traded the sorghum to my grocer. He took it to Missouri and traded it for flour. Then I sold him an ad to sell the flour.

Mr. Sims, a charter member of Alamo Rotary Club and past president of the West Tennessee Press Association, was Alamo correspondent for the Commercial Appeal for more than 40 years. He is now a correspondent emeritus.

So diligently did he seek out news in the depression days, when every item meant much to the Sims budget, that a protest was heard from the town of Henry. He was told he was reporting so many obituaries from the town of about 300 people it was acquiring an unhealthy reputation.

TAKES LIFE EASY

When two masked men attempted to rob a bank across the street from Sims' office in 1931, he had a tip they were coming and quickly telephoned the Evening Appeal a running description of events while one of the robbers fell before gunfire from officers.

"We were right on top of that story," he recalls. It won him banner headlines.

Nowadays, Sims tries to take life easier than he used to, but he's still the boss of all his newspaper enterprises. He's had help from his children—Rebecca and Bobby—and Rebeca's husband, R. I. Green, now works in the shop. But Leslie Sims supervises every operation.

"And my wife supervises me," he jokes. She's the former Lucille Bell of Friendship.

Bobby, a naval lieutenant, junior grade, Who was graduated from Union University at Jackson before he won a Rotary Foundation fellowship to Australia, has just extended his Navy obligation a year to permit his leaving Washington for duty with the 6th Fleet Overseas, so he won't be home for a while yet.

Sims doesn't know whether Bobby will want to step into his shoes, but he isn't hurlying a decision. He feels that is Bobby's choice to make, alone.

And besides, he's busy. Got three papers to get out, and Thursday coming on like sixty. Be here before you know it.

But he'll be ready—as he has been for 50

The American Foot Health Foundation Sponsors 36th Annual Foot Health Week, May 13-20

> EXTENSION OF REMARKS OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, May 12, 1960

Mr. JOHNSTON of South Carolina. Mr. President, because of the tremendous interest generated by the focus of attention on the health of the people of this Nation, I call attention to a special event which actually strikes at the very foundations of good health and well being. I refer to Annual Foot Health Week, sponsored by the American Foot Health Foundation.

Foot Health Week will be observed throughout America from May 13 to May 20 to create a greater awareness among adults and children of the importance of early foot care and proper foot health habits.

Mr. President, I ask unanimous con-sent that there be printed in the Appendix of the RECORD a statement prepared by the associate directors of the foundation, Dr. H. A. McAninch, of South Carolina, and Dr. Sidney Hirschberg, of New York.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THIRTY-SIXTH ANNUAL FOOT HEALTH WEEK-1960

Annual Foot Health Week will be observed throughout the Nation from May 13 to 20 to create a greater awareness among adults and children of the importance of foot care and proper foot health habits. This event is sponsored by the American Foot Health Foundation-a nationwide nonprofit research organization—the only one of its kind in the United States serving this country in research and in public foot health educa-

The significance of the vital need for more attention to the human foot on the part of everyone is probably best highlighted by a statement of Dr. Sidney Hirschberg, president of the American Foot Health Foundation, in which he said:

Seven out of 10 of all persons in the United States have something the matter with their feet and 75 percent of our school children have correctible foot defects in terms of foot disorders. If I were asked to name one outstanding cause of foot troubles, I'd say it would be a matter of plain neglect. Healthy feet are the foundation of good health-when you have a foot ailment, your entire health and efficiency are impaired. This is why during Annual Foot Health Week, the foot doctors, the chiropodists, podiatrists, M.D.'s urge every man, women, and child in America to give more thought to the foundation upon which they stand, their own two feet. We must all awaken to the inescapable fact that foot ills do not usually correct themselves. A little attention at the beginning of trouble may prevent lifelong suffering and disability."

The theme of Annual Foot Health Week

this year is "Health Check-up Complete?-Don't Forget Your Feet." In every State, this educational program is being joined in a cooperative effort by the medical profession, especially among the doctors of surgical chiropody, podiatry and orthopedies; and educational and community groups concerned with the general health and welfare.

The foundation, primarily concerned with prevention, endorses the following sugges-tions to parents for better foot health for their children-from the American Podiatry Association:

Watch growing feet. Replace shoe with a larger size as soon as indicated. Teach children to toe straight ahead when walking. Toeing out weakens ankles. Discard short stockings that crowd growing feet. Bathe feet daily in warm water, brushing the toe nails. Cut toe nails straight across even with the end of the toes. Never cut corns or calluses.

Keep the heels of shoes straight. Provide a good nutritional diet. Feet need the right food to grow properly. Practice dally hy-giene to guard against athlete's foot. Once the disease is contracted, do not attempt treatment without professional advice; the dangers of infection are too great.

Seek professional care as early as possible for knock-knees, bow legs, or pigeon toes. These defects may be the results of faulty feet. Many such conditions can be corrected readily if proper care is given in the beginning stages. Have children's feet, and your own, examined at regular intervals by a podi-

atrist-chiropodist (your foot doctor).

In contemplating the future of the feet in modern civilization, one might presume that the ease of transportation and the indulgence of today's sedentary living—with man's tendency to walk less and less—is relegating the human foot to comparative oblivion.

However, one fundamental fact in human activity which demands recognition is that even in this day of the space age, when man is standing on tip-toe reaching for the moon and stars with tremendous rockets roaring from their platforms, and the planets being encircled by satellites—nothing can take the place of his one indispensable form of personal locomotion—the human foot.

Twenty-fifth Anniversary of REA

EXTENSION OF REMARKS OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. BREEDING. Mr. Speaker, this week marks the 25th anniversary of the founding of the Rural Electrification Administration.

The Congress can be proud of the fact that it had the foresight and wisdom to create this agency 25 years ago. I can think of no other single piece of legislation that has meant more to millions of farm families throughout the Nation.

I personally can testify to just what REA has meant to farmers. I still live on a farm in southwest Kansas. We now enjoy electric and telephone service, both of which were made possible by the Rural Electrification Administration and its younger brother, Rural Telephone Administration. These two modern conveniences have made farm life much more pleasant and satisfying. They have, I am convinced, been a major factor in persuading many families to remain on the farm.

It is significant, I think, that very few if any Members of this or the other House would seriously consider a proposal to abandon our great rural electrification program. There may be disputes over the administration of the program or details as to its financing, but as to the program itself and the philosophy behind it, there is almost no dispute.

The program has worked. The fact that 95 percent of the farms are now electrified is proof of this. Farmers have been able to install many laborsaving devices and machines. Electricity has taken a lot of the drudgery out of farming. It has literally and figuratively brightened the lives of farm families.

Also, it is interesting to note that on this 25th anniversary not one loan made by the Government to finance a cooperative electric system is in default. In fact, repayments are ahead of sched-

I am proud of the cooperatives which have been built to operate electrical and telephone systems. These cooperatives are member owned. They are in business to provide a service to farm families.

The success of these institutions is due in a large measure to the dedication of the men who serve on the boards of directors and make the actual decisions as to how they will operate. This is a labor of love on the part of these men and women. They want to provide their members with the best possible service at the lowest cost consistent with good and sound business practices.

Thanks to the REA and to the thousands of dedicated men and women throughout the Nation who devote many hours each year to running the locally owned cooperatives, the lives of our farm families have been greatly improved and enriched. The REA has helped make America a much better place in which to live for millions of our people, by bringing the American standard of living to the American farm.

I am happy to salute REA on its 25th anniversary.

Corpus Christi Caller-Times Says That "Right To Disagree Is Our Greatest Heritage"; "Go Along To Get Along" Is a Cynical Slogan

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Thursday, May 12, 1960

Mr. YARBOROUGH. Mr. President, in this day when so much stress in business and political life is placed on the virtues of conformity and compromise, we would I believe do well to consider the invaluable role of the dissenter in a free society.

Our freedom-of-speech guarantees would mean little if men are afraid to speak their convictions because of a fear of the social forces of conformity.

An extremely thought provoking editorial on the subject was recently published in one of Texas' consistently best daily newspapers, the Corpus Christi Caller-Times.

I ask unanimous consent to have printed in the Appendix of the Record the editorial from the Caller-Times of May 8, 1960 entitled "The Dissenters."

There being no objection, the editorial was ordered to be printed in the REC-ORD, as follows:

THE DISSENTERS

The way of the dissenter has never been an easy one in any land or in any time. But in America the role of the dissenter becomes more difficult year by year, as the virtues of conformity are stressed in school and workday life.

To dissent, of course, not only has the meaning of "thinking apart," but also of "being" apart. It involves a deliberate choice of an unconventional, unpopular or novel alternative. At one extreme it takes eloquent form in the dissenting opinion of a U.S. Supreme Court Justice. At the other extreme it represents the rebellion of a child against discipline. It is not absent even today in the Halls of Congress, although too frequently it is the hallmark of an unsuccessful legislator, as far as getting bills passed is concerned.

The arguments for conformity in an increasingly complex and populous society are cogent ones. There could be no effective industrial economy nor democratic government, for instance, for 180 million rugged individualists. On the other hand, the American intellectual tradition must reject the cynical slogan of the professional legislator: "To get along go along."

lator: "To get along, go along."

The call to become a "mass man" is a most seductive one. Only by being "cooperative" and "agreeable" can the average person hope to achieve status and acceptance by the group. If he rebels, he becomes a "square," a radical, perhaps even an enemy of the people, a social outcast, a "Red," or worse. Conversely, by becoming a mass man he experiences, in the words of Carl Gustav Jung, "A gentle and painless slipping back into the kingdom of childhood, into the paradise of parental care. * * * Where the many are, there is security; what the many believe, must of course be true; what the many want, must be worth striving for."

It is a tribute to the toughness of the human spirit that great dissenters have appeared in most countries to shape, in the end, the course of history, although they may have been rejected, like Gailleo, in their time and even tortured or put to death. For the vigorous dissenter in every free society is an invaluable catalyst. On issues of substance, ranging from religion to astronomy, he offers an alternative.

The framers of our Constitution were much more aware than we are of the importance of free speech when they asserted it as an unalienable privilege in the first amendment. They were well aware that free speech is a two-edged sword: It is at once the chief weapon of the revolutionist and the surest protection against tyranny.

The right, even the need for dissent in a free society, was eloquently expressed by Thomas Jefferson in his first inaugural address in these words: "If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is felt free to combat it." This, surely, is our greatest heritage, the right to disagree.

Meriden (Conn.) Record Comments on "Bad Blunder" in U-2 Case

EXTENSION OF REMARKS

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. KOWALSKI. Mr. Speaker, under unanimous consent I present the text of an editorial carried by the Meriden Record in my home State of Connecticut on the U-2 incident and the handling of it by our Government.

This editorial is another indication of the extent to which the American people are disturbed by the inept way in which this entire matter has been handled.

Following is the text of the Meriden Record editorial of May 11:

EXCUSES, UNLIMITED

The United States has been caught in a bad blunder in the case of the plane and pilot shot down over Russian territory and the Reds are making the most of it. At a time and in a place where the greatest circumspection were indicated, we have been

unbelievably awkward and heavyhanded. Caught in the act, we have handled our responses to the Russian roars with all the finesse of a kid caught with jam on his face.

There is nothing very remarkable about the Russians having caught somebody spying on them; it goes on all the time, on both sides of the fense. There are plenty of Red agents in this country and in Canada, and every so often one of them is uncovered amid a big flurry of publicity, tried, and usually sentenced to prison. We may safely assume that their counterparts exist among our people on assignment in Russia.

But sending somebody in to investigate the weather or anything else over Russian territory in a jet plane, however unarmed, is another and much riskier matter, and one which we would certainly protest if it were to happen against us. Sending a plane across this particular bit of border, about which the Soviets have been notoriously touchy, makes the violation gratuitous. And engaging in this sort of spying in the stratosphere at this particular time, when chances of summit agreement deserve all the odds they can get, is timing so bad as to be unbelievable.

All of which wouldn't matter very much if the Russians were determined, as they seem to have been earlier, that the Big Four meeting be conducted in amity. Premier Khrushchev has his own way of manipulating history and if his calculations had called for warm winds at the summit he would have held off on the cold blast here.

Unhappily, the incident seems to have coincided with Red realization that no real concessions were planned by the West on Berlin and the general German situation, for which Khrushchev was stubbornly hoping. It gives him just the excuse he needs to charge bad faith, stir up public opinion against us, and generally sabotage the summit chances while putting the blame on us. And while he probably could have found his own excuses anyway, there's no need for us to supply them for free.

Government Makes Profit Under Silver Purchase Program

EXTENSION OF REMARKS

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record a statement by industries of the Coeur d'Alene, showing that the Government makes a profit under the silver purchase program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GOVERNMENT MAKES PROFIT UNDER SILVER PURCHASE PROGRAM—STATEMENT BY INDUSTRIES OF THE COEUR D'ALENES, MAY 5, 1960

That hardy legislative perennial, the bill to repeal the silver purchase laws, has again found its way into the Halls of Congress in Washington.

And, as usual, the principal sponsor is Senate Theodore Green, the 92-year-old Senate veteran from Rhode Island. Joining him in proposing the bill are Senator PASTORE, the junior Senator from Rhode Island, and Senators Bush and Dodo of Connecti-

cut. All of these sponsors, it will be noted, are from that small area in the New England States where the manufacture of silverware and silver plate is concentrated.

On the House side, the man carrying the ball for the repealer bill is Representative EDGAR HIESTAND of California. His stake in this matter is a little more difficult to understand since he has no apparent connection with silver-consuming interests. But, apparently, judging from the speech he made in introducing his bill, his concern stems from a fear that the silver aspects of our monetary system constitute some sort of obstacle to his ambitions to reestablish the gold standard, with currency convertibility, in this country.

What the proposed repealer legislation is intended to accomplish is briefly as follows:

1. Repeal the Silver Purchase Act of 1634, and the subsequent amendments of 1939 and 1946, which require the Treasury Department to provide a market at a specified Price, currently 90 cents an ounce, for hewly mined domestic silver.

 Make silver certificates exchangeable on demand at the U.S. Treasury for any other lawful money coined or issued by the Gov-

ernment

- 3. Authorize the use, sale or lease of any silver held or owned by the United States, and
- 4. Permit the issuance of Federal Reserve hotes in denominations of \$1 and \$2. Under existing law the smallest denomination is \$5.

The effect of such legislation would, of course, be disastrous for silver producers because the smaller Federal Reserve notes would invite the withdrawal of silver certificates as a circulating medium, and this action, in turn, would free the large reserves of silver for sale to silver consumers in the arts and industries at whatever price and on whatever terms the Secretary of the Treasury may deem reasonable and advantageous to the public interest.

Under such circumstances silver producers would find themselves in direct competition with the Federal Government in trying to market their production in a free and open world market and they would find themselves at a distinct disadvantage because every ounce of silver in the Treasury reserve was purchased at less than the present world market price of 91% cents an ounce.

What the enactment of this legislation would amount to is nothing more nor less than a raid on the Nation's monetary reserves at a time when those reserves are already badly depleted due to the loss of gold to foreign countries over the past several years as a result of our unfavorable balance of trade. The replacement of silver certificates with Federal Reserve notes would require the issuance of more than \$2 billion worth of this type of paper currency. Such action would put a further damaging strain on our gold supply because Federal Reserve hotes are, by law, supposed to have a 25 percent reserve of gold behind them.

It is interesting to note that Representative Hiestand does not even take this matter of hard-money backing for Federal Reserve currency into account in arguing for his bill. He expresses grave concern over the remote possibility that the Treasury Department might decide to purchase silver up to the full amount required by the Silver Purchase Act of 1934 and in so doing require payment in gold to foreign countries from which the silver is obtained. Yet he completely ignores the imminent danger that is certain to be faced if his bill is passed—that is, stretching the already insufficient gold reserve to such a point that foreign creditors begin to doubt the liquidity of our monetary system and seek to convert their dollar credits into gold. That could be a serious threat to our monetary stability.

Senator Green's speech of introduction contained most of the usual allegations used by silver consumers in attacking the silver purchase laws—that it is a subsidy to domestic miners, that it is unsound monetary practice, and so forth. In fact, in a special burst of rhetoric he classified the silver buying policy as "The most atrocious example of special privilege furthered by law to be found in American history."

He was careful not to mention, however, that the silverware industry for which he was speaking enjoys the protection of a 68 percent ad valorem import duty—one of the highest duties imposed on any imported item in this era of free trade. If silver producers had equivalent protection from foreign imports of silver, they would without doubt be getting a far better price for their production than they can presently obtain either from the Treasury or in the open market.

It is strange indeed that the silver purchase program is so persistently under attack when it is practically the only program under which the Federal Government has shown a profit over the years.

Ever since the beginning of the program the Treasury has been buying the domestic miners' output at considerably less than the monetary value of \$1.29 cents per ounce. Since 1946 the purchase price has been 70 percent of the monetary value, or 901/2 cents an ounce; before that, for about 7 years, it was 60 percent, or a fraction over 71 cents an ounce, and before that, it was even less. The silver producer, however, was paid off in silver currency backed by silver valued at the monetary price. The difference between that and the purchase price was simply confiscated from the producer as seigniorage and put into a so-called "free silver" fund which has provided the Government with its needs for subsidiary coins—dimes, quarters, and half dollars, and since 1946, has been made available to silver consumers for 91 cents an ounce.

Thus the Government has been profiting for years at the expense of the silver producer. The silver consumer has also benefited by the availability of the Treasury source of supply which has effectively kept a ceiling on the world price over an extended period of years when world consumption of the metal has exceeded world production by a substantial amount.

If there are any special privilege laws on the books today, they are those which provide exceptionally high tariff protection for silverware manufacturers and keep the price of silver for consumers at a fairly constant level when all other prices are mounting steadily.

But the silver users are still not satisfied. Apparently they recognize that the dwindling reserve supply in the free silver fund will not be able to offset the supply shortage much longer and they want to get their hands on the entire Treasury silver reserve to forestall the normal price advance that results when production is insufficient to meet the demand.

It is almost inconceivable that Congress would consider such a raid on Treasury

More on New York Times and Salisbury

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. HUDDLESTON. Mr. Speaker, in past weeks I have brought to the at-

tention of my colleagues in the Congress a series of articles written by Mr. Harrison Salisbury and published by the New York Times which, in effect, constitute a scurrilous attack on the city of Birmingham. In this connection, there appeared in the May 10 edition of the Birmingham Post-Herald a most interesting editorial that I think will be of real interest to the Members of this and the other body and, thus, I insert it in the Record under leave heretofore granted:

OCHS' CREED AND MR. SALISBURY

On January 13, 1925, Adolph Ochs, longtime publisher of the New York Times, made a talk to students of the Joseph Pulitzer School of Journalism at Columbia University.

In his talk he said: "A reporter is assigned to a task; he arrives too late or not at all, accepts from another reporter what occurred and writes it as his own observations. Deserving the same censure is an-other who does not take the trouble to confirm his facts; one who gets his own views tangled with the views of the person interviewed; one who fails to give the person affected by his story the benefit of the doubt: still another who needlessly gives pain and disregards, or is perhaps oblivious to the sensitiveness that persons have about their personal affairs; one who, to appear smart and witty, misrepresents or exaggerates; one who is indifferent to the responsibility of his newspaper, who is careless with its reputation for truth and accuracy; one who plagi-arizes; one who is cynical, offensive, discourteous, vulgar or impertinent; one who regards himself as an editor when he should

be a reporter.

"No one can conscientiously represent a decent newspaper and be guilty of any of these offenses against the ethics of the profession, and what is expected of a gentie-

man,'

These are noble words. We would like to see the present proprietors of the New York Times apply them as a yardstick against the reporting of conditions in Birmingham by Harrison Salisbury in the Times.

American Legion Endorses Fossil Fuels
Study in Interest of National Fuels
Policy

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. RANDOLPH. Mr. President, it has been my observation that the American Legion has always anticipated with patriotism and accuracy those areas of our economy which are closely associated with the national defense and the security of our Nation and which need strengthening.

The more than 2,700,000 veterans of World Wars I and II and Korea who are members of the Legion, and the more than 1 million members of the American Legion Auxiliary, have always been aggressive in espousing strength of America's defense and security structure, both in peacetime and in war.

On May 4, 1960, the national executive committee of the American Legion, upon

recommendation of its national security commission, adopted a resolution during its meeting in Indianapolis recommending the support of legislation pending in the Congress which would establish a joint congressional committee to study all of the fuels of the Nation and report as to whether or not a national fuels policy should be established.

This is typical of the Legion's alertness to basic matters of importance to national defense and national security.

The legislation to which the Legion's resolution makes reference is Senate Concurrent Resolution 73, which I introduced for myself and 42 cosponsoring colleagues on both sides of the aisle. It is most gratifying to have the American Legion's support recorded so emphatically on this measure so vital to the key industries and the homes of our country. Because such a study of fossil fuels is so important to both industry and home, it is obvious that the Legion's interest in this legislation is a-valid one which does, indeed, have direct impact on our security and defense posture.

I congratulate the American Legion for its farsightedness and patriotic understanding of the problems of our complex

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the resolution.

There being no objection, the resolution was ordered printed in the RECORD, as follows:

Whereas the adequate defense and security of this country is dependent upon the amount of available fuels of this Nation in the event of war; and

Whereas the manufacture of steel, the operation of railroads, the making of electricity and the other important industries of our Nation are dependent on the fossil fuels; and

Whereas Canada, England, Russia, and several South American countries have established such a national fuels policy; and Whereas all study groups appointed by the

Whereas all study groups appointed by the President; private research agencies; and industry groups have, without exception, urged such a congressional study of the fuels of this Nation; and

Whereas the Federal Power Commission has repeatedly recommended such a study of the fuels and their availability; and

Whereas without such a study of the fuels by a congressional committee on all fuels, gas, oil, coal, atomic energy, there is no criteria upon which to base a fuels policy; and

Whereas there is now pending before the Senate and the House of Representatives Senate Concurrent Resolution 73, signed by 43 Senators of both parties; and House Concurrent Resolution 661 introduced by Congressman Wayne Aspinall, of Colorado; and House Concurrent Resolution 662, introduced by Congressman John Saylor, of Pennsylvania, and other Members of Congress; that establishes a joint congressional committee to study all of the fuels of this Nation and report to Congress on January 2, 1963, as to whether or not this Nation should establish a national fuels policy: Therefore be it Resolved, That the National Security Com-

Resolved, That the National Security Commission of the American Legion at its meeting in Indianapolis, Ind., on May 2 and 3, 1960, do hereby recommend the support of this legislation in the interest of national defense looking toward the study of the fuels of this Nation and the recommending of a fuels policy for this Nation.

Passed by National Executive Committee, the American Legion, Indianapolis, Ind.

Resolution on the Forand Bill

EXTENSION OF REMARKS

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. HOLLAND. Mr. Speaker, I would like permission to insert into the Record the attached resolution of the board of directors of the Croatian Fraternal Union of America, on the subject of the Forand bill.

As you can see this organization is deeply concerned over the fact that 15,000 members of this group are 65 years of age or older and have reached that period of life where retirement begins and their remaining years should be free from worry over illness and distress from their inability to receive proper care.

These 15,000 individuals have contributed much to our way of life and they gave their productive years to help make our Nation the wealthiest in the world as well as the best educated.

It was through their skill, their inventiveness, their ability, their industriousness, and their ambition—these 15,000 and our other elder citizens—that we are capable of going to even greater heights in the future.

They toiled in our mills, our mines, and our factories during their employable years and made our Nation the great industrial giant it now is.

They raised their families and educated them to the best of their ability—thereby giving us our highly skilled workers which we need in today's economy

In the majority of cases it was their sons who joined our Armed Forces and defended our Nation in times of war.

These 15,000—and their contemporaries—made America what it is.

We all know they were never overpaid. They could never speculate in the stock market, nor could they make long-term investments.

They were lucky to have a small mortgage-free home in which to live and a social security pension, to which they had contributed payments over the years they had worked, for their retirement years.

Now, with the terrific increase in the cost of hospitalization and medical care, their small pension is not adequate to give them the care they need in their declining years. They are fortunate if they can feed and clothe themselves on their depleted income.

I feel certain that the majority of Americans, who are today in the social security program, have no objections to the passage of the Forand bill. True it is that its enactment into law would increase their contribution one-quarter percent a month—and that amount would go to assist our present elder citizens—but today's workers, when they reach 65, would be protected, also.

I am positive that our American workers realize that, were it not for those

elder citizens and the contributions over the years, our working conditions, our salaries, our living conditions and our standards would not be where they now

I am sure that most of us today know that were it not for the blood, sweat, and tears of those elder citizens our way of life would be considerably different.

They are not asking for charity—for a handout—for relief.

They are asking for benefits they earned—and we, of this generation, have a moral obligation to see that they receive them.

There should be no hesitancy on the part of any Congressman to sign the discharge petition and get the Forand bill on the floor for a vote.

The resolution follows:

At the semiannual session of the Supreme Board of Directors of the Croatian Fraternal Union of America, meeting of Saturday. April 9, 1960, the following resolution was duly adopted:

"Whereas nearly 15,000 members of the Croatian Fraternal Union of America are over the age of 65 years and in many cases in need of health and hospital care beyond the limited means of the society; and "Whereas the Forand bill (H.R. 4700) in-

"Whereas the Forand bill (H.R. 4700) introduced in the House would amend the social security laws so as to provide against the high costs of hospitals, nursing homes, medical and surgical care for persons eligible for old-age and survivors' insurance benefits and for other necessary benefits; and

"Whereas U.S. Congressman AIME D. FORAND has filed a petition asking the House to bypass the committee and bring this measure to a vote of the entire House for the good of the senior citizens of the United States. Now therefore he it.

States: Now, therefore, be it

"Resolved, That the Supreme Board of the
Croatian Fraternal Union endorse the humanitarian principles contained in the Forand bill and urge their acceptance for the
future commonweal of the United States
of America; and be it further

"Resolved, That all U.S. lodges and individual members of the Croatian Fraternal Union send a copy of this resolution to the Congressmen representing their districts with an appeal that it be made a matter of public record in the Congressional Record."

This will certify that the foregoing resolution is a part of the minutes of a meeting of the Supreme Board of Directors of the Croatian Fraternal Union of America, as above stated.

JOSEPH BELLA,
Supreme Secretary, Croatian Fraternal
Union of America.
PITTSBURGH, PA., April 26, 1960.

Erie County Young People Write Outstanding Essays on "My Duties and Responsibilities as an American"

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. KEATING. Mr. President, it was my pleasure recently to welcome to Washington four winners of the 31st Annual Americanism Essay Contest sponsored by the Eric County American Legion, Legion Auxiliary, and the Buffalo Evening News. These outstanding young people were selected after stiff competition for their essays on the subject of "My Duties and Responsibilities as an American."

Anyone who reads these essays cannot help but have confidence in the future of America. The firmness of the convictions stated and the obviously deep faith of these young people in the virtues and future of our Nation is extremely heartening.

I cannot praise too highly the organizations which sponsored this important contest. By stimulating interest in the traditions and obligations which go with being an American, they are contributing substantially to building a bright and secure future for our Nation. I salute the Eric County American Legion and Auxiliary and the Buffalo Evening News for their commendable leadership in this undertaking.

Mr. President, I ask unanimous consent that 12 winning essays in this contest be printed in the Appendix of the Record

There being no objection, the essays were ordered to be printed in the Record, as follows:

[From the Buffalo Evening News, Apr. 5-11, 1980]

WINNING AMERICANISM ESSAYS

(By Shirley Ann Turner, 17, Grover Cleveland High School, winner of girls' division of the Buffalo public high school classification. (Harriet M. Waters, teacher.))

In such a wonderful country as the United States, we should fulfill our duties and responsibilities as Americans in return for the freedoms and luvusless as a state of the state of the

reedoms and luxuries we enjoy.

As a teenager, it is my responsibility to improve my scholastic ability and my personal thoughts. Then I will be able to make accurate decisions when an important crisis arises. I respect my parents' authority and am loyal to those who govern me. It is es-Sential that I take part in all activities that help make me a well-rounded individual. I participate in the life of my community and am able to put myself in a position of leadership whenever necessary. It is my responsibility to use wisely the talents and op-Portunities given me. I am developing de-sirable attitudes, such as honesty, courage, dependability, and high ideals of service to my school, home, and community. It is also important that I set a good standard of conduct for others to follow.

In a few years it will be my duty to investigate political candidates and situations so I will be able to vote intelligently. I must be able to make the proper provisions for insurance, income tax, savings, retirement, a will, and serving jury duty. I must raise my family into good citizens and provide them with the necessities of family life. I must respect nature's laws and try to correct undesirable conditions around me. I will also volunteer to help the needy.

It would be un-American for me to discriminate against others, for we are all equal. I must have a clear understanding of my rights, duties, citizenship, government, and world affairs. Most important is that I follow my religious beliefs and not allow my-self to be influenced by propaganda against my country or religion.

It is a great privilege to be an American and still a greater honor to participate as one by faithfully carrying out my own duties and responsibilities. Outstanding men like Lin-

coln and Franklin Roosevelt fulfilled their dtuies exceptionally well and have helped make America the leading country of the world today.

(By Valerie Casale, 14, eighth grade pupil of school 3, winner of the girls' division of the Buffalo public elementary school classification. (Richard N. Gilbert, teacher.))

The word "America" is like a shining beacon of light in this partially enslaved, often hungry, and cold world of today.

Our freedom loving forefathers coming from every place on the globe, left us with a wonderful heritage. Under inspired leadership, they worked, fought, struggled, sacrificed and dreamed a nation out of a wilderness in less than 100 years. This has made us the most powerful country in the world. We want to use this might, not to dominate other nations, but to help their people to an independent better way of living.

The home is the core of our existence where all of our ideas and habits are formed. I should obey my parents, attend church regularly, and perform certain household duties willingly.

In school I should cooperate with my teachers and participate in school activities. I should learn how our Government functions, be well informed about world events,

and join civic organizations.

If this Nation is to be the democracy it was intended, we must erase from our minds any taint of religious or racial prejudice. I should respect the ideals of the individual,

should respect the ideals of the individual, even though they don't always agree with ours.

As an adult I should provide for my family's physical needs by becoming a good homemaker and for their mental well-being by setting a good moral example.

In community affairs, I should obey laws, respect public property, defend my country, pay taxes willingly but not blindly, vote intelligently, serve on juries, hold office if qualified, and support civic enterprises.

I must not let my country become a second-rate nation because of greed, hatred, love of prestige, or indifference on the part of its citizens. God has blessed our land and bestowed his abundant riches upon it. May we prove worthy of them.

(By Douglas Bauer, 17, Riverside High School senior, winner of the boys' division of the Buffalo public high school classification. (Veronica McGee, teacher.))

Freedom to worship, to own, to express my opinions, and freedom from fear, from want, and from oppression—for all these freedoms inherited from my ancestors I am thankful. But, just as any legacy carries with it definite obligations of stewardship, this inheritance of privilege is also accompanied by duties and responsibilities. My adequacy as an American (I feel) depends on the way I interpret my mission and on how well I perform it.

As the world grows smaller and we become more aware of other nations, religions, and ways of life, prejudices tend to arise from our ignorance. My duty as an American is not only to respect the different ideas of men but also to remember that, despite their superficial differences, men are brothers. I must also try to understand ideologies other than my own and to be alert to the material and social needs of my neighbors, whether they live across the street or across the ocean. Vigilance is the price of liberty, and understanding, the key necessary to unlock the door of prejudice.

unlock the door of prejudice.

Along with the duties of understanding and vigilance, we must accept certain responsibilities for our less fortunate fellow men. Merely to recognize the poverty of others is not enough—where we find a dearth of the material necessities, we must share;

where we find a lack of the social freedoms, we must fight for them. I believe the greatest of our responsibilities is charity; love for God is best demonstrated in acts of generosity toward men. How wonderful the world would be if all Americans were dedicated to fulfilling this one great responsibility of stewardship.

These inherent moral obligations must be performed with reverence, for they are of a sacred nature. As the freest and most prosperous people in history, Americans (you and I) have the duty of sympathizing with the downtrodden and the responsibility of looking after the liberty and welfare of all. But is it an uniquely American task to strive for peace on earth and good will toward men?

(By Van C. Negris, 13, eighth-grade pupil of School 78, winner of boys' division of the Buffalo public elementary school classification. (Christine Nagel, teacher.))

Foremost in my catalog of duties as an American is this trilogy: Knowledge, loyalty, service.

I need a thorough knowledge of my country's heritage, realizing that the continuation of our ideals and tradition—in fact, the perpetuation of democracy—is guaranteed only to the degree that its rising generation is schooled in its fundamental principles. To keep climbing the educational ladder, to me, constitutes a mandate clear and inescapable, that I may, with others, meet the challenge confronting us today on all fronts—military, scientific, scholastic, industrial, economic.

I stop and think. I recall that first Fourth of July, the battlefields of the Revolution, the Constitutional Convention, and the hallowed ground at Gettysburg. These events and places make me appreciate the hardwon comforts and battles for democracy; and to my flag I pledge allegiance.

I pledge my services to home, school, church, and community. Without service, what value can be placed on knowledge and

loyalty?

On the avenues of progress I see no stop-light. It is my duty, my responsibility, to go on, to tap new resources, to explore and exploit new possibilities of useful service. Yesterday is over. Today, every jet in the sky, every miracle drug, every electronic device testifies to our progress. The harnessing of the atom and the conquest of space can spell universal peace, accomplishment, fulfillment—or annihilation. Is it not my duty to do my best, today, tomorrow, and always, in all ways? Is it not my duty to pray? "Help us, O Lord, in all our needs. Guide our thoughts, our words, our deeds."

(By Mary Margaret Romano, 17, Cleveland Hill High School, Cheektowaga, senior, winner of the girls' division of the Erie County public high school classification. (Albert G. Mirand, teacher.))

Daniel Webster once asserted, "I was born an American; I will live an American; I shall die an American, and I intend to perform all the duties incumbent upon me in that character of my career."

I also am an American, and intend to perform the duties incumbent upon me. Now it is important to realize what the duties and responsibilities of being an American entail. I have a responsibility to my school, to the family unit, to the preservation of democracy, to prepare for a vocation, to make use of cultural facilities, to keep well informed on public affairs, to maintain high standards and values, to obey the law, and to make best use of leisure time.

I must respond to the motivation being given through organizations and activities. There must be a serious attitude toward school. The primary purpose of school is intellectual development to understand and

prepare for vocations and later life. A large part of my adaptability to learning and respecting authority develops from the family unit; therefore, it is my duty to contribute to a harmonious and educational homelife.

This is a challenging age. Our future democracy and freedom depend almost wholly on our knowledge of government and its development; hence it is my duty to be well informed on public affairs and preserve our democracy.

our democracy.

America has become a nation of new leisure. It is my duty not merely to relax in this leisure, but to cultivate the mind, spirit, and body. It is necessary to know and appreciate the cultural facilities which add depth to our rationality.

I must set high standards and values. It is imperative to realize and heed the laws which the country's leaders have developed for safeguarding our Nation from decadence. To quote Robert Browning, "A man's reach

should exceed his grasp."

I must be an alert, tolerant, reflective, and courageous citizen. I must remember that it is always better to light one candle than to curse the darkness.

(By Joan Enser, 13, eighth grade pupil of Cheektowaga Central Junior High School, winner of the giris' division of the Erie County junior high school classification. (Mrs. Euzekia Swist, teacher.))

What is an American? What duties and responsibilities must he fulfill to practice true Americanism? Only if we know these answers can we be true Americans. We can find these answers in the laws of our country and in the ways of our fellow man, but mostly in God and ourselves.

The hope of our country is in its youth. The chalenge to youth is even greater in this revolutionary atomic age. As a future citizen I must work hard and take advantage of every opportunity to develop my abilities and potentialities. I must be well informed on the laws of my country and respect them. I must stand up for what is fair and just.

When I take part in class and student projects and see them through, when my family depends on me, I am becoming a leader and assuming responsibilities which will make me strong in character and a better American.

I have learned many things from my parents and teachers. Now, as a young American, it is my duty to use what I have learned to help myself and others. Good Americanism may not look like a scout badge but neither is it invisible. When I wear it all the time it has a comfortable fit. If I put it on only for special occasions its value becomes tentative.

I believe it is my duty to use the freedom I am offered to the best advantage for myself and my fellow man. It is my responsibility to interpret the real meaning of freedom and use it wisely. I must realize that real freedom is not a question of doing as I like but doing as I ought with regards to the rights of others. As an American citizen I owe my first and highest allegiance to my country.

(By David Leese, 16, Hamburg Central High School junior, winner of the boys' division of the Eric County high school classification. (Alice N. Bergstrom, teacher.))

Yesterday, as I was touring the country-side, I halted upon a protruding bluff from which a scenic panorama of the surrounding area was visible. It encompassed every aspect of life. In the distance loomed the massive steel mills, billowing forth their amoke—so symbolic of growing industry. I next sighted a thriving business section with people hurrying to keep pace with the changing times. The foreground spanned an agricultural region. Produce of every kind

adorned the fields. As I surveyed this landscape, I saw in a glimpse the whole of America.

I then became disturbed. I suddenly came to the realization that all this network was serving me. As an American, I had inherited it. Out of the sweat and toil of strangers, by the grace of God, I had come to be the beneficiary. I became ashamed. What right had I to such an inheritance? What virtues were mine to reap such high reward? How could I ever repay this

greatest of all gifts?

Then, as I gazed upon a single ear of corn, an enlightening analogy emerged. That ear of corn was God's gift to man. Certainly no man could repay this * * * but he could protect, nourish and improve it. Man learned to sacrifice a portion of this year's crop for next year's seed. He learned to fertilize, water, spray, dust and remove fungus and smut to promote growth and abolish pestilence and infection. He learned that filth bred disease; cleanliness, health. He learned the rewards of trade and versatility. He learned that cooperation outproduced isolation and aid reciprocated aid. He learned cross-pollination yielded hybrids greater than either of the parents. He learned to store for the future. Primarily, he learned to improve himself and his methods and to relate this knowledge to

guide his posterity.
Is it not this husbandry of man that determines the destiny of our Nation? Can I not draw a parallel to my own ear of corn?

(By George Unger III, 14, eighth-grade pupil of Orchard Park Central Junior High School, winner of the boys' division of the Erie County junior high school classifica-'tion. (Marion H. McDowell, teacher.)

"We the people of the United States * * *"
have been willed a great legacy of freedom.
As a citizen it is my duty and obligation to
protect this heritage and, as the saying goes,
use it or lose it.

Every American should take part in this great country. If I sit back and let other people do my thinking and plan my future, I may lose this liberty. It is my duty as an American to be something, to have some farreaching goal in life. But it takes work. America doesn't guarantee success to every-

America is a land of freedoms and rights. But democracy will not function properly if each individual does not use his privileges. The church I attend is by choice; I should participate in its activities. The education I am receiving is provided for; I must make the most of it. America insures freedom of the press; it is my obligation to purchase a newspaper and read it. Well-informed citizens protect our democracy. The right to assemble and voice my opinion in the local and Federal Governments is included in the Constitution; I should attend town meetings. After investigating the candidates and issues, I can vote intelligently. Once the candidates have been elected, it is my duty to obey the laws they make.

Maintaining freedom puts upon me an obligation not known to the serf or subject of a dictator. To keep freedom, I must be tolerant and alert. A democracy endures only because its citizens protect human rights and respect the individual. Here in America we possess unlimited wealth of all types, and the liberty to make use of it. What I do with it is up to me. These are my real duties and responsibilities.

(By Eva Fleszar, 17, Immaculate Heart of Mary Academy (Villa Maria), Cheektowaga, junior, winner of girls' division of the private and parochial high school classification. (Sister Mary Felicitas, teacher))

Citizenship is the most perfect form of membership in a political community. Good citizenship, especially in a democracy, implies that for the many wonderful civil and political rights a citizen gains, he owes unqualified allegiance to the state, an allegiance he expresses in faithfully assuming the duties and responsibilities of a citizen.

Since I am not yet an American citizen, I am awaiting eagerly the privileged moment when I shall become an adopted, but a true and proud citizen of this great land. I am preparing seriously to be a good American.

At present, I consider it to be my prime duty to learn well the language, traditions, history, and culture of my new fatherland. I read much about the great national heroes of this land, whose inspiring examples are among America's greatest gifts to new generations. Studying America's past makes me feel honored to become a citizen of so powerful, so just a nation. The trust I place in its policies, the respect I feel for its laws actuate me to obey all rules and laws as a matter of honor rather than duty.

Right now my duties are those of my fellow American students. I am expected to be honest, conscientious, participate in all civic, school, and church activities that train me for my future role in life, know well and keep an open mind on current events and problems, and learn and practice the American way of life. I must develop my abilities and train myself to do the work of my choice to the benefit of society as well as for myself. I must know the great freedoms the Constitution guarantees me and the serious obligation I have never to lose or abuse them.

My gratitude for being accepted as a real member of this great American society, for the equal opportunities I have been given, places upon me the obligation to prepare myself for worthy citizenship. I shall try to repay America by serving with honor this great land of freedom.

(By Elaine Sabuda, 13, eighth-grade pupil of St. Michael School, Lackawanna, winner of the girl's division of the private and parochial elementary school classification. (Sister Mary Redempta, teachef.))

In the United States all Americans enjoy perfect freedom because our Constitution guarantees and safeguards the libertles of the American citizen. We must be aware of our heritage of freedom and keep in mind that we should also assume the duties of citizenship for the rights and privileges we enloy.

Our responsibilities as good Americans are many. First we must love our country and respect its flag. We must support our Constitution and obey its laws. We must respect all those in authority because all authority comes from God. We should select good books, newspapers, and magazines to keep ourselves well informed about current events. We must weigh everything we read and be able to recognize un-American propoganda. A good American should be tolerant and respect other people's rights to worship as they please. Even though someone's oplinions differ from ours we should remember he, too, has the same freedoms.

We must take advantage of our educational opportunities which will prepare us for useful Americans. Also, we should select jobs and vocations we are best suited for, so we can be able to serve our country best and help our fellow Americans. As responsible Americans, we should also guard against any attempt to destroy the American way of life. We must keep ourselves physically mentally, and morally healthy to be able to help our country in case of war.

Americans, who assume their duties and responsibilities, are a great asset to their country. They are the pillars supporting the democratic ideals. They are the nucleus of a live democracy, which is the United States of America. I hope and pray that every American boy and girl will assume

these responsibilities to merit the faith that the United States has in its Americans.

(By G. Donald Frey, 17, Diocesan Preparatory Seminary, Buffalo, senior, winner of the boys' division of the private and parochial high school classification. (Rev. Daniel G. Duggan, teacher.))

The United States is fighting for its life. The sad thing is that many people are forsaking their duties. They say that the country is so big that their activities have no effect upon the Nation; modern government is too corrupt, or too intricate, or too this or too that and they will have no part of it. These people are sadly mistaken. The responsibility for good government rests directly upon their shoulders just as it rests upon yours and mine. The efforts of a few great men will not defeat our enemies, but only when each one of us accepts his responsibilities will they be vanquished.

I am only 17, therefore, I am not able to fulfill many duties of a citizen. I cannot vote nor serve in the Armed Forces. I do not pay taxes. However, I do have responsi-

bilities.

The most important of these is that I must study. I must study the glorious history of our country. I must make our democratic, our social, and our military triumphs part of me. I must learn all this and much more because knowledge is the foundation of all physical activity.

I must take an active part in government. You may think that this is impossible because I cannot vote. This is not so. I can take an active part in government. I can make my opinion known. I can express it at school, at home, and at gatherings of all kinds.

Finally, but by no means the least important, I must love my country. I must show her the same love as the men who fought and died for her. It is hard to show this love. It is manifested by the tingling of my backbone when I hear "The Starspangled Banner," and the anger I feel toward sples and traitors. I experience it in the pounding of my heart when I say, "I am an American." This is the hardest to explain but the most basic of all the responsibilities and duties.

I am an American if I study, become a Part of, and love America.

(By Z. Andrew Furtak, 13, eighth-grade pupil of St. Adalbert School, Buffalo, winner of the boys' division of the private and parochial elementary school classification. (Sister Mary Boguslava, teacher.))

America is my home and I am an heir. Rich in freedom, I contentedly reap the fruits of liberty which my forefathers toiled to sow. Rich in security, I proudly boast of the law they established which guarantees my rights of inheritance. Rich in wisdom, which the Constitution provides, I tenaciously hold to all it prescribes.

Yes, the Constitution is my support. It alone upholds my rights. It demands loyalty, service, taxation, and discipline. Thinking of my welfare, the authors of the Constitution made me responsible and gave me duties. They also gave me shining examples of their own lives to show me that no sacrifice is too great for a cause such as freedom.

As a young American my biggest responsibilities are: To develop myself spiritually, mentally, and physically for the glory of God and the good of my country; to show consideration and respect for all people; to believe in noble ideals and follow them.

My country today is a strong nation because many good citizens contribute to make her so. She will keep on being strong and safe as long as all Americans will share in supporting her welfare. We all know that the strength and security of a nation depends upon individuals who are willing to fight for right, no matter what the cost.

America-may I never fail you!

New Vistas of World Cooperation

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. WESTLAND. Mr. Speaker, the President of the United States was honored May 2, 1960, in the Hotel Statler by representatives of the 15 countries he had visited last Dccember. Sponsors of the event were the Committee for International and Economic Growth and the Committee to Strengthen the Frontiers of Freedom.

I believe the statement made that night by his Excellency Manlio Brosio, the Ambassador from Italy, about the New Vistas of World Cooperation is of interest to all Members of Congress. Under leave to extend my remarks, I include Mr. Brosio's message in the RECORD:

Mr. President, Mr. Chairman, Your Excellencies, ladies and gentlemen, I am sure it is not only a high honor, it is also a difficult task to recall and to appraise in a very short time and on behalf of 11 important countries, a memorable event. President Eisenhower visited in December 1959 Italy and Turkey, Pakistan, and Afghanistan, India, Iran and Grecce, Tunisia and France, Spain and Morocco. Everywhere he was met with the same warm feelings of friendship and with great enthusiasm. Everybody felt that this outstanding general and statesman embodied in himself some of the best qualities of his people: energy, courage, fairness, understanding, tolerance and a genuine good will to help.

In the same time, leaders and people in each and every country realized that the visit meant the vigilant presence of the United States in all the key areas of the world. A presence not intended to imply interference, but only friendly and unselfish assistance; not to show the flag, but to show the heart of the American Nation.

It was everywhere a tremendous success, which is and will be remembered. A success not only because of the cheers it raised, but above all because of the better and deeper comprehension it produced of the real motives and aims of American policies and actions. It certainly gave new strength and inspiration to those who, in every country, believe in international cooperation.

But we cannot think only of the past, we are bound to care first of all about the present and about the future. In this respect, this very meeting, so impressive and so distinguished, should encourage us. It means that the intent which inspired that journey is well alive among many of the most responsible people in this country. It was an intent of mutual understanding and of disinterested support.

In the meetings and talks which were held during the President's visit, alongside his public appearances, exchange of views about technical assistance and economic aid inevitably took place. Different conditions, needs and opportunities were discussed. In Italy, for instance, a new situation has developed, which has turned my country from a recipient of Marshall aid into a fast progressing industrial community, able to contribute in different ways to the development of other nations. The same happened in other countries where aid has equally released new energies, able to help economic growth abroad. We all realized that aid programs are necessary more than ever, and they may promote great progress, granted

the indispensable initiative, coordination and patience.

May I insist on the concept of international cooperation. Aid does not necessarily imply the idea of a unilateral gift. It implies on the contrary the necessity of a mutual effort by the giving and the receiving country: its aim is to enable the last to become stronger and more economically independent, its condition is a great amount of work and determination on the side of both the more and the less developed countries. Aid means a common venture, in equality of

efforts and of dignity.

On the other hand, cooperation is more and better than mere coexistence. Coexistence itself is not enough. As such, it may mean a mere absence of conflict, accompanied sometimes by separation, indifference, or even hostility. Cooperation means much more, it requires deep mutual understanding, common ideals, and friendly feelings.

To all this the President's visit brought an invaluable contribution, on the solid foundation of peace. Indeed, peace is not so much the ultimate goal, it is rather the desirable starting point for progress toward a better and higher life, worthy to be lived. Nor can the cause of peace be considered the monopoly of any country or group of countries or of any man. But we may well say in candid truth that no man since the Second World War has contributed more to the cause of peace than President Eisenhower has during his terms of office.

Ladies and gentlemen, we are now very near to the summit meetings, where the representatives of the United States, Great Britain, France, and the Soviet Union will face some of the great questions that beset the world. We feel that President Eisenhower will go there with a deeper understanding of our ways of life, needs, and points of view after the great experiences of his recent and strenuous journeys. We are sure he will contribute there, with even greater authority, to express and fulfill the expectations of all peoples, for peace, freedom, and a better future.

Growth of Texas Cities in Past Decade Was Most Rapid in State's History

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. YARBOROUGH. Mr. President, over the past decade the population of Texas cities has grown more rapidly than in any other 10-year span of history.

A number of factors have contributed to help bring about this phenomenal growth and not the least of these is the remarkably able and virtually tireless leadership in many of our cities. These community leaders, through hard work and inspired planning, have encouraged countless new industries to move to Texas.

Three of our cities, Irving, Mesquite, and Farmers Branch, made spectacular population advances in the 1950–59 period of more than 1,000 percent. Irving grew from 2,621 to 45,000 residents, Mesquite from 1,696 to 24,000, and Farmers Branch from 915 to 12,000 residents.

I ask unanimous consent to have printed in the Appendix of the Record portions of a special report on Texas' fastest-growing cities which appeared in the March 1960 issue of Texas Town & City magazine entitled "Population Growth in Texas Cities and Towns—1950–59."

There being no objection, the article was ordered to be printed in the Record, as follows:

SPECIAL REPORT: POPULATION GROWTH IN TEXAS CITIES AND TOWNS, 1950-59

1. FASTEST GROWING CITIES IN TEXAS

The decade 1950-59 has seen Texas municipal population increase more rapidly—and far more dramatically—than any other comparable period in the State's history. Among other units of local government, population losses continued to be the most significant trend during the 1950's, as during the latter half of the 1940's. For municipal government, the trend has been the opposite, and often spectacularly so.

"Spectacular growth"—e.g., a population increase exceeding 150 percent in a decade—has special significance in itself, far beyond serving as a basis of community pride or boasts. Growth at such rates means the virtual overnight formation of mature-size cities. If a State—or an area within a State—has a tendency to form major cities rapidly, chaos can be avoided only by:

(1) State-city, county-city, school- and special-district-city relationships and policies must be sufficiently mature and flexible to permit orderly development of the municipal area and full services within that

area.

(2) Fiscal policies at all levels must be fair in concept so that the impact of sudden growth does not bring hasty, ill-considered recourse to financing practices or other measures which would result long-term in deferring continued growth of the affected area.

(3) Provision should exist for area or regional cooperation, planning, and integration of the vital basics of community services, e.g., highways, streets, water, sewers, parks, etc.

Texas, during the 1950 decade, has shown a pronounced tendency toward a pattern of spectacular growth communities concentrated in several geographic areas: the north Texas Dallas-Fort Worth area, the gulf coast area, the west Texas Permian Basin area, as well as more isolated growth in cities located adjacent to or near major industrial plants and facilities. Thus, cities hardly more than "sleepy villages" at the beginning of the decade have become in 10 years important full-size communities. In the 1960 decade, it may be anticipated that this pattern will continue, diffusing over a wider geographic range of the State. Hence, long-range planning is as vital-if not more so-for today's small cities which may, on the basis of current precedent, be virtually in the metropolitan class when the 1970 decade begins.

The accompanying table tells the impressive story of what spectacular growth has meant to Texas cities during the past decade. Twenty-two Texas cities—most of them under 10,000 population in 1950—have grown by 150 percent or more during the 1950%. Today 10 of these cities have more than 20,000 population, five have more than 40,000

population.

Thirteen of the twenty-two fastest growing cities are on the perimeter of major metropolitan cities: 11 in the Dallas-Fort Worth area, two in the Houston metropolitan area. The four fastest growing cities—Irving (1,617 percent), Mesquite (1,323 percent), Farmers Branch (1,211 percent), and Richardson (864 percent)—are in Dallas County. Four—Benbrook (548 percent), Arlington (524 percent), Richland Hills (227 percent), and Burleson (160 percent)—are in Tarrant County. Two—Deer Park (579 percent) and Pasadena (168 percent)—are in Harris County.

Growth of at least seven of the fastest-growing cities is principally attributable to development of a manufacturing economy base; Grand Prairie, Garland, Deer Park, Rockdale, Pasadena, Lake Jackson, and Ingleside. In addition, Daingerfield in east Texas—at the site of the Lone Star steel plant—the 23d fastest growing city at 149 percent increase falls into this category. Manufacturing economies clearly have been the key to spectacular growth for the largest segment of these cities.

Natural resources—i.e., petroleum—have been responsible, chiefly, for the growth of three cities in this category: Odessa, Mid-

land, and Andrews.

Military activity—a factor of chief significance in the 1940 growth decade—influenced the expansion of only one city in this 21city list: Killeen, site of Fort Hood.

Officials of small cities should note that in at least six instances—Lake Jackson, Ingleside, Rockdale, Grand Prairie, Daingerfield, and Arlington—the establishment of a single major manufacturing plant has proved sufficient impetus to trigger a spectacular growth decade for the benefiting community. This is another forceful reminder that "growth can happen anywhere" and every city, regardless of size, should—as it seeks new industry—engage wisely and prudently in advance planning for the possibility of such unexpected growth during the 1960 decade.

2. GROWTH OF TEXAS CITIES UNDER 10,000

In 1950, approximately 28 percent of the municipal population in Texas resided in cities of less than 10,000 population. Proportionately, this percentage has declined during the 1950 decade because of the concentrated growth in the larger cities—for example, 50 percent of the population of the entire State now lives in the 20 largest cities alone.

Seventeen cities among those sampled have doubled or more than doubled population since 1950. These cities, current population, and the approximate rate of growth percentagewise are listed below:

Richland Hills 9,000 (227 percent), Angleton 8,258 (143 percent), Slisbee 6,500 (104 percent), Rockdale 6,400 (173 percent), Deer Park 5,000 (579 percent), Carrollton 4,700 (192 percent), Plano 4,500 (112 percent), Daingerfield 4,200 (149 percent), Ingleside 4,200 (195 percent), Benbrook 4,000 (548 percent), Lewisville 3,205 (115 percent), Dimmitt 3,100 (121 percent), Friona 2,500 (108 percent), Tomball 2,500 (135 percent), Burleson 2,061 (160 percent), Santa Rosa 1,350 (238 percent), Bovina 1,300 (130 percent).

On the basis of numbers, the typical Texas city is a small town—populationwise—rather than a metropolis. Over 86 percent of the incorporated municipalities in Texas have under 10,000 population. Many of these, of course, are located in counties and areas which have been losing population for the past 20 years. City growth does not always follow the general population growth trend for the area. Texas small towns have shown, generally, a consistently healthy growth trend during the 1950's. In the new decade of the 1960's, the possibilities of continued growth are widespread.

The fastest growing Texas cities, 1950-59

American Citizenship a Priceless Gift

EXTENSION OF REMARKS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial which appeared in a recent issue of the Buffalo (N.Y.) Courier-Express. This editorial will be of great interest to those who have received or will receive their American citizenship papers. The editorial follows:

AMERICAN CITIZENSHIP A PRICELESS GIFT

Most native-born Americans accept citizenship in a matter of fact manner and frequently we appear more concerned with our rights than we are with our responsibilities. This is particularly true at this time of year when we complain about the income taxes we pay without giving serious thought to the fact that the price is small compared to the privileges and freedom we enjoy in this greatest democracy in the history of the world.

Sometimes it takes the observation of those who have not always enjoyed the privileges of freedom to give serious thought to the advantages we enjoy from birth. Such observations were offered recently by a comparatively young Polish refugee who only 7 years ago flew his Russian MIG fighter plane to sanctuary in free Europe and eventually was transferred to the United States. In that short space of time Frank Jarecki, now a resident of Oil City, Pa., obtained a college degree, became a citizen, and worked his way to managership of a machine and tool company.

He recounts that his grandfather had often told him of the wonders of the United States, but that he dismissed such stories as the fanciful tales of an old man. Now he finds that the enthusiasm of his grandfather was far too conservative.

far too conservative.
"You have to get in the country to realize how great it is," the former Polish flier told

reporters.

Such appraisal comes from an intelligent person who has had the opportunity to weigh the true worth of freedom against totalitarianism where the individual is the pawn of the state.

Those of us who are given to chronic complaint might well ponder Jarecki's feelings on the matter of U.S. citizenship. "Freedom," he said, "is something you can't express. You can just feel it deep in your heart."

If all of us shared Jarecki's feeling, citizenship would increase in value with the dawning of each day.

American Firm Demonstrates Virtues of Foreign Investments in Israel

EXTENSION OF REMARKS

HON, KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 12, 1960

Mr. KEATING. Mr. President, the development of the State of Israel, one of the extratordinary events of our time, is taking another giant stride forward with the helping hand of American enterprise.

A symbol of this important step is the listing on the American Stock Exchange in New York City of American Israeli Paper Mills, Ltd. AIPM is the first Israeli corporation to be listed on any U.S. exchange.

This fact, in itself, may not seem startling. Yet it tells a story. It is an example of how American capital has been successfully invested in Israel to the lasting benefit of this once underdeveloped economy. It shows how farsighted American private investors are paying a substantial role in strengthening our important ally in the Middle East, preserving and strengthening at the same time our own philosophy that the reciprocal advantages of private investment overseas may do more in the long run to chart our future than almost any other single effort we can make.

The story of American Israeli Paper Mills is a fascinating exercise in enlightened corporate enterprise. In existence for less than a decade, and with initial backing from the Joseph M. Mazer family—well known for their connection with the Hudson Pulp & Paper Co. of New York—AIPM is giving renewed impetus to Israel's economy. Already saving Israel about \$1 million annually on trade balances, AIPM expects this figure to rise to \$4 million in the near future.

The obstacles faced by this firm were many for Israel had little water, few skills, no wood for pulp, and a storage of vital chemicals. How the company licked these problems is, I think, one of the most unbelievable of the many unbelievable—but true—sagas of modern Israel. It bodes well for future American investors in the noble State of Israel.

I ask unanimous consent that an article entitled "American Israeli Paper Mills" from the April 1960 issue of the American Investor, official publication of the American Stock Exchange, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN ISRAELI PAPER MILLS

Once upon a time, dear investor, there lived an industrial executive who might have knelt fancifully by his corporate bed and prayerfully dreamed of a new industrial development where there was none before, a monopoly position in his industry, enthusiastic government approval, a protective tariff, accelerated depreciation, and tax exempt income. Piously disposed as his reverie appeared, he might have languidly promised to do much for the country and its economy if only this museful prayer came true. This being so, he might have begged to be blessed with harmonious labor relations, skilled, productive workers, informed management, an abundance of raw materials, adequate financing, an effective building program, smooth transition to production, a growing market for his product, the need for almost immediate expansion, the ability to grow and sufficient credits to implement the new program.

A fairy tale? A pious hope? A pure dream? Not in this case. This is the fascinating position in which Israel's first corporation to be listed on a U.S. exchange finds itself. For Joseph M. Mazer, American Israeli Paper Mills, Ltd. chairman, has steered an enlightened corporate course, not without massive roadblocks, in giving Israel its first major producer of paper.

In less than a decade AIP (on the Mediterranean coast between Tel Aviv and Halfa) provides Israel with hundreds of jobs, gives impetus to the nation's rising standard of living and saves the economy about \$1 million annually on trade balances with the soon-to-be-fulfilled promise that the figure will reach an annual rate of \$4 million.

"The idea of a large scale paper mill in Israel was fantastic in the fall of 1949," says Mazer who carefully gaged the paper needs of the growing country and launched an exhaustive engineering survey of the overall problem. The obstacles were many. No water, no skills, no wood, no pulp, a shortage of vital chemicals, the need to import fuel oil, all of which placed together ordinarily adds up to no paper.

ordinarily adds up to no paper.

Mazer rolled up his sleeves. He found the water (two wells supplying 1,500 gallons per minute on the 18-acre property), built the mill (one main and six auxiliary reinforced concrete and steel buildings), developed machine shop facilities, imported the equipment to assemble the paper making machinery, reached around the world to tap technical know-how and brought in wood pulp from Sweden, Finland, and the United States and straw pulp from Italy and Holland. The effort can only be measured in Bunyanesque proportions.

In the assembling and initial production stage, Israeli workers did not share a common tongue with American and other foreign technicians. There was difficulty in absorbing all there was to learn. Plans for progress might be jeopardized. Chairman Mazer dispatched everyone for 16-hour daily English sessions in a local hotel. Communications, and therefore, learning, naturally improved tremendously. Then followed an intensified in-service training program which enabled the Hadera work crews to develop foreign skills. Supervisory personnel was aided by U.S. management consultant direction.

The dynamism of the management team was matched by an enlightened government approach to the problems of industrial birth. Israeli corporations are subject to a company profits tax equal to 28 percent of taxable income and an income tax of 25 percent of taxable income or a total of 53 percent of taxable income. Companies which come under the title of "approved undertakings," however, find that the law for the encouragement of capital investments smiles upon them. Enterprises in this category, while they must pay the 28 percent company

profits tax, are exempt from the 25 percent income tax for a period of 7 years from approval or 5 years from production, whichever is later. American Israeli enjoys this privilege at the moment on its expanded facilities. Its exemption for initial productive facilities expired in November 1958. The same law permits "approved" companies to accelerate depreciation rates. AIP happily avails itself of those legal provisions, and has no cash liability at all. Nevertheless the company places the equivalent in a reserve fund for future purposes.

The fablelike tale might ordinarily end

The fablelike tale might ordinarily end here with the Middle East halling its first major paper mill in 1953 and with the Israeli Nation entering a new and even more impressive era of industrial achievement, nodding happily to the million dollars that would remain at home freed from the international search for paper to serve the economy. Actually it was only the end of phase one and the second of several other phases was just beginning in the mind of Joe Mazer,

The 136-inch Fourdrinier machine ran a trimmed sheet of 126 inches at speeds up to 1,000 feet per minute, serving up new kraft, printing, and writing grades. Paper production reached 17,000 tons annually and the restless company cast about for methods that would eliminate the importation of wood pulp. The question was vital. The absence of local spruce and pine cost the economy dearly in foreign currencies. New raw materials from native sources were necessary and AIP, the Ministry of Agriculture, and the Israel Institute of Technology launched a joint research program.

The problem was as old as papermaking itself. In North and South American mills sugarcane waste (bagasse) produced pulp. Cereal straw was used in India. England based pulp production on the North African esparto grass. Asiatic countries used bamboo. France found sorghum helpful. The United States is now looking into the possibility of pulp from cotton stalks.

In Israel the high yield corn crop provided the answer. A plan was evolved for the collection, transport, and conversion of corn stalks and cereal straws into pulp. Israel's papermaking industry found a new, local pulp source. The industry was to be more fully integrated. Pulp costs would be slashed from a rate of \$150 per ton for the imported variety to a \$120-per-ton rate from local sources and imports would be cut in half. Many more dollars would remain at home. Farmers found a new and ready million-dollar market for former waste. Mazer had a new problem—the need for Israel's first pulp mill.

This was the springboard for a \$12 million expansion program: A pulp and bleach plant; a 10,000-kilowatt turbo electric generating station; a new paper machine; expansion of existing converting facilities; construction of research laboratories to improve product and efficiency. In addition new working capital would be required. Overall object: 40,000 tons annual output and the introduction of newer paper grades such as tissue, citrus wrap, bible grades, and intermediate weight boards.

Fast-moving Joe Mazer moved faster than ever. Originally financed in the main by the Mazer family, major interests in the Hudson Pulp & Paper Co. of the United States, American Israeli looked to other sources for new expansion money.

expansion money.

Five and one-half million series B ordinary shares were sold in the American market and 500,000 more had to be allocated in Israel where the shares were quickly oversubscribed. Supplier credits totaling close to \$1 million were extended and the Export-Import Bank of Washington granted a \$3 million loan. The program was launched and is scheduled for 1960 completion.

AIP's new papermaking machine is already in production. Modifications on the initial

machine are now completed after a 3-month conversion shutdown. The new pulp mill is grinding up cornstalks and other straw residues in high gear and the generating station slated for an August 1960 start, will be in a position to sell excess capacity to the local utility company. Never wasteful, the company utilizes steam produced for the paper machines to spin its generators. Research facilities, slated for completion this year, are expected to increase product acceptance and to stimulate increasing paper usage in cooperation with the newly established packaging institute which seeks to push present per capita paper consumption of about 60 pounds over the 100-pound mark before 1965. While the United States uses 400 pounds per person, the Israeli rate is considerably above Middle East consumption.

Despite the 2-month conversion lull, Ma-

Despite the 2-month conversion lull, Mazer projected sales at between \$6 and \$7 million for the fiscal year just ended last March 31, about even with the previous year. Earnings are expected by him to approximate the 41 cents per ADR reported for the two previous years. ADR's are American depositary receipts which equal 5 ordinary shares of which there are 11 million presently outstanding. The company is on a 25-cent annual dividend basis. Mazer looks for fiscal 1961 sales to approach \$14 million, or double the \$7 million estimates for the current fiscal

Mr. Pinhas Sapir, Israel's Minister of Trade and Industry, who seeks to attract additional industry makes the salient observation when he views the American Israell experience. "Here is additional proof of the possibility of attracting foreign capital to Israel"—with a deep bow to Mazer's planning and the ability of the AIP management team.

At the Drop of a Snowflake

EXTENSION OF REMARKS

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, a recent editorial in the Wyoming State Tribune, Cheyenne, Wyo., clearly points to the danger of diverting first-class mail on which air mail postage has not been paid from the railroads to the airlines under the airlift of the Post Office Department.

All of us in Congress are concerned about a strong railroad industry, which is so essential for everyday private and Government business, and especially so for defense. The effect of the airlift is discussed in this editorial, and I include it as a part of my remarks. I would call attention to my bill H.R. 9498 which would end the authority of the Post Office Department to airlift this type of mail and stop the damaging inroads into what historically and legally has been the business of the Nation's railroads.

The editorial follows:

AT THE DROP OF A SNOWFLAKE

Some years ago the Post Office Department inaugurated an experimental airlift for some regular first-class mail. The mail is handled on a space-available basis and, so far, the experiment has been of a limited nature. Now, however, it is proposed that the airlift be extended.

That proposal has been the cause of serious concern in Congress and elsewhere—and with good reason. For one thing, it seems only fair that people who want their mail to

carried by air should pay the going rate of air postage.

But there is much more to the matter than this consideration. Increasing diversion of mail from the railroads to other carriers would further undermine the railroads' financial strength, and their ability to perform the kind of transportation service this country must have. The railroads are in a serious position as it is, and we can't afford to further and needlessly compound their problems.

Moreover, from the standpoint of mail users—a category which includes virtually everyone—diverting 4-cent letters to the air carriers would be a mistake. We all know what happens when the weather gets really bad. Air traffic stops or is disrupted and delayed. And when that happens, to what agency do we look to get the mails through? The answer is, the Iron Horse.

So, as one railroad man puts it, "If diversions to other carriers continue, the day may come when railroads will not be able to move all mail at the drop of a snowflake. And if this ever happens, all America will be the loser."

They Work Longer for Less in Russia

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, May 12, 1960

Mr. WILEY. Mr. President, historically, the rise of communism to a position of power and control of the land and the people in the world, has been due largely to the relentless, dedicated efforts of a hard core of almost fanatic Communists working tirelessly toward the objective of world domination.

Through deft, insidious practices of infiltration, espionage, subversion—and, yes, murder—they have gained control of almost 1 billion people and vast acres of land. From this pinnacle, they are now attempting to persuade the peoples of other lands that communism is the "system of the future"; that it holds a promise of better life, even, than our own free way of life. Traditionally, the promises of Communists have far exceeded their "ability to deliver." Time after time, Communist bragging about great progress has in practice fallen short of its mark.

Despite the history of Communists "stamping out" freedom, subjecting the fundamental rights and privileges of peoples, and, in a large way, failing as yet to even approach standards of living created under a free system, the Communists still are continuing to influence some people—fortunately a minority—in many lands to believe that communism is an acceptable way of life,

For the "gullible," swallowing the promises of a "great and glossy future under communism," it is necessary from time to time, to present the hard facts of realism—to paint a factual picture of life under the Communist system.

We recognize, of course, that, through the powers of dictatorship, the Communists have been able to channel manpower and vast resources into such programs as military weapons and scientific achievements. In providing a better life for the people, however, communism is still a low-rate system. For the people for whom communism may have a faint appeal, it is essential to ask: Just how are the people living under a Communist system? Is it really, for example, a "workers' paradise"? Or, again, "does the Communist bragging and promising far exceed its ability to produce?"

In the May 9 edition of the U.S. News & World Report, an informative article entitled, "They Work Longer for Less In Russia," reviews some of the "facts of life" under communism. According to the article:

After 32 years of 5-year plans most Russians have slightly less buying power than in 1928. It takes the average Russian 28½ hours of labor to buy the same food that an American earns in 7 hours. Under Krushchev, Russians have gained—but not much, by U.S. standards.

Reflecting further upon the fact that the Communist system has a long way to go before it will catch up with the U.S. system—let alone "pass us by," as Khrushchev brags—I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THEY WORK LONGER FOR LESS IN RUSSIA What it's really like in the "workers' paradise":

After 32 years of 5-year plans most Russians have slightly less buying power than

It takes the average Russian 28½ hours of labor to buy the same food that an American earns in 7 hours.

Under Khrushchev, Russians have gained—but not much, by U.S. standards.

In 1928, the Communist rulers of Soviet Russia promised to improve the lot of the Russian people by launching a series of 5-year plans. But today the Russian worker is getting less food for his labor than he received in 1928 before the first 5-year plan was started.

Official Soviet figures, as they are now analyzed by the U.S. Department of Labor, show that the average worker in Moscow had to work 8 percent longer in 1959 than in 1928 to buy a week's supply of seven essential foods for his family. The same trend is indicated on clothing, the experts say.

Even though the Soviet worker's buying power on food is lower than in 1928, he is able to purchase somewhat more food than he did in 1953 for the same amount of labor. Since 1954, Soviet authorities have allowed wages to rise for many workers, as a means of improving their purchasing power.

of improving their purchasing power.

What worktime buys: Despite higher wages, the average worker in Moscow, the survey reports, has to work about 12 times as long as a New York worker to earn the money to buy a medium-priced suit, as shown on the chart on this page. Or the Russian works 18 times as long to provide the price of his wife's dress, in comparison with the American.

It takes eight times as much working time for the Russian to purchase a dozen eggs, in relation to what the American worker's labor will buy.

For a pack of cigarettes, the worker in Moscow pays the equivalent of 27 minutes of working time, while an American pays 7 minutes of work.

A loaf of rye bread is worth half again as much worktime in Moscow as in New York; 9 minutes against 6.

The comparisons thus show that the Russian worker has to put in far more hours of work per week to provide the essentials for his family than does the American worker. The American has more money left

to spend on foods and other items that the Russian would consider to be luxuries.

Week's food: 281/2 hours. The U.S. survey also makes a comparison of buying power by adding up the hours of work needed in Russia and the United States for purchase of a week's supply of seven essential foods for a family of four. These foods include rye bread, potatoes, beef, butter, sugar, milk and eggs.

To buy this week's supply, the average Russian worker would have to work about 281/2 hours, the survey shows, against about 7 hours needed for an American worker to

buy the same "basket."

When the comparison is made with purchasing power in 1928, it is found that the Russian spent 261/4 hours on the job to earn enough for a week's similar supply of food. In 1928, the American put in 12 hours of work for the same group of items. Since then, the American worker has been able to reduce his working time while purchasing power increased—but the Russian still has not caught up with his own buying power of

In all of the comparisons, the average earnings of a Moscow factory worker have been matched against the average pay of a New York City production worker. The 1959 York City production worker. The 1959 figures, for example, are based on an average Wage of \$2.17 an hour for the New Yorker. For the Russian, the working time is computed on the basis of average earnings of 4 rubles an hour—about 800 rubles a month. That amounts to 40 cents an hour or \$80 a month.

Wide gaps in pay. The U.S. survey, made by the Bureau of Labor Statistics, also reveals the range of earnings for various groups of Russians, indicating large differences in income between professional people and factory hands.

The unskilled worker in a Russian factory, it is explained, now earns from \$27 to \$50 a month in terms of U.S. dollars. However, a Russian opera star receives from \$500 to \$2,000 a month, according to the report.

A scientist in Russia earns from \$800 to \$1,500 monthly, the survey shows. Other estimates: \$700 a month for the head of a Government department; \$600 to \$1,000 for a science professor; \$300 to \$1,000 for a factory manager; \$100 to \$300 for an engineer.

A high-school teacher is shown to receive \$85 to \$150 a month, while a primary-school

teacher gets \$60 to \$90.

In a Russian factory, the semiskilled worker gets \$60 to \$90 a month, with the skilled employee earning \$100 to \$250 a month.

Thus, a Russian scientist's buying power turns out to be about 16 times that of the semiskilled worker in a Soviet factory. a science professor is able to buy 11 times as much as the factory hand in the "workers' paradise."

What a worker's wages will buy in Russia and United States

Espionage: Weapon of Survival

EXTENSION OF REMARKS

HON, BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. WILSON. Mr. Speaker, the international incident involving the U-2 airplane has created much flak, with many nonsensical statements by opponents of the administration.

The American people should be reassured that we have knowledge of what goes on behind the Iron Curtain as a result of our surveillance systems.

While Russia understandably doesn't like to be spied on, this country is more secure because of the information obtained by efforts such as the activity in which the U-2 was engaged.

In the future, it may be that some international court of law will determine just how far above the earth's surface the sovereignty of a nation extends. For instance, an enemy submarine or fishing boat can operate outside the 3-mile limit today under international law and can take all the photographs it wants without violating sovereignty or being guilty of esponage activity against any country.

This country is today operating satellites that take pictures of the earth's surface from a distance of some 400 miles

Is a picture taken from 400 miles above a country right, while a picture taken from 12 to 14 miles, as in the U-2's case, wrong? That is one of the questions that may some day be settled. Until some court makes this decision, we can be reassured that this country has adequate and reliable means to keep informed about the enemy's war plans or inten-

An outstanding editorial regarding the need for espionage in the cold war recently appeared in the San Diego Union. I ask unanimous consent to include it as a part of my remarks in the Appendix of the RECORD:

[From the San Diego Union, May 10, 1960] ESPIONAGE: WEAPON OF SURVIVAL-WINDOW ON RUSSIA

Espionage is one of the major weapons in the cold war. Its employment by the United States is a matter of survival itself. Premier Khrushchev's condemnation of this country for realistically facing up to the facts of self-preservation has a hollow ring.

The American reconnaissance plane shot down by Russian gunners-on what our Government said frankly was a spying mission-was one of the casualties of a cold war battle for national security. There have been other casualties in this espionage battle, and there will be more-on both sides.

It comes as no surprise to learn that we have an effective and productive espionage system. Indeed, it would have been surprising-and disastrous-if we did not. There is no need to justify our spying. As Senator CLIFFORD CASE, Republican, of New Jersey, put it:

"It really isn't a question of right. It is a question of what has to be done. The thing that would really concern me would be if I didn't think we were making every necessary effort to get all the possible information we could for the safety and security of our country in the cold war that exists

at the same time we are doing our very best to end the conditions that make the cold war exist."

Espionage is one of the distasteful but necessary jobs we must do to find out what a ruthless and diabolical enemy is preparing for our destruction.

The free world's major countries are free societies where Soviet officials can see much of what is going on. A Soviet agent, for example, can play his binoculars on North Island from Cabrillo Monument and count planes by type and number. Information that is suppressed in the Soviet Union is freely disseminated in this country. Some technical publications offer what amount to do-it-yourself kits for weaponry.

We are the most open country in the world.

And we are contending with a tightly sealed Communist fort, behind the walls of which

our extinction is being plotted.

The Soviet Union makes no attempt to hide its hostility for the United States and its allies. Almost daily it threatens free men with annihilation, destruction by nu-clear-packed missiles. It repeatedly sabo-tages honest proposals for open-skies inspection systems, for safeguarded means of controlling disarmament.

On orders from Moscow, Red agents fan out over the globe. They subvert, they spy, they sabotage. Their submarines train periscopes on our shores; their trawlers track our sea perimeters. They have stolen the H-bomb, and they will steal whatever they can.

The fact that the Lockheed U-2 has made successful reconnaissance flights over Soviet territory for more than 4 years testifies to the competence of our intelligence apparatus. Facts obtained explain why the administration is confident in our military strength. The U-2's record of safe flights indicates weaknesses in Red defenses.

Getting caught at spying is embarrassing. But the embarrassment is small compared to Khrushchev's embarrassing realization that his armed camp is not impervious to obser-

Espionage is part and parcel of maintaining an alert security in the cold war. Let us thank our stars for a good system.

Resolutions Memorializing the Congress of the United States To Enact Legislation Increasing the Compensation of Postal Employees

> EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960 Mr. LANE. Mr. Speaker, under leave

to extend my remarks in the RECORD, I include resolutions adopted by the General Court of Massachusetts in support of legislation to increase the compensation of postal employees:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLA-TION INCREASING THE COMPENSATION OF POSTAL EMPLOYEES

Whereas, there is now pending before the Congress of the United States legislation, including H.R. 9883 and H.R. 9977, which would increase the compensation of postal employees; and

Whereas the Post Office Department requires adequate means for attracting and retaining efficient and well-qualified personnel in order to maintain the operations at a high level of service: Now therefore be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to enact legislation that will increase the compensation of all postal

employees; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of the Congress, and to each member thereof from this commonwealth.

Senate, adopted, April 25, 1960. IRVING N. HAYDEN,

Clerk.

House of representatives, adopted in concurrence, April 27, 1960.

LAWRENCE R. GROVE, Clerk.

Attest:

JOSEPH D. WARD, Secretary of the Commonwealth.

Twenty-fifth Anniversary of REA

EXTENSION OF REMARKS OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. HENDERSON. Mr. Speaker, the rural electric program of the Nation marks its 25th anniversary this week.

This program has developed over the years into a significant service bringing electrification to vast numbers of rural homes and communities. In my own district cooperatives have been formed to serve the needs of the families. I should like to point out the development which has occurred in the operation of one of the cooperatives with which I am familiar. Today the Guernsey-Muskingum Electric Cooperative is extending service not only in Guernsey and Muskingum Counties in Ohio but to members in Morgan, Noble, Coshocton, Licking, and Harrison Counties as well. The cooperatives 6,000 members consumed almost 28 million kilowatt-hours of electric power last year. Their average member during the year used 4.580 kilowatthours, an increase of 258 kilowatt-hours of power over the average utilized in 1958. For this service in 1959, the cooperative received \$717,817.97, an increase in income of \$37,258.51 over the previous year.

The first loan from REA was received by the Guernsey-Muskingum Electric Cooperative in 1938. During the intervening years, the organization has borrowed \$2,909,714.23. Of this sum, it has repaid \$965,054.11. With the funds at its disposal, over 1,800 miles of rural distribution lines have been constructed and 6,800 services have been installed. Last year 184 new services were connected and another 200 new services are expected in 1960. The expansion of new services requires approximately \$200,000 in new

capital each year. The cooperative serving such a large portion of the 15th Congressional District has a staff of 36 regular employees with an annual payroll of more than

\$163,000.

The Frankfort Morning Times Speaks Out Against Proposed Postal Rate Increase

EXTENSION OF REMARKS OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. ROUSH. Mr. Speaker, the proposed postal rate increases include rate increases on second-class mail which will vitally affect the newspapers that use postal services for rural subscribers. These newspapers are the main artery for the flow of news, information and knowledge to the people who are subscribers. The proposed postal rate increase will cause an unfair financial burden to be imposed upon an already struggling industry. I am inserting in the RECORD an editiorial which appeared in the May 1 issue of the Frankfort (Ind.) Morning Times. I strongly share the views expressed in this forceful editorial and want to share them with my colleagues.

The editorial follows:

Let's keep the facts straight about the proposed rate increase on second-class mailing rates now being studied by the House Post Office Committee.

Two bills are before the Congress. One is H.R. 11140, the other is S. 3192. Both are the same.

As was stated in a page 1 editorial in the Times of Sunday, April 17, this bill, according to those "in the know," has a 50-50 chance of passing. Such a rate increase, if made effective, would be absorbed by small dailies and all weekly newspapers who use the postal service for rural subscribers. It been estimated that such a postage hike would cost the Morning Times approximately \$4,200 annually to absorb the proposed new rate. This, obviously, would soon be passed on to the rural subscriber.

The position of the Times in this matter is not one that reflects on any local situation in the post office. Rather, it concerns the high echelons of the postal service and the proposal of Postmaster General Arthur Summerfield.

The feelings of the Times could not be said better than in a recent statement made by Ralph Nicholson, publisher of the Dotahn (Ala.) Eagle. We quote the words of Mr. Nicholson:

'The daily newspapers of America are concerned over the lack of progress in Washington toward management of the Post Office Department and outraged by the repeated charges that they are being subsidized through second-class mail rates.

"The Congress clearly marked the way to the objective in its Postal Policy Act of 1958 which declares that each class of mail shall bear its own cost and expense of 'public services' rendered by the Post Office be defrayed by specific appropriation.

"Instead of complying, the Department proposes additional increases on some classes of mail, far above the cost of handling same, in order to offset alleged losses in serving other users, and again it fails to compute soundly the cost of its 'public service' activities.

"Why sound management, which includes fairness to the public it services, has not long since replaced confusion and distortion seems almost inconceivable. One of the long existent inequities is the charge of subsidy against newspapers, in spite of the oft repeated declaration from U.S. dailies that they approve the Postal Policy Act of 1958; that they want no subsidy from the Post Office and believe they receive none. The newspapers invite those who reiterate the subsidy diatribe to prove it, but they never do. This is conviction without trial, an irksome occurrence."

Still another publication has spoken out in direct terms. We refer to an editorial from the March 15 edition of the Valparaiso (Ind.) Vidette-Messenger in which Avery B. Weaver, the paper's general manager, wrote: "We [newspapers] believe we are being accused of a subsidy because of the free-incounty privilege-which we do not want, because the Post Office Department will not separate from the costs of handling daily newspapers the costs of handling weekly and monthly magazines, and because we must bear most of the cost of distributing religious and charitable publications. members [Inland Daily Press Association] once again urge the Postmaster General to institute an accounting procedure which will ascertain the true cost of handling daily newspapers and, after that cost has been determined, will pass it along to the daily newspapers using second class mail. want to pay our own way."

The Times, once again, urges those rural subscribers who would absorb any increase in cost passed to the newspapers by the higher second class postal rates should this bill become effective, to write their Congressman and both Senators. The Times does not believe the proposed mailing hike on second class mailing is fair. We don't believe our rural readers want the bill passed either, especially if it means an increase in subscription rates to absorb the higher cost of production. Why not write Congressman J. EDWARD ROUSH OF Senator HOMER CAPEHART and Senator Vance Hartke and express your disapproval to the postal increase proposal before the Congress? Hearings will start in the House Post Office Committee this week. Mention H.R. 11140 when you write to your Congressman, and S. 3192 in writing the U.S. Senators from Indiana.

Voyage of the "Triton"

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. McCORMACK. Mr. Speaker, the feat of Capt. Edward L. Beach and the officers and men of the Triton reflect great credit upon our country. Special tribute is also due to Admiral Rickover. They have lived up to the highest traditions of the U.S. Navy.

In my remarks, I include a deserving tribute to them-an editorial "Voyage of the Triton," appearing in the Washington Post of May 12, 1960:

VOYAGE OF THE "TRITON"

Capt. Edward L. Beach and the officers and men of the Triton have just completed an adventure that ought to rank with the great naval expeditions of history. To be sure, there is nothing very dramatic about going around the world any more. But circumnavigation under water is quite another matter, involving new challenges to man and machine quite without precedent. That the huge Triton and her 183-man crew completed such a voyage without serious difficulty is a tribute not only to Captain Beach and his men but also to those who designed and built their fabulous ship and to Adm. Hyman Rickover, the prime mover of nuclear submarine development.

The world's largest submersible, the nuclear-powered Triton, also is one of the World's fastest naval vessels even when submerged. The round-the-world voyage, demonstrates the great potential of the country's growing fleet of nuclear submarines and particularly of those which will carry the ballistic missile, Polaris. It is now more apparent than ever that Polaris, in submarines like Triton, offers a way to reduce the vulnerability of the Nation's nuclear deterrent that no fixed or land-based missile system can match. Congress has consistently called for greater empasis on nuclear submarine procurement, and the voyage of the Triton confirms again—as did the noteworthy trips to the North Pole-the wisdom of that action.

"Gimme" Demand Killed Off Rome

EXTENSION OF REMARKS OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks, I include an edi-torial by Hon. Quimby Melton, Jr., which appeared in the Griffin (Ga.) Daily News on Monday, May 9, 1960. Hon. Quimby Melton, Jr., from Griffin, Ga., is the editor of the Griffin Daily News, and this is the lead editorial in this issue of the paper. In addition to being editor of the newspaper, Mr. Melton is a representative of Spalding County in the General Assembly of Georgia and is also a member of the board of regents of the university system of Georgia.

For many years I have felt that Gibbon's "The Decline and Fall of the Roman Empire" should be required reading for every Member of Congress and, indeed, all public officials; because after all it is our responsibility to avoid the errors and pitfalls of the past if we are to preserve the strength and integrity of our Government, our Nation, and our Deople. Evidently, the distinguished editor of the Griffin Daily News shares this feeling. The full text of his splendid editorial appears below:

"GIMME" DEMAND KILLED OFF ROME

In this modern age, who is concerned with the Roman Empire?

All of us should be. History has lessons for those who heed.

Edward Gibbon's book "The Decline and Fall of the Roman Empire" tells of events hundreds of years ago. What do they have to do with us today? Well, let's skim over

the information which Mr. Gibbon offers: The main thing which contributed to the destruction of the once mightiest of empires was moral decay, lack of strength, disintegration of character. All of this went naturally along with demands of "gimme."

Hordes of unemployed people in Rome demanded that the emperor "gimme." Just like today's politicians, he gave. He kept his job, but after awhile the Roman Empire fell into pieces. The emperor gave food to the masses, but to do this he had to increase

taxes. When he raised taxes, unemployment increased also.

Once fed, the jobless demanded entertainment. The emperor declared a holiday and put on a circus. Soon everybody went to the circus and it was not long before every day was a holiday. The masses of people of Rome did as little as they could get by with. They demanded "gimme, gimme." And the emperor gave and gave and gave.

Then the Germans came. The once strong Romans had no will to resist, no strength of character, no moral fiber. The legions of Rome melted like butter on a hot summer day. The "gimme" boys paid for what they got with their freedom.

Does any of this sound familiar?

Seafarers Union Withdraws Picket Line Following State Department Good Faith Assurance to AFL-CIO Re Arab Blacklisting

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. ROOSEVELT. Mr. Speaker, in recent weeks I have entered into the RECORD information on the protest, through peaceful picketing of the United Arab Republic ship docked in New York Harbor, of the Seafarers International Union and the International Longshoremen's Association against the blacklisting of American-flag ships by the United Arab Republic.

I think it proper that information on the latest developments likewise be made part of the RECORD. This information sets forth the recent sequence of events, culminating in the withdrawal of the picketing of the United Arab Republic ship. The withdrawal action was based on the good faith assurance of the State Department to the AFL-CIO that it will investigate fully the grievances of the Seafarers International Union and through appropriate diplomatic action with the foreign countries involved, to renew its efforts to assure freedom of the seas and to protect the interest of our shipping and seamen now being discriminated against by the Arab boycott and blacklisting policy.
I insert at this point the following com-

munications and statements:

Exhibit I, AFL-CIO President George Meany's letter of May 5, 1960, to Acting Secretary of State Douglas Dillon, accompanied by a statement or resolution adopted by the AFL-CIO executive

Exhibit II, Acting Secretary of State Dillon's May 6 reply to Mr. Meany, accompanied by a statement of policy.

Exhibit III, a May 6 telegram from Mr. Meany to Paul Hall, president of the Seafarers International Union and Mr. Hall's telegraphic reply thereto.

EXHIBIT I

MAY 5, 1960.

Hon, Douglas Dillon, Acting Secretary of State, U.S. Department of State, Washington, D.C.

MY DEAR MR. SECRETARY: I have the honor to transmit to you the resolution adopted by

the executive council of the AFL-CIO on Wednesday, May 4, pledging full support to the maritime affiliates of the AFL-CIO in their protest against the blacklisting of American-flag ships and the boycott policy being pursued by the Arab boycott organization of the Arab League.

You will not that the resolution further expresses the support by the executive council of the AFL-CIO of the direct actions taken by the Seafarers International Union, supported by the International Longshoremen's Association in the New York port.

I have taken the liberty of forwarding the resolution to you for the information of the Department of State and for such action as may be appropriate under the circumstances.

Sincerely,

GEORGE MEANY President.

STATEMENT BY THE AFL-CIO EXECUTIVE COUN-CIL IN SUPPORT OF THE SEAFARERS INTERNA-TIONAL UNION, MAY 4, 1960, WASHINGTON, D.C.

The AFL-CIO, by convention action, is pledged to support the principle of freedom of navigation for all nations through the Suez Canal. The maritime unions affiliated with the AFL-CIO and the maritime department of the AFL-CIO have, on numerous occasions, vigorously protested the blacklisting of American-flag ships by the Arab Boycott Organization of the Arab League.

This blacklisting and boycott policy violates the international law of freedom of the seas, which the AFL–CIO convention resolution pledges the AFL–CIO to support. At the $\,$ same time, this blacklisting and boycott policy, pursued by certain Arab countries, threatens job opportunities for American seamen whose livelihood depends upon the American merchant marine and unrestricted opportunities of peaceful trading and transportation.

The maritime affiliates of the AFL-CIO, in addition to protesting directly against this blacklisting of American-flag ships, have likewise protested to our State Department, urging that the State Department use its good offices through diplomatic channels to remove

this boycott.

These protests have thus far been unavailing and recently the Seafarers International Union, AFL-CIO, supported by the International Longshoremen's Association, AFL-CTO has peacefully picketed an Egyptian ship docked in New York Harbor in protest against the discrimination against American shipping and seamen, being practiced by this and other Arab countries.

The U.S. District Court in New York has denied an injunction against this peaceful picketing on the ground that the unions involved have a legitimate labor interest to protect in their action. This action of the district court was sustained today by the U.S. Court of Appeals.

The executive council pledges full support to the maritime affiliates of the AFL-CIO and to the Maritime Trades Department of the AFL-CIO in their protests against the blacklisting of American-flag ships and the boycott policy being pursued by the Arab Boycott Organization of the Arab League. The executive council specifically supports the direct actions taken by the Seafarers International Union, supported by the International Long-shoremen's Association, in the New York

The executive council rejects the implication unwarrantedly made by Senator Ful-BRIGHT in a speech in the Senate that this action is a political action of an "irresponsible" union group.

The executive council reaffirms the fact that the purpose of the maritime affiliates of the AFL-CIO in their protests is to protect the interests of American shipping and seamen from the Arab boycott which the State Department itself recognizes is "discriminatory" against American shipping and seamen.

The executive council calls upon the administration and the State Department to take all appropriate diplomatic action to protect the interests of our shipping and seamen, now being discriminated against by the Arab boycott and blacklisting policy.

EXHIBIT II

DEPARTMENT OF STATE, Washington, D.C., May 6, 1960.

Mr. George Meany, President, AFL-CIO, Washington, D.C.

DEAR MR. MEANY: I have just received your letter of May 5 enclosing the statement recently adopted by the AFL-CIO executive council with respect to boycott measures of

the Arab League.

With reference to the last paragraph of your letter regarding appropriate action which the Department of State might take under the circumstances, I enclose a statement of basic principles which actuate U.S. foreign policy affecting the American merchant marine.

Sincerely.

Dougas Dillon,
Acting Secretary.

STATEMENT OF POLICY, MAY 6, 1960

1. As a matter of settled policy, the United States supports the principle of freedom of the seas and free access to foreign ports and facilities. The Department has constantly sought to facilitate the normal pursuit of international commerce by vessels of U.S. registry.

2. The U.S. Government has long and unequivocally maintained the principle that there should be freedom of transit through the Suez Canel for all nations. This policy has been publicly emphasized on numerous occasions, and was specifically reiterated by the Secretary of State during his address before the United Nations General Assembly

on September 17, 1959.

3. The U.S. Government protests as a matter of policy discriminatory actions or practices with respect to international trade which adversely affect U.S. firms, vessels, and citizens. The Department will continue to pursue, by all appropriate and effective means, every avenue whereby private American interests in international trade may be

fully safeguarded and restored.

With respect to Arab trade restrictions arising out of the Arab-Israel conflict, the Department of State reemphasizes that our Government neither recognizes nor condones the Arab boycott, which includes the blacklisting of U.S.-flag vessels in part because of prior calls at Israell ports. Every appropriate opportunity will be utilized, on continuing basis, to reemphasize this fundamental position to the Governments concerned. At the same time, every suitable occasion will be employed both within and outside the United Nations, to facilitate progress toward a solution of the basic Arab-Israel conflict from which the Arab boycott arises.

5. The U.S. Navy in February 1960 discontinued the use of a clause formerly employed in contracting procedures for the delivery of oil to U.S. naval installations abroad, lest this clause, which was designed to assure the efficient operation of the fleet, be misconstrued as acquiescence in the Arab boycott. Regarding transportation of Public Law 480 cargoes, restrictive clauses have in certain instances been included in ship charters by foreign countries which purchase the surpluses in this country and make their own shipping arrangements directly with private carriers.

No U.S. Government agency is a party to these contracts. Consistent with the policy that no U.S. agency condone the Arab boycott, the Department will continue its efforts to do what it can to end the application of these restrictive clauses with respect to U.S. flag vessels under charter to foreign countries.

6. Regarding treatment of U.S. citizens abroad, including American seamen, it is of course mandatory on this Department to do everything possible to assure equal treatment and freedom from harassment for all our citizens in foreign countries. U.S. diplomatic and consular officers have standing instructions to extend every appropriate assistance to our citizens who may encounter difficulties. In several recent instances American seamen experienced difficulties at ports in the United Arab Republic. Our consular officers made every effort to assist the crews of these vessels, and were in fact able to be of material help. The Department has renewed its standing instructions to its consular officers to be on the alert to assist in settling grievances regarding treatment abroad of American seamen or other American citizens which are brought to their attention.

7. As a matter of basic procedure, the Department gives full consideration to all communications from private American groups with respect to problems affecting the conduct of U.S. foreign relations. In accordance with this procedure, it has been and will continue to be, the intention of the Department of State to give full consideration to all communications from the Seafarers International Union, other affected martitine unions and other interested groups.

The Department will consult with the AFL-CIO and its maritime affiliates on future developments affecting American vessels and

seamen in the areas concerned.

In the light of the foregoing basic principles and in conformity with the fundamental national interest, the Department gives assurances that it will undertake to investigate fully the grievances of the Seafarers International Union and, through appropriate diplomatic action with the foreign countries involved, to renew its efforts to assure freedom of the seas and to protect the interest of our shipping and seamen now being discriminated against by the Arab boycott and blacklisting policy.

EXHIBIT III

MAY 6, 1960.

Mr. Paul Hall, President, Scafarers International Union, Brooklyn, N.Y.:

I have today received from Acting Secretary of State Douglas Dillon the good-faith assurance of the Government of the United States that it will fully investigate grievances of U.S. seamen and renew its diplomatic efforts to protect American seamen and shipping against future indignities and discrimination. I firmly believe that the good trade union purposes for which the Seafarers International Union established the picket line at the Cleopatra has been served and I suggest the picket line be withdrawn.

Please be assured of the continued and complete support of the entire trade union movement for the members of the SIU and all merchant seamen. We intend to protect the interests of American shipping and seamen at all times.

GEORGE MEANY, President AFL-CIO.

MAY 6, 1960.

GEORGE MEANY, President, AFL-CIO, Washington, D.C.:

Re your wire pertaining to the picketing of the SS Cleopatra in protest against the United Arab Republic blacklist of American ships and mistreatment of American seamen you have informed us that the State Department has given good-faith assurances to you that it will take positive action to resolve these problems. Therefore, in deference to your suggestion as president of the AFL-CIO

and in light of our traditional support of AFL-CIO policy we will abide by your request and will remove the picket line as of today at 5 p.m. The officers and members of our union take this opportunity to express to you and to the executive council our deep appreciation for your interest in and support of our fight for the rights of American seamen and for freedom of the seas for American-flag ships.

PAUL HALL, President, Seafarers International Union.

Automobile Design-for-Living Kits Mailed

EXTENSION OF REMARKS

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. MONAGAN. Mr. Speaker, no problem is more important to the American people today than the program to improve the safety of travel on our highways. In this connection, Ralph Nader, Connecticut State chairman for the automobile design-for-living project of the Connecticut Junior Chamber of Commerce, has announced a program of sending outlines and information kits to all local chambers with the idea of acquainting the people of various Connecticut communities with the importance of safer design of automobiles.

I consider this program a great step in the direction of reducing the frightful highway accident toll, and I am happy to append hereafter an article concerning this project which appeared in the Connecticut Jaycee News for

April 1960:

AUTOMOBILE DESIGN FOR LIVING KITS MALLED PROJECT FOR ALL CHAPTERS

Raiph Nader, State chairman for the automobile-design-for-living project, announced the dispatch of program outlines and information kits to all local chapters. He urges all chapters to conduct the program so as to acquaint the people of their community with the great contribution which safer designed automobiles can make to the reduction of casualties in traffic accidents.

The program outline envisages informing the community of this engineering approach to casualty reduction by various media of communication and public addresses before interested groups in the coming weeks. A film, "Design for Survival," is available on loan from the Hamden office of Liberty Mutual Insurance Co. It illustrates the need and feasibility of safer design components in motor vehicles by describing the Cornell-Liberty experimental safety with over 60 new safety devices.

The basis for the program on the briefly

The basis for the program can be briefly described. For the past several years, automotive crash injury research by university, private and military agencies has piled an impressive amount of evidence that unsafe automotive designs are far more fundamental causes of destroying life and limand far more controllable by public and industry effort than the customary and instead policy of trying to confine the temperament and behavior of 80 million drivers.

Most motor vehicle accidents involve two separate collisions: First, the striking of the vehicle with another object and second, the striking by the occupant against the interior parts of the vehicle or ejection through the door opened by the impact.

is this second impact of the occupant against the inside of his car that does the killing and injuring.

Unsafe designs contribute both to the accident and the injury. Examples of the former include inadequate braking systems, leakage of carbon monoxide and visual obstructions and distortions. A few illustrafatality or injury are doors flying open on impact, inadequately secured seats, the protruding steering wheel mechanism, sharpedged rear-view mirror, pointed knobs and Jutting dashboards, the cardboard-like roof structure and poor force-moderating bump-

Studies indicate that with adequately designed cars and an increased use of attachable safety accessories, a reduction of 75 per-Cent or about 28,500 lives saved annually would be a realistic possibility. This view gains credence from the fact that it is easier to make machines safe than to make humans behave safely, a principal learned in our factories long ago with remarkable casualty reduction.

The overall objective of this Jaycee program is to forge the consumer demand for safer cars that is needed to induce safer production of cars and safety standards, and to promote use of whatever few safety aids now existing on the market, particularly reputable seat belts adequately installed.

Holds FCC Responsible for Abuses of TV

EXTENSION OF REMARKS OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. TOLL Mr. Speaker, under leave to extend my remarks I include an interesting letter appearing in the Philadelphia Bulletin of October 30, 1959, which was written by a constituent of mine, Max N. Carol. This letter is pertinent to the investigation which is being conducted by the Harris committee in an effort to improve the standards and prestige of TV and the performers who participate. The letter is included to show the hope of a citizen who represents the feeling of all people for proper and beneficial use of this remarkable medium of communication.

The letters follows:

Holds FCC RESPONSIBLE FOR ABUSES OF TV With the advent of television it was the hope of our society that at last a great medium of visual information would be available of visual information would be available. able in the field of clean entertainment, educational enlightenment, and up-to-theminute news medium.

That a mockery has been perpetuated by the television industry upon its audiences is now well known. What with its fabulous large, well known. large and small cash prize programs, why would it not attract and induce contestants to participate in this great farce and de-

This situation becomes more aggravating when the Federal Communications Commission, through its Chairman, Mr. Doerfer, admits its about-face helplessness in controlling television programs, finally using the old subterfuge of freedom of speech to cover up its lack of competence or its indifference in enforcing the Communications Act.

It is the duty of Congress, if need be, to rewrite the law with teeth in it and replace the present Commission with one that will administer and execute the law with proper

MAX N. CAROL.

Capital Punishment Is Not the Answer

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1950

Mr. MULTER. Mr. Speaker, the House Judiciary Committee has set for hearing on May 25, 1960, my bill, H.R. 870, to abolish capital punishment. In that connection, I commend to the attention of our colleagues the following article by Ernest Havemann as it appeared in the May 1960 issue of Reader's Digest:

CAPITAL PUNISHMENT IS NOT THE ANSWER (By Ernest Havemann)

(Nine States and some 40 foreign countries have abolished the death penalty. Here are the reasons why they have concluded that the age-old law is barbaric and use-

Shortly after he was elected Governor of Ohio, Michael DiSalle went before a committee of his legislature and did his best to persuade the lawmakers to abolish capital punishment. As a brash young man in college, DiSalle had argued eloquently on a debating team in favor of the death penalty. Later, as a young legislator, he had sponsored a bill which made kidnapers subject to capital punishment in Ohio.

But Governor DiSalle had become convinced over the years, he said, that the old law of a life for a life was inhumane and unworthy of a civilized society. His feelings were confirmed and intensified when he began to live in Ohio's executive mansion, which has a staff of servants recruited from the State's most trustworthy penitentiary inmates

Nine of these 10 servants, he discovered, were convicted murderers. All nine might very well have died in the electric chair. Yet here they were, years later, apparently completely rehabilitated and so reliable that the Governor felt no hesitancy in leaving his family alone with them.

Having known these faithful servants, the Governor could hardly bear the thought of signing a death warrant. "What would we have gained," he asked his legislators in a voice choked with emotion, "if these men had been electrocuted?"

What does society gain—and what does it lose—from an execution?

Many lawmakers have decided that society loses far more than it gains when it puts a man to death. They have come to agree with California's famous Warden Clinton E. Duffy, who wrote in his book "The San Quentin Story": "Capital punishment is a tragic failure, and my heart fights it even as my mind gives the execution signal." Nine States-and some 40 foreign countries-have now abolished the death penalty. This year, partly as a result of the celebrated Chessman case in California, there are certain to be strong attempts in at least six other States to wipe the law off the books.

One fact that raises strong doubt about the wisdom of capital punishment is that

the law is not infallible. It is always possible that an innocent man may be executed. In the District of Columbia jail, a condemned prisoner named Charles Bernstein was minutes away from the electric chair when a messenger rushed in with the news that his sentence had been commuted to life imprisonment. If the messenger had been caught in traffic, Charles Bernstein would have died. Two years later the police found positive proof that Bernstein was innocent of the murder for which he was convicted. and he was duly released. Eventually he received a full Presidential pardon.

Another strong argument against the death penalty is that justice is notoriously uneven. In California two men named Thomas and McCain were jalled for killing a woman during the holdup of a grocery. Testimony was given before a legislative committee that Thomas was defended by a court-appointed lawyer who let him plead guilty before a notoriously strict judge. Nothing was said in court about his previous good record at both civilian and soldier. McCain's lawyer had him plead not guilty and took the case before a jury. was executed. McCain got off with a life sentence.

In Texas a woman who was said to have killed seven men was finally brought to justice and sentenced to death for killing an eighth. To death row at about the same time went a man who had never been in trouble until he killed his estranged wife in a fit of anger when he saw her with another man. The woman who had killed eight men never doubted she would escape the chair; she was sure that Texas would keep intact its record of never executing a woman. She was right-her sentence was commuted to life imprisonment. The man who had committed a crime of passion went to his death

Despite such miscarriages of justice there are many people who still favor capital punishment. They contend that we need the extreme penalty as a deterrent to crime, This would be a strong argument—if it could be proved that the death penalty discourages potential murderers and kidnapers. there is abundant evidence that the death penalty does not discourage crime at all.

If capital punishment were a real deterrent to crime, then the 41 States which electrocute their murderers-or hang them, or put them to death in the gas chambershould be relatively free from murder; and the 9 States which have abolished capital punishment should be hotbeds of killing. If anything, the opposite is true.

In 1958 the 10 States which had the fewest murders—fewer than 2 a year per 100,000 population—were New Hampshire, Iowa, Minnesota, Massachusetts, Connecticut, Wisconsin, Rhode Island, Utah, North Dakota, and Washington. Four of these 10 States have abolished the death penalty.

The 10 States which had the most murders-from 8 to 14 killings per 100,000 population—were Nevada, Alabama, Georgia, Flor-ida, Tennessee, South Carolina, Texas, North Carolina, Arkansas, and Virginia. All of them enforce the death penalty.

The fact is that fear of the death penalty has never served to reduce the crime rate. Through most of man's history executions have been as public and as brutal as possible, so that the wicked might observe and take heed. Malefactors were once crushed to death slowly under heavy weights. Or they were stretched out along the spokes of a wheel, and their arms and legs clubbed to a pulp before the executioner finally ended their anguish.

Less than 200 years ago the whole country-side in England was dotted with gallows where criminals were hanged; their bodies

were then left on gibbets, to rot in the public view as examples to other potential evildoers. There were no fewer than 200 different offenses which called for capital punishment, including such minor matters as fishing without permission. In the 1800's a British boy of 13 was hanged for stealing a spoon, and a boy of 9 was sentenced to death for reaching into a shop window with a stick and poking out a few pennies' worth of colors for a child's painting kit. (When children were hanged, the executioner often had to jump up and hold onto their legs, since their own weight was not enough to strangle them.)

Yet, despite the omnipresent gallows and gibbets, crime was much more common then than now. Indeed, the hanging of one pick-pocket was always the occasion for great activity by others—who found that the pickings were never so ripe as when a crowd was gathered at an execution and busy looking up to watch the body sway. The chaplain of the British prison at Bristol once reported that, of 167 men then awaiting execution, 164 had witnessed a previous hanging—and had gone right on to commit capital crimes themselves.

The same sort of thing still happens. An Ohio prison inmate named Charles Justice invented the clamps which are used to hold the condemned man tight in the electric chair. He later finished serving his prison term, went out into society, got into trouble again, was convicted of murder, and returned to the prison to be executed in the very electric chair he had helped design.

One of the best studies of the problem has been made by a committee for the Delaware Legislature. The committeemen came up with seven good reasons for abolishing capital punishment. At the top of the list was the question of whether the death penalty discouraged other criminals. The committee's points:

1. The evidence clearly shows that execution does not act as a deterrent to capital crimes. (The committee reached this conclusion after looking at all the facts and arguments, some of them set forth above.)

Except in rare instances, the serious offenses are committed by those suffering from mental illness; or are impulsive in nature, and are not acts of the "criminal class."

For this conclusion the Delaware committee had ample statistical and psychiatric evidence. About one murder out of every seven, some studies show, is committed by a hopeless psychotic—a man or woman so deteriorated mentally as to have no faint conception of the act or its consequences. About one murder in four is a crime of passion. A jealous husband shoots an unfaithful wife, or a girl kills the man who jilted her, usually without premeditation and in the heat of emotion.

Of all the remaining killings, the great majority are more or less accidental—the result of other crime. A burglar is surprised in the act and beats the owner of the house to death with fireplace tongs. A robber meets with unexpected resistance from a shopkeeper and shoots him.

Often it is the bungling amateur—not the hardened professional criminal—who blunders into murder. The Delaware committee found that half the murderers who had been executed in that State had no previous criminal record of any kind.

 When the death sentence is removed as a possible punishmer+, more convictions are possible with fewer delays.

As long as the jury system has existed, there have always been jurymen who will look for any excuse to acquit the defendant rather than send him to his death. Back in the 1830's, a thousand British bankers petitioned for an end to the death penalty for for jery. They were not being kind or humane—they were simply forced to act in

self-defense because juries were letting most forgers go scot-free rather than send them to the gallows.

In New York, where conviction for premeditated first degree murder automatically carries the death penalty, juries have gone out of their way to find defendants not guilty on grounds of insanity or some other excuse. A request for a change in the law was made this year by no less a body than the New York State District Attorneys' Association. The district attorneys were doubtless thinking of what a Massachusetts commission once stated: "It is the swiftness and certainty of punishment and not its severity that deters." They figured it would be better for the cause of law enforcement to have two murderers sent to prison than to have one executed and one set free, as so often happens under the present law.

4. Unequal application of the law takes place because those executed usually are the poor, the ignorant and the unfortunate.

Warden Duffy once said flatly, "Seldom is a person of means executed." Lewis E. Lawes, who supervised the execution of 150 men while he was warden at Sing Sing, was impressed by the fact that the majority of them had been too poor to hire a lawyer and were defended by counsel appointed by the court.

On the other hand, certain famous criminal lawyers have seldom failed to keep their clients out of the chair. A high-priced Texas lawyer has defended 200 murderers, only one of whom was executed. Asked by a newspaperman if this client was any more guilty than the other 199, the lawyer said with great regret, "No, he was no more guilty. I just didn't work his case right."

Some men have been executed because they were too stupid—or could not speak English clearly enough—to tell their lawyers about a perfectly good alibi or extenuating circumstances. Proportionately more Negroes than white persons are executed, and far more men than women. Although about one murder out of every seven is committed by a woman, only about one woman a year is executed in the United States.

5. Conviction of the innocent does occur, and death makes a miscarriage of justice irrevocable.

There are several cases on record, like the one of Charles Bernstein in the District of Columbia, in which innocent men have nearly been executed. In 1956 a Georgia man named James Foster was positively identified as a murderer and sentenced to death. The execution was delayed by all kinds of legal appeals, fortunately—for 2 years later another man confessed to the killing. In 1957 a San Francisco man named John Rexinger was identified by the victim of a particularly brutal rape and was sentenced to the gas chamber. He, too, was saved by the real culprit's confession.

Two of the States which have abolished the death penalty—Maine and Rhode Island—did so during a wave of public shame and remorse resulting from the discovery that they had executed innocent men.

 A trial where a life may be at stake is highly sensationalized, adversely affects the administration of justice and is bad for the community.

The least edifying sights in our Nation are the morbid curiosity seekers crowding into every courtroom where a defendant, in the words of the newspaper headlines, is "fighting for his life." But if we create the spectacle, how can we blame the spectators?

As Supreme Court Justice Felix Frankfurter once put it, "When life is at hazard in a trial, it sensationalizes the whole thing almost unwittingly; the effect on juries, the bar, the public, the judiciary, I regard as very bad." Even if it could be proved that capital punishment deters crime, Justice Frankfurter said, this would not in his opinion "outweigh the social loss due to the inherent sensationalism of a trial for life."

There is strong evidence that the publicity surrounding the death penalty may actually encourage crime instead of preventing it. Some criminologists claim to have statistical proof that a well-publicized execution results in more murders, rather than fewer, in the days and weeks immediately following. After the Lindbergh kidnaping case a number of States adopted the death penalty for this crime—but the figures show that kidnapping increased.

Opponents of the death penalty often cite the words of a minister of justice in Belgium, where the last execution occurred in 1863 and the murder rate is now extremely low. "We have learned," the minister said. "that the best means to teach respect for human life consists in refusing to take life

in the name of the law."

Society is amply protected by a sentence of life imprisonment.

This final conclusion by the Delaware committee is perhaps the most interesting of all, because it answers a question which has bothered a great many people. The question is this: If we do not execute murderers, what is to prevent a politically dominated or soft-headed parole board from releasing even the most callous and unrepentant professional killer after he has served only a few months of his sentence?

No doubt this is the crux of the problem. And the answer to it is to write ample safeguards into the law. If we tightened up the requirements for parole—and made a life sentence really a meaningful term instead of a mockery, as it often is—society would be better served.

After pondering all the arguments in favor of capital punishment and those against it the Delaware State Legislature voted to become the ninth of our States to abolish the death penalty. Another State had decided—as doubtless many more will do in the future—that the age-old law is a traglo failure.

School Safety Patrol

EXTENSION OF REMARKS

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. WOLF. Mr. Speaker, we have all noticed from time to time on our street corners, in the morning and afternoon hours when children make their way to and from school, a young boy or girl in the uniform, or wearing the shoulder strap, of the School Safety Patrol. Almost everyone, if they were asked what they thought of the Safety Patrol, would say that they think it is a good thins. The hard fact that the Safety Patrol averts many traffic accidents, and even probably saves many little lives, is not brought home to us until we read a newspaper account of some heroic act by a boy or girl in the Safety Patrol.

I was highly honored to have present in the House today Miss Beverly Jean Marsh, a constituent of mine from Cedar Rapids, Iowa, who today received the following citation from the Vice President of the United States:

BEVERLY JEAN MARSH, AGE 12, TAYLOR SCHOOL, CEDAR RAPIDS, IOWA, CERTIFICATE CITATION

Samuel Fountain, age 5, and David Jones, age 10, returning to school after lunch on March 10, 1960, were about to cross Sixth

Street at Fifth Avenue where Beverly was on School Safety Patrol duty. A truck driver, moving north on Sixth Street, kept driving at about 25 miles per hour despite a red traffic signal. The two boys, facing a signal in their favor, were not aware of the approaching truck. Alertly noting their danger, Beverly quickly pulled them back, thus preventing serious consequences.

Beverly is the daughter of Mr. and Mrs.

Robert Marsh, 820 Ninth Street SW., Cedar

Rapids, Iowa.

Mr. Speaker, we believe in the School Safety Patrol for this is the sort of activity which develops good leadership, and we hope that other young people will be encouraged to take seriously their responsibilities.

I have today sent to the Gazette and to radio station WMT, Cedar Rapids, Iowa, the following telegram:

Ceremonies have just been concluded in the office of the Vice President at the Capitol in which the lovely little safety patrol, Beverly Jean Marsh, of Taylor School, Cedar Rapids, was honored by a national citation from the Vice President of the United States for the courage which she showed in rescuing from a traffic accident two little boys on March 10. As the Congressman representing Cedar Rapids in the U.S. House of Representatives I take great pride that one of my constituents has been chosen as one of five people in all the Nation to be so honored this year. I commend Beverly Jean for her alertness, devotion to duty, and her courage. Let us hope that her example can encourage other young people to take seriously their responsibilities.

Water for Southern California

EXTENSION OF REMARKS OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. LIPSCOMB. Mr. Speaker, the Colorado River Aqueduct is the vital supply line which brings water to southern California from the Colorado River. Recently a \$200 million expansion program was completed bringing the aqueduct up to its full planned delivery ca-Pacity. The Metropolitan Water District aqueduct system is not subsidized in any manner by the Federal Government.

Under leave to extend my remarks, I Submit for inclusion in the RECORD an article reviewing the history of this great project by Mr. Joseph Jensen, chairman, board of directors, Metropolitan Water District of Southern California, which appeared in the May 1960 issue of Western Water News. Mr. Jensen's article. I believe, will be of interest to the membership of the House.

The article follows:

Serving 71/2 Million People With Water (By Joseph Jensen, chairman, board of directors)

The Metropolitan Water District of Southern California was organized on December 29, 1928, when its board of directors held its first meeting in Pasadena. It was organized in accordance with the provisions of the Metropolitan Water District Act adopted by the California State Legislature

in 1927. The District was composed of 11 cities at the time it was organized.

The Metropolitan Water District was organized to plan, finance, build, and operate a water supply system from the Colorado River. The District made water diversion filings on the Colorado River immediately after it was organized and entered into a contract with the Secretary of the Interior for a supply of water from the Colorado

BOND ISSUE AUTHORIZED IN 1931

In September 1931 the citizens of the Metropolitan Water District, which then included 13 incorporated cities, voted by a ratio of more than 4 to 1 to authorize a bond issue of \$220 million to finance the cost of building the Colorado River aqueduct. Aqueduct construction started in December 1932 and the aqueduct system, in its initial development, was completed and placed in operation in June 1941.

The Metropolitan Water District has increased its area from about 600 square miles in 1928 to more than 3,400 square miles. The 13 cities comprising the constituent areas of the district in 1931 were sit-uated in Los Angeles and Orange Counties. District territory now extends into five Cali-fornia counties, Los Angeles, Orange, San Diego, San Bernardino, and Riverside. The population of the district has increased from 1,600,000 in 1928 to about 7,500,000; its assessed valuation has grown from \$2,200 milsessed valuation has grown from \$2,200 lion in 1928 to more than \$12 billion. In Metropolitan Water District of Southern California now represents about one-half the entire State of California.

THUOLVES HIIGE CAPITAL INVESTMENT

The Metropolitan Water District's aqueduct system today represents a capital investment in excess of \$380 million. All construction costs on the aqueduct are met (a) by the sale of Metropolitan Water District bonds, which in turn are amortized with interest by taxes levied on property within the district or by water sales revenues received from its constituent areas, and (b) by direct investment of funds derived from such taxes and water revenues.

The Metropolitan Water District aqueduct system is not subsidized in any manner by the Federal Government.

GOVERNING BODY

The district is administered by a board of directors with its members representing its various constituent entities. There are at present 37 members on the district's board

Serving with me as officers of the district's board of directors are Warren W. Butler, vice chairman, director representing the city of Compton; and Fred a Heilbron, secretary, one of the directors representing the San Diego County Water Authority. General manager and chief engineer of the district is Robert B. Diemer. General counsel is Charles C. Cooper, Jr.; controller is George M. Carroll; and treasurer is Chester G.

A \$200-MILLION EXPANSION PROGRAM

To keep pace with the rapidly growing water requirements of southern California, the Metropolitan Water District in 1952 set underway a major \$200-million adqueduct expansion program.

On June 5, 1956, the voters of the district, by a ratio of 11 to 1, authorized its board of directors to issue short-term notes to be repaid from annexation fees derived from special taxes levied in areas which have been annexed to the district. At that time there was a total of more than \$176 million in such outstanding annexation fees to be paid to the district during the succeeding 30 years. Issuance of short-term notes made it possible to greatly accelerate the aqueduct expansion program.

Funds derived from these short-term notes have been used to help finance a construction program that brings the Colorado River aqueduct to its full planned delivery ca-

NOW 1 BILLION GALLONS DAILY

The Colorado River aqueduct, built and operated by the Metropolitan Water District, now has the capacity to deliver 1,212,000 acre-feet of water annually to the people in the district. This amounts to more than 1 billion gallons of water a day. The main aqueduct early in 1960 was brought to its full ultimate delivery capacity by the en-largement program started in 1952. In 1959, it was operating at about one-half its full In 1960, it is able to deliver sufficapacity. In 1960, it is able to deliver suffi-cient additional water to meet the needs of about 3 million more people in the service

area of the Metropolitan Water District.
In 1952, the board of directors adopted the following "Water Policy Statement" which was reaffirmed as recently as October 1959:

"The Metropolitan Water District of Southern California is prepared, with its existing governmental powers and its present and projected distribution facilities, to provide its service area with adequate supplies of water to meet expanding and in-creasing needs in the years ahead. The district now is providing its service area with a supplemental water supply from the Colorado River. When and as additional water resources are required to meet increasing needs for domestic, industrial, and municipal water. The Metropolitan Water District of Southern California will be prepared to deliver such supplies.

"Taxpayers and water users residing with-in the Metropolitan Water District of Southern California already have obligated themselves for the construction of an aqueduct supply and distribution system. * * * This system has been designed and constructed in a manner that permits orderly and economic extensions and enlargements to deliver the district's full share of Colorado River water as well as water from other sources as required in the years ahead.

"Establishment of overlapping and paralleling governmental authorities and water distribution facilities to service southern California areas would place a wasteful and unnecessary financial burden upon all of the people of California, and particularly the residents of southern California."

Big Business-Its Taxes

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present an editorial which appeared in the Shreveport (La.) Times on Monday, May 9, 1960, entitled "Big Business Works for Government." We are all interested in taxes and a solution to them, and I feel this will be of interest to the Members of the Congress. It is as follows:

BIG BUSINESS WORKS FOR GOVERNMENT

The real beneficiaries of big business are not the millions of shareholding owners but government—chiefly Federal Government but also lesser government at State and local

This is brought out in the ever-increasing practice of big corporate business to include in annual reports the amount of taxes paid per share along with the earnings per share before taxes, instead of just listing taxes as a lump sum.

Almost invariably, big business pays more per share in taxes than it earned per share after taxes. Exceptions are service companies, such as railroads, where earnings have been shaky for some time and where, also, quite a bit of taxation is of the property type at lower rates than income taxes.

As a whole, from samplings made of taxes paid by big companies, and earnings after taxes, the owners are lucky if they get anywhere near an even break between taxes and

earnings after taxes.

For example, U.S. Rubber, doing nearly a billion dollar business in 1959, reported earnings after taxes of \$5.30 per share, while taxes paid were at the rate of \$21.85 per share.

At the other extreme, Southern Railway, with a \$256 million business in 1959 had net earnings after taxes of \$4.20 a share against \$4.17 per share paid in taxes.

General Motors, with more than \$11 billion in business in 1959, paid \$4.45 per share in taxes which left \$3.06 in earnings per share after taxes.

Many big corporations have been reporting unusually large stockholders meetings this year. Where, in the past, a comparatively small number of stockholders actually attended the meetings, with the big majority represented by proxies, it is not uncommon now to find 1,000 or more stockholders at an annual meeting, many of them owners of only a few shares.

owners of only a few shares.

Some attribute this to greater interest in the companies by those who invest their savings in stocks. Some financial experts believe, however, that the increased attendance at such meetings often is due to a desire among shareholders to find out why profits—in the form of dividends—are so low when yolume of business is so great.

At least one answer may be found in what many companies now are revealing—the fact that the major portion of all earnings before taxes goes into paying taxes, and the owners themselves get only the minority portion that is left.

In other words, big business works more for government than for its millons of

Not only that, but the owners—the share-holders—must pay income tax on their dividends, except for an infinitesimal exemption, although the company itself already has paid income taxes on all earnings, including the sums that go to dividends.

In order to earn a dollar net after taxes, the average big business organization actually has to earn two, three, four, or more dollars before taxes.

The situation is one that discourages incentive and venture and which certainly may contribute to inflation, although the theory of high taxers is that taxation is a means of stopping inflation,

Despite the fact that big business is the goose that lays the golden eggs for Government, there is always agitation within Government to break up big business on the grounds that it is engulfing little business. Here, again, General Motors happens to offer considerable illumination, especially since it has been one of the major targets of those who think that anything big in business automatically is bad.

A financial writer for the Detroit Times notes that General Motors this year is buying parts and other material from 27,500 American business firms. About 12,000 of these firms employ fewer than 25 persons. More than 70 percent employ fewer than 100. The total bill which General Motors will pay to these small businesses for the year will be approximately \$5,500,000.

Thus, gigantic General Motors is spreading \$5½ billion out into the payrolls of 27,500 small businesses. Yet, General Motors almost certainly will be denounced sometime in Congress this year as an outstanding example of the "big business octopus which crowds out the little fellow."

This phase of General Motors operation is duplicated, though perhaps not to quite as large an extent, in other big business. It's a type of "crowding out" which the Nation could stand a lot more of.

To gain a general picture of the ratio of taxes paid per share by big business to net earnings per share after taxes, The Times asked the national brokerage firm of Merrill Lynch, Pierce, Fenner & Smith to check the annual reports of 20 companies in various fields and tabulate the total sales or revenue, the net earnings per share after taxes, and the taxes per share paid by each. The tabulation is presented herewith, the figures being the companies' and Merrill Lynch simply making the tabulators.

There was no effort to especially pick the 20 companies listed; they happened to be companies presenting the information desired in their annual reports and representative of a broad area of American "big business." Here is the data:

Company	1959 sales or revenues	1959 net earn- ings per share after taxes	1959 taxes per share	
Aluminum Co of America. American Can Bristol-Myers Bendix Aviation. General Mills General Motors Goodrich, B F. Goodyear Tire & Rubber. Great Northern Rail-	\$865,000,000 1,107,000,000 132,000,000 690,000,000 546,000,000 11,233,000,000 772,000,000 1,579,000,000	2, 42 1, 70 5, 37 6, 77 3, 06 4, 18	\$2.31 4.29 11.89 9.31 9.75 4.45 10.21 5.84	
way. International Paper National Dairy Prod- ucts. National Steel. Owens Illinois Glass Pennsylvania RR Pittsburgh Plate Glass. Radio Corp of America. Sears, Roebuck. Southern Railway. U.S. Rubber. ¹ Federal income taxes only. ² Excludes social security taxes.

The Economic Challenge to the United States in the Coming Decade

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. BENTLEY. Mr. Speaker, under

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the Record, I would like to include the following letter, newspaper article, and speech entitled "The Economic Challenge to the United States in the Coming Decade" which was made by Mr. H. H. Whittingham, president and general manager of the Long Manuard acturing Division of the Borg-Warner Corp. I think this is an excellent approach to a problem that is very real

and certainly feel that Mr. Whittingham's remarks should be carefully studied by every Member of Congress:

Long Manufacturing Division, Borg-Warner Corp., Detroit, Mich., May 4, 1960.

Hon. ALVIN BENTLEY, Congress of the United States, Washington, D.C.
